NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 2ND, 1897.

MARRIAGE.

In New York, on December 23rd, Mr. A. B. DE GUERVILLE to Miss LAURA BELLE SPRAKER.

SUMMARY OF NEWS.

THE Diet has adjourned till the 8th of January.

THE Korean Minister to Japan has returned to Seoul.

MR. MOTODA has been elected Chairman of the Budget Committee.

THE Orient Liner *Orotawa* has su k at Tilbury whilst coaling.

FROM all the great trading centres comes news this week of a dearth of subsidiary coins.

MARQUIS ITO arrived at Shinagawa Station on Monday and went to his residence at Isarago.

RUMOUR says that Barons Ito Miyoji and Snyematsu Kencho will join the *Fuyu to* (Liberals).

MR. CARLISLE, Secretary of the United States

Treasury, estimates there will be a deficit of sixty-four million dollars for the current financial year.

A CONSIDERABLE drop in the market price of commodities marks the close of the year 1896 in Japan.

J. M. SCOTT won the Dayton \$50 prize in the bicycle road race from Kodzu to Yokohama last Saturday.

PRINCE MORI, head of the late feudal clan of Choshu, was accorded a state funeral in Tokyo on Wednesday.

THE appointment of Mr. Paul May, as second secretary of the Belgian Legation in Tokyo, was notified on the 22nd ult.

A big fire is reported to have occurred at Kuwagasaki-machi, Iwate Ken, on the morning of the 17th ult., destroying one-third of the town.

THE staff of the Yokohama Post and Telegraph Office is greatly overworked at present, the pressure of business being phenomenal.

BARON ITO, Chief of the Bureau of Naval Command, came to Yokohama on the 28th ult. and visited the commander of the Russian man-of-war *Dimitri Donskoi*.

ON the 8th of January, H.I.M. the Emperor will proceed to the Aoyama Parade Ground, leaving the Palace at half-past nine o'clock, and hold a military review.

A TELEGRAM from San Francisco, received by the Foreign Department, states that Yokohama and Kobe have been declared infected ports, as small pox prevails there.

THE veterans' relay bicycle race on Boxing Day was a walk over for the Yokohama representatives, Ward, of Tokyo falling in the second relay and retiring.

THROUGH diplomatic channels it has been learned that the Powers, including Russia, have agreed in principle to adopt coercive measures if the Sultan continues unyielding.

THE *Sagami Maru*, of the Nippon Yusen Kaisha, will be requisitioned by the Government at Ujina on the 6th of January next to convey troops between Kelung and Kobe.

THE expenditures in the thirtieth fiscal year for Formosa are estimated at yen 14,540,000 while the income is only yen 8,110,000. The deficiency may be supplied from the Chinese indemnity.

It is stated that Viscount Okabe, a member of the House of Peers, will be appointed Korean Minister in place of Mr. Hara, now on leave. The announcement will be made early in Jan.

THE U.S. Senate adjourned the discussion of all resolutions relating to Cuba, including the Foreign Committee's report, until after the Christmas and New Year holidays.

"CINDERELLA," an original burlesque, drew a crowded house at the Public Hall on Wednesday, and was excellently performed by some local amateurs. It will be repeated on Monday next.

THE Mori family contributed yen five thousand to the sufferers in Shiba-ku and yen one thousand to the Japan Red Cross Hospital and the Tokyo Jikei Byoin respectively, as a memorial of the late Prince.

MESSRS. OTANI, Mogi, Hiranuma, Hara, and others of Yokohama applied on the 18th December to the authorities for permission to establish the Keihin Tetsudo Kabushi Kaisha (Keihin

Railway Joint-stock Company). They are backed by a capital of yen 1,500,000. One line is to run from Yokohama Station to Shinagawa and the other from Yokohama to Ofuna.

BARON MATSUDAIRA, the new Vice-Minister of the Home Department, who sent in his resignation a few days ago, owing to a difference of opinion with the Home Minister, will be permitted to resign.

THE *Fuyu to* held a preliminary meeting on the 27th ult. at the office, Shiba, at which it was decided to ask Count Itagaki to become President. The grand meeting will be held on the 10th of January.

THE steamships ordered in England by Japan are as follow:—The Nippon Yusen Kaisha, 10 vessels; Osaka Shosen Kaisha 7 vessels; Mitsui Bussan Kaisha, 2 vessels; and Toyo Kisen Kaisha 4 vessels.

A SAILOR named Shaw has been committed for trial by the Assistant-Judge of H.B.M. Court for Japan, on a charge of unlawfully wounding a shipmate on the high seas, while serving on the British ship *Engelhorn*.

It is proposed that English Churchmen in Yokohama and the vicinity should rebuild Christ Church as a commemoration of the sixtieth year of Queen Victoria's reign. A fund has already been started.

THE French Chamber has rejected the proposal to expend two hundred millions of francs on the Navy, with the assent of the Government. The Ministers admitted that there are defects and abuses, and promised remedial measures.

THE Communications Department has issued a notification that telegrams to Korea written in Chinese containing numerical characters will not be received: all figures must be written according to the Arabic alphabet.

OHASHI TANROMI, an official of the Osaka Branch of the First National Bank, was taken to the Osaka Local Court on the 23rd ult. on a charge of having stolen Redemption Loan Bonds valued at yen 75,000 belonging to the Bank.

MR. FURUZAWA, Governor of Nara Ken, has been appointed Governor of Ishikawa Ken, his late position being taken by Mr. Midzuno. Mr. Akiyama, Secretary of Hyogo Ken, is appointed Governor of Fukushima Ken, in place of Mr. Ogura who has been retired.

THE 28th December being the day on which all Government business is closed for the year, T.I.H. Princes Akihito, Sadanaru, and Takehito, the Ministers of State, Privy Councillors, and other officials had the honour of dining with H.M. the Emperor.

THE Import trade in all its branches closed dull and lifeless with the end of the year, and as very little business is done during the week or ten days following the first of January at the best of times, a slack period is certain now that trade is at so low an ebb. There is nothing to report in Textiles or Metals, though in the latter trade holders have advanced their quotations for all kinds. In Kerosene no transactions, and prices are easy. There has been a little done in Sugar at late rates. In Exports there is but little more doing than in Imports. There have been a few small transactions in Silk for Europe, but the U.S. market is entirely inactive. Waste Silk is quiet and weak. There is still about a thousand piculs of Tea on offer, but its quality does not attract much attention. Exchange has been fairly steady, the only movement being a fractional decline.

EDITORIAL NOTES.

YOKOHAMA LITERARY SOCIETY.

A CROWDED meeting of the Yokohama Literary Society took place at the Van Schaick Hall last night, when a special programme having reference to the present season of the year was given. The four original papers were all of great merit, especially the one read by the Rev. A. A. Bennett, in which he interpreted the symbolism of the New Year decorations in Japan. If we might be allowed one remark we would suggest to the framers of the programme that super-generosity is apt to induce satiety. Last evening's bill might have been shortened with advantage; as it was, Mr. Griffin, the President, had finally to intervene and close the last few numbers, otherwise the members of the Society and their friends would have been keeping up the entertainment till past midnight. The following was the Programme:—Overture, "Son and Stranger" (Mendelssohn), Miss Poole and Mr. Mason; Paper, "New Year in Korea" (Original), Mr. Gale; Song, "Let me like a soldier fall" (Wallace), Mr. Lewis; Paper, "Christmas in Russia" (Original), Mr. G. Sale; Song, "A May morning" (Denza), Mrs. Mollison; Trio "Allegro" (No. 1), (Rafi), Messrs. Brüll, Poole and Schmid; Recitation, "The Spanish duel," Mr. Whitney; Songs, (2) by Mr. den Arend; Paper, "New Year in Japan" (Original), Mr. Bennett; Songs, (a) "Biondine Bella" (Gounod), (b) "Because I love you" (Hawley), Mrs. J. Walter; Recitation, "An old sweetheart of mine," Mr. Whitney; Violins Solo, "Introduction and Gavotte," (Ries), Mr. H. A. Poole.

"STAR IN THE EAST" INSTALLATION.

On Monday evening at the Masonic Temple, Main Street, Yokohama, Wor. Bro. Andrew Patterson installed with impressive dignity Bro. A. R. G. Clark as W.M. of the "Star in the East" Lodge, No. 640, S.C. The following Brethren were then invested:—

Wor. Bro. H. W. Lea I.P.M.
Wor. Bro. T. E. Beatty, P.M. Dep. M.
Bro. J. S. Robinson Sub. M.
Bro. Rev. J. G. Cleveland S. W.
Bro. E. C. Fox J. W.
Bro. C. A. Peterson Treas.
Wor. Bro. J. T. Griffin, P.M. Sec.
Bro. Rev. W. S. Worden Chap.
Bro. J. Diack Arch.
Bro. C. F. Pope S. D.
Bro. I. Delhougue J. D.
Bro. R. McCrince D. of C.
Wor. Bro. O. Keil, P.M. Org.
Bro. T. M. Laffin I. G.
Bro. O. Brüll Stewards.
Bro. F. W. Thomas Stewards.
Bro. H. Ivison Tyler.

After the Lodge was closed some forty of the Brethren sat down to a banquet provided by Bro. C. B. Clausen. The newly installed Master presided and the usual Masonic toasts were given and duly honoured.

THE PACIFIC MAIL.

COMMENTING on the recent declaration of a dividend by the Pacific Mail Steamship Company, the *New York Herald*, says:—It is eleven years since the Pacific Mail Steamship Company stopped paying dividends, the last one being 1½ per cent., or at the rate of 5 per cent. per annum. The first dividend ever paid was 10 per cent., on May 12th, 1856, on \$3,361,000 of stock. Another dividend of 15 per cent. was paid in November of the same year, making 25 altogether, and an average of 20 to 25 per cent. per annum was paid during the next ten years. Then the rate dropped off gradually until, in 1884, it was 5 per cent.

DEATH OF THE GOVERNOR-GENERAL OF FRENCH INDO-CHINA.

THE *Messageur de Chine* gives an account of the death of M. Rousseau, Governor-General of French Indo-China. It appears that against the advice of his doctor and his friends he undertook recently a trip in Annam, Cochinchina, and on the Cambodge to the ruins of Angkor-Wat. The hardships of this trip told

upon him and on his return to Hanoi he refused to rest, but engaged himself in innumerable details of business, until he was stopped by an attack of congestion of the liver. He recovered from this under the sedulous care of his regular attendant, M. Delrieu, and the chief medical authority of Cochinchina, M. Ayme, who was spending the winter in Tongking for his own health. Subsequently to this he was attacked by constipation which refused to yield to any of the remedies that were tried, and he was unable to take any nourishment; and this attack had too soon a fatal termination.—*N.-C. Daily News*.

MONTHLY CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for November, showing the foreign trade of the Empire for the month:—

	SILVER YEN.	SILVER YEN.
Exports	11,699,874.300	12,317,300.680

THE PHILIPPINE REBELLION.

THE *China Mail* on the 17th December published the following telegram received from its own correspondents, then at the Spanish Headquarters:—

The rebellion is spreading in the Province of Batangas and Pampanga, and in a less degree in the Province of Morong, embracing the Island of Luzon to the South, and in the Province of

Bulacan in the North. In fact, all the Tagalog Provinces.

The chief interest centres in the Province of Cavite, where the rebel stronghold will shortly be attacked by the Spanish forces. It is expected that General Pola Vieja will direct these operations in person.

General La Chabrie has assumed command of the Spanish forces in the Provinces of Batangas and La Laguna, and has started northward in order to clear the rebels in from that region.

Traffic on the Manila-Dagupan Railway is now entirely suspended in consequence of the operations of the Spanish troops under General Rios around Meycauyan, about fifteen kilometres north of Manila, beyond which the dangerous zone begins.

Considerable numbers of the people in the Northern Provinces still remain loyal to the Government.

Unfortunately, there is some disaffection amongst the native auxiliaries on the Spanish side, and on Friday last, the 11th inst., a column of 250 native troops deserted in Bulacan, and went over to the rebels. Frequent executions in the Spanish army, up to the present, have proved ineffectual to stop desertion. Twenty-one men were executed at Cavite, and four in Manila on Monday, the 14th instant, for attempting to desert.

Emilio Aguinaldo, one of the principal leaders of the revolutionary movement, commands the rebels in the Cavite Province. Two Spanish ladies are held prisoners in the rebel stronghold at Imus.

The Japanese cruiser *Yoshino* has arrived from Yokohama. The British gunboat *Daphne* is moored in the roadstead commanding the central part of the city of Manila. The British Consulate is guarded every night by a party of bluejackets. At many places boats are held in constant readiness to enable the wealthy foreign residents to escape on board the various foreign warships now in the Harbour. This precautionary measure is necessary, as at any moment an outbreak might occur in Manila, where there is widespread disloyalty.

The Hongkong *Daily Press* on Dec. 18th wrote:—

It was rumoured yesterday that Dr. Rizal, Pedro Roxas, and Luna, the artist, were on Tuesday publicly shot at Manila for the conspicuous part they took in assisting the rebels in the Philippines. It was also said that the insurgents were making great headway in the country and that they were now within easy marching distance of Manila. As to the latter statement, however, it must be remembered that bands of insurgents have been hovering on the outskirts of the city for some time, and the report may have its origin only in the appearance of one of these bands at some particular point. All private advices received by letter state that no apprehension need be entertained as to the safety of the city itself, and we do not think any special uneasiness need be caused by the reports now current.

The following telegram has been received by Senor Navarro, Spanish Consul at Hongkong, from the Governor-General of the Philippines:—

Manila, December 18th.

Yesterday, the quarries of Meycauyan (the refuge and stronghold of the rebels in the Province of Bulacan), were attacked. The rebels were routed by the troops, who captured the position and killed 47 of the rebel force. We had only two wounded.

Yesterday and the day before, at Paranaque, the troops, who were in ambuscade, captured a rebel convoy of provisions and 149 bullocks, killing 10 men. We had no casualties.

THE PATENT LAWS.

THE laws of Patents, Trade Marks, and Designs, together with the Regulations, Forms, and Ordinances relating thereto, that recently appeared in the columns of the *Japan Mail*, can now be obtained in pamphlet form.

THE RUSSIAN SQUADRON.

IT is stated that the Russian man-of-war *Imperator Nicolai I.*, which left this station a few weeks ago for Europe, is to be replaced by the *Navarin*, a superior vessel. The *Navarin* is a steel turret ship of 9,476 tons displacement and is engaged to steam 15 knots.

WINDING-UP.

At an extraordinary meeting of shareholders in Messrs. Dakin Cruikshank & Co., Ltd., held at the Hongkong Hotel, it was decided to voluntarily wind-up the business. Mr. Maitland has been appointed liquidator at a fee of \$500.

THE LIBERALS AND THE NATIONAL UNIONISTS.

From the results of the voting for the Chairman of Committee of the Whole House, and for the members of the Budget Committee and the Standing Committees, the *Yorodsu Choho* infers that the Liberals and National Unionists have come together. By standing aloof from each other at the election for the President of the House, they left the field in possession of the *Shimpo-to*, and our contemporary thinks that the lesson learned by them on that occasion was sufficiently bitter to drive them once more into the same camp. Strong as is the rancour of the National Unionists towards the Liberals, their antipathy to the *Shimpo-to* is stronger, and since they must vote with one party or the other, unless, indeed, they efface themselves altogether by remaining absent from divisions, the probability is that they will raise their hands with the Liberals. There is always the contingency that they may split up, and then neutralize the preponderance that their adhesion would give to either the *Shimpo-to* or the *Fiyu-to*. For the moment, however, there are no signs of a split in their ranks. Hence the *Yorodsu Choho* deems it quite within the range of possibility that the Liberals and Unionists may combine to introduce a vote of want of confidence when the Diet re-assembles after the New Year's recess. Certainly it is quite on the cards that they may do so, but, after all, the results of the voting for a Chairman of Committee of the Whole House do not appear so very suggestive. It is true that the Liberal candidate obtained 240 votes, but there were two *Shimpo-to* candidates, Mr. Kashiwada Moribumi and Mr. Suzuki Shigetō, and between them they polled 241 votes. Had not the strength of the Party been thus divided, it seems that Mr. Kashiwada ought to have come out at the head of the poll. The composition of the Budget Committee is more remarkable, namely, 15 Liberals and 13 Unionists, against 11 *Shimpo-to* and 6 Independents. That is an exceedingly poor showing for the *Shimpo-to*. Their membership in the House is fully 95, whereas the National Unionists number only 33. It does not seem possible that the Unionists can have worked in combination with the *Shimpo-to* to produce such a result. However, there is no apparent reason why the Liberals and National Unionists should give the Government much trouble in connection with the Budget. If the *Shimpo-to* are content not to raise the old question of reducing administrative expenditures, the *Fiyu-to* can scarcely touch it.

THE WELCOME SOCIETY OF JAPAN.

The "Welcome Society" (*Khin-wai*) held its first Council meeting in October, 1892, and, in the spring of the following year, the Society commenced operations under the patronage of several Japanese nobles. It has at present a number of foreign gentlemen among its members. The head-office of the Society is situated in the Imperial Hotel, in Tokyo. The object of this Society is to afford as much convenience as possible to foreign visitors in Japan, and it has connection with the "Guides Association" (Yokohama and Kobe Kaiyusha), to which association fifty certificates from the Society have been granted for guides. The principal objects of the Welcome Society are as follows:—

1. Giving facilities for inspecting works of art and visiting places of interest.
2. Giving facilities for making purchases.
3. Facilitating travel.
4. Introducing tourists to well known men of Japan.

No tourist finds any difficulty in visiting any of the celebrated places or ancient ruin on the ordinary list, and in acquainting himself with their history. There are, however, not a few places that not only foreigners but even Japanese travellers find it difficult, if not impossible, to obtain permission to visit. Hitherto, persons desirous of visiting such places could not do so unless they procured letters of introduction

from the representatives of their own governments in Japan.

Since the establishment of this Society, the members have done all in their power to obtain permission for foreign visitors, in particular, to gain admission to all places of interest in Japan, it is now possible, on application to this Society, to procure permits for visiting the following places or institutions:—

Imperial Horticultural Gardens at Shinjuku.
Arsenal Gardens.
Houses of Peers and Representatives.
Court of Cassation.
Court of Appeal.
Prisons, Hospitals.
Government Schools.
Police Fencing Establishment.
Famous Factories.
Osaka Castle.
Osaka Mint, &c., &c.

From January 1894 to the end of 1896, the Society gave tickets of permit to 2,404 persons, of the following nationalities:—Americans, 1,139; Europeans, 1,144; other foreigners from Asia and Australia, 141.

At present Japan is a centre of attraction in the East, and the revised treaties will go into operation in a few years. Hence the motive of many persons in visiting Japan is not merely to enjoy her climate and scenery, as has hitherto been generally the case, but also to learn the true degree of her civilization and the customs of her people. The number of tourists is increasing day by day. The Society has therefore found it necessary to enlarge the scope of its labours and, with that object, a meeting was held, a few days ago, at which the President, Marquis Hachisuka; Chief Director, Mr. E. Shibusawa; Director, Mr. T. Masuda, and Baron Suyematsu, were present. Several topics came up for discussion, and among other things it was decided that, by contribution, a map of Japan in English should be compiled, showing the present condition of communications throughout the country, both by sea and by land, hotels, hot springs, and so forth, and giving information about the principal objects of the Society, its business, useful points for travellers, and having, further, on the back, printed advertisements of hotels, interpreters, and companies or shops important to foreign tourists. Ten thousand copies are to be published for distribution to tourists.

It may not, perhaps, be generally known that the work of this Society is purely a labour of love. No profit of any kind accrues to the members, either directly or indirectly. The Society was organized solely for the purpose of protecting tourists against the extortion that they were known to be suffering, and to increase their facilities for travelling and viewing the sights of the country. It was felt by the promoters that the constantly increasing concourse of tourists attracted by Japan is a veritable stream of Pactolus to the country, and that every effort should be made to remove difficulties or obstacles of a deterrent nature. One prominent hope was that the system of excessive commissions on purchases made by tourists might be amended, but it must be frankly confessed that no marked success has yet been attained in that particular direction. It is not, perhaps, within the competence of such a society to correct practices that bring grist to so many mills, and have now virtually passed into recognised customs. However, the Society proposed to do everything in its power, and with that laudable resolve each member put up a subscription of 30 yen, to be applied by the Committee to whatever ends might appear best calculated to benefit tourists. The light of the good work has truly been hidden under a bushel up to the present, for although the Society's Committee has been exerting itself vigorously, as the above record shows, the general public seem to know nothing about the affair, and even tourists themselves probably imagine that the *Khin-wai* is simply another device for relieving them of their loose cash, instead of being, as it is, an association that spends money, without any idea of return, proximately for the sake of their comfort, and ultimately for the benefit of the country that they help to enrich. The map now projected by the Society should prove very useful, for

although there is no lack of good maps of Japan, a chart compiled expressly for the convenience of tourists does not exist outside the pages of Murray's Handbook, and even there the sectional character of the maps and their wealth of not absolutely essential detail leave room for a publication of the kind contemplated by the Welcome Society.

THE LATE PRINCE MORI MOTONORI.

His Highness Prince Mori Motonori, formerly Chief of the Choshu clan, who died in Tokyo on the 23rd inst., represented one of the greatest of the old feudal families. Among the territorial barons the houses of Shimadzu (Satsuma) and Mori (Choshu) alone received the title of "Prince" when the nobility was reconstituted. Prince Mori was only 55 at the time of his death. In 1864, when the three *Karo* of Choshu involved the forces of the Clan in treasonable proceedings at Kyoto, Mori Motonori, then a youth of 25, and his father were ordered to retire from public life. But in consideration of the great part played by the clan in the drama of the Restoration, Mori's rank was restored in 1867, and the following year, he became a Councillor of State, receiving, at the same time, a pension of a hundred thousand *oku* of rice, in consideration of his distinguished services. As to his personal share in politics, it is difficult to speak, but his position as the head of one of the two great clans that effected the Restoration received full recognition. In 1879, he was raised to the second grade of the second class of official rank; in 1884, the Emperor made him a prince; in 1889, he attained the distinction of the first class of merit; in 1895, he was promoted to the second grade of the first class of official rank, and during the present month the grand cordon of the Rising Sun was conferred on him. It has been decided that he shall have a State funeral, an honour, hitherto bestowed on three dignitaries only during the Meiji era—apart, of course, from Imperial Princes—namely, Princes Iwakura, Sanjo, and Shimadzu.

RESIGNATION OF THE VICE-MINISTER OF HOME AFFAIRS.

The post of Vice-Minister of State for Home Affairs seems to be difficult to fill for any length of time under the present Cabinet. It is only a few weeks since Mr. Matsudaira was appointed in succession to Mr. Matsuoka, and it is now alleged that the former has tendered his resignation owing to a difference of opinion with Mr. Misiaki, Chief of the Local Government Bureau in the same Department, in connection with the Bill for amending the Press Law. The *Fomiori*, from which we take this news, says that Mr. Matsudaira's resignation is likely to be accepted.

THE AUSTRO-HUNGARIAN CONSUL IN YOKOHAMA.

We learn that the Shanghai journals are mistaken in their statement as to Mr. Eriljar's being appointed Austro-Hungarian Consul in Yokohama. The appointment is that of Secretary to the Consulate. Mr. de Flesch remains Consul as before.

A new charitable society, quite distinct from the Dainihon Hinmin Kijyo Jizenkai (Japanese Charity Association) of Hirai-cho, Fukagawa, Tokyo, has been established. It is called the Kyosai Jizenkai (United Charity Association), and is situated at Susaki, Fukagawa. The President is Viscount Mori and the Vice-President is Mr. Onoda, late of the Police Board. The object is, we hear, to help the poor who now wander about the streets by teaching them some trade; and also to assist prisoners on their discharge from jail.

IMPERIAL DIET.

FRIDAY, DECEMBER 25TH.
HOUSE OF REPRESENTATIVES.

When the ceremony of opening the Diet had been duly concluded, the members of the Lower House took a short recess, and were summoned to the debating hall at 10.55 a.m. by the sound of the bell. Mr. Hatoyama, President of the House, announced that in compliance with the House's instructions, he had prepared a draft reply to the Speech from the Throne, as follows:—

Your Majesty's humble servants, members of the House of Representatives, were profoundly impressed by Your Majesty's personal performance of the opening ceremony of the tenth session of the Imperial Diet, and by the gracious speech with which Your Majesty was pleased to favour them on that occasion.

Your Majesty, endowed by heaven for the administration of civil and military affairs, and gifted with august virtue and benevolence that permeate the four quarters, has been pleased to convey instructions as to various important measures of State. It is the respectful intention of Your Majesty's servants, keeping always in view Your Majesty's august will, to perform their legislative functions with prudence and circumspection, so that they may be able, on the one hand, to duly discharge their duties of deliberation and consent in conformity with Your Majesty's commands, and, on the other, to prove true to the trust reposed in them by the nation.

Your Majesty's humble servant, Hatoyama Kazuo, President of the House of Representatives, most reverentially and humbly submits the above.

This draft was endorsed by the House after an insignificant amendment in its wording.

Mr. Inouye Kakugoro (Independent) wished to call the attention of the House to an act, amounting to want of propriety on the part of Mr. Matsumoto Juntaro (one of the so-called "Business Men"), a member newly elected for Osaka, in place of the late Mr. Awaya Shinazo, who had died soon after the close of last session. Mr. Matsumoto had violated the etiquette of the House by attending the opening ceremony of the Diet in a frock-coat, instead of wearing the regulation swallow-tail. It seemed desirable that the President should convey a warning to the said member.

Mr. Kusakari Shingoro (Liberal), moved that the offending member be handed over to the Disciplinary Committee, but this motion failed to obtain supporters.

Mr. Tanaka Shozo did not object to submitting the case to the Disciplinary Committee, but as nobody could avoid the perpetration of unwitting blunders at one time or another, he trusted that the Committee would deal leniently with the offender.

The President then announced the order for the next day and the House rose at noon.

SATURDAY, DEC. 26TH.

HOUSE OF PEERS.

The House met at a quarter past 9 a.m., Prince Konoye, President of the House, in the chair, the Order of the Day being election of Chairman of the Committee of the Whole House and members of Standing Committees. The following draft of the House's reply to the Speech from the Throne was read and approved unanimously:—

Your Majesty's humble servants, members of the House of Peers, most reverently submit this Address.

Your August and enlightened Majesty has personally performed the opening ceremony of the tenth session of the Diet, and has been pleased to favour them with a gracious speech.

Your Majesty's servants have been reminded that the relations with the Treaty Powers are growing more friendly than ever; that the work of revising the Treaties is about to be consummated, and that the national prestige is steadily increasing, while, with regard to the completing of national defences and the administration of Formosa, Your Majesty has condescended to favour them with profound and enlightened measures.

It is the humble intention of Your Majesty's servants to ever keep in view the commands of Your Majesty, and to discharge their duty of co-operation so that they may contribute their

humble share to the achievement of the Imperial policy. In all humility and reverence Your Majesty's servants submit this Address.

Prince Konoye temporarily left the chair in charge of Marquis Kuroda, Vice-President of the House, and proceeded to carry the above address to the Palace.

The Vice-President then caused one of the secretaries to read, first a report showing the changes that had occurred in the personnel of the House, and secondly, an official urgency Bill for postponing the date of enforcing the Commercial and Civil Codes.

The first business on the Order of the Day was then taken with the following result, the members present being 145:—Prince Tokugawa 73 votes; Viscount Tani, 68; Prince Niijo and Marquis Hosokawa, 1 each.

The election of Prince Tokugawa as Chairman of the Committee of the Whole House was then duly announced, and the House took a recess.

On the re-assembling of the House, Prince Konoye announced from the Chair that he had been received in audience by the Emperor, and had submitted the Address of the House, whereupon the Emperor had been pleased to favour him with the following words:—

We appreciate the warm respect displayed by House of Peers.

The results of the election of members of the various Standing Committees was next announced, but need not be given here.

The Urgency Bill introduced by the Government then came up for discussion.

Mr. Kiyoura, Minister of Justice, explained that the revision of the Codes was not yet completed; that the Government consequently wished to have the date of their enforcement postponed till the end of June, 1898, being resolved that the work of revision should be completed by that time, and the revised Codes submitted to the Diet for approval. Baron Komatsu moved an amendment but obtained no supporters, and the Bill was passed without going through the usual stages of discussion.

After the midday recess, another urgency official Bill was introduced, relating to the expenses of a State funeral for Prince Mori, the appropriation being twenty thousand yen.

Baron Tajiri, Vice-Minister of Finance and Government Delegate, said that as the Bill explained itself, no necessity existed to speak at any length about it. The Government hoped that it would pass without the routine of a second and third reading.

Viscount Tani ascended the rostrum and spoke in solemn and respectful tones about the merits of the House of Prince Mori, father and son, in consummating the grand work of the Restoration. It was universally felt that such merit could not easily be found in the annals of the Empire, and he hoped that the House would endorse the Bill without one dissenting voice.

The Bill was carried at once, the second and third readings being dispensed with.

The House rose at 10 minutes past 2 p.m.

HOUSE OF REPRESENTATIVES.

The House met at 10 a.m., Mr. Shimada, Vice-President, in the chair; the Order of the Day being—

1.—Election of a Chairman of the Committee of the Whole House.
2.—Election of Standing Committees.

Before proceeding to the Order of the Day, the acting President caused one of the secretaries to report the vacancies resulting from death, resignation, or process of law, among the members, as well as the issue of by-elections; the appointment of Government Delegates; the Bills presented either by the Government or by members of the House, and so forth.

When the first topic on the Order of the Day was about to be taken, Mr. Tanaka Shozo (*Shimpo-to*) wished to call the attention of the President to the fact that as their pecuniary allowances were to be handed that day to the members of the House, their attention seemed to be unduly diverted from the business of the day. They ought to be cautioned.

The President then asked the House to proceed with the election of the Chairman of Com-

mittee of the Whole House, the voting to be by closed ballot. The members present were then counted and found to be 279.

About half an hour later, the result of the voting was announced as follows:—

Mr. Tanikawa Shochu (Liberal), 240 votes; Mr. Kashiwada Moribumi (Parliamentary Club), 231; Mr. Kawashima Jun, 4; and Mr. Suzuki Shigeto (*Shimpo-to*), 1. The remaining two ballots were invalid. The Liberal candidate was declared duly elected.

The acting President asked the House to elect the members of Standing Committees in the committee rooms.

At 30 minutes past noon, the members were summoned to the Hall, and the President announced that he had obtained audience of the Emperor at 11 a.m. and had submitted the reply of the House to the Speech from the Throne. The Emperor had been pleased to favour him with these words:—

We appreciate the warm respect of the House of Representatives.

The members of the House received this announcement standing with bowed heads.

The President then caused one of the Secretaries to read two urgency Bills which had been sent down from the House of Peers, and stated that as the Government asked the House to discuss the Bills at once, a short recess would be taken so that the members might have an opportunity of examining the measures.

At half-past 1 p.m. the House reassembled, and the discussion of the first Government urgency Bill, relating to postponing the date of enforcing the Civil and Commercial Codes, was proceeded with. The Bill ran thus:—

The General Provisions of the Commercial Code, chapters 1 to 5 and chapters 7 to 11, in Section I.; Section II. of the same Code, issued in 1890 by Law No. XXXII.; Regulations for the Application of Laws, issued in the same year, by Law No. XCVII.; the Law of Property and the Law of Persons in the Civil Code, issued in the same year by Law No. XCVIII.; and all Laws and Regulations connected with the practical operation of the above laws, shall not be carried into effect till June 30th of the 31st year of Meiji (1898). Provided that Chapters II. and IV. of Sect. I. of the Commercial Code shall be in force as heretofore, in so far as they concern mercantile corporations.

Mr. Kiyoura, Minister of Justice, explained that the operation of the laws and regulations referred to in the Bill had been postponed from January, 1892, to December, 1896. Subsequently during 1893, a portion of the Commercial Code had been put into force, and during the current year the amendment of a large part of the Civil Code had been effected. Still the work of amendment was not yet completed and the Government wished to have the date of enforcement postponed until the end of June, 1898, in order that the revision of the remaining part might be completed.

In reply to a question put by Mr. Yamada Taizo (Liberal), as to the date of the completion of the work of revision and of the enforcement of the Codes, Mr. Kiyoura replied that since the Government intended to put the revised Treaties into operation from July, 1899, and since the Codes must go into force at least one year prior to the operation of the revised Treaties therefore the Government's programme was to effect the revision in time to submit the amended drafts for the approval of the Diet in its eleventh session.

The Bill was passed without division, and the second and third readings were dispensed with.

The second urgency Bill was a supplementary Budget for 20,000 yen to defray the expenses of a State funeral.

Baron Tajiri, Vice-Minister of Finance and Government Delegate, briefly explained that the money was to be employed to give a State funeral to the late Prince Mori.

This Bill also was passed at once without division.

Mr. Hayakawa Ryusuke (Unionist), observed that as a State funeral was undertaken by the nation and as representatives of foreign Powers would be present, extreme care should be ex-

exercised so as to conduct the ceremony in a manner worthy of the occasion.

The House rose at 15 minutes past 2 p.m. to re-assemble from Jan. 8th next year.

The composition of the Budget Committee, as elected from each section, is as follows:—

Liberals, 15; National Unionists, 13; *Shimpo to*, 11; Independents, 6; in all, 45.

In the Petitions Committee, Disciplinary Committee, and Final Account Committee, the combined numerical strength of the Liberals and National Unionists, supposing them to work together, exceeds that of the *Shimpo to* and their allies.

BARON NODA ON FORMOSA.

Accountant-General Baron Noda, who recently undertook a tour of inspection through Formosa, has brought home much interesting information about this new territory. He finds that the following is an accurate census of various places:—

Census, No. of Households.	Males.	Females.	Total.
Kelung	23,538	43,658	57,196
Taipei	50,154	78,127	128,281
Shinte	85,291	81,948	167,239
Myole	16,839	—	16,839
Tai-chou	44,897	—	44,897
Chanho	50,935	143,481	194,416
Peltan	3,079	9,630	12,709
Honlim	37,653	28,000	65,653
Kagi	14,000	35,000	49,000
Tainan	83,000	145,000	228,000
Honsoa	60,000	150,000	210,000
Taku	73,729	111,111	184,840
The Pescadores	8,245	25,405	33,650
Total	444,811	—	444,811

In Kelung, Taipei, and Shinte the census of Japanese living in the adjacent country has not yet been precisely ascertained, but as 15,907 Japanese (males and females) landed at Kelung from March to September 1896, the remainder, after 2,250 is deducted from that number, may be considered as a fairly accurate estimate of the number living in Kelung, Taipei, and Shinte.

CENSUS OF WEALTHY NATIVES.

Yen.	Kelung.	Shinte.	Tai-chou.	Peltan.	Kagi.	Tainan.	Taku.	Total.
Over 2,000,000	1	1	1	1	1	1	1	7
Over 1,000,000	1	1	1	1	1	1	1	7
Over 500,000	1	1	1	1	1	1	1	7
Over 250,000	1	1	1	1	1	1	1	7
Over 150,000	1	1	1	1	1	1	1	7
Over 100,000	1	1	1	1	1	1	1	7
Over 50,000	1	1	1	1	1	1	1	7
Over 30,000	1	1	1	1	1	1	1	7
Over 20,000	1	1	1	1	1	1	1	7
Over 10,000	1	1	1	1	1	1	1	7
Total	6	6	6	6	6	6	6	42

Scales and measures:—These are most irregular, everybody making scales or measures as suit his purpose. The shapes are also diverse.

Rice and agricultural products:—The rice fields in the southern half of the island total 87,274 *ho* approximately (1 *ho* corresponds to a little over 8.2 *tan* of Japanese measurement), and harvests are taken twice a year, namely, in May and October. The later harvest is about a quarter less yield than the earlier and the quality of the grain is inferior. The average yield of the year aggregates 2,603,000 *koku* (1 *koku* in Formosa corresponds to about 1 half of the Japanese measure) of which 541,000 *koku* or so are transported to other districts of the island where the rice crop is insufficient to support the people, or exported to China. In general a dearth visits the southern districts about twice every 60 years, while in Hinchun districts a dearth is expected about thrice every 30 to 40 years. Miscellaneous cereals are very scarce, but sugar cane is cultivated on dry farms and tea on hilly places.

(N.B.—In all these figures fractions of yen are omitted.)
* Increase. † Decrease.

With regard to the principal items of increase

in the Revenue for the 30th fiscal year, as compared with that for the preceding fiscal year, we have the following facts:—

In the Ordinary Revenue, the items of increase are Business Tax (5,874,000 yen); tobacco monopoly (716,000 yen); amended *saké* tax (11,410,000 yen); additional receipts from Customs duties (460,000 yen); from Income tax (471,000 yen); additional receipts from railways (1,400,000 yen); additional receipts from Government forests (430,000 yen), and from post and telegraph services (2,085,000 yen) and so forth, the total increment of revenue being 20,659,925 yen.

In the Extraordinary Revenue Section the items of increase are:—The Public Undertakings Loan, in conformity with the original programme; appropriation from the Indemnity, and so forth, giving a total increase of 55,448,354 yen approximately. On the other hand, there are diminutions in the interest on deposits, the appropriation from the previous year's surplus, the extraordinary war fund, and so forth, the total being of 26,819,298 yen. Hence the net increase of Extraordinary Revenue is 28,629,056 yen.

The principal items of increased expenditures are as follow:—A sum of 299,700 yen, approximately, for establishing new Legations in Hawaii, Mexico, Brazil, and Siam, and Consulates in Sydney, Antwerp, Chicago, Manila, and Newchwang; 800,000 yen, spread over six years, as aid towards re-constructing the harbour of Nagasaki; 522,400 yen, for putting the Tobacco Monopoly into operation; 2,060,000 yen for aiding the Central and Local Industrial Banks; 260,700 yen for expanding the Kobe Customs premises; 1,000,000 yen for the 2nd Reserve Fund; 1,006,400 yen for introducing changes in the organization of Gendarmes in Formosa; 596,400 yen for constructing a fort at Maizuru; 271,300 yen for a fort at Nagasaki; 532,000 yen for a fort at Hakodate (all the three last items being spread over 5 years); 164,500 yen for constructing a fort at Tsushima (as a continuing work of four years); 4,896,100 yen, spread over five years for arming the above four forts; 19,363,700 yen (spread over 7 years) by way of initiatory fund on account of the second-period programme of Army Expansion; 9,854,500 yen (spread over 6 years) as additional expenses for the improvement of arms; 6,802,000 yen as an extraordinary war fund for settling matters connected with the Japan-China War; 118,324,700 yen (spread over 7 years) for constructing warships, dockyards, official buildings, and for making arms, on account of the Second-Period programme of Naval Expansion; 225,000 yen (spread over three years) for constructing a gunpowder factory at Shimosa; 320,000 yen (spread over eight years) for establishing the Imperial Library; 729,300 yen (spread over 5 years) for founding the college of medicine in Kyoto; 8,814,700 yen (spread over 5 years) for participating in the World's Exposition to be held in Paris; 223,100 yen for stretching telegraph wires between Tokyo and Sapporo; 408,500 yen for stretching telegraph wires between Tokyo-Osaka, Osaka-Tokushima, Osaka-Marugame, and so forth; 18,562,000 yen (spread over 12 years) for constructing railways in Hokkaido; 2,188,600 yen (spread over 10 years) for constructing the harbour of Otaru.

In the First Supplementary Budget, sums aggregating 1,339,800 yen are demanded, to increase the working funds at the Tokyo and Osaka Arsenals, and the Senju Woolen Factory; these sums to be ultimately made good out of the Indemnity, inasmuch as the expenditures in question are connected with the expansion of the national defences. The Second Supplementary Budget contains a sum of 6,420,300 yen for supplementing the expenditures for Formosa; this also to be made good out of the Indemnity. All the figures given are in round numbers. Besides the above, there are a Budget relating to Special Finance and a Supplementary Budget attached, as well as a Supplementary Budget relating to the Special Finance for the 29th fiscal year. We omit these from our abbreviated epitome.

The Budget for Formosa is included in the

Special Accounts, and may be epitomized as follows:—

Ordinary Revenue	Yen 8,112,264.000
Extraordinary Revenue	9,240.000
Supplementary Fund	6,420,330.000

TotalYen 14,541,834.000

Ordinary Expenditure	Yen 10,524,040.000
Extraordinary Expenditure ...	4,017,790.000

TotalYen 14,541,930.000

PARLIAMENTARY NOTES.

On Saturday last, a scene of unusual commotion was presented in the sixth section-room of the House of Representatives, in connection with the election of the Budget Committee, five from each section. Owing to some unexplained cause, three *Shimpo-to* members failed to be present while the election was going on, and did not appear until it was over. When they found that all the five committee-men had been returned by the Liberals and Unionists, the three members wished to exercise their privilege of voting. Another *Shimpo-to* member of the same section who presided over the election had also been strangely remiss, for he had forgotten to cast his vote. He, too, wished to remedy the omission, but as the result of the election seemed likely to be reversed in favour of the *Shimpo-to* had these four members been allowed to vote, the Liberals and Unionists objected, and a sharp discussion arising, the lobby became crowded with members from other sections. It was finally decided that the four defaulters must not be allowed to vote, and the original election was held valid.

A similar and even more serious dispute occurred in connection with the election of the Chairman of the Budget Committee. After the result of the voting for the committee-men had been reported to the House, the President announced that the committee-men must proceed to elect a Chairman and Manager from among themselves. At the close of the sitting, the President further mentioned that as the House was to resume its session from January 8th he should expect to receive a report of the result of the Committee-men's choice by that time. Now it has hitherto been customary to elect the Chairman and Manager of the Budget Committee, as soon as the Committee is constituted. Hence the majority of the Committee-men repaired to the Committee-room after the House had risen. But when the voting was about to commence the members of the Committee identified with the *Shimpo-to* declared that the election must be conducted on the day specified by the President. This assertion threw the Committee into great confusion, and it was decided that the question must be debated then and there. The President came into the room and stated it had been his intention to specify the date for electing the officers of the Budget Committee. But the majority would not listen to his explanation on the ground that they were not under any obligation to obey Presidential injunctions other than those entered in the proceedings of the House, and that the election must be made at once. The *Shimpo-to* members of the Committee still persisting to protest against the ruling of the majority, it was deemed advisable to ask the attendance of the shorthand writers of the House so as to place the debate on record, since the action taken might furnish a precedent. But no sooner had the stenographers come in and taken their places than they were re-called by order of the President, a step that evoked strong expressions of indignation from the Liberal and Unionist members. Mr. Motoda, one of the Committee, suggested that the re-call of the stenographers should be made a separate affair, and that though the Committee could legitimately elect its officers at once, it might be advisable to defer the proceeding until some other day, as the members were not all present. This moderate counsel prevailed, and it was decided that Mr. Motoda (Unionist) and Mr. Yamada Taizo (Liberal) should, as delegates of the committee, call on the President and ask him to issue letters

to the committee-men directing them to conduct the election on the 28th inst. The deputies proceeded on their errand, and having obtained the consent of the President, the election took place in the forenoon on Monday, with the result that Mr. Motoda was elected Chairman. He obtained 31 votes out of 39, six committee-men being absent.

OFFICIAL AND PRIVATE BILLS RELATING TO PERSONAL RIGHTS.

The long talked-of Bill for amending the Press Law, introduced by the Government, is as follows:—

Art. XIX.—The Minister of Home Affairs or of War may prohibit the sale or distribution of daily journals or periodicals that have published leading articles or notes coming under Arts. XXII., XXXII., and XXXIII., or may seize the particular number containing such matter.

Art. XX.—To be rescinded.

Art. XXII.—The Minister of Foreign Affairs, or of War, or of the Navy, may issue a special injunction forbidding the publication of matter relating to international or military affairs.

Art. XXIII.—In case a daily journal or periodical is prosecuted in connexion with Arts. XXII., XXXII., or XXXIII., the Minister of Home Affairs or of War may provisionally suspend the issue of the offending journal for a period not exceeding one week, the limit of suspension for periodicals is not to exceed the period corresponding to three successive issues. In accordance with the gravity of offences, Judges may suppress the publication of a journal that has violated the provisions specified in Arts. XXII., XXXII., and XXXIII.

Art. XXXII.—In the event of a journal's publishing matter calculated to impair the dignity of the Imperial Court, or to subvert the political system, or derange the laws of the realm, its publisher, editor, and printer shall be sentenced to minor confinement of not less than two months and not more than two years with the additional imposition of a fine of not less than 50 yen and not more than 300 yen.

Plant used for the publication of the offensive matter specified above shall be seized.

Art. XXXIII.—In the event of a journal's containing matter calculated to disturb good order and public morals, the publisher and an editor of the offending journal shall be sentenced to minor confinement of not less than one month and not more than six months, and to the imposition of a fine ranging between 20 and 300 yen.

Government Amendment of Law of Public Meeting and Political Association:—

Clause 3, Art. VIII. to be amended as follows:—Even though a meeting be non-political, should such meeting be deemed likely to injure public peace or good order, Constables may attend and superintend it.

Clause 5, Art. XIII. to be rescinded.

Provision in Art. XXVI. dis-qualifying a foreign subject to join a political association to be rescinded.

Amended Bills regarding the Press Law, Law of Public Meeting and Political Association, Law of Publication, Law of Election of the House of Representatives, all of which have been introduced by members identified with the *Shimpo-to*, are briefly as follows:—

The Amendment of the Press Law proposes to rescind the clauses relating to suspension and suppression, but to leave the provisions about punishment and fine virtually unaltered. Clauses about news agencies are inserted in the amendment, as well as provisions authorizing newspaper branch offices to issue special sheets containing news of events in the vicinity and to append it as a supplement to the paper published at the head office. The amendment of the Law of Publication is on the same lines as that of the Press Law.

The chief points of alteration in the Amended Law of Public Meeting and Political Association are that one political association shall be allowed to combine with another; that the clause requiring notice to be given 24 hours in advance when a political meeting or a meeting of similar description is to be held, shall be abolished; that the restraints imposed on meetings in open air shall be lessened, and that the power of dissolving the meeting shall be limited. The Bill for amending the Law of Election proposes that the minimum age limit of electors and persons eligible for election be reduced to 20 and 25 years, respectively; that the property qualification of electors, so far as concerns the land tax and the business tax, be reduced from 15 yen to 5 yen, with no limit whatever about income tax; that persons eligible for election shall include all that are enjoying the rights of a citizen, without any property qualification.

COST OF A PACIFIC CABLE.

Messrs. Taguchi, Sakatani, and four others, acting under instructions from the Japan Economic Society, have investigated the problem of laying a submarine cable from Japan to the opposite coast of America. They submitted the result of their researches in a report in which two routes are discussed, one starting from Hokkaido and going to Alaska *via* Russian Siberia and Behring Straits, and the other stretching from San Francisco, or its vicinity, *via* Hawaii. The former, though the shorter in point of distance, has many draw-backs, including the severity of the weather that prevails in the higher latitudes, and the liability of the cable's being continually interrupted, in addition to the strategic defect of the line's passing through Russian Siberia and along the coast of Canada. Therefore, all things considered, the other route *via* the Hawaiian islands is to be recommended. The cost of construction by the latter route is estimated as follows:—

	Yen.
Cost of 6,000 miles of cable	11,160,000
Two steamers	1,800,000
Laying charges	270,000
Working account	450,000
	13,680,000
Gross receipts per annum	1,674,900
Expenses	990,000
Office expenses	45,000
Three cable offices	216,000
Current expenses of steamers	153,000
Maintenance of cable ...	585,000
Profit	675,000
Yearly dividend of 3 per cent. on capital	410,400
Reserve, for paying off construction expenses at a per cent. per annum	264,600

As such a cable would connect Eastern Asia with America and therefore indirectly connect the former with Europe and Australia, the receipts would increase yearly so long as the cable was efficient. Among the benefits that would accrue would be a shortening of the time in transmission of telegrams; reduction of charges; the possibility of transmitting messages in the Japanese language. The Investigation Committee is of opinion that the scheme should be undertaken by private individuals rather than by the Government, and that the capitalists of Hawaii and America should become stockholders, so that international relations with those two countries could be strengthened.

FUNERAL OF THE LATE MR. PEYTON JAUDON.

The funeral of the late Mr. Peyton Jaudon took place on the 26th instant. At half-past ten in the forenoon the coffin was carried into the Trinity Cathedral in Tsukiji, the pall-bearers being Mr. J. Herod, Secretary of the United States Legation; Mr. J. H. Gubbins, Japanese Secretary of the British Legation; Mr. H. W. Denison, Legal Adviser to the Japanese Government; Mr. J. Conder, Mr. A. Macmillan, and Captain F. Brinkley. The Cathedral was filled with mourners, among whom were the Ministers of the United States and Italy, Baron and Baroness Sannomiya, Baron d'Aehrenthal, most of the leading foreign residents of Tokyo, and many Japanese. After a full choral service, at which the principal officiating Minister was the Rev. J. M. Francis, and the favourite hymns of the deceased, "Nearer, my God, to Thee," and "Hark, hark, my soul, angelic songs are swelling," were sung, the coffin was replaced in the hearse, and the cortege set out for Aoyama Cemetery, where it was met by the Right Reverend Bishop McKim and the Rev. J. M. Francis, and where the band of mourners received a considerable accession, both foreign and Japanese. Bishop McKim performed the service at the grave. Great numbers of beautiful wreaths and many handsome stands of flowers, set in Japanese fashion, had been sent by sorrowing friends, and nothing was wanting to show the deep esteem and regard widely entertained for the deceased.

THE GOVERNOR-GENERAL OF FORMOSA AND FOOT-BINDING.

WHILE fully endorsing the wisdom of Baron NOGI'S announcement that due respect must be shown towards the customs and conventions of the Chinese in Formosa, we can not but regret that His Excellency should have designated foot-binding as one of the things deserving toleration. Official interference with traditional usages that have become dear to a people is to be emphatically deprecated, so long as the usages in question are not hurtful physically or morally. But foot-binding is distinctly hurtful. There is not a shadow of excuse to be found for it. To produce deformity by a cruelly painful process, children incapable of resistance being the victims, is a palpable violation of the first law of humanity. If it be right to crush the bones in a little girl's foot, and subject it to restraints that deform it, and render it comparatively useless throughout life—if it be right to perpetrate such a shocking atrocity merely because men's wanton fancy approves the monstrous result, why should it not be right to allow parents to make a cripple of a child in order that it may earn its livelihood and theirs by begging? We had hoped that Baron NOGI would have exercised his authority for putting an end to this shocking abuse, and it is a disappointment as well as an astonishment to find him publicly indicating it as a thing to be permitted. Foot-binding is nothing less than criminal mutilation. Would the Japanese suffer such an awful custom to be inaugurated in their own country? Surely not for an instant. Why, then, should they suffer it to continue in Formosa merely because they find it there? The average Chinaman's habits have so completely familiarized him with insanitary conditions that he prefers them and would adhere to them as a matter of choice. Why should not his perverted inclination be respected in that matter if the custom of cruelly mutilating his female children is to be permitted, merely because it is a custom? The Japanese are admittedly anxious to administer Formosa in accordance with the best principles of civilization. Yet we find the Governor-General of the island, an enlightened and humane man, directing his subordinates to respect and refrain from interfering with the barbarous custom of foot-binding. We are fully sensible that in criticizing Baron NOGI'S programme, we expose ourselves to the retort that foot-binding is not interdicted in the British colony of Hongkong. The point is not to be gained. Possibly some palliation for Great Britain's disgraceful tolerance of such a savage custom may be found in the fact that, when the island of Victoria came into her possession fifty-five years ago, the foot-binding abuse had not attracted special attention. Things were suffered

to drift on in their old channels without much inquiry, the general policy of the Hongkong Administration being practically identical with the general policy of Japan in Formosa, as enunciated by Governor-General NOGI; namely, a policy of non-interference with custom or convention that did not directly hinder the preservation of good order and morality. But whatever value attached to that excuse in past years, there can be no question that the Hongkong Government ought long ago to have extended to all female children born under the shadow of the British flag the protection against brutal maiming and mutilation that every subject is entitled to expect from those set in authority. The foreign philanthropists that recently started, and are now fomenting, in China such a praiseworthy agitation against the foot-binding barbarity, were guilty of a singular oversight when they addressed a petition to the Empress of CHINA alone. They ought also to have petitioned the Empress-Queen of GREAT BRITAIN to extend similar relief to the Chinese female children living in HER MAJESTY'S dominions. Meanwhile, two wrongs do not make a right. Japan finds an opportunity to set an example to Great Britain, and we sincerely hope that she may yet be persuaded to avail herself of the occasion. Apart from the general principles of humanity, and the duty of every Government to protect the lives and limbs of its subjects, there is a particular case worth considering—the case of a Japanese woman married to a Chinaman. Suppose that the mother of girl children born in such wedlock objects to torture them for the sake of deforming their feet, and appeals to the Japanese Authorities against her husband's *fiat*, what course would the Authorities adopt? They certainly could not compel the woman to acquiesce in the barbarous mutilation of her offspring; but, on the other hand, if they forbid the father to have his children's feet bound, what becomes of the toleration nominally extended to the horrible custom? Queues, pantaloons, paper-soled shoes, tunics, and such things lie beyond the range of proper legislative interference, but foot-binding is a shocking act of criminal inhumanity that should be sternly interdicted. We have published strongly worded appeals from Japanese philanthropists, and translated vehement protests from Japanese publicists, against granting the smallest measure of official licence to the vice of opium-smoking. But to smoke opium or not to smoke it is within every individual's free choice, whereas an unfortunate little baby has no power to save its feet from mutilation by cruel parents. We call it farcically inconsistent on the part of the Japanese Government to inaugurate a system of checks upon the use of opium while granting complete licence in the matter of foot-binding. The subject is well worthy of consideration, not merely

by the Governor-General of Formosa and the Minister of State for Colonization Affairs, but also by every humane Japanese. The courageous discharge of her duty in this matter by Japan, would win for her the approval of the civilized world and of her own historians, as well as the gratitude of many generations of Chinese women.

MUSICAL NOVELTIES.

AT the close of a concert given by the Gakuyukwai on the afternoon of Dec. 21st, in the hall of the Gagaku-keikoshō, an addition to the programme was offered by Mr. ECKERT, who produced a new march of his own composition which was received with warm and well-merited applause. Apart from the spirit and brightness of the work, it attracted attention by the ingenuity with which at a certain stage, the Japanese song, "Kimigayo" was interwoven with one of the author's original melodies. Alone and unsupported, the grave and measured strains of the "Kimigayo" would scarcely meet the requirements of an animated military march; but Mr. ECKERT has employed the device of combining with it a rapid and enlivening movement which stands out in brisk relief to the stateliness of the native air. The union of two melodies of different character is not uncommon in musical compositions. Many of the happiest artistic conceptions have been thus wrought out. Such familiar examples as the duet of the two girls in "Der Freyschutz," and the serenade in "Don Juan," show what can be done in this way by a master-hand, and the noteworthy instances in classical music are almost without number. In joining an accessory melody to the "Kimigayo," the peculiar form of the Japanese time,—which is by no means pliant or submissive to harmonic treatment,—needs to be carefully considered, but Mr. ECKERT seems to have found little difficulty in blending his themes consistently. An extremely good effect was produced in the performance of the march by using the voices of some members of the band. During the "Kimigayo" passage, such instruments as could be spared were temporarily dropped, the players singing the popular air in unison. The idea is not without precedent, though naturally less practicable with a brass band than with an orchestra. The string family can always take up a chorus without diminishing the forces at command, whereas something must be sacrificed if voices are to be heard to an extent with a body of military musicians. Persons whose memory stretches back to the days when JULLIEN held sway at Drury Lane and Her Majesty's, may recall the fondness of "the great Mons." for vocal embellishments of this description. He introduced them often, and with a discretion which was not always his strongest characteristic; and by their aid

he added immensely to the colour and vividness of many of his operatic transcriptions. It is a far cry from London in the fifties to Tokyo in the nineties. One, at least, of Mr. ECKERT'S audience was indebted to him for calling up a pleasant recollection,—as all undoubtedly were for the renewed evidence he gave of the energy and assiduity with which he fulfils the arduous duties of his position. It is greatly to be regretted that his opportunities are not larger, and that the occasions for listening to the results of his labours are not more frequent and unrestricted. These was a time, not many years ago, when the military bands of Japan promised to attain a very high degree of proficiency, under the careful training of their able instructor. Their reputation had, indeed, extended so far that an effort was made to secure the attendance of one of them at the United States Exposition of 1893. An invitation was sent by the officers in charge of the musical department at Chicago, but the Japanese Government did not find it convenient to grant the requisite leave of absence. The experiment would have been extremely interesting, though a more satisfactory result might have been attained at an earlier date; for in 1893 the bands had already begun to deteriorate. One of the weaknesses which the foreign friends of Japan have most reason to deplore, is the tendency often displayed by students, after proving that they possess remarkable and unexpected abilities, to abandon a great part of what they have achieved, and fall back to an inferior stage of progress. The failure to retain distinction that has been won by earnest and ambitious application is nowhere more perceptible than in the field of musical education. To be content with a low standard of merit, after having risen to a worthy and creditable elevation, is a condition of mind strangely at variance with the general spirit of emulation by which the people of this country are animated. It is satisfactory, however, to know that the principal military bands retain a good proportion of their efficiency. It would be easily possible to restore them to what they were at their best, and make them capable of competing with similar organizations in other lands. There is plenty of good material among the musicians, and the competency of their teacher is not questioned. The encouragement and practical support of high authority seem to be all that is needed to initiate the reform, at any moment.

Another novelty in the same concert—a novelty in the impression it produced upon foreign listeners, though apparently an old acquaintance of the Japanese—was a piece of instrumental music entitled "Kaden." It is well understood that one of the most marked differences between the music of Japan and that of the West is that the former is destitute of harmony,

and, as a rule, cannot be brought into conformity with the European laws of that science. Attempts have occasionally been made to point out instances where a partial recognition of harmonic principles may be found in Japanese songs, but in all such cases the strong desire to establish a certain amount of resemblance appears to have misled the commentator and warped his judgment. The best and surest testimony to the absence of harmony in the Japanese scheme, is found in the fact that the people are totally unconscious of harmonic effects when they hear them. The average American or European, unless he happens to be what we may call tone-deaf, experiences a pleasant sensation when even so simple a combination as a sixth, or a third, is sounded, though he may not know what the notes are. To a Japanese, sixths and thirds mean nothing, and a full chord is still farther beyond his comprehension. If one of his own melodies is harmonized and played to him, the chances are a hundred to one that he will not recognise it. It is true that Japanese music is not always a succession of unaccompanied unisons. Different notes are often simultaneously heard, and passages occur in which no connection can be discovered between the vocal and instrumental parts. But the effect is harshly discordant, and has nothing in common with the harmony of the European school. One might listen to an infinite number of Japanese performances without encountering anything that would remotely suggest a real harmonic progression. If vague indications of true chords are sometimes detected, they come as surprises, and we know that they are merely accidental coincidences. It is precisely because of this rarity that we speak of the "Kaden" as a novelty. Of all the native compositions that we have heard, this one alone contains cadences which might be taken as the outgrowth of a partial acquaintance with Western methods. Not once or twice only, but many times, effects of primitive harmony are produced and by means which are as unexpected as the effects themselves. The instruments employed are the usual reeds and strings of Japanese bands. The reeds carry a sustained melody, which at times is thoroughly accurate in form and graceful in expression; although at periods it breaks into the uncouth and cacophonous wailings which seem inseparable from Oriental music. This melody is supported by another air, played upon the koto and biwa, which follows and connects with the principal strain, in a manner totally unlike, and far superior to the ordinary processes of Japanese classical compositions. At regular intervals, the two melodies are brought together, quite naturally, and, it would appear, with definite intention, in a harmonic resolution. The effect is not prolonged, but it is unmistakable while it lasts, and is a

most gratifying relief to the ear—the alien ear. It would be interesting to know the history of this singular production. According to the programme, it is a specimen of "Japanese classical music," but it is strongly Chinese in character, and is unquestionably an imitation of the Chinese style, if, indeed, it is not an ancient importation from that country. The construction of the melodies is not what we are accustomed to in Japanese pieces, and they run in a major key, or mode, while Japanese airs are mostly minor. If the "Kaden" is publicly performed again, musical amateurs will find it well worth their while to hear it. Much of it is unsymmetrical and incoherent, from the foreign point of view, but there are passages in it which it is difficult to associate with Eastern ideas of music, and which,—unless we were unduly influenced by the surprise of the first hearing,—entitle it to a degree of attentive consideration that could not be profitably bestowed on many works of its kind.

RAILWAYS IN JAPAN.

IN our issue of the 15th instant, we reproduced the gist of an article from the *Fiji Shimpō*. The writer of the article undertook to institute a comparison between Japanese and foreign railways, avowedly basing his conclusions on information furnished by an expert who had recently visited Europe and America. It is exceedingly difficult to believe that the expert in question, whose identity is, of course, fully established, really expressed opinions such as those attributed to him. If he did express such opinions, if the *Fiji Shimpō's* article faithfully reproduces the intelligence that he assimilated during a long and costly tour of inspection abroad, we can only express unbounded regret that such disheartening evidence should be furnished of the incapacity of Japanese railway engineers, and of their inability to derive instruction from object lessons of a simple character. It is more comfortable to assume that this expert had the misfortune to be interviewed by a reporter who to ignorance of the subject added a full share of the assurance that too often accompanies ignorance, and that the *Fiji's* article represents the reporter's blundering not the expert's misconceptions. However, the statements must be dealt with as they stand, for they reflect injuriously upon the reputation of foreign railway engineers who have worked ably and conscientiously in Japanese interests. It is alleged, in the first place, that "a striking contrast offers between the systems of Japan and the Occident, with regard to the style of rolling stock, since, whereas a Western railway uses 6-to 8-wheeled cars, the majority of the cars or waggons used on Japanese railways are 4-wheeled, and of a style entirely out of date in the West." The

critic adds, incidentally, that "the bogie system was introduced only quite recently in America." The force of every adjective is relative. The bogie style was introduced in America in 1834; that is to say, 62 years ago. From the point of view of the *Fiji Shimpō's* "expert," a period sixty-two years ago may seem quite recent. But considering that the first fully equipped passenger train hauled by a steam-power engine and performing regular service in America, began to run in the year 1831, we can not, for our own part, agree to regard 1834 as a quite recent date where American railway affairs are concerned. With respect to the statement about the cars and waggons, the facts are that there are two standard types of car used in Japan; one on two pairs of wheels, the body of the car 23 ft. 8 in. long and 7 ft. 3 in. wide; the other, on two bogie trucks with two pairs of wheels each, this second kind being 47 ft. long by 7 ft. 3 in. wide. The waggons also are of two distinct classes: one having iron underframes and designed to carry 10 tons; the other having iron sole-bars, with the remainder of the underframe of wood, and designed to carry 6 tons. All the waggons are on two pairs of wheels; some are on the bogie system, and all have a capacity equal to that of waggons for the 4 ft. 8½ in. gauge. There are also some large cars with two bogies, each of three pairs of wheels, but the greater part of the bogie stock is on two bogie trucks with two pairs of wheels each. Bogie cars were built at the Kobe work-shops as early as 1876, and a number of them were running in 1877. On the Tanko Railway (Hokkaido) the goods and passenger stock has always been on the bogie system. Competent foreign engineers have approved the design, appearance, and capacity of the rolling stock on Japanese lines, and pronounced it well adapted to the gauge. The question of special fittings for the comfort of travellers is another matter. In that respect Japanese railways are miserably provided, but the fault rests entirely with the Japanese Authorities themselves: their foreign employes are in no respect responsible. Turning now to the matter of locomotives, we find the *Fiji's* expert still more mistaken. He says:—"The locomotives used in Japan are similarly old-fashioned. The average speed of locomotives between Ueno and Aomori is only 18 miles an hour, while that between Shimbashi and Yokohama is 20 miles. But the speed could easily be increased to 40 if only locomotives of the latest style were introduced." The only answer to this is a flat denial. The engines are not old-fashioned at all, and the majority of them are capable of running 35 to 40 miles an hour. One of the Imperial trains, for example, recently attained a speed of 36 miles on level sections, and in the case of Imperial trains run in 1890 and 1894 between Tokyo

and Kyoto, a distance of 329½ miles, the through speed was 25 miles an hour, including stoppages at many stations, and a very slow rate in passing all the rest, so as to allow school children and country folks in general to have a leisurely look at HIS MAJESTY'S carriages. These trains generally consisted of two Imperial saloons and five bogie carriages, the equivalent of 14 ordinary carriages, weighing 120 tons, exclusive of the locomotive and tender. These are facts not to be gainsaid. They completely refute the allegations of the *Fiji Shimpō's* expert, and we are constrained to say that if he be an average specimen of the Japanese railway official, it is easy to account for the perpetual complaints, preferred by the public with regard to the running of trains and the transport of goods. It is no longer possible to conceal the fact that the management of the goods traffic on Japanese railways, especially State lines, is most defective. We hear of thousands of tons of goods waiting day after day to be carried to their destinations, and in some cases they have to be stacked up between the lines of rail. The natural conditions of the carrying business are reversed; instead of railway folks soliciting for custom and providing every facility to attract it, the owners of goods are obliged to come on bended knees and pray to be allowed to put the roads to the uses for which they were built. The thing has become a veritable burlesque, painful to those that believe in the business capacity of the Japanese and are anxious to see them succeed. It must be added that on the State lines, however courteous and obliging individual employes may be, incidents not infrequently occur that indicate culpable negligence as well as want of consideration for the public. Quite recently we received information of a most flagrant case, fully bearing out the complaint made some months ago by Dr. ELDRIDGE in our correspondence columns. A quantity of baggage, the speedy transit of which involved issues of great importance, was carried to the Yokohama station sixteen minutes before the time fixed for the departure of the train. Three foreign gentlemen, of unquestionable credibility, were witnesses as to the time. Application was at once made to have the baggage booked, but the booking clerks suffered it to lie untouched, and the train finally started without it, despite earnest and often repeated appeals from the owners of the luggage. When complaint was subsequently preferred, leading to investigation in which both sides gave their testimony, the Japanese Railway Authorities accepted the allegation of one or two porters in preference to that of the three foreigners, and decided that the baggage, not having reached the station until after the ringing of the second bell, could not possibly be put on board the train. It is almost incredible that such things should happen,

but to doubt is impossible in the face of such evidence. That the Japanese do not lack organizing capacity is proved by their manner of conducting the recent war with China. To what, then, must we attribute the defective organization of their railway system? Something is radically wrong, and we begin to perceive what it is when we find that a man with the reputation of being an expert blunders so egregiously as the *Fiji Shimpō's* "expert" has blundered."

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

A recent number of the *Shinri* (Truth), urges the importance, from a philological point of view, of the study of dialects in Japan. The writer calls attention to the fact that what has been done in this direction hitherto has been the work of foreigners like Mr. Chamberlain and others. It is customary to despise provincialisms as barbaric, overlooking the fact that it is only by a study of this class of language that numerous philological problems can be solved. Many dialects contain words that are much older than any in common use all over the country. Some of these words throw great light on the history of the past. The *風俗書報 Fūsokugahō* has lately commenced to publish a list of provincial terms. The facilities of travel and investigation are such that there ought to be no difficulty in making an exhaustive collection of terms now in use in the provinces.

Commenting on a desire expressed by the *Tetsugaku Zasshi* that the essays which have earned degrees for their authors should be published, the *Shinri* observes that the lectures delivered by Professors in the University ought also to be given to the world in some permanent form. It is hardly fair that the University public garden of learning should be closed to all but students. The system of taking notes and solely relying on them, adopted by the students of the University, is open to many objections. Before the invention of printing, this course was inevitable, but to follow it now is an anachronism, as Hartman showed many years ago. It is not to be supposed that there are teachers in the University whose views are not sufficiently matured to bear publication, who would fear the criticism of the outside world. The existence of such teachers would account for the fact that the laborious and unsatisfactory method of note-taking is still adhered to. If there are teachers of this kind they ought not to be tolerated, and their existence is all the more reason for making University lectures more public.

The *Tetsugaku Zasshi* gives a list of the new subjects on which lectures are being delivered at the University this term. Dr. Motora is lecturing on "Mental Physics," Professor Nakajima on "Social Mental Science;" on "Logic," being engaged on the exposition of Aristotle's *Organon*; and on "Ethics" (the system of Spinoza). Dr. Inouye Tetsujiro is lecturing on Buddhism (the life of Shaka Muni). Dr. Koerber is lecturing on Philosophy, being engaged on the views of Schopenhauer. Professor Toyama is lecturing on Sociology—the evolu-

tion of marriage, &c. The newly created Sanscrit chair is filled by Professor Uyeda, and Greek is taught by Professor Heck. Mr. Hearn, we learn from another source, is lecturing on Milton's "Paradise Lost," Tennyson's "Princess," and on English literature generally.

The organ just quoted states that a literary graduate, Mr. Matsumoto Matatarō, has started for America and Europe for the purpose of investigating recent theories respecting Experimental Mental Science, specially with reference to sense perception. He intends to visit Yale University first and afterwards to proceed to Germany.

A writer in a recent number of the *Teikoku Bungaku* discourses on Chinese Romance and Drama, maintaining that the value of Chinese contributions to this class of literature has been quite under-estimated in Japan. For the origin of Chinese romance, contends this writer, we must go back to the Sengoku period (about B.C. 500-B.C. 220), when were published those satires and recitatives allusions of 莊子 Chwang-tsz and 列子 Lech-tsz which are known in China and Japan as 寓言, and the 天問 of 楚辭 Tsu-tsz. In these works was displayed the imagination which, when further developed, led to the publication in the 漢 Han [B.C. 202-A.D. 182] and the 魏 Wei [A.D. 200-about A.D. 260] eras of a number of romances and dramas. In this province of literature, as in so many others, early Japanese writers took their models from China. This was specially the case with Murasakishikibu, the gifted authoress of the *Genji-monogatari*, and with Bakin. The history of Chinese civilisation is to be learnt from Chinese romance and drama. In these works are recorded not only the methods of Government in successive ages, but the folk-lore of the town and village communities of ancient China and the theories maintained by various schools of learning.

The writers who affirm that scholars have nothing to learn from Chinese romance are unacquainted with this class of literature. With the exception of Jūgoken (Mr. Tanaka), Gakkai (Mr. Yodo), Kainan (Mr. Mori), and Rohan (Mr. Kōda) no writers have made any effort to render this province of literature familiar to the Japanese public. Western scholars have written little on the subject, so that Japanese investigators have in the Chinese drama and romance practically a virgin field, and extensive exploration cannot fail to prove of great value for purposes of literary comparison.

The *Waseda Bungaku* furnishes an interesting account of Yasumoto Kamehachi, the well-known doll designer and maker. Yasumoto relates the difficulty he experienced in the early stages of his career in finding suitable models. Photography led him astray and drove him to the study of nature. He took notice of the various transformations to which the human face is subject under the influence of different passions, and of the prominent features of the faces of the young, the middle-aged, and the old. To imitate the artificial looks put on by courtesans and women of the *demimonde* class, he found easy. What really puzzled him was to reproduce the natural loveliness and vivacity of girls who were unconscious of their charms. Women's dress presented great difficulties to him. Mr. Yasumoto is of opinion that the looks and the gestures of the young can be successfully imitated only by the youthful sculptor, painter, or stage-actor. For powerful representation thorough sympathy is necessary, and it is very rare to find a man of mature years entering heart and soul into the feelings of the young. The obtaining of a reputation in art, says Mr. Yasumoto, is often a mere matter of luck. There are scores of ingenious artisans whose names are quite unknown to the world owing to lack of opportunity for bringing their work into prominence,

or from the praise due to them being appropriated by men for whom they labour.

It is stated in the *Shigaku Zasshi* (Historical Magazine), that Professor Toyama, in obedience to official orders, paid a visit to the Imperial Mausolea situated in Kyōto and Osaka and in the Prefectures of Hyōgo and Nara; that he inspected no less than 144 tombs; and that he collected a large amount of historical information bearing on the ages in which the mausolea were built, which information will be published at a later date.

Among other articles the *Teikoku Bungaku* has one on Modern Criticism, in which the writer contends that little attempt is made by reviewers to master the contents of a book and to explain the point of view of the author. In too many cases the notice of a new work serves as an occasion for the display of the learning of the critic, who is careful to introduce a number of difficult philosophical terms, or to quote German and even Greek phrases. The duty of informing the public about the meritorious parts of the works criticised is not one that the ordinary modern reviewer in Japan dreams of fulfilling. In Europe the age of destructive criticism was followed by an age of discerning, appreciative, and impartial criticism. Some Japanese modern critics seem to the writer in the *Teikoku Bungaku* to be a century behind the time.

The *Teikoku Bungaku* is of opinion that the use of the plays of Schiller and Lessing as text books in the Higher Schools is not advisable. Students need quite another kind of mental training. There is always too great a tendency among students to dream over unpractical subjects. If the teachers of German in these schools are desirous of rendering the students familiar with German poetry, they would do well to substitute Goethe and Uhland for the above named poets, on account of the sublimity, purity, and high tone of the thoughts expressed, and the simplicity of the language used by these two great representatives of German genius.

The same organ speaks approvingly of the attention paid to Japanese colloquialisms by literary men. Hitherto this field of investigation has been almost totally neglected by the Japanese. In Europe there are numerous students of folk lore, and in many languages there are dictionaries which explain the terms, figures, and allusions constantly met with when listening to the conversation of uneducated people. Much of this class of material reveals the notions held by the masses on questions of morality and business better than anything else. The results of the investigations now being carried on will shortly be given to the world in book form.

In an article entitled, "The Supplementary Rules relating to entrance into the Imperial University," the *Teikoku Bungaku* discusses the measures lately taken by the Faculty of the University for relieving the pressure caused by the fact that applications for entrance exceed the vacancies. It has been arranged that competitive examinations shall be held for those whom it is impossible to admit in any given year, and that the successful candidates at this examination shall be admitted the following year. The organ we are quoting thinks that much more might be done to relieve the situation. It is only in certain departments that, owing to the limited number of the appliances necessary for study, restriction as to the number of students entering is indispensable. In Law and Literature, desks and books alone need be increased in order to provide for an extra number of students. Hence there seems to be no reason for the application of the new rule to these departments. The *Teikoku Bungaku* points out the inconvenience to which students are subjected when, having finished their course in the Higher Schools and being thus entitled to enter the University, they are obliged to wait a whole year or change the profession for which they are preparing, and thinks that the Mombu-

shō ought to do more than it does to meet the exigencies of the time, instead of expecting students to accommodate themselves to the rules of the Department.

We have to record the appearance of a new magazine called the *Dai Nippon*. In the statement of the objects of the new organ it is explained that the title does not imply that the projectors of the magazine consider Japan to be a great country, but rather that they expect great things from her. The *Taiyō*, commenting on the appearance of the *Dai Nippon*, observes that both the *Nihon Shimbun* and the magazine called *Nihonjin* are conservative organs, but that the newly born literary infant is begotten of liberal parents, is in fact an organ of the *Fuyu-tō*, and hence may be regarded as a kind of cousin of the *Taiyō*. The *Dai Nippon* has taken the "Review of Reviews" as its model. It is to be issued on the 15th of each month. The chief writers are Dr. Matsumoto Kumppei, who spent seven years in America and until was lately on the staff of the *Tōkyō Shimbun*, and Mr. Takagi Nobutake, once on the staff of the *Kokumin-no-tomo*, and subsequently editor of the *Shinshu Nippo*.

The *Bungaku-kai* publishes a note on modern literature in which the tendency of modern novel writers to dwell exclusively on love is deprecated. There is a great sameness, says this organ, about the love stories that are published from month to month and the public are likely to grow wearied of them. Love is no doubt a grand theme in competent hands, but who, with the exception of Rohan, Kōrō, and a few others, among modern writers can produce a work that is at once interesting and elevating. Of the majority of modern works it is time to say that they make for vice rather than for virtue.

Two well-known *littérateurs*, Mr. Asahina, of the *Nichi Nichi Shimbun*, and Mr. Tokutomi, of the *Kokumin Shimbun*, are now in England and are sending to the journals with which they are connected, accounts of their experiences and comments on English life and thought. The *Bungaku-kai* draws a contrast between the subjects discussed by these two journalists. Mr. Tokutomi is attracted by the religious life of England, by its art and literature. Mr. Asahina's mind turns naturally to politics, and he writes of interviews he has had with Ministers or ex-Ministers. In the observations of the former writer the *Bungaku-kai* occasionally detects a tendency to attach too much importance to superficialities, to surface morality, of which there is so much, and to exaggerate the significance of isolated instances as an indication of the spirit of the age, but on the whole Mr. Tokutomi shows himself to be possessed of a keen insight into prevailing English sentiment and impartiality in writing about it. While Mr. Tokutomi frequents the bye-paths of English life, Mr. Asahina bows boldly along its highways and describes sights and sounds that attract his attention there. Consequently the two writers form an excellent complement to each other.

We learn from the *Waseda Bungaku* that Mr. Kuroiwa Ruikō is engaged on a Dictionary of Japanese Colloquial. In his work as a translator of novels, Mr. Ruikō has constantly been struck with the adaptability of the colloquial language in situations where polished speech is altogether unsuitable, and this, some years ago, led to his commencing the compilation of a dictionary, which he hopes to complete before very long.

Reference is made in the organ we have just quoted to the views of Mr. Menpes on Japanese stage acting. Mr. Menpes is represented as holding that talent for acting and talent for painting are usually possessed by the same persons, and is said to have quoted Danjūrō as a case in point, the famous actor having at one time been a diligent student of the Tosa style of painting. To this a writer replies that Danjū ō's performances with the brush are extremely mediocre, that his histrionic powers are rather to be traced

to the ardour with which, in very early youth, he studied the art of dancing and gesture, as well as to a large amount of inherited genius. Mr. Menpes is represented to have drawn a contrast between the variety and beauty of the stage scenery in Europe and the primitive character of the Japanese stage, and to have expressed regret that there should be no class in Japan corresponding to the scenic artists in Europe. To this Mr. Fukuchi Genichirō, writing under his *nom de plume*, Ochi Kōji, replies that the European method has its drawbacks. The scenery is by no means always in keeping with the costume of the actors and actresses and the spirit of the play. In Japan great freedom is allowed to individuals in the choice of dress and in the mode of representing their parts: even Danjūrō does not dictate to others what they shall wear or how their parts are to be performed. Mr. Fukuchi is in favour of retaining this custom.

From the various notices of Mr. Owada Kenju's *Nihon Daijisho*, to the publication of which we called attention last month, we cull the following:—No less than 250 works of reference, says the *Meiji Hyōron*, were used in the compilation of this work. In many respects Mr. Owada's lexicon is an improvement both on Mr. Otsuki's *Genkai* and Mr. Mozume's *日本大辞林, Nihon daijirin*. The chief defects of Mr. Owada's dictionary are the paucity of illustrations, fewness of colloquial terms compared with the number of Chinese, and the deficiency in modern renderings of foreign terms.

The *Waseda Bungaku* thinks that the dictionary is designed for general use and is not intended to meet the needs of specialists. To any one who aims at spelling correctly such a dictionary is indispensable. The Roman letters so largely used by foreigners give no indication of how a word should be spelt in Japanese *Kana*. The word transcribed *yō* we find in Mr. Owada's dictionary is spelt in four different ways, thus *よう, えう, やう, やふ*, according to the Chinese characters with which it is used. In reference to lexicography in general, the *Waseda Bungaku* observes that the great want of the times is a dictionary that gives the colloquial in use in the Tokugawa era, and a work that supplies a full list of Chinese words that may be said to have been adopted into Japanese, to the exclusion of all others.

The Hakubunkan announce the publication of a new and enlarged edition of Mr. Owada Kenju's book on theatrical terms and *Nō* songs. The title of the new work is *増補謡曲通解, Sōhō-yōkyoku-tsūkai*. In the course of five years, the book has passed through five editions. The enlarged work covers 1,900 pages, and if applied for during the present month may be purchased for 1 yen 60 sen. Mr. Owada is an acknowledged authority on operatic songs.

The publication is announced of the first volume of a work entitled *Saikin-Sekaiishi "Universal History of Recent Times,"* by Professor Tsuboi Kumazō, of the Imperial University. The *Waseda Bungaku*, in noticing this volume, says that the period embraced by this work begins with the Congress of Vienna and ends with the commencement of the reign of Napoleon III. It is to be regretted that more recent events are not dwelt on. The *Kokumin-no-tomo* is sorry that the history is confined to Europe, to the exclusion of America. This organ speaks highly of the style of the author, but the *Sekai-no-Nihon* takes an opposite view, maintaining that the work would be improved by the use of more commonplace language. The price of vol. 1 is 1 yen 30 sen, for sale at the Fuzanbō, Ura Jinbōcho, Kanda, Tōkyō.

Mr. Tsubouchi Shōyō lately published a book of considerable value bearing on the literature of the Meiji era, entitled *文學をたづね, Bungaku Sono Oriori*. The (*Literary Fragments*) book covers a thousand pages and consists of specimens from, and critical notices

of, the principal modern works published in Japan. It sells at 1 yen per copy at the Shunyōdō, Nihon-bashi-dōri, Shichōme.

Professor Mitsukuri Kakichi contributes to the *Kokumin-no-tomo* an article on Japanese investigation, in which he calls attention to the interest taken in Zoölogy in recent years and to the advantages that Japan possesses as a field for zoölogical investigation. The Professor bears testimony to the value of the University memoirs, whose primary object is to record original investigations carried on by Japanese. The tenth volume of these memoirs was lately published: it contains a large amount of valuable material. Professor Mitsukuri is of opinion that a large number of Japanese scholars have imbibed the Western spirit of earnest inquiry, and predicts that before long they will be known as authorities in various branches of knowledge.

The *Kokumin-no-tomo* is in favour of the greatest liberty being allowed to writers of fiction in introducing characters. Literary taste must dictate to an author what to exclude, and he is not to be trammelled by conventional rules respecting propriety.

No. 324 of the *Kokumin-no-tomo* contains an interesting article entitled "Questions put to the aged Tolstoi." Mr. Tokutomi in this essay gives the results of an interview with the eminent novelist at Odessa, in which the latter gave utterance to his well known views on Christian and moral subjects. Among other things, the Count said that patriotism and Christianity were incompatible with each other, which is the same as saying that love of country and high class virtue are contradictions. The Count then referred to a case, that occurred in Holland not long ago, of a man being imprisoned for refusing conscript service, and added that he had a work in hand in which he was making a furious onslaught on conscription laws. He hoped Mr. Tokutomi would translate the book and publish it in the *Kokumin-no-tomo*. If people ask whether I am a Russian, continued the novelist, say no. I am a cosmopolitan. Were Germany or Japan to attack Russia, I should feel no regret whatever. My only desire is that Russia's dominion should be reduced instead of being enlarged.

On Mr. Tokutomi's expressing dissent from these views, the Count further remarked that it is the duty of everyone to study the interests of humanity as a whole and to sacrifice everything to the furtherance of these interests. Then, presenting Mr. Tokutomi with a copy of the Four Gospels having the passages which the Count deems untrustworthy scratched out, he said, "The Bible is to be read in the same way as another book, with discrimination. What surprises me is that ministers of religion should lay such stress on unreliable texts to the neglect of Biblical teaching on ethical questions."

Mr. Tokutomi, while doubting the wisdom of Count Tolstoi's sinking the novelist in the philosopher and the religious advocate, writes in tones of admiration of the greatness of his character.

In the *Sekai-no-Nihon*, Mr. Uchimura Kanzō discourses on "Chinese Education;" an anonymous writer furnishes an account of an alleged invention of a flying machine by Mr. C. A. Smith; and there is the usual supply of articles on foreign topics. But the last number before us contains also a very interesting account of Mr. Yenchō, the well known orator, whose *Botandōrō* and *Shiwobara Tasuke* have perhaps had a larger sale than any work in Japan. The writer in the *Sekai-no-nihon* furnishes a report of an interview held with Yenchō, and it will be most convenient in epitomising the details given to allow Yenchō to speak for himself as follows:—In searching for interesting subjects on which to speak, I have explored various regions. Hearing that foreign novels were very entertaining, I tried to adapt some of the stories to Japanese tastes and feelings, but found that in the process of translation most of the tales lost their power.

My *Botandōrō* was founded on Chinese romance. But I may mention two direct sources of the ideas expressed in that work, one being what I heard as to the origin of a *boatsu* at the Denzū-in, in Koishikawa, when I was 23 years of age, and the other, conversations held with a retired *hatamoto* at Mejiro, who related to me the story of the warrior Iijima. With these materials I commenced the story, but at first failed in blending the different parts to my satisfaction. I rearranged the story and after taking several months over the task, produced what is now known as the popular *Botandōrō*. The production of the *Shiwobara Tasuke* involved much more labour. As a preparation for writing that work I travelled pretty well over the whole of Japan. I studied the physical peculiarities of every place and took note of the mental characteristics of the people. In order to get a better idea of the relative position of places to each other, I even ascended Mount Tsukuba. No detail of scenery escaped my observation. I looked around me and noted everything—here a *tsujidō* (an idol shed erected at a cross-way) with pine branches scattered around it; there a stream of pure water springing from a rock and trickling gently through a pipe. I studied every particular so earnestly that it was not possible for me to forget anything, and the vividness with which everything appeared to me I succeeded in expressing in language when I wrote. But I did not confine myself to natural scenery. I frequented the haunts of men, examined their industries and from them learnt many a lesson. I visited the great mercer Takashima's place and watched the workmen as in the most skilful manner they turned out exquisite shapes and colours with the most uninteresting looking material. It was their patience more than anything else that struck me, and I said to myself, if Yenchō expects to convert his material into a thing of life and beauty, he must be content to work slowly. I also went to the famous Ikkan's place and had an interview with Ikkan himself. Hearing who I was, he was desirous of presenting to me some article as a memento of my visit, but, on looking around, he declared that there was nothing worth giving me. Pointing to a tray that lay before me, I begged him to give me that, but he refused, saying that he always made it a rule never to give to another what did not come up to his standard of workmanship. He then related that though he had a very high opinion of the flower baskets by the making of which his house had obtained a high reputation, for seven years he had ceased making them, because neither the bamboo nor the rattan procurable was of a quality to warrant his using it. To find an artisan with such a high standard was indeed a surprise to me and this incident taught me much. Public speakers of the present day, perhaps, have little conception of the arduous nature of the training which I underwent in my younger days. From childhood I was always fond of poetry, specially of the poems known as *haikai* (17 syllable verses), and I was instructed in the art of composing these by Mr. Date Chihiro. I began to speak in public at the age of 17. My elder brother, a Buddhist priest of the Zen Sect, taught me a great deal. At that time I spent my days in selling flowers and my nights at the *yose*. During that part of my life I was on intimate terms with Bishop Nikolai, and in this connection I have an amusing incident to relate. Once, when I was visiting this divine, he said to me, "Most of our converts come from Oshū; hence in preaching they speak through their noses, I should be glad if you would join our church and engage in preaching." I replied that I was a Buddhist, and that my idea was that the world generally ought to feel indebted to a man like Kōbōdaishi for having invented the *Kana*, whereby thoughts could be transmitted from one person to another and so on. Owing to the interference of others who were present, the tenor of my remarks led to a great commotion. When I was about 20, I became one of the *Shin-uchi* speakers.* In the

* The arrangements at the *Yose* have of late years been considerable, altered. But in old days the speakers were divided into 4 classes, viz. (1) *Zensu*, usually consisting of 4 untrained speakers (2) *Nahairi-mayo*, or "Recapitulators" 4 in number, and (3) *Shin-uchi*, or first class speakers, also 4 in number.

days of which I speak, noted *Shin-uchi* were few, and hence the *yose* managers made the most of them. It was considered enough if they put in an appearance and said a few words. They were then at liberty to go on to another hall. They sometimes went to three or four places in one night. You may like to know how I got my readiness of speech. Well, I attribute it largely to a trick played on me by my teacher. He went to the *yose* with me and invariably spoke before me. He was in the habit of asking me beforehand what I thought of discoursing on, and then, on being told, he repeatedly treated the subject himself, thus taking the words out of my mouth. When I remonstrated, he replied, "Say anything that comes into your head. Do not hamper yourself with a subject. You will do better that way." He was right. I acted on the advice and was never at a loss what to say. In the old days the speakers had leisure to converse with each other before and after the meeting and much was learnt this way, but in modern times it is all hurry-scurry and there is little time for thought. But anyhow my days are past; and I can no longer speak as of yore.

For an exhaustive list of the original works and translations published, we refer our readers to the *日本圖書月報 Nihon-susho-geppō*, compiled by Mr. Uchiyama Seijō, and published by Mr. Noguchi Takejiro, 11, Ogachō, Kyobashi, Tokyo. This publication is not a mere catalogue. It gives a short account of the principal works referred to and publishes extracts from the newspaper reviews. From this source we learn that Mr. Smith's excellent work on "Chinese Characteristics" has been translated into Japanese by Mr. Nakanishi Ushirō. We also note that Mr. Henry Dyer's book on "Industrial Evolution" has been translated by Mr. Tanboya Zenshirō, and that Mr. Togawa Zanka has published a book called *Sekai San Dai-shūkyō*, "The three great Religions of the World" (Christianity, Buddhism, and Confucianism). Crowds of translations of foreign novels are issued month by month. The cheap prices at which they are offered for sale is astonishing: Rider Haggard's "King Solomon's Mines" sell at 25 *sen*, some of Tolstoi's works at 15 *sen* each, and Bulwer-Lytton's "Night and Morning" at 25 *sen*, and the translators of these books are by no means obscure adventurers in the literary world, but men like Kōda Rohan, Morita Shiken, and Uchida Fuchian.

The *Taiyō* recurs to the much discussed question of the future of Japanese art. This organ is of opinion that, in view of the failure of Japanese paintings to obtain distinction in foreign exhibitions owing to their defectiveness from a foreign point of view, the best plan to be adopted in the training of artists is to give them a thorough grounding in foreign art before they are initiated into the mysteries of Japanese art. This course the *Taiyō* thinks should extend over seven or eight years, and should be followed by three or four years' training in Japanese art. The advantage to Japanese art of adopting this plan must be apparent to all who have given the matter any thought. Artists who come to the study of native styles with the experience and the ideas acquired from foreign sources will be far more likely to devise means for supplying the defects and rendering the excellencies of these styles still more perfect than if they had commenced the investigation of Japanese art as raw students with no standard to guide them. In cases where the opposite method has been adopted, it has generally been found that the foreign instruction has obliterated most of the notions entertained by students in reference to native art and has rendered the students incapable of producing anything original of a purely Japanese type.

It is stated that a supply of subsidiary coins is especially needed in Kyushu and the Tohoku districts, while even in Tokyo these coins are very scarce. The Nippon Ginko has asked for *yen* 1,000,000 worth of small coins to be delivered from the Osaka Mint at once, but these will not suffice to meet the demands of the hour.

THE SPINNING OPERATIVES QUESTION.

An advertisement has been published over the joint signatures of 26 Spinning Mills in the Kei-Han districts, warning merchants with whom these mills regularly do business not have any transactions with the Kanagafuchi Spinning Factory, on pain of having their connection with the advertisers completely severed. A certain wholesale cotton-dealer who regularly transacts business with the Kanagafuchi Spinning Mill has informed a representative of the *Nippon*, that as the markets supplied by the advertising mills in the Kei-Han districts are distinct from those supplied from Kanagafuchi, the latter will not be subjected to any particular inconvenience by the boycott of the Kei-Han mills. However, in the matter of procuring raw cotton, the declaration of the 26 mills may cause trouble to their Tokyo and Kobe rival, inasmuch as the former will be sure to open negotiations with the Nippon Yusen Kaisha to prevent the shipment of cotton needed by the Kanagafuchi mill.

Mr. Shibusawa Eiichi, who happened to be in Osaka when this complication occurred, has tried to reconcile the two parties, but thus far without success.

It ought to be remembered, we read in the *Chuo*, that the Kanagafuchi Mill has persistently refused to join the Spinners' Union, organized with the view of controlling operatives, the ground of refusal being that such a method of combination on the part of capitalists is irreconcilable with the spirit of personal freedom. Operatives, being fellow-countrymen, must be at liberty to seek employment in any place they please, and it is wrong to place obstacles in their way if they wish to leave one mill for the purpose of going to another that can afford to pay them higher wages and give them better treatment. Owners of other newly established mills however, even though inclined at heart to support the policy of the Kanagafuchi Factory, unable to publicly adopt such an independent attitude, owing to their relative insignificance as compared with the Union, were obliged to join the latter. The managers of the Kanagafuchi mill have informed the *Chuo* and the *Fiji* that of the operatives now employed at the Hyogo Branch, 1,500 were sent thither from the Tokyo Head Office, after having been trained either in Tokyo, or in certain Hiroshima factories, so that the accusation preferred by the 26 mills against their Kanagafuchi rival is untrue. Even admitting that a few operatives have secretly come from other mills, that being the result of their free choice in consideration of an offer of better wages at the Hyogo mill, the Kanagafuchi managers feel no compunction, and do not concern themselves about the threats uttered against them by the 26 mills. Let the latter adopt a similar attitude towards the operatives now in the Kanagafuchi's service, and if the operatives prefer to go elsewhere for the sake of better wages, the Kanagafuchi managers will make no complaint. Meanwhile, what causes the public to feel uneasiness in connection with this affair is that both parties to the quarrel are said to feel no scruples about having recourse to *soshi*. The Union Mills have engaged 60 *soshi*, of whom 20 are experienced fencing masters. These "stalwarts" are now in Hyogo and Kobe, awaiting orders from the consulting barrister of the Union, who has set up a special office in Kobe. Agents are also promised a reward of from 3 to 7 *yen* for every operative successfully decoyed from the Hyogo mill, and that a leading *Kaoyaku* (headman of labourers) in Osaka has been asked to take charge of girls thus brought from Hyogo, "taking charge" meaning of course, that the girls are to be forcibly protected against overtures from the other side. Under the circumstances, it is not strange to hear rumours that *soshi* of the two rival parties have come to blows, and that a clerk in the employ of the Union, found prowling in the vicinity of the Hyogo mill, has been soundly punished. Another cause for uneasiness is furnished by the apparent partiality of the Osaka and Hyogo Police for the

mills within their jurisdiction. It is even apprehended that quarrels may occur between the police themselves. Rumour alleges that the Osaka Local Office announced, some time ago, that no one living within other jurisdictions would be permitted to procure operatives in districts under the control of the Osaka Local Office without first obtaining the latter's sanction.

FURTHER NEWS ABOUT THE SPINNING OPERATIVES.

The quarrel between the Union Spinners in the Kei-Han districts and the Kanagafuchi Mill has gradually been intensified, and has now assumed the character of a contest between the citizens of Osaka and Tokyo. The original 26 mills that publicly boycotted the Kanagafuchi factory have been reinforced by many others in the Kei-Han vicinity so that the boycotters now number more than 40. The Kanagafuchi Mill, however, has a powerful supporter, namely, the wealthy Mitsui firm, the mill being virtually the property of that Company. The Mitsui Bank has therefore, decided to espouse the Kanagafuchi cause, and has announced the cessation of all business transactions with the boycotting mills. The Osaka Branch of the Bank has been accustomed to transact business with mills in the Kei-Han districts, and the latter are actually indebted to it in the sum of over a million *yen*. This announcement by the Mitsui Bank has produced a strong feeling of umbrage against it on the part of the Banks in the Kei-Han districts, and there are fears that the latter may publicly espouse the cause of the mills in their localities, and adopt a retaliatory policy against the Mitsui Bank. In the meanwhile, the scenes in Hyogo and Kobe began to assume such a serious complexion that the Hyogo Police were obliged to interfere, and to deport from the two towns over 100 clerks and *soshi* whom the boycotters had sent to the vicinity of the Hyogo Mill to decoy or abduct its operatives. Those clerks and *soshi* wore badges over their garments, to distinguish them from men in the opposite camp, and carried either stout cudgels or sword-sticks. The presence of such "stalwarts," armed with dangerous weapons, imperilled the maintenance of public tranquillity in Hyogo and Kobe, and on the 21st inst. the police of the two towns summoned them for examination. It was found that the *soshi* had been engaged by the Union spinners at a daily wage of 40 *sen*, and that they were under instructions to obey any orders issued from the temporary headquarters established by the spinners in Kobe. The police came to the conclusion that the Union Spinners were resolved to abduct the operatives of the Hyogo Mill even by force when the Mill should be closed for the New Year's holidays, and when the operatives would be free to leave its compound. Over 100 men sent by the boycotting mills were then ordered to quit Hyogo and Kobe. They returned to Osaka, but not to disperse peacefully. They held repeated meetings at Kitano, in that city and resolved to demand a satisfactory explanation from the Hyogo Local Police as to the reason of the latter's interference. They were even on the point of starting for Hyogo on the 25th inst., but the Osaka police ordered them to disperse, and, at the same time, summoned one of the managers of the boycotting mills to warn the Union Spinners against taking such a disorderly step. The idea of recovering the operatives originally decoyed by the Hyogo mill has not, however, been abandoned. The Chairman of the Union petitioned the Osaka Local Police for permission to send employees of the Union to Hyogo with that object, but the petition was not granted, though the Chief of Police intimated that the Union might despatch a few clerks with the view of identifying the operatives said to have been decoyed by the Hyogo mill, and of demanding their restoration. On the 26th inst., a vice-manager of the Union proceeded to Hyogo at the head of 29 men, carrying an official letter written by the Osaka Police Chief, addressed to the Hyogo Police Office.

A telegram in the *Fiji* says that the employes

of the Union originally despatched to Hyogo have preferred against the Toba Police of that town a charge of unlawfully imprisoning or wounding five of their number.

SHIPPING NEWS.

Mr. Asano Soichiro, President of the Orienta Steamship Company, we read in the *Kokumin*, is now in England, having visited the United States of America, and is engaged in buying steamers or giving orders to ship-yards for building new ones. Already he has managed to purchase four tank steamers of about 4,500 tons each, on condition that if these ships fail to pass the inspection of the Authorities and obtain a bounty, they will be returned to the vendors. The ships are to come to Japan next spring. The routes that the Company has determined upon are three, namely, to Batoum, to New York and Philadelphia *via* Europe, and to the West Coast of the United States. The terminal port of the last route is not yet fixed, as the Directors thought it best to come to a definite conclusion after Mr. Asano had again visited America and inspected the various harbours on the West Coast. Mr. Asano was welcomed at each of these ports, prominent people promising to furnish every possible convenience and each desiring to have their port selected. Such was also the attitude of the people of San Francisco, and it was subsequently thought best to select that port, rather than any other north or south of it. Passengers being of more importance than goods for the voyage to San Francisco, vessels on that line will be of mail steamer type. Arrangements having been made accordingly, the new ships for that line are to have proportionally greater accommodation for second class passengers. San Francisco being selected as the terminal port, an agreement for railway connection is said to have been concluded with the Southern Pacific Railway Company. The Company contemplates opening business by April or May next year, provided the tank steamers purchased on the stated conditions obtain the approval of the inspectors in Japan and receive bounty from the Government, but, if not, the date will be postponed to the fall. The Batoum service will be undertaken first, then the Pacific service, and lastly the service across the Atlantic *via* the Suez Canal. The Company has already called up 975,000 *yen* from the shareholders.

It is curious to observe how tardily ship-owners avail themselves of the Navigation Encouragement Law, seeing that the Law went into force from Oct. 1st last. Rumour says that this is because the Authorities are resolved to enforce very stringent inspection, and shipowners are therefore deterred from placing their vessels in the hands of the Inspectors. Be that as it may, already two steamers have been placed before the Authorities, one by the Yusen Kaisha and the other by Mr. Suzuki, a well known photographer in Tokyo. But the Yusen Kaisha sent their ship away before the inspection could be completed, and Mr. Suzuki is at a loss what to do because of the strict inspection; at least so says the *Chuo*. The *Yamaguchi Maru* of the Yusen Kaisha, and the *Sumiyoshi Maru*, owned by Mr. Suzuki, were sent to Yokosuka, but the inspection was so tedious and strict that the Yusen Kaisha could not see when it would be completed. The Company could not wait and incur loss, and so withdrew the application and put the ship on the European berth. Mr. Suzuki is in greater trouble. His ship does not possess the documents and diagrams usually provided on a steamer of so large a size, so that he was obliged to ask an expert of the Kawasaki Dock-yard to draw up diagrams of his ship. Twice the diagrams was rejected on the ground that they were defective, and at the same time the proprietor was told to produce a document certifying the date of the launching of the ship and specifications of the materials used in building her. Mr. Suzuki is placed in a very awkward position, inasmuch as the original proprietor of the Dockyard at Barrow-in-Furness, where the ship was built, was declared bankrupt some years

ago, and it is not certain whether the books kept by the new proprietor can give information on those points. However, as no other course was open, Mr. Suzuki was obliged to ask the Foreign Office to take up the matter on his behalf and to request the Japanese Consul in London to ask the Barrow Dock-yard for the necessary information in regard to the steamer. When Mr. Suzuki asked the Inspection Authorities what step would be taken in regard to his ship if he could not succeed in obtaining documents from the English builders, the latter replied that a defective application would be rejected, but if an owner insisted on having his ship examined, then the examination would be effected by boring 500 to 600 holes in different parts of the ship and by taking out the engines, and then, if the ship was considered unfit for the bounty, the application would be rejected. This experience (we are quoting the *Chuo*) of inspection has struck terror into the hearts of other shipowners, so that no one now dares to place a steamer before the Inspection Authorities. Hence some evil-tongued men say that the spirit of the navigation encouragement bill has died out [and that a navigation suppression measure has taken its place. We might add that Mr. Suzuki's steamer is a twin-screw vessel of 1,384 tons gross, and that she can not hope to obtain the bounty after October, 1898.

DECLINE IN THE MARKET-PRICES OF COMMODITIES.

Happily for consumers a very marked decline has begun to manifest itself in the market prices of commodities. It would appear that the booming period which followed the war, in conformity with the experiences of all countries, is now to be succeeded by a period of comparative flatness, equally in conformity with universal experience. The great sums of money expended at home during the War, and the return of tens of thousands of army-transport coolies and soldiers with pockets full of bank-notes after the war, added so materially and suddenly to the people's purchasing power that a brisk demand sprang up for commodities of domestic and foreign manufacture. That state of affairs would doubtless have lasted throughout the present year and even well on into the next had not storms, floods, and seismic waves inflicted terrible losses on the country and greatly crippled the resources of a large section of the nation. The results are that quantities of goods ordered from abroad lie stored in godowns at the Treaty Ports or in the interior; that unusual difficulties are experienced in meeting the New Year's payments; that no demand survives for luxuries of any kind, and that even necessary articles are purchased as little as possible. Comparative tables have not yet been compiled, but it is alleged that in the case of staples like rice, charcoal, fire-wood, cotton manufactures, and so forth a decline of from twenty to twenty-five per cent. has taken place. It is to be feared that importers must look forward to a season of dullness.

THE ROTHSCHILDS AND JAPANESE BONDS.

The *Yomiuri* alleges that the Rothschilds have commissioned Messrs. Samuel Samuel & Co. to purchase for them three million *yen* worth of Japanese Consols and War Bonds; that Mr. Mitchell, the representative of Messrs. Samuel Samuel & Co., has applied to the Finance Department through Sir Ernest Satow, and that the transaction has not been concluded owing to a difference as to price. The introduction of the British Minister's name does not add to the credibility of this story. With regard to Japanese Consols, however, it is a fact, we believe, that the Specie Bank has succeeded in placing one million *yen* worth on the London market. A million *yen* is a small matter in such a context, but everything must have a beginning.

KOREAN NEWS.

Cho Pyong-sik, Master of the Board of Ceremonies, has been appointed Minister of Justice in place of the former Minister Han, who resigned the post because his relatives had been arrested on the charge of plotting to compass the King's return to his palace. Han's continuation in office would have produced an embarrassing situation, since he must have sat in judgment on his own relatives. His successor is a man of unenviable notoriety. He was a tool of the Prince-Parent when the latter perpetrated the murder of Roman Catholics some years ago. He is said to have been guilty of extorting bribes in various localities where he served as Governor, and he brought about a serious complication with Japan by interdicting the export of beans. Moreover, he was at one time kept in prison for several years on a charge of peculation and wholesale destruction of life by illegal methods while acting as Governor or operating against bandits. Such is the man who will preside at the trial of Koreans recently arrested in connection with the alleged *coup d'état*, and very grave fears are entertained about the fate of the unfortunate prisoners.

The outspoken language said to have been employed by a Russian officer in Seoul on the occasion of the ceremony of laying the foundation stone of Independence Gate, is reported to have offended many patriotic Koreans. He declared, it is alleged, that Korea, being a poor and weak country, must rely upon the protection of Russia, and that the latter, with the 'view' of giving that protection, has already supplied a number of officers. The other day a certain Korean sent a letter to the editor of the *Independent*, asking whether the speech of the Russian officer was to be counted correct, or whether the speeches delivered by the Foreign Minister and the President of the Korean Independent Association, both of whom laid great stress on the reality of Korean Independence, should be taken as really representing the truth. The editor of that journal refrained from publishing the letter, apprehensive that it might cause trouble. It is said that the wife of the Russian Representative in Seoul had advised the officer not to say anything in his speech offensive to the sentiments of the Koreans or to other nations, but the officer disregarded her prudent counsels. Rumour has it that some Korean officers have applied for permission to resign in consequence of the umbrage that they feel towards the Russians.

It seems that the story recently circulated about the pecuniary embarrassment of the projectors of the Ninsen-Seoul railway was unfounded. The latest letters that have reached Tokyo papers from Seoul state that the work of construction will be commenced from April next, and that, with the exception of a bridge over the Hankow, the line will be completed within a year, computed from the date of starting the work.

Japanese merchants in Seoul were highly indignant about the speech that Count Okuma delivered a few weeks ago before the Japan-Korea Commercial Association. They actually drew up a document seeking an explanation from the Foreign Minister, and took steps to enlist the co-operation of merchants in Ninsen and Fusan. But wiser counsels subsequently prevailed. The Seoul merchants who took the lead in the affair, have abandoned any idea of protest, for they themselves acknowledge that many reckless Japanese adventurers have come to the peninsula, and also the fact that the unimpeachable conduct of the leading Japanese merchants is well known to the Foreign Office in Tokyo. They surmise that the Foreign Minister did not utter such a severe criticism without an adequate object in view, and that even though the interest and reputation of a handful of Japanese in Korea were impaired the benefit of the whole Japanese people is of far greater importance.

Korea has been very fortunate in the result of its harvest. The crops have proved more abundant than anything recorded during the past 50 years. Hence, whereas the Treasury has hitherto adhered to a parsimonious policy

limiting the monthly expenditure of the Government to a little over 100,000 *yen*, the estimates for next year, now being compiled in the respective Departments, are expected to show a large increase over the estimates for the current year. Rumour says that the President of the Russo-Chinese Bank, now in Seoul, has consented to furnish a loan of three million *yen* to the Korean Government.

CHINESE NEWS.

Chinese papers persist in circulating the canard that the relations between Li Hung-chang and the Emperor of China have become more strained than ever owing to the ex-Viceroy's censuring his Imperial master for signing the Cassini Convention. Were it possible to believe that the so-called Cassini Convention had ever been signed, the story of Li's remonstrances might be more credible. But the Cassini Convention has gone the way of other "hundreds," though the English local journals that circulated it so confidently still cling desperately to their delusion.

A new Chinese magazine (the *Hua-pei-yueh-pao*), edited by the Rev. Gilbert Reid, has made its appearance. Out of twelve essays contained in the first number, four are by Chinese writers.

The trouble at the Medical College and Hospital in Tientsin has resulted in the dismissal of the three students who acted as spokesmen for the rest. They have been released from prison and sent back to their homes in the south of China. Among the foreign community in Tientsin an impression prevails that the students have been hardly treated, but, after all, the question at issue was whether the students at a College should be allowed to remonstrate *en masse* against the Faculty's action in providing teachers. There have been many instances of similar interference on the part of students in Japanese educational institutions, and it is now matter of regret that they were not dealt with more vigorously at the outset.

Colonel Liebert, the German officer appointed to reorganize the Chinese army, is expected to reach China soon. He carries an autograph letter from the Emperor of Germany to the Emperor of China—together with the Order of the Black Eagle—and it is anticipated that unprecedentedly large powers will be given to him. If the military resurrection of China is really anticipated by the Emperor of Germany with such misgivings as his speeches and his celebrated painting imply, it is strange that His Majesty should lend such active aid to the dreaded contingency.

The anticipated appointments of Sir Chih Chen-lo (Lo Feng-lo) and Wu Ting-fang (Ng Choy) to be Chinese Representatives in London and Washington respectively, have become an accomplished fact. Both speak English excellently, and are men of most attractive address.

A legal adviser from the Belgian Foreign Office has arrived in Peking to set the Tsung-li Yamén in order, it is said, but probably with no more important function than to give legal opinions. It is not in the least likely that the statesmen of the Tsung-li Yamén intend to have their business regulated by any foreigner.

The Cassini Convention is now denied in Peking by Chinese officials and Foreign Ministers alike. Journalistic correspondents still insist, however, that some kind of treaty has been signed; that it will be ratified six months hence; and that it contains much of what the bogus Cassini Convention was supposed to contain. China, say these correspondents, is to be given a year to undertake the building of Manchurian railways, and if she does not make arrangements within that time, Russia is to come to the rescue. Among all the *canards* hitherto circulated, that is perhaps, the least credible. It would be impossible to complete even the preliminary surveys of the lines within a year. The public may fairly take it for granted that the only concession obtained by Russia from China in the matter of railways is permission to run a portion of the Trans-Siberian Railway through northern Manchuria.

It is now confidently alleged that a line from

Shanghai to Woosung will be the first of the contemplated system of Chinese railways. Years ago an iron road connected these two places, but it was never suffered to be opened to regular traffic, and ultimately the rails and sleepers were taken up and transported to Formosa for use in the construction of the Kelung line. As for the great trunk line from Peking to Hankow, there is a hitch about commencing it. Taotai Shêng's plan is to raise 20 million taels at first and build the line from one end only, but the Viceroy Chang and Wang want him to begin at both ends simultaneously, and as Shêng's petitions to the Throne must be countersigned by these two Viceroys, his hands are somewhat tied. Presumably Shêng would have no objection to working from both ends were he confident about the future, but he does not know the moment when railway work may be stopped, and he would then find himself with two railways leading nowhere.

The Chinese Government have appointed Liang Chêng to be Minister in Berlin, in place of Huang Chun-bsien, whom the German Government refused to receive. Liang is a Cantonese. He studied for some years in the United States and is now a Secretary of the Tsung-li Yamén, with the rank of Taotai.

The Empress-Dowager of China is reported to be endeavouring to procure for Li Hung-chang the post of Comptroller-General of either the Board of Revenue or the Board of War, a position superior to that of the Presidents of these Boards. But rumour, as interpreted by Shanghai newspapers, alleges that the Emperor will probably persist in refusing to promote Li. His Majesty continuing incensed against the old statesman for condemning the Cassini Convention. The Cassini Convention forsooth! How hard that chimera dies!

From Tientsin comes a statement that the Chinese Government have ordered eleven armoured cruisers and torpedo-destroyers, through two German firms, and will order four more very large cruisers next spring. It is further stated that China's present naval programme is to have a Peiyang Squadron and a Nanyang Squadron, each consisting of twenty ships, in the form of armoured cruisers, steel-protected cruisers, and torpedo-destroyers. She will have another squadron for the southern littoral, including Kuangtung, but it will be composed of light-draught cruisers and torpedo destroyers. The necessary funds are being raised by imposing increased *likin* throughout the empire. What can be the use of these squadrons until there is such a thing as a Chinese nation?

The promotion of Tsai Sieh-yung—formerly an attaché of one of the Chinese Legations and a good English scholar—to be acting Taotai of Hupéi, is said to be the first instance of a foreign educated Chinese subject's appointment to so high a post as that of Senior Taotai.

The new rapid on the Upper Yangtze, already spoken of in these columns, is said to have been caused by a landslip that raised the bed of the river and "transformed what was previously a piece of deep flowing water into a foaming, boiling rapid." To pull a medium-sized boat up the rapid, from three to four hundred men would be required, and arrangements have consequently been organized for landing and re-shipping goods below and above the rapid. A writer in the *N.-C. Daily News* says:—

At the time I passed, at the beginning of this month, only one or two boats were passing up in the course of the day, and these without any cargo on board. On an average, only four or five boats go down in the course of a day, and of these many are wrecked, two out of five in the course of one day. A small boat went down, rowed by one man, and turned a complete summersault, and neither man nor boat were seen again. No rocks are visible in either the up or down channels; the former is said to be twenty Chinese feet deep, the latter thirty. One large junk, rowed by sixty or seventy men, was seen going down the rapid; with two or three tremendous bounds, the water dashing over and into her, she appeared to clear the rapid, when she was caught by the backwater, and in spite of all the efforts of the men, was carried back, and, turning round, once again rushed down the rapid.

This happened three times, and then she went down, stern foremost, and got away. As the river falls, the rapid gets worse, and it is probable the traffic will soon be completely stopped until the river rises again next year. At present there are five hundred boats, or more, moored there, the greater number below the rapid.

We take the following from the *North-China Daily News*:—

The time when officials could "throw dust in the eyes" of the Emperor of China when recommended to him "for special knowledge of foreign customs and international affairs," by Viceroys and Governors of provinces whilst having nothing better to recommend them than family influence and an appointment for a year or two in one of the treaty ports, has evidently gone by. A new era has been inaugurated by his Majesty himself in the audience hall of the Grand Council for the special benefit of officials who desire to seek the favour of the occupant of the Dragon Throne. We have already touched upon the fact of his Majesty's study of the English language under the tuition of two graduates of the Tung Wên College, Messrs. Chang and Siên, secretaries of the Tsung-li Yamén. The Emperor likes to air his English whenever he can get a chance and he gets this chance now whenever an official comes to him with "a knowledge of foreign affairs." The other day, the Viceroy Liu of Nanking recommended to the Throne a Taotai of this type, named Li, and his Majesty at the audience asked the Taotai whether he knew any English. Having been recommended for his "knowledge," Li Taotai had to sustain his reputation, and so replied "Yes," forgetting apparently that his Imperial master had studied English and was still studying the language. Then came the attack. The unlucky Taotai was bombarded with "How do you do?" "Are you well?" "Thank you." "Sit down." "Have you been to England?" and the like, spoken with a rich Manchu brogue, in rapid succession, as many phrases as the Imperial memory could muster on the spur of the moment. The poor Taotai was completely bewildered, of course, and instead of seeking for an escape by declaring in tones of respectful admiration his extreme wonder at the Imperial eloquence and the infinite wisdom displayed by his august master, he began *kowtowing* on the polished marble floor in constant succession in mute remonstrance against such a volley of phrases. His Majesty was so disgusted at this display of ignorance on the part of the audience seeker that he roundly abused in Manchu the now trembling Taotai for daring to come before him "on a borrowed reputation." The unlucky Taotai was then almost driven from the audience chamber with the injunction "to keep an English book constantly under his nose for three years, at least, if he wished to succeed at all in that line!" The reason officials eagerly seek for the opportunity of going for audience with the reputation of "mature knowledge in foreign affairs"—*Shu hsi yang wu*—is because coming under this category they have a better chance of some customs *taotai*-ship, and also can get a promotion or "favourable mention" once in three years, whereas in the other branches of the government service these promotions come only once in from six to nine years.

FOREIGN PLAINTIFFS IN JAPANESE COURTS.

It has been pointed out by correspondents that two errors occur in our recently published list of suits brought by foreigners against Japanese subjects in the Yokohama Local Court. The first error relates to the case "Favre-Brandt v. Nishimura." In our list, owing to a mistake on the part of the transcriber, the Japanese defendant appeared as the winner of the suit, but the fact is that judgment was in favour of the foreign plaintiff. The second error is in the case "Denig v. Tanaka and another." Here, also, our list makes the Japanese defendant successful both in the Local Court and in the Court of Cassation. But the correct record is this:—

Result in Local Court,	in favour of Japanese defendant.
Result in Appeal Court,	in favour of foreign Plaintiff.
Result in Court of Cassation,	order for a new trial in Court of Appeal.
Result of Second Trial in Court of Appeal,	in favour of foreign Plaintiff.
Result of Second Trial in Court of Cassation,	in favour of foreign Plaintiff.

This was one of the longest and most complicated cases on record between a foreigner and a Japanese.

A WILD FREAK OF IMAGINATION.

In connection with the final disposition of "Johann Orth's" Swiss property, European newspapers tell the story of a curious delusion said to have been cherished by the highest social circles of Vienna. Johann Orth was the name assumed by the Archduke John of Austria when he left his country in 1889, after quarreling with his family. He went to South America, but could not be traced later than 1892, although the mother of the opera-singer whom he married professed to be in communication with him, and declared that after the death of Archduke Charles he would assuredly return. In 1895, according to Swiss and English journals, a report was circulated in the Austrian capital identifying the missing prince with Field-Marshal Yamagata of Japan. "Many coincidences," it is alleged, "gave force to the rumour, which was credited throughout Vienna for a considerable time." It would be interesting to learn the nature of these pretended coincidences, if only to discover by what means the credulity of the Viennese was imposed upon. Investigation probably showed the absurdity of the tale, for we are informed that "the belief in its accuracy gradually declined," though the general conviction that the Archduke was still living could not be shaken and he was expected at any time to emerge from his retirement "in some remote island," and resume his position at home. This hope will scarcely survive the judgment given last month by a Court of St. Gall, Switzerland, by which one million francs deposited in a bank by Archduke John, seven years ago, are awarded to the relatives of his wife. In the eyes of the law the prince is dead.

THE AFTERMATH OF THE MAHOMMEDAN REBELION.

The spirit of disaffection, supposed to have been completely crushed out by the operations of the Chinese troops against the Mahomedan rebels during more than a twelvemonth, has again become active, this time on the Szechuan-Tibet frontiers. Two thousand Imperial soldiers were defeated by these new insurgents on the 5th of September, the troops having been decoyed into a mountain pass and nearly annihilated. The outbreak is attributed to intrigues on the part of Mahomedan refugees from Kansu. It is stated that a large force has been despatched to avenge the disaster.

WEEK OF PRAYER.

Services will be held in the Union Church and Van Schaick Hall, Yokohama, as follows:—

- SUNDAY, Jan. 3.—Union Church, 11 o'clock a.m., Rev. A. A. Bennett.
 SUNDAY, Jan. 3.—Van Schaick Hall, 8 o'clock p.m., Rev. J. S. Gale.
 MONDAY, Jan. 4.—Van Schaick Hall, 5 o'clock p.m., Rev. J. H. Ballagh. Theme for Monday, Thanksgiving and Humiliation.
 TUESDAY, Jan. 5.—Van Schaick Hall at 5 o'clock p.m., Rev. H. Loomis. Theme for Tuesday, The Church Universal.
 WEDNESDAY, Jan. 6.—Van Schaick Hall at 5 o'clock p.m., Mr. Wilkin. Theme for Wednesday, Nations and their Rulers.
 THURSDAY, Jan. 7.—Van Schaick Hall, 5 o'clock p.m., Rev. F. G. Harrington. Theme for Thursday, Foreign Missions.
 FRIDAY, Jan. 8.—Van Schaick Hall, 5 o'clock p.m., Rev. J. L. Dearing. Theme for Friday, Home Missions and the Jews.
 SATURDAY, Jan. 9.—Van Schaick Hall, 5 o'clock p.m., Mr. Staniland. Theme for Saturday, Families and Schools.
 SUNDAY, Jan. 10.—Union Church, 11 o'clock a.m., Rev. W. S. Worden.
 SUNDAY, Jan. 10.—Van Schaick Hall 8 o'clock p.m., Rev. W. B. Parshley.

On Tuesday morning all the Princes and Princesses of the Imperial Blood, and high officials in various Departments proceeded to the Imperial Palace and the Aoyama Palace to offer congratulations at the close of the year.

THE FAR EAST.

The December number of *The Far East* sustains the reputation that the magazine is gradually acquiring. It has several excellent essays, from which category we must except, however, the opening article on the Enforcement of the Revised Treaties. This is the only superficial essay in the volume. In the first place, the title is bad. "Enforcement" is an objectionable term. There is no question of "enforcement." There is question only of the new Treaties going into force or operation. The point may seem trivial, but an author that cannot choose his titles with more discernment is not likely to be profound in his general treatment of a subject. It would be interesting to hear, from some non-official Japanese, the story of Treaty Revision from 1873 to 1894. We should then learn how much genuine appreciation outsiders possess of the various phases through which this most difficult problem has passed. But the article before us tells nothing that might not have been learned from the most casual perusal of third-rate newspaper columns. Nothing could well be balder. One of the best essays in the magazine is from the pen of Professor Nitobe Inazo. It is grandly broad in tone. Professor Nitobe scoffs at the narrow-mindedness and superficiality of critics that talk with alarm and censure about manifestations of Japanese chauvinism. He asks whether two great rivers ever met and commingled their waters without some fretting and rippling. A nation that casts aside its old traditions and usages without occasional qualms must be despicably lacking in patriotism. In point of fact, the tide of Occidental civilization has swept into Japan with extraordinarily little friction or disturbance, and if the current is occasionally set back by the impact of its purely alien and non-essential elements upon the rocks of Japanese patriotism and nationalistic instinct, what room is there for surprise. We can not refrain from quoting some very pertinent phrases from Professor Nitobe's essay:—

No wonder that reaction has lately been started against undue respect for European civilization. We have set too great a store by the so-called Christian enlightenment. We had sought in it for wisdom and power, goodness and happiness, wealth and plenty, and, in fact, for whatever may make life worth living. European civilization, like any other, has, I dare say, germs of all these elements; but they exist in a form adapted to its own sphere. When it reached us it came with the volume of centuries and with the debris of many lands. Take, for example, Christianity, of which the West makes so great a boast, and which not a few thinkers regard as a distinctive institution of the Occident. Instead of the Messiah in the garb of a Nazarene peasant-saint, what a cumbersome structure—"a habitation of doleful creatures"—stands before us, with less of love than threat! The doctrines promulgated by its professors are deeply overlaid with the local traditions and racial characteristics of their divers nationalities; so much so that one has no small difficulty in excavating the fragments, to find the Altar and its sacred lamp perennially burning there. Is it strange then that the so-called Christian doctrines, as preached now-a-days among us, are so alien to our ways of thought and repugnant to our better feelings?

For if Christ is the "light which lighteth every man coming into the world," irrespective of race or nationality, why should he be such an utter stranger to our hearts (even though we have no historical knowledge of him), that he must be presented to us almost as an American or an Englishman?

To take another example: the political economy of Europe was hailed with delight as a panacea for all our social ills. One has but to open a dozen pages in it to discover that this dismal science justifying unrelenting competition and self-interest, the iron laws and wages-fund, affords no great peace to a mind trained in *Samuraiism*. Shall we turn to physical science—the proud triumph of the age, for succour to our perturbed spirits? Materialism and Hedonism stare us with terrors in the face.

It may sound highly ungrateful to say that much of the importations from the West were mere trash, worn out garments, not free from pollution or even disease, and in order to derive real benefit from them, these accidental accretions must be separated from all that is essential and valuable.

On the other hand, it is but just—not to say civil—to charge ourselves with having introduced the scum and dregs. The waves of the West had dashed against our shores, but they had seldom (respiced beyond the sands, before we opened with our own hands the channel for them to come flooding in. High-

ly unjust, therefore, is it to lay to the charge of European civilization those abuses and misuses which we ourselves have made of it. It is only bad workmen that find fault with their tools. Neither Europe nor America has ever actually resorted to superior force, to compel us to accept her terms or her ideas and customs. We have imbibed them of our own accord. We may have done it sometimes unconsciously; but in either case we have acted as free moral agents. If there has been any indulgence to excess, none but ourselves are responsible for it. Hence when thin and hoarse voices are heard in low and high places, railing at foreign influences, they are either a wail of remorse or a cry of childish chagrin.

THE QUEENSLAND NATIONAL BANK.

We have received from Messrs. Bowden Brothers and Co., of Yokohama, a copy of the Report of the Committee appointed to ascertain the position of the Queensland National Bank. The following are the most important paragraphs of the Report:—

6. The debts due to the Bank amount to £7,791,693. Every overdrawn account has been examined. The securities have been carefully considered in each case, and values of Brisbane properties, both city and suburban, were fixed after consultation with Mr. F. R. Hall, who is a valuator of much experience. Pastoral properties have been valued by our colleague, Mr. Cameron, whose figures, subject to certain reductions, have been accepted. The mining scrip has been taken at current market prices. With regard to the Branch securities other than pastoral and mining, our estimates were formed from our own knowledge and experience of particular districts, from the periodical reports of Branch Inspectors, and from the Half-yearly Reports of Branch Managers, confirmed in some cases by the values of local experts. In the case of Overdrafts unsecured or only partially secured, statements of liabilities and assets from many individuals and firms were submitted to us by the Bank. The Discount Accounts were carefully reviewed, together with reports as to the means and standing of acceptors.

7. Our estimate of the Bank's position is that the Liabilities exceed the Assets by £2,435,423; that is to say, the whole of the Paid-up Capital amounting to £899,552, the amount at credit of Profit and Loss Account, £46,955, the Contingency Account of £160,544, the Interest Suspense Account of £75,562 (amounting in all to £1,182,613), have been lost, and that there is still a deficit of £1,252,810.

8. In addition to this, we find that since the reconstruction of the Bank in 1893 the sum of £747,872 has been written off as bad. Practically the whole of this loss has arisen out of transactions of old standing.

13. The Bank notwithstanding its heavy losses, has still a good volume of sound and profitable business; and this, under careful management, should enable the creditors to realise 20s. in the £. But the rate of interest allowed on deferred deposits should be reduced as soon as possible to 2½ per cent., otherwise the margin between revenue and expenditure will not permit of any substantial annual appropriation towards restoring the stability of the Bank.

14. We estimate that, even on the reduced Assets, the Bank can pay its expenses, 2½ per cent., to its depositors, provide for current banking risks, and yet show an annual surplus of, say, £100,000. This is taking the business as it stands without allowing for improvement in values or expansion in the volume of trade. The deficit, so far as the creditors are concerned, is £1,250,000, and, under ordinary favourable circumstances, it should be extinguished within a period of twelve to fourteen years.

22. After careful consideration of many schemes we have decided to offer what appears to us to be the most practical suggestion, since it is based upon a clear recognition of the facts. It must, however, be obvious that the publication of our Report would materially damage, if not destroy, the credit of the Bank. Hence it becomes necessary to devise some means by which protection may be at once afforded to existing interests pending the completion of arrangements for placing the affairs of the Bank upon a working footing. To prevent the stoppage of the Bank, to avert what most people would regard as a public disaster, and to enable the shareholders, the holders of the deferred deposit receipts, and the Government to decide upon a future course of action, we have resolved, notwithstanding our strong aversion to any form of State guarantee, to recommend the Government to guarantee temporarily the balances at credit of current accounts,

and also such of the new fixed deposits as may mature during the same period.

23. The Government is, we are advised, a preferential creditor, and in view of this fact we are of opinion that the best course for the depositors (*i.e.*, the private holders of deferred deposit receipts) to take would be to convert their receipts into shares—in other words, we recommend them to obtain the consent of the shareholders and to replace them as proprietors of the Bank.

24. The capital is gone, but the shareholders are legally in possession. There are 160,000 shares issued on which there is a liability of £2 per share, or a total reserved liability of £320,000. If the shareholders will surrender what may be termed their equity of redemption to the depositors in consideration of being relieved of this liability, we recommend the Government and the depositors to grant the release.

25. Under the proposed arrangement the position of the new Bank would be, roughly, as follows, viz.:

Assets	7,670,558
Liabilities	4,905,718*

Surplus Assets 2,764,840

The figures render it unnecessary to dilate on the stability of the position. But even if the depositors were to convert only two-thirds of their receipts into shares, the new Bank would still show a good surplus. In our opinion it would be wiser for them to risk more, because we think that ultimately they would gain more—but that is their affair.

26. We have included in the above calculation the amount owing to those current account depositors who were compelled under the late scheme of Reconstruction to accept deferred receipts. We are of opinion that the sums so held might be equitably released.

27. Credit is an asset without which no Bank can live. It has been lost by the present Bank, but it would be restored under the new proprietary. New business should be attracted by the margin of security offered to the public, since the Bank would not be resting on an artificial prop, but would stand secure on its own resources.

28. In offering this suggestion we do not desire to minimise the difficulties that lie in the way of its accomplishment. Doubtless many weighty objections can be urged against it, but probably as much may be said for any scheme of reorganisation which human ingenuity could devise. After carefully considering all the objections that occurred to us, we are still of opinion that the course recommended is the simplest and the best.

29. In no other way that we know of—save under full and permanent guarantee by the State—can the depositors hope to better their position. If the Bank were to go into liquidation, and the Government were to exercise its preferential right, the depositors would get very little. Under the proposed arrangement they would stand a good chance of ultimately realising 20s. in the £, while in the meantime they could pay themselves and the Government 2½ per cent., and show a good annual surplus besides.

* After deducting £4,017,550 amount due Depositors, and £1,182,613 Share Capital and Reserves (Appendix B).

CORRESPONDENCE.

JAPANESE RAILWAYS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—There was a time, I believe, when the railway track between Tokyo and Yokohama was considered one of the smoothest and best laid pieces of line in the world. The same compliment could not be paid it now. Doubtless many of your readers will have noticed the very rough state to which this piece of road has been allowed to degenerate. Now that railway enterprise is so much to the fore in Japan, and the question of running express trains similar to those in Western countries is so much talked about, surely the first thing that should receive the attention of the authorities is the proper maintenance of their roads. Any railway expert would hesitate, I think, to run a train at a very great speed over this line in its present condition, especially on that portion between Shimbashi and Shinagawa, which is the worst piece of all; indeed, I should imagine that to do so would be positively dangerous, particularly if the locomotive being run had experienced much wear and tear. Therefore, not merely for the comfort of passengers traversing this line, but for their safety, it is to be hoped that whoever is re-

sponsible for the up-keep of the permanent way of the Government railways will give some attention to this road.

Yours, &c.,

A FREQUENT PASSENGER.

THE GOTEMBA LEPER HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is a custom of mine to write, every year, a few lines about the leper hospital of Gotemba, and to address them to the benefactors of the establishment. This year I am a few months late, but the delay is not owing to any fault of mine. I feel happy to tell our benefactors, first of all, that the work is still prosperous, and continues progressing both morally and materially.

Our patients in the hospital have rarely exceeded 80, an average which has generally been maintained. Their present number is 76. Among these, 67 are Christians and 3 catechumens. The others also prepare for baptism, but more remotely, as they are all new comers. In the course of this year, we have had 18 baptisms, 34 confirmations, and 2 deaths.

As before, and every year more and more, our patients lead a regular and peaceful life. Discipline is observed; the exercises of instruction are regularly attended to; good order reigns, and with it profound peace and every holy joy. I take pleasure in repeating it, our patients seem to forget their horrible disease, so happy do they feel in their new home.

As most of them belong to the peasantry, they work willingly, according to their ability, and till a certain extent of land that the establishment has acquired. They sow and grow the vegetables they need, cut dry wood to heat the baths, or gather grass, in summer, to feed our three horses and three cows; one looks to the mill that grinds our rice; another drives the horse that transports it, or ploughs the ground. The more vigorous clear the land that is yet untitled and plant in it mulberry trees or paper trees. The weaker are continually engaged in cleaning up the hospital. The women do the washing and the sewing. Everything is kept clean and orderly, for every one is at his work and does it cheerfully and well.

To conclude, in the name of all our dear patients and in my own name, I renew to all our benefactors the expression of our sincerest gratitude.

And as the year is coming to its close, we address them our best wishes of the season. May the Lord repay them a hundredfold, and in every possible manner for the good they do the bodies and souls of our poor patients.

I am, &c.,

P. VIGROUX, Miss. Ap.

3, Tsukiji, Tokio.

26th December, 1896.

A QUERY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the last Summary of the Religious Press, the writer gives a synopsis of an article, in the *Uchu Shinkyo*, on Mr. Fukuzawa's 100 Essays.

"Mr. Fukuzawa is of opinion that some people take life too seriously and are oppressed by its difficulties and responsibilities The man who regards life as a comedy bears his losses and disappointments with a light heart." The writer of the summary then adds:—"The *Uchu Shinkyo*, it seems to us, founds its objection to Mr. Fukuzawa's remarks on a misconception of their purport."

It would be a favour not only to myself, but also I believe, to all the readers of the *Japan Evangelist*, if the writer of the Summary would kindly let us know wherein Mr. Fukuzawa has been misunderstood.

The following are excerpts from four of the Essays, translated into English and published in the *Japan Evangelist* :—

"If we understand that human life is only a joke, we will not be worried by anything that may befall us, and we can be calm amid the tumults of the vulgar crowd. It is through such views of life that peace of mind may be obtained."

"Understanding well that human life is but a joke, we must go forward and do our duty earnestly, and conform to the social order. Thus by knowing that all things are but trifles, we shall not be overtaken with surprise by anything that may befall us, and we can maintain our hearts in peace."

"A human being is but an insignificant worm, its life of 50, 60, or 70 years is but a joke, and needs not to be lived in seriousness. Life means death, and death is not a wonder."

"As said before, human life is a joke and death is nothing. But as a practical way of life we are persuaded that we should love life, do good,

and avoid evil. This may seem a great contradiction. But the human heart is great, and goes beyond the light of reason."

Speaking of translation, while I have confidence in the Summary to give us English equivalents, yet I have wondered if it is possible that Dr. Kato really said what a former Summary makes him say, namely:—"I have never contended that religion can be altogether dispensed with. There are doubtless people who need it. What I do maintain is that, to the man who is thoroughly acquainted with the nature of things, with the principles which control the world, religion is superfluous."

A philosopher used to mean one who loved wisdom and sought her. Mr. McCosh used to say that added knowledge was like the lighting of a lantern; while it revealed more distinctly that which was at hand, it but made denser and brought nearer the background of darkness. Newton, as we all were told in our school days, compared himself to a child picking up pebbles on the shore, while the great ocean of truth was still before him. Hopkins said that the intellectual vision of one man may extend further than that of another, but, to both alike, the sky closes down upon the mountains. Tennyson's Ulysses found that "all experience is an arch, where through gleams that untravelled world whose margin fades forever when I move." I therefore wondered whether it might not possibly be an inexact rendering when I read of "the man who is thoroughly acquainted with the nature of things" and the implication that he might be found in Japan. The work of the Summary is evidently done with painstaking care and is much appreciated, but the reader is shut up to one of two conclusions, either of which is difficult to reach; that the writer of the summary has made a mistake, or that the English gives us the exact meaning of the words.

Tokyo, Dec. 29th, 1896.

B. C.

"CINDERELLA" AT THE PUBLIC HALL.

Seldom in our recollection has a local audience so thoroughly enjoyed itself or been so entirely satisfied with the fun provided as was the crowded house that gathered in the Public Hall on Wednesday evening, when the original burlesque "Cinderella" was presented by some amateurs of the community. Expectation had been running high for several weeks before the affair, and more than ordinary hopes were entertained regarding it: and now in all honesty it must be acknowledged that in no sense were people disappointed. Indeed, sweet-voiced, winsome *Cinderella's* appeal at the end, when she craved the indulgence of her large audience and asked them "to be a little blind" to any shortcomings of the players, was entirely superfluous. It should be explained that the burlesque is the work of a local *litterateur*, Mrs. G. K. Dinsdale. This lady is undoubtedly a writer possessing a pretty turn of wit, to judge by last evening's performance, for the *libretto* was excellent all through and the adapted songs capital—always apt, humorous, and decidedly taking. The staging was another good feature, and the make-up and costumes something to thoroughly admire.

The old fairy story of childhood formed the foundation of the burlesque, but like a *Drury Lane* Pantomime it bore but faint resemblance in anything but outline to the original tale. The curtain rises on *Fack* (Mr. Wileman) in search of something to eat, having been robbed of all he possessed by some quondam friends. Of course he wanders into *Cinderella's* house, and soon we are introduced to the three interesting sisters. First of all *Cinderella* (Miss Wheeler), appears in answer to *Fack's* knocks, but before he has fairly detailed his woes to her or sung her a plaintive ditty, the Sisters, *Gorgonzola* (Mrs. McWilliams), and *Alforlorna* (Miss Thomas), call their "slave" into their dressing-rooms to tire them for the Prince's Ball. After some amusing "remarks" from the sisters in regard to "lacing" and other subtleties of the toilette, they appear in the parlour to the discomfiture of *Fack*. Just as things are getting complicated, *Ohayo* (Mr. A. B. Smith) the Prince's Secretary and an ex-policeman of Japan, appears to escort the sisters to the ball. *Ohayo* was splendidly made up and acted the character of the Japanese variety of the "man-of-blue" to the life. From his rounded shoulders, spectacles, and socks, down to his note book he was perfect. His salutes and actions were those of a man to the manner born. Whenever he was on the stage laughter was never absent from the house. After some amusing songs and dances by the Sisters, the curtain falls upon *Ohayo* about to escort

them out. Act II. introduces *Cinderella* darning socks in the kitchen, "sitting up" awaiting the sisters' return. Then the *Fairy God-mother* (Mrs. Dinsdale) appears and the burlesque follows the old nursery story up to the departure of *Cinderella* to the ball. But before this occurs *Fack* declares his love and wins *Cinderella's* heart, trolloping out for his assistance in the siege a pretty song adapted to "I want you my honey, yes, I do." This he had to repeat. The thunder and lighting effects introduced in this scene were exceedingly well managed; while the quick changes of costumes of both the *Fairy Godmother* and *Cinderella*, and the appearance of a chorus of wee fairies, were all most effective, reflecting credit on actresses and stage management alike. The *Fairy Godmother's* dances were all exceedingly graceful, and some had to be repeated. At the Prince's ball, *Cinderella*—introduced as Princess Kiss-and-Kiss-again—makes immediate conquest, and her own happiness is further enhanced through the faithful *Fack* appearing—due to the kindness of the *Fairy*—in the character of Admiral Incogniti, in consequence of which several dances, we are given to understand are "sat-out" by the happy pair. Previous to *Fack's* appearance at the ball, however, the *Fairy* has discovered that he was the bold sailor-man who, some years before, had rescued her from a terrible plight in Water-street: the *Fairy*, one hot July day, by some mischance having fallen into the "treacherous gutter," when passing Messrs. Butterfield and Swire's offices. The "hit" was most palpable and the house roared and roared again. Act III. brings us to the morning of the ball, and *Cinderella* tells the story of her predicament in staying after 2 a.m.—we suppose it is out of deference to Yokohama customs that this *Cinderella* had two hours' longer at the ball than was allowed her prototype of immortal fame. Soon the elder sisters come upon the scene, *Gorgonzola* as a modern woman in the latest "biking togs," *Alforlorna* in a pretty yellow dress, but in a sad temper at her disappointments with the Prince at the ball. In the midst of some "affectionate" recriminations sang in song or hissed in dialogue, in walks the *Prince Up-to-date* (Mr. Coghill Jackson) in search of the owner of the tell-tale slipper. He was quite a Prince of the olden school—silks, satins, laces, ruffles, wig, powder, sword were all brought in to set off his noble self. In several well-sung lyrics he tells of his errand; then the sisters try their blandishments upon him using a special adaption of "The gay Tom Tit." They charmed the house—that demanded a repetition of the song—but upset the *Prince*. Eventually *Cinderella* appears and the slipper is placed upon her dainty foot. Then the *Prince* declares his passion, only to be rejected, for *Cinderella* has plighted her troth to *Fack*. But he persists and has to be knocked down by *Fack*, who happens opportunely to be near. The *Fairy Godmother* appears at this juncture, and much to the satisfaction of her darling god-child discovers a birth-mark on *Fack's* arm. This is a Tilly foot pierced by the X-rays on an azure ground. Unknown to himself, *Fack* was of noblest birth, and the finding of the fairy's "private chop" lifts him to a position of most desirable eminence, an eminence that enables him to become the affianced groom of *Cinderella*. Then *Prince Up-to-date* was paired-off in a most amusing fashion to *Alforlorna*, *Fack* advising the depressed suitor that when all else failed he could join the noble fraternity of brokers, "who are always ready for a morning cocktail at No. 5, sir." The last pair require some gentle persuasion to link-on, *Ohayo* at first declining the hand of the willing but repellent *Gorgonzola*—or *Gorgy* as she is known to her dearest girls friends—on the ground that he already has a wife in Japan. But after some cajoling by the *Fairy* and the obtaining of an implicit promise that *Gorgy* will always show "perfect submission," he agrees to telegraph for a divorce. A clever dance and song concluded the piece, the curtain falling on one of the most taking performances ever given here. The authoress well deserved her "call."

Miss Wheeler as *Cinderella* was most charming. She was dainty, bashful, and coquettish by turns, displaying the powers of a cultivated actress, and her enunciation left nothing to be desired. Of the Sisters equally high praise is merited. Miss Thomas sang her songs cleverly and her action as a burlesque actress was most finished; Mrs. McWilliams was splendid in every detail, carrying out her part with great *verve*. As the *Fairy Godmother*, Mrs. Dinsdale was peculiarly happy; and her dancing enchanted the house. Mr. Wileman was heard to advantage in all his songs, while his acting was very good. Of the other two characters we have already spoken in high terms. A word of praise is due Mr. C. H. Fearon, who arranged the pretty music and accompanied, and

to Mr. E. Beart, the stage manager. The following was the *cast* :—

CHARACTERS.

<i>Cinderella</i>	Miss Wheeler.
<i>Gorgonzola</i>	Mrs. McWilliams.
<i>Alforlorna</i>	Miss Thomas.
<i>Fairy Godmother</i>	Mrs. Dinsdale.
<i>Fack (the Real Prince)</i>	Mr. A. Wileman.
<i>Prince "Up to Date"</i>	Mr. Coghill Jackson.
<i>Ohayo, the Prince's Secretary, a Japanese</i>	Mr. A. B. Smith.
ex-Policeman.....	Mr. R. Beart.
Stage Manager, Mr. R. Beart.	Accompanist, Mr. C. H. Fearon.

THE "GEISHA."

"Kokatsu" had a little word,
A word as cold as snow,
And everywhere Kokatsu played
That word was sure to "go."
Unlucky lovers sent for her
In Kurume, where she stayed;
She played to them the samisen
But aye that word she said.
However kind your words may be,
However deep your woe,
She sings and plays and laughs so calm,
And coldly answers "No."
And then you think you'll mind her not,
Or the smiles she seems to show,
Again that horrid word you hear,
And—okin! arigato.
Kokatsu's played and sung so sweet,
Time's up and she must "go."
She asks for "pay" and smiles again,
Its "yes," I meant not "No."
Kyoto. JOS. SEEL.

LETTER FROM FORMOSA.

(FROM OUR SPECIAL CORRESPONDENT.)

Taipei-fu, Formosa, Dec. 16th, 1896.
His Excellency Lieut.-General Baron Nogi, the new Governor-General has been a very busy man during the time that has elapsed since his arrival. Besides the extra labour occasioned by the outbreak of plague, he has plans for the new living quarters for the Government officials on his hands; numerous schemes for general improvements throughout the island to be considered, and, perhaps the most difficult of all, the close study and attention required to pick out the good and the bad in the present administration and to devise such changes as will insure a just and impartial government to all. Having reached a conclusion on many points, he has had assembled with him at the capital, for the last few days, the head officials of the different districts throughout the island and the Pescadores. The following which is a synopsis of the closing address delivered before the officials by His Excellency, is important, as it announces in a general way the policy by which the island will be governed:—"When the government house of Taiwan was first opened, the island was in a state of disturbance, caused by the opposition that the Japanese encountered from the native rebels and remnants of Chinese soldiery. Consequently it was not until last March that the regulations for civil government of Taiwan were put in force and the foundation of the administration established. Since then more than a half a year has elapsed during which period vigorous efforts were made to bring about uniformity of administration in all the districts, acting with the central Government as adviser on even comparatively minute matters.

"In the future, however, local governors will be given more power in administering their respective districts, and will be required to refer to the central government in matters of importance only."
"It seems positively necessary that more local offices be established, and that the subordinate officials to fill the posts be appointed from the respectable class of natives, as far as possible, with the view of improving the relations between Japanese and Chinese, and insuring greater consideration for the wants of the latter."

"The preparatory investigations effecting these changes, have been made and the matter will be laid before the coming session of the Imperial Diet which meets this month. It is hoped that it may be possible to introduce the corrected forms of administration in Formosa the first of next April."

"We are placed in the island among people that differ from us in language, dress, and customs, and it seems specially necessary that for the establishment of good order, the enforcement of our laws be placed in the hands of police, who, by remaining for a long term in the island, can become familiar with the character and habits of the native

population. Occasional riots and petty rebellions are likely to occur for several years. Against such disturbances the peaceful natives must be protected, and to do so effectually our present force of police must be greatly augmented."

"We extremely regret the unfortunate condition into which some of the natives of the island were thrown during the late disturbances, but now that peace is re-established in their districts, it is important that strenuous efforts be made to restore public confidence and assist the natives in regaining their former condition of prosperity."

"The establishment of various industries, the improvement of means of transportation, innovations in sanitary works, and the introduction of an educational system are all of immediate necessity for our welfare in the island. There is still another and a great value in these works, when we consider that the ultimate effect in placing before the natives for their convenience as well as ours these arts of civilization, will no doubt be to convince them that our intentions are good and that we are sincere in our wish to benefit them. Generally speaking, work on these improvements has already been commenced, and I am in a position to state that it will proceed in due course. The local officers are requested to give all possible assistance in their respective districts to such work."

The habits and customs handed down by their ancestors are so deeply impressed upon the minds of the Chinese inhabitants that they are generally more highly respected than even the laws of the land. In Formosa we should allow the Chinese perfect freedom of action in these matters, so far as such freedom does not interfere with the administration of our laws or encroach upon the liberties of others. Thus the wearing of queues, the binding of feet, the costume should be left to their choice, and as to the use of opium, it will be tolerated with certain restrictions, until the time when its entire abolition can be effected."

Mr. Nao Nabekura, Hongkong Agent of the Yokohama Specie Bank, who is in the city, gave to the foreign community a most enjoyable dinner and entertainment at the new Azuma Restaurant last week.

The plague still claims occasional victims. Two of Japan's leading doctors are here to make closer examination into the disease.

Mr. Okura, one of Tokyo's great merchants, has arrived at Taipei.

BOXING-DAY SPORTS.

Two bicycle races, a football match, and some scratch flat-races was the sporting bill-of-fare provided for Yokohama residents on Saturday, Boxing-day. The first race was on the high-road from Kodzu railway-station to Yokohama, and was open to all riders in Japan. The first prize, presented by Messrs. T. M. Laffin and A. J. Baguall, in the interests of the Dayton bicycle, was valued at \$50; and Mr. F. J. Collins, of Kobe, presented a second prize of \$25. Out of the eleven entries, four started, Messrs. J. M. Scott, L. Eytton, C. R. Morse, and W. H. McGowan, Mr. Gunn, the starter, getting them off at 10.30 o'clock. Scott and McGowan soon obtained a lead and they kept together until Hodogaya hill was reached. Here McGowan's chain snapped and put him out of the race altogether. Scott finished in 2 hours 7 min.; L. Eytton was second in 2 hours 11m. 15s; Morse third, 2 hours 25 min. Scott takes the first prize. The roads from Kodzu to Fujisawa were in good condition but from there on to Yokohama they were very bad, "floundering" our grandfathers would perhaps have called them, and Scott had to dismount three times and carry his machine. A word of thanks is due to the police. At each town along the route they kept the road clear, special constables being placed on duty in the more populous places, in order to facilitate matters for the cyclists. Mr. T. M. Laffin was timekeeper and judge.

At two o'clock in the afternoon, a large number of spectators gathered on the Cricket-ground to witness the relay bicycle races between two veterans from Tokyo and two of Yokohama. Their names, ages, and weights were:—

YOKOHAMA.		TOKYO.	
Geo. Hodges, 54 years,	215lbs.	P. Peacock, 57 years,	175lbs.
J. L. O. Eytton, 50 years,	178lbs.	R. Ward, 50 years,	235lbs.

The weather was perfect for such a contest, bracing and windless. Mr. A. M. Delf was starter; Messrs. Robert Hay and K. Kingdon, timekeepers; Mr. A. T. Watson, referee. The distance was 24 laps, each competitor doing three turns of four laps each. Hodges and Peacock opened and the former led in the first three laps; then the Tokyo man passed his rival and finished the relay about 30 yards ahead. Eytton and Ward next took up the running, and Yokohama was not

long in pulling down Tokyo's advantage: at the top of the ground Eyton took the lead. Turning into the straight for the Pavilion an unfortunate accident happened that took all the interest out of the subsequent proceedings. The handle bar of Ward's machine worked loose and as a result he came a cropper. Before he could get himself together again, Eyton had made another lap, so the Tokyo representatives retired. The Yokohama men completed the whole course in 26min. 30sec.

23rd		23 25
24th		24 30

The winners entertained the losers at Whaley's Hotel in the evening; a sumptuous repast being followed by a most enjoyable evening.

About half-past three o'clock a football match was started, under Association rules, the teams being picked up on the ground. The game was far from interesting, the influence of the Christmas festivities being very apparent. One goal each was scored.

At the conclusion of the football, a welter bicycle flat race over the 100 yards track was arranged, which Goldman won. Some two-lap bicycle spins were then indulged in, the fun being kept up till daylight waned.

AUSTRALIA AND JAPAN.

By JOHN PLUMMES, M.J.S.

Sydney, November 14th.

JAPANESE TRADE WITH AUSTRALIA.

The arrival of the *Yamashiro Maru* in Australian waters continues to form a leading topic of conversation in colonial mercantile circles, which see in the initiation of the new line a trade opening of considerable importance to the colonies. While the vessel was in the Brisbane river, an entertainment was given by Captain Jones, the guests including Mr. T. J. Byrnes, the Attorney-General; Mr. D. H. Dalrymple, the Minister for Works; Mr. J. G. Foxton, Minister for Lands; Mr. A. J. Thynne, Postmaster-General; Mr. R. Philp, Minister of Railways; and a number of members of Parliament and leading commercial men. Several toasts, including one of "The Japanese Government," were honoured, and three or four very interesting speeches made. Mr. Byrnes, who was loudly cheered, said the spirit of adventurous enterprise had taken hold of the Japanese and it was only to be expected that they should want to find a market for their enterprise in the East. Queensland was very glad to see the development, and was sure Japan would become a good customer to Queensland. They must inevitably expect Japan and the eastern countries to take trade from them, as they desired to take trade from those countries. He was not viewing the venture with apprehension, but needless alarm had been expressed about it. He believed the Anglo-Saxon race could hold its own. Mr. Philp, in responding to the toast of Burns, Philp and Co., agents of the vessel, said he was not afraid of Japanese flooding Australians out. The Australians would be able to hold their own against any nation, but it was fitting that they should have closer relations with a country like Japan, which had shown during the last few years that it was the nation of the East. It was well Queensland should cultivate friendly relations with that great country. All knew that good commercial relation between countries augured well for friendship.

Australia had many products which it could sell to Japan, and there were many useful products which Australia could take from Japan. He did not think there was the slightest fear that the Japanese would come in greater number than Queensland would care to receive.

The Brisbane papers have not, so far, given any extended notice of the new line, but the Sydney journals have promptly recognised its importance. The *Sydney Daily Telegraph* not only published a lengthy description of the *Yamashiro Maru* and its crew, with an account of an interview with Commander Jones, but also gave a lengthy editorial, in the course of which it said,—"It is practically sure that Japan will afford a ready market for a considerable number of our products. The requirements of the Government and the people arising from the great change that is in progress are likely to be many, and the advantage to us in supplying them very considerable. In return for what we send, the chief imports from Japan, in the beginning at least, will be such goods as the world has been in the habit of buying from the clever and ingenious people of that country. The goods brought by the first steamer are principally lacquer ware, porcelain, pottery, and articles generally in the domain of decorative art. For this trade Sydney, owing to her free port, will become the Australasian distributing centre. It is probable enough that before very long we will find that it is to our advantage to buy from Japan classes of goods which are now obtained from elsewhere, and that for each shipload of exports sent out we will receive payment an increasing degree in imports. This is not a prospect which will cause any alarm to the people of New South Wales, however. They have the good sense to comprehend that if goods come here from any quarter of the world, it is because we want them, and are able to pay for them with something given in exchange, which is produced here by our own labour employed in the most natural, and therefore, in the most profitable manner."

The *Australian Star* which, as the organ of the New South Wales protectionists, is always denouncing "foreign competition," British as well as Japanese, says—"The greatest incident in the history of Japan is the wonderful growth of its steam marine, as exemplified in the *Nippon Yusen Kaisha*." It does not, however, express any opinion respecting the probabilities of trade, or the extent to which the interests of existing lines may become affected.

AUSTRALIAN COLOURED RACES RESTRICTION BILLS.

The New South Wales parliament, previous to its prorogation, passed the Coloured Races Restriction Bill, but with the following clause introduced by the Legislative Council—"This Act shall not apply, nor shall the Chinese Restriction and Regulation Act of 1888 apply, to ministers of religion, missionaries, native teachers, tourists, merchants, men of science, or students, and the wives and families of such persons, and also their domestic servants, who are bearers of certificates of identity specifying their occupation and their object in coming into New South Wales, or of other similar documents issued by the Government whose subjects they are. Every such certificate or other document shall be in the English language, and shall be examined and endorsed by a British Consul or *Chargé d'Affaires*, or other accredited representative of the British Government at the place where the same is issued, or at the port or place of departure. And neither of the above-mentioned Acts shall prevent the landing of any of the officers or of the crew of any vessel during her stay in any port of New South Wales, subject to such regulations ensuring the departure of such officers and members of the crew in their ship as the Governor-in-Council shall prescribe."

The Bill was opposed in both houses, but the supporters had a large majority. In the Legislative Council the motion for the third reading was met by a protest read by Mr. Brown on the grounds that legislation on the subject should be left until the Federal Parliament had assembled, and that the provisions of the measure were repugnant to the spirit of the British Empire. He objected to the exclusion from the colony of any subjects of the Empire, no matter of what colour or creed. The protest was subscribed to also by Dr. MacLaurin, Messrs. Kerr, Cox, Dangar, T. H. Smith, and Jacob. The Bill is being sent on to London for the assent of the Imperial Government, but it is understood that its provisions will not be stringently enforced save under circumstances of emergency. But with the passing of the Bill misgivings are being expressed respecting its expediency. Already the Syrian residents in the colony are protesting against their being regarded as a coloured race, while others are asking why, if Syrians come under the provisions of the new legislation, Jews should be excluded.

One of the provincial journals says, however, it is not so much with nondescript races that Australians have to deal, as with the Eastern Asiatic, whose complexion and general appearance leave no doubt whatever as to his nationality. "With China, Japan, and India we are more concerned, and have more to fear from them than from any number of hawking Syrians, be they Asiatic or Caucasian in the mould of their features and the cast of their countenances. Here in Australia where we have a population numbering somewhere about five million souls, we are passing legislation which will veto the landing on our shores of the natives of these most populous countries of the world. The Bill proposes to restrict the movements of four hundred million Chinese, three hundred million Indians, and about forty millions of Japanese, to say nothing of the numerous islands of the Pacific which, it is intended, will come within the operations of this measure. The order is a stupendous one certainly, and if Australia is lacking in anything else, she has shown at least that she can put a bold front on an occasion like the present. But times are altering in Asia, and the western states of Europe no longer hold that monopoly of civilization on which their prestige was based, even a short lifetime ago. With British occupancy of eastern territory the natives of Eastern Asia have become somewhat enlarged in their ideas, and the China and Japan of to-day are no longer the mere ciphers they were a few decades ago. They have grown into Powers, and have now to be reckoned with as such. In Japan perhaps the advance in civilization has been greater during the past few years than with any other country in the world, and on every hand she is evidencing her keen desire to take her place in the foremost rank of the world's commercial undertakings. The Japanese are not gifted with inventive genius, even in a moderate degree, but they have superb imitative faculties. Of this they have given ample proof of late years, and as mechanical workmen they seem bound to outdo even the long-headed Britisher and the keen-witted Yankee. Then again, the recent war between Japan and China showed that the former country is not by any means deficient in the arts of warfare. In fact, both the Chinese and Japanese fighting junks of half a century ago have now been replaced with the most modern European war vessels; their men are trained in arms by our own British officers until to-day, neither the Chinese nor the Japanese considers himself one whit inferior to his more western brother. Neither Japan nor China can now be treated as the uncivilized countries they were a few years ago, even though we Australians might consider an influx from either country an undesirable element in the midst of our southern civilization."

Similar restriction bills have been introduced in the parliaments of Queensland, Victoria, and South Australia. The *Sydney Morning Herald*, alluding to this, observes—"In the recognition as to what would be the duty of Australia did the danger of wholesale immigration of Asiatics become imminent, we are in full accord with the promoters of the Alien Bills which seem destined to go through several of the colonies. But the points in which we differ from these far-sighted reformers are as important as those in which we agree with them. We are unable to see the slightest evidence of any tendency of these dangers becoming real within a period with which present-day politics need concern themselves. And we cannot see the least necessity for getting up fussy legislation against these dangers before they acquire at least some semblance of reality. We are told that in view of their serious nature it is prudent to prepare against them in advance. This proposition might be theoretically assented to were it not so applied as to commit us to legislation of a character which nothing short of actual danger could excuse. Every self-respecting Australian must surely feel a twinge of shame at seeing some of our Parliaments passing laws placing limitations on the entrance to our ports of people certain members of whom would be welcome and useful additions to our population. It is simply humiliating to see our legislatures passing laws under the influence of either panic or trades unionism trying to disguise itself as far-sighted statesmanship, against a handful of Japanese traders, Afghan camel-drivers, and Syrian pedlars. The more so from the fact that these provisions will surely be applied, as in the case of those against the Chinese, to the worry, the hardship, and the harassment of the people of these races already domiciled here. Surely the whole thing is uncalled for, and is nothing but an appeal of our politicians to votes of the baser sort. We are all agreed that a peaceful invasion of Asiatics coming in numbers sufficiently great to form a social or national danger to our political homogeneity is to be resisted just

as absolutely as though they came as enemies with weapons in their hands. It would be easy to pass a measure arming the Government with powers adequate to the emergency should it ever arise. For the purposes of ordinary restriction, it would be possible to impose passenger and shipping regulations which would act as a sufficient check to the arrival of undue numbers. If a real danger were to arise, the powers of the State would of course be used to the last possibility to meet and repel it. In that we are all at one. But when we see our legislators, in a state of real or simulated panic, getting ready to bring 100-ton guns to bear upon a few poor aliens arriving here to try for an honest living, a large part of the community must be painfully conscious of the degrading and ludicrous aspect of the whole matter."

MR. NOEL BUXTON'S VIEW ON NORTHERN AUSTRALIA.

Mr. Noel Buxton, son of the Governor of South Australia, has lately been visiting Northern Queensland, and on his return to Adelaide he encountered the inevitable newspaper interviewer. It appeared that he had made a trip to portions of the Northern Territory, and the interviewer was anxious to record his impressions of the country. In reply to a question put to him, Mr. Noel Buxton said:—"I think that with a view to its supporting as many whites as possible, Japanese, or perhaps Indian, labour should be allowed under strict contract. Many whites would be employed in the industries which might grow up as in Queensland, and if afterwards these could be carried on with white labour only the coloured labour could be stopped by not importing more. For this reason the Japanese are the best labourers for Queensland, because they are obliged to go home after three years. They are helping the white workmen now without endangering their interests in the future. So long as Australia is part of the Empire, the idea that immigrants might help a Japanese invasion is absurd, and, besides, the alarm about a flood of Japanese is unfounded. There are less than 1,200 working at sugar, and hardly any at other trades except diving, which Europeans do not like. And the other objections to coloured people do not apply to Japanese. They do not marry whites like Chinamen, and as to lowering the average of civilization, I think from what I saw on several plantations that impartial people would judge the Japanese in some ways more truly civilized than many whites. The philanthropic objection to Kanaka labour on the score of possible cruelty is also out of place, for the Japanese can be trusted to look after themselves—too much so to please some employers. Their Government will not let them come unless they live like civilized men. It only allows suitable men to come, and insists on their returning unless they re-engage with the same planter. As an advocate of 'Australia for the white man' I think Japanese contract labour, far from being the most dangerous, is the best possible help to the interests of white labour." As to the natives, they do good work on many plantations in Queensland, but they cannot be depended on. It is a great pity they have not made themselves useful and so avoided the cruel fate they have often met. It is certainly time that some amends were made for the injustice of the past.

JAPANESE INDUSTRIAL COMPETITION.

The bogie of Japanese industrial competition, which has occasioned so much alarm among the Australian labouring populations, is beginning to lose much of its ill-omened terror, the modified tone of colonial public opinion being significantly illustrated by a leading article in one of the oldest and most influential colonial provincial journals, in which the editor, referring to a letter recently published in the *London Times*, says:—"There seems to be no question at all that the Japanese with their conspicuous imitative faculty have made copies of many European manufactures—felt hats, bicycles, woven stuffs, etc.—and can sell them so cheaply that the Japanese merchants have been deluged with inquiries from America and England. But it turns out that none of these phenomenally cheap goods would suit either the English or the American market. The hats would be unsaleable; the woollen stuffs are so flimsy that cheapness in their case is equivalent to nastiness; bicycles made in Japan are primitive in construction, fabricated by hand, and badly made. Nor are they specially cheap. Japanese pneumatic tire bicycles can be put on the market at £11 to £17; but an English manufacturer produces at from £12 to £20, a far superior and therefore a cheaper article. In one commodity alone has she affected English trade. That commodity is cotton yarn. The imports to Japan of cotton yarn, alike from England and from India have fallen off, and Japanese spinning mills undersell, in Japanese markets, the mills of Lancashire and Bombay. But that is because they are nearer to their cus-

tomers. It does not follow, says the correspondent, that she will become a powerful competitor in the foreign trade. It is doubtful whether, unless she grows her own cotton and makes her own machinery, she will even command the contiguous China markets. At present Japan imports both her machinery and her cotton. Is it probable that in the future she will make her own machinery? The writer thinks not, either in the early future or at any time. She is a country not rich in minerals, and is already using up her easily accessible coal at such a rate that coal in Japan is no cheaper even now than coal at the pit's mouth in England. And with the need for sinking more deeply for it will come increase of the cost of production. Then almost all the iron used in the country comes from Europe. "It is worth repeating that no nation which has to depend on others both for its machinery and for its raw material is likely to be a successful competitor in the field of industrial production." The writer goes on to remind us that Japan is not a newly discovered country of immense virgin resources. Till lately, wood only has been used for fuel, and for building purposes. The consequence is that the forests have almost disappeared, and that timber from America is cheaper than native Japanese timber of a similar quality. The increase in the cost of timber means an increase in the cost of living. Then there comes the question of wages. Undoubtedly wages are low in Japan. But three persons are employed in Japan to do the work which one man does in England. And though wages are low their tendency is to rise. The manufacturers have already experienced the joys of several strikes, and the workmen as the demand for comfort increases, must have more wages. The conclusion of the correspondent on the whole situation is therefore that present indications belie the prophecies about Japan becoming a formidable competitor with the older industrial communities. The indications, on the contrary, are entirely in favour of her being for many years to come a good customer of England, and of other European nations. There is no reason for any immediate scare about her entry into foreign markets.

No doubt other observers of Japan may acquire views other than those mentioned above. But *The Times'* correspondent's views seem reasonable. There is a good deal in the reminder that Japan is not a new country with immense virgin resources. On the other hand, she is a very old country, many of the resources of which have been used up. And we venture to suggest that not only many of her resources but her people have also been used up. The population was for centuries living on itself. Nor has it since Japan has been tolerably open to the world been reinforced by the admixture of fresh and vigorous blood. So that the question may be justly asked whether it is likely that such a nation, though it assimilate with avidity new modes of government and of industrial working, possesses the stamina which will enable it to outdo other nations whose mental and physical powers have been developed by competition and by mutual intercourse.

LATEST TELEGRAMS.

[REUTER'S "JAPAN MAIL" SPECIAL SERVICE.]

London, December 28.

The difficulty between Germany and Portugal arising from the attack on the German Consulate at Lorenzo Marquez has been settled.

South African despatches report a serious rising of the natives of British Bechuanaland. The Cape Volunteers have been called out for service.

Russia is hastening the completion of eight ironclads now building, and has also ordered the construction of two battleships, four cruisers, and two torpedo destroyers.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, December 24.

Through diplomatic channels it has been learned that the Powers, including Russia, have agreed in principle to adopt coercive measures if the Sultan continues unyielding.

(FROM THE "N.C. DAILY NEWS.")

London, December 23.

Yielding to pressure, an *irade* has been issued by the Porte granting an amnesty to the Armenian prisoners.

The Hon. John G. Carlisle, U.S. Secretary

of the Treasury, estimates a deficit of sixty-four millions of dollars in the Budget for the current fiscal year.

No definite opinion about the Indian Famine can be formed until the results of the winter rains are known.

(FROM THE COURNIER D'HAIPHONG.)

Paris, December 8.

The Chamber has reached the Colonial Budget. A message from President Cleveland mentions the possibility of the United States imposing a limit within which the Spaniards must terminate the war in Cuba.

December 9.

The Chamber has adopted the Colonial Budget.

December 10.

Admiral Besnard is studying a project for the construction of new vessels.

December 13.

The Chamber has been discussing the Naval Budget. M. Gerville made an interpellation in reference to the recall of General Dodds, which he said caused emotion in Indo-China. He hinted that the Minister wished to find a place for a friend. Admiral Besnard, who was much excited, made a lively protest; he eulogised General Dodds, and declared that a General of Division was "necessary." M. Méline called for the order of the day pure and simple, which was adopted by 300 votes to 228.

(FROM THE JAPANESE PAPERS.)

Osaka, Dec. 26.

In regard to the cotton spinning mill's disturbance, much excitement prevails between the police and *soshi*.

The Mitsui Bank has decided not to advance money to the twenty-six cotton-spinning companies that are opposed to the Hiogo Branch of Kanegafuchi Cotton Spinning Company.

A general meeting of the Tokiwa Cotton Spinning Company will take place on the 15th of January next when it will be decided whether the Company shall build its factory at Shanghai or at home, or dissolve.

Yonezawa, Dec. 26.

Three workmen were crushed to death while carrying cement to No. 14, tunnel from No. 16 tunnel, on the Tohoku Railway.

Nagasaki, Dec. 26.

The men-of-war of Great Britain and Russia are very busy passing between this port and Chemulpo.

Yonezawa, Dec. 25.

The action against the *Yonesawa Nichi Nichi Shimbun* for disrespect towards the Cabinet, will commence on the 7th of January.

Bakan, Dec. 25.

Fire broke out in the Toyotore Ordinary Middle School last night. The building was burnt to the ground.

Akita, Dec. 26.

The expenditure of yen 7,500 on a survey of the proposed port at Funakawa has passed the Prefectural Assembly.

Bakan Dec. 26.

Marquis Ito will return to Tokyo this evening owing to the death of Prince Mori.

Kobe, Dec. 26.

Mr. Rikayei, Korean Minister to Japan, is due here from Tokyo this evening. To-morrow he returns to Korea by the *Nanyetsu Maru*.

Mitajiri, December 30.

A supply of subsidiary coins is wanted here. Rice has gone up in price.

Naoyets, December 30.

A supply of subsidiary coins is greatly needed. Numadzu, December 30.

Market prospects are dull.

Yokkaichi, December 30.

The tone of the markets is less active. The cold is intense.

Toyama, December 30.

A supply of subsidiary coins is wanted here. Kumamoto, Dec. 30.

The new barracks of the 48th Regiment at Kurume were blown down by a gale to-day.

Kyoto, Dec. 30.

As a result of the reformation in the Higashi Honganji, Mr. Otsumi, director, has been released at his own request.

Utsumomiya, Dec. 30.

The tone of the markets is brighter, though money is scarce.

Mr. Hiraoka Sadatoro, Police Superintendent of this Prefecture, having been appointed Secretary in the House of Representatives, is to leave for Tokyo to-morrow.

A special meeting of the Prefectural Assembly closed yesterday. Yen 750,020 will be spent on civil and water-works next year.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

- (a) The better way of defending this game is by playing B to Kt 5.
(b) We prefer Q to B 3, though Q to Q 5 may also be played.
(c) If Black plays P takes Kt, White obtains a winning game by Q to B 3.
(d) The only way to save the loss of a piece.
(e) Kt to Kt 3 was available; but the outlook was bad in any case.
(f) This was the final mistake. But he hardly had anything better, as White threatened Kt to B 5, &c.

Equally smartly played was the game Charousek v. Tschigorin. The opening moves were as follows: 1—P to K 4. P to K 4. 2—P to KB 4. P takes P. 3—B to B 4. Q Kt to B 3. 4—P to Q 4. Kt to B 3. 5—P to K 5. P to Q 4. 6—B to Kt 3. B to Kt 5. 7—Q to Q 3. Kt to KR 4. 8—Kt to KR 3. Kt to K 5. 9—Q to QB 3. Kt to R 3. 10—Castles. B to K 7. This was the position as shown in the next diagram. Black

threatened the rook, and at the same time he also threatened to win the queen by B to Q Kt 5. White won the game in the following pretty and incisive manner:—

Position after Black's 10th move.

BLACK.—TSCHIGORIN.

WHITE.—CHAROUSEK.

- | | |
|------------------|----------------|
| 11—B to R 4 ch. | 11—P to B 3 |
| 12—B takes P ch. | 12—P takes B |
| 13—Q takes P ch. | 13—K to K 2 |
| 14—Kt takes P | 14—Kt takes Kt |

NOTES BY EMIL KERNY IN "THE LEDGER," PHILADELPHIA.

- (a) The opening moves were well played on both sides. Black's present play, however, was inferior. P to B 5 is played with advantage, prior to White's R to B sq move for if then White answers B to K sq he cannot well develop the Q R. In the present position White has moved R to B sq and Kt to Kt sq. There was no cause for P to B 5 play. It was loss of time and weakened Black's centre position. R to B sq or B to B 5 was proper.
(b) Overlooking the next trap White had on hand. Black should have played B to K 2, followed by Kt to B 3.
(c) Winning a Pawn; for should Black capture the Kt, White would count one Q to R 5, attacking the B and threatening mate.
(d) Here is when the trap was sprung.—En.
(e) Better than B takes Kt, for it breaks White's strong centre. Black, however, can not save the Pawn.
(f) Of course Q to R 5 could not be played on account of Kt to B 3. The next move wins the R P.
(g) The exchange of Queens was necessary, for otherwise Black could not guard the QBP.
(h) The exchange of Rooks seems necessary. White otherwise

would continue Kt to Q 6 and P to Kt 5, endangering Black's game.
(h) Causes Black to resign. He can not play Kt to H 4 or Kt to H 6 on account of Kt to K 4, ch. exchanging the Kt, leaving White with an easy win. Should Black play Kt to Kt 5 the K to B 6, followed by Kt to K 4, wins. Any other play would enable White to continue Kt to K 4, followed by the advancing of the Pawns on the King's side.

GAME No. 629.

60-K to B 7	60-Resigns (j)

NOTES FROM THE "DEUTSCHES WOCHENSCHACH," BERLIN.

- (a) Steinitz played against Pillsbury in the St. Petersburg match, in this game, he..... Q to R 4, whereupon White at once availed himself of the opportunity to bring the Q out of the line of attack via K 4.
(b) Naturally not..... Kt takes Q P, because then 15-Kt takes Kt, K takes Kt; 16-B to B 3, etc.
(c) The R must be exchanged off, because, otherwise, he would station himself at K Kt 3.
(d) Threatening R takes P!
(e) I thus far the game has been correctly played on both sides; the end-game is in the highest degree interesting and instructive.
(f) Not good, since Black, in the Pawn-advance, on account of his passed P. on both sides of the board as opposed to the centre passed P. of his adversary, remains with the advantage. The conduct of the play is however, certainly not easy in practice, since it is only by securing the gain of a tempo that finally the result turns in favour of the second player.
(g) Best, as it hinders the adverse Q R P. Black should now win.
(h) Better was 50..... P to Q R 4, whereby Black secures the advantage. 51: 50..... P to Q R 4; 51-K to B 4; 52-K to B 3; 53-P to K R 5; 54-P to Q 6; 55-P to K 6 ch; 56-K to K sq; 57-K to B 6, P to R 7; 58-P to Q 7 ch (best, since, if 59-P to K 7, followed by K to K 6, threatening mate, White proves one more too late on account of P to R 8 (Q), etc), K to Q sq; 59-K to B 7, P to R 8 (Q); 59-P to K 7 ch, K takes Q P; 60-P to K 8 (Q), ch, K to Q 3, and Black must speedily win as, in the well-known Morphy-Andersen partie, is convincingly demonstrated. If 42, 60-Q takes Kt P, 61..... Q to Q 4 ch would be the continuation.
(i) The decisive error! By 59..... K to B 4, and then a like continuation to that indicated in the preceding note, the game was at least drawn, if not, indeed, still won for Black.
(j) If 60..... P to Kt 2, then follows naturally 61-P to K 7 ch, K takes Q P; 62-P queens ch, K to B 3 (or Q 3); 63-Q to K 5 ch, (or to Q Kt 8 ch, and wins).

CHAROUSEK V. TSCHEGORN.

The following is the first of the match of four games for the first prize in the Budapest tournament:

GAME No. 630.

(BISHOP'S GAMBIT.)

WHITE. Charousek.	BLACK. Tschigorin.

Pakking, British steamer, 2,875, Allen, 31st December.—London via ports, General.—W. M. Strachan & Co.

Suminoye Maru, Japanese steamer, 866, Tenji, 31st December.—Kobe, General.—Nippon Yusen Kaisha.

PASSENGERS.

ARRIVED.

Per German steamer *Hohenzollern*, from Hongkong:—Mr. Hidaka Zio, Dr. Weipert, Mr.

Bernus, and Mr. P. Strehel in cabin; 18 Chinese in steerage.

Per American steamer *City of Peking*, from San Francisco:—Mr. and Mrs. G. A. Scott, Mr. W. M. Long, Count Anenokoji, Mr. S. Takato, Mr. M. Onodera, Paymaster D. A. Smith, Surgeon R. S. Blackman, Mr. H. Hockert, and Mr. S. Okawa in cabin; Mr. W. M. Keogh in European steerage. For Shanghai:—Mr. Jas. Hosford and Mr. J. Findlay Thompson in cabin. For Hongkong:—Mr. and Mrs. J. K. Owen in cabin.

Per British steamer *Ancona*, from Hongkong via ports:—Mr. and Mrs. Bushby, Lieut. O. H. G. Bernard, Messrs. G. H. Morey, A. McConnell, Chung Chink Wun, W. Lippitt, and M. Lynch in cabin; 2 Chinese in steerage.

Per Japanese steamer *Kobe Maru*, from Shanghai via ports:—Miss Johnstone and Commander T. Imagiri in cabin; Mr. and Mrs. G. Chiba, Mr. Hawson, and Mr. Ching in second class, and 28 passengers in steerage.

Per British steamer *Doric*, from San Francisco:—For Honolulu:—Mr. V. Knudsen, Miss M. Knudsen, Miss A. Faye, Mr. Geo. P. Wolff, Mrs. Geo. P. Wolff, Master Wolff, Mr. W. A. Kinney, Mrs. C. D. Kinney, Mr. August Fries, Judge C. H. Garoutte, Mrs. C. H. Garoutte, Miss Amy Garoutte, Miss Grace Garoutte, Mr. R. Rosenbacher, and Mr. P. Kohnspeyer in cabin. For Yokohama:—Mrs. Geo. B. Eastin, Miss Julia Carroll, Mrs. W. B. Curtis, Mr. Curtis, Mrs. J. A. Kirby, Master Kirby, Mr. Howard Kennedy, Mr. H. B. Thayer, Miss Edith Dillon, Mr. G. F. Gardner, Miss C. L. Greer, Mr. J. E. Hazzledine, Mr. T. Hays, Mr. Y. Shimachi, and Mr. S. Saito in cabin. For Nagasaki:—Miss Anna Bing and Miss Fannie G. Wilson in cabin. For Shanghai:—Mr. T. J. Harris, Rev. J. Mercer Blain, Rev. W. F. Jenkins, Miss Emma McKnight, and Miss Helga Skramstad in cabin. For Hongkong:—Mr. Jas. M. Littlehale, Miss T. A. Campbell, Miss Agnes Cooney, Mr. A. S. Murray, Mr. J. W. Brown, Miss E. Wells, Mrs. Sadie Foster and child, and Mr. A. F. Knudsen in cabin.

Per American steamer *City of Rio de Janeiro*, from Hongkong via ports:—Mrs. Hecht, Messrs. Georges Mahe and servant, J. Thebaud, Louis Imbert, K. Yoshisuye, and J. C. Pierson in cabin. For San Francisco:—Mr. Th. F. Van Vloten and Mr. and Mrs. E. E. Giffin in cabin.

Per British steamer *Empress of Japan*, from Hongkong via ports:—Mr. G. W. Barton, Mr. P. Morse, Miss Lee, Mrs. Grijbovsky and son, Captain H. Eden, Mr. Schegoleff, Mr. S. Shedin, Mr. F. Shedin, Mr. Chun, and Mr. G. Beebe in cabin. For Vancouver, B.C.:—Mr. H. McDonald, Mr. N. McDonald, Dr. Ellen Lyon, and Mrs. W. de C. Wetherell and child in cabin; 244 passengers in second class, and 248 passengers in steerage.

DEPARTS.

Per German steamer *Hohenzollern*, for Hongkong via ports:—Messrs. J. Strauss, O. Keil, O. Meyer, Mrs. Milinarky and child, and Mr. Sow Kon Chin in cabin; 9 passengers in steerage.

Per French steamer *Tamise*, for Shanghai via Kobe:—Messrs. Bindley, A. Chalhoub, Woong, H. E. Champbell, N. C. Spotswoode, Hagiwara, K. Sagawa, Mr. and Mrs. D. Cortes and 3 children, Mr. M. Cortes, Mr. A. D. Cortes, Miss F. Cortes, Mrs. L. Witt, Messrs. T. Carimir, V. Sanchez, A. Edwards, J. Arevalo, Mr. and Mrs. Lacan and 2 boys, Mrs. Gabiot, Mr. and Mrs. Chauvin, Mr. and Mrs. P. S. Bent and 2 children, Messrs. J. C. Campbell, T. Kondo, J. Chalhoub, L. Descours, H. Nakayama, and Mrs. Angèle Dastrevigne in cabin; 8 Manilamen and 4 Japanese in steerage.

Per British steamer *Sunda*, for London via ports:—Colonel E. H. Sartorius, V.C., Commander T. H. Fisher, R.N., Mr. James Isaak, and Mr. A. N. McConnell in cabin.

Per Japanese steamer *Kobe Maru*, for Kobe:—Baron T. Shimazu, Mr. Y. Shimazu, Mr. H. Shimazu, Mr. Geo. Bayfield, Mr. and Mrs. G. Shimura, Mr. Y. Aoki, and Mr. T. Hashimoto in cabin; Mr. K. Uenishi, Mr. T. Kitabata, Mr. A. Ede, Mr. T. Kawamura, Mrs. Kawamura, and Mr. K. Kawasumi in second class. For Shimonoseki:—Mr. S. Saso in cabin; Mrs. Kitabe and Mr. S. Miyagi in second class. For Nagasaki:—Mr. Josiah Conder and Mr. H. Shoda in cabin. For Shanghai:—Miss E. W. Case in cabin; 45 passengers in steerage in all ports.

CARGOES.

Per Japanese steamer *Kobe Maru*, from Shanghai via ports:—Treasure, \$30,000.

REPORTS.

The British steamer *Doric*, Captain H. Smith, reports:—Left San Francisco the 10th December at 2 p.m.; experiencing variable winds with moderate to strong head and beam seas to Honolulu, arriving at 8.07 p.m. on the 16th, in 6 days, 8 hours, 22 minutes. Sailed thence at 4 p.m. on the 17th; had fine weather to port, arriving at Yokohama the 28th December at 8.56 p.m., in 10 days, 9 hours, 16 minutes. Distance, 3,513 miles.

The American steamer *City of Rio de Janeiro*, Captain Wm. Ward, reports:—Left Hongkong the 19th December, via ports. Arrived at Yokohama the 29th December at 4.10 p.m.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is certain remedy for bad legs, bad breasts, and eruptions of a kindred. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1895.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 9TH, 1897.

DEATHS.

On 7th inst., at 211, Bluff, Yokohama, EDWARD GRAFTON, the beloved son of Leonard Joseph and Mabel Alice Healing, aged 1 year and 2 months.

At Nagoya, on January 3rd, 1897, of peritonitis, resulting from caria, LILIAN NORA, infant daughter of Rev. U. G. and Nora Murphy, aged 2 months and 13 days. Interment at Yokohama.

SUMMARY OF NEWS.

THE plague is increasing seriously in Bombay.

THE Railway Conference began its sittings on the 7th inst.

ALL the Departments of State were officially opened on the 6th inst.

H.M. THE CZAR has sent President Faure a hearty new year telegram.

THE revised Treaty between Belgium and Japan was ratified on Monday.

INFORMATION from the Governor-General's Office states that, as the pest has been stamped out at Taipeh, the Epidemic Inspecting Bureau

has been closed since the 15th of December last.

THE German difficulty with the Portuguese at Lorenzo Marquez has been settled.

CONTINUED local bank failures are reported in the western districts of the United States.

FURTHER rains have fallen in many parts of India and the winter prospects are improving.

THE Spanish Cabinet has decided not to reply to President Cleveland's message through diplomatic channels.

SEVEN leading members of the *Jiyu-to* seceded from the party on Sunday last owing to a difference of opinion.

ON the 1st inst., the Tokyo Tramway carried 95,295 persons, from whom yen 2,123 was received as fares.

It is expected that M. Gerard, French Minister at Peking, will be appointed Governor-General of French Indo-China.

H.M. THE CZAR has authorised collections being made throughout the Empire for the benefit of Armenian immigrants.

COUNT SANO, President of the Japan Red Cross Society, who has been indisposed for some time, is now reported to be seriously ill.

AT Utsunomiya the bankers held a general meeting recently and reduced rates of interest. In general the tone of the market there is good.

H.I.H. PRINCE HIROYASU having arranged a marriage with the sister of Prince Tokugawa Iyotaku, the nuptials were celebrated on the 9th instant.

THE correspondent of *The Times* in Berlin stated that the German Mission to China and Japan is forbidden to establish personal business relations with native firms.

M. NEBIDOFF, Russian Ambassador to the Porte, has warned the Sultan of the necessity for following the counsels of the Powers, as otherwise the sequel will be unpleasant.

A TELEGRAM from Nawa, Riukiu, dated 29th December, states that small-pox has become rife, the cases totaling about one hundred and thirty at present.

H.I.M. THE EMPEROR being greatly grieved at the death of the mother of Governor-General Nogi, of Formosa, has graciously contributed yen 300 to the funeral expenses.

THE Carew case opened on Tuesday last, and has occupied the Court every day during the week. It is thought that it will not be finished in less than another week or ten days.

A CAUCUS of the Republican Committee has prepared a Bill empowering the President to appoint delegates to any conference that may be called with the object of restoring bimetallicism.

THE capital is to be five millions of roubles and the shareholders must be Russian or Chinese. The work is to be completed in six years and the Russo-Chinese Bank are the promoters.

MR. K. ITO, a Director of the Nippon Ginko, left for Osaka and Kobe districts on Wednesday by special order. He will examine into the real condition of the cotton spinning companies' affair.

THE Government will issue the following in the thirtieth fiscal year:—Redemption Loan Bonds to the extent of yen 2,502,250; Railway Loan

Bonds, yen 5,527,350; Treasury Bills, yen 28,000,000; National Undertakings Bonds, yen 59,280,600; total, yen 95,110,300.

THE Higher Commercial School, Tokyo, has expanded its scope of late. Connected with the new scheme, yen fifty thousand will be granted by the Government to organise fresh courses of instruction.

THE Commander of the British cruiser *Archer* called upon Governor Nakano at the Kanagawa Kencho on the 4th inst. On the following day the Governor returned the compliment by visiting the *Archer*.

H.I.H. THE CROWN PRINCE, being now at Numazu, the Princes of the Blood, Ministers of State, high officers and officials of various Departments, sent their expressions of congratulation for the New Year to the Prince.

ON Tuesday, the Princes of the Blood, the high officers and officials of various Departments, and foreign Representatives were given a New Year's entertainment at the Palace. But they had not the honour of audience owing to His Majesty's indisposition.

A ST. PETERSBURG *ukase* sanctions the formation of a company to construct and work a railway from a point on the western frontier of Hilungchiang to a point on the eastern frontier of Kirin to be connected with the Trans-Siberian line.

MR. KONDO TORATORO, an expert of the Home Department, and Mr. Nakayama Hidesaburo, assistant instructor in the Engineering College of the Imperial University, left Yokohama on the 27th inst. for Marseilles by the French mail steamer *Tamise*, their object being to investigate civil engineering works in Europe. At Singapore they will land and go over to Java on a visit.

THE Odawara Electric Railway Company, whose line is to be laid between Kozu and Yumoto, utilizing the water of the Sukumogawa, Hakone, has received a license from the Home Department. Work will be commenced as soon as the Communications Department gives a licence for the electric work.

HIS IMPERIAL MAJESTY THE EMPEROR is slightly indisposed through a cold. In consequence, Her Imperial Majesty the Empress held the New Year's reception on the first of January. All the Princes and Princesses of the Blood, Ministers of State, high officers of the Navy and Army, and other high officials of the various Departments, proceeded to the Palace. The Empress who was attired in foreign costume, and wore the First Class of the Order of the Crown, and, followed by the several Chamberlains and Court Ladies, proceeded to the Reception Hall to receive the congratulations of the visitors.

THERE is very little to be said about the Import trade, and no improvement can be reported. In Textiles there are small enquiries, but the Metal market continues very dull, and the Kerosene trade is as quiet as last reported, though it is stated that a somewhat better feeling prevails. There have been fair sales of Sugar, and the paucity of arrivals has somewhat hardened rates. This refers to Brown sorts generally, though Whites are also looking up in value and a fair amount has been moved. There has been a small rush upon Raw Silk, for which more money has been paid, but the market has again relapsed into quiet. Waste Silk is depressed. Tea is about finished. Exchange has dropped a couple of points during the week, and there is a lack of steadiness at the close.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The Japanese press is advancing with the times. Formerly the custom of the Metropolitan papers was to suspend their issues for as long as a week at the close of each year and the beginning of the next. Then a new departure was made by the *Nippon* and the *Yomiuri*. They refrained from taking any holiday whatever, and went on issuing throughout the year. Subsequently the duration of the New Year holidays was considerably reduced. At the end of last year the majority of the Metropolitan papers were issued up to the 27th of December, and the *Fiji*, the *Shogyo*, and the *Yoroku*, in addition to the two all-the-year-round dailies mentioned above, dispensed with a winter recess, and appeared regularly up to the 31st of December, inclusive, resuming work from the 2nd of January. This year, the one remaining holiday has been dispensed with, and a few papers excepted, all the Tokyo journals issued their New Year's number on the 1st inst. As usual, most of them contained pictures, or were accompanied by handy almanacs and tables of reference. The *Fiji* has an oil painting by Mr. Asai Chu, in connection with the topic of the new Japanese war-vessels *Fuji* and *Yashima*; the *Nichi Nichi*, a portrait of the Crown Prince in his uniform; and the *Nippon*, a picture representing the Palaces of Crowned heads in Europe and the Far East. Domestic fowl are also a very common pictorial subject in journalistic supplements, 1897 being the "bird" year, as 1896 was the "monkey" year, according to the old chronology of China and Japan.

The *Fiji*'s new year's issue is significant of business prosperity, for out of 48 pages—four times the paper's ordinary size—28 are filled with advertisements. The *Nichi Nichi*, with 32 pages, comes next, its advertisements bearing a similar proportion to its total size.

We must mention here that the *Tokyo Asahi* has made a new departure in the manner of its publication. From the beginning of the year it divides its daily issue into two sections, a morning and an evening journal. It also raises its monthly subscription from 35 to 36 sen, a difference of about three-pence annually! The *Sekhai-no-Nippon*, a proleptic fortnightly periodical, announces that a daily of the same name will appear from about the middle of the month.

The official Amended Press Law Bill has evoked unfavourable criticism from the press. It is condemned as a measure that neither satisfies the Government's supporters nor propitiates the Opposition. The *bona-fide Kaishin-to* organs, as the *Yomiuri* and the *Mainichi*, are especially dissatisfied with it, the former not hesitating to declare that Ministers responsible for such a project of law are regarded by it as open enemies, while the latter criticizes it as a merely temporizing measure such as the public had no reason to expect from the Matsukata Cabinet.

The *Nippon* also calls the Bill a failure, an opinion shared by the *Osaka Asahi*, which urges the Government to withdraw and alter the draft. The *Kokumin*, too, recommends that course, and, at the same time, tells the *Shimpo-to* to think carefully what attitude they should assume towards the Government. The *Chuo* is of opinion that the amendment leans towards severity as compared with the existing Law, for the provisions relating to suppression are more stringent than before. In other words, suppression is made a principal punishment and suspension a subordinate. The *Chuo* insists upon the necessity of more liberal amendments.

The *Tokyo Shimbu* advises the public to suggest some suitable substitute if they wish to have the suppression and suspension provisions rescinded, for some restraint must be put on journalistic utterances calculated to impair

public peace, injure good morals, or disturb the political system of the country.

The *Nichi Nichi* wonders whether the *Shimpo-to* deceived the public when they declared, on the occasion of the Household Minister's affair, that they would induce the Government to draw up an amended Press Law satisfactory to the public; or whether the Government have decided to throw over the Party.

Amid such universal voices of dissatisfaction the Ministry must be somewhat consoled to find, in the pages of a high authority like the *Fiji*, comments on the whole quite favourable to the measure. That independent paper does not hesitate to declare that the official amendments constitute a marked improvement upon the existing Law, inasmuch as utterances of a political nature will be practically emancipated from the restraint of censorship, and the scope of the objectionable articles will be virtually limited to matters connected with the Imperial Court and diplomatic and military secrets. Moreover, the process of enforcing these articles becomes entirely legitimate, for the duty is to be essentially relegated to Courts of law, the power of the Administration becoming purely provisional. The article inveighing the Administration with authority to provisionally suspend an offending journal for the space of not more than one week, may dissatisfy the public, but as prosecutions in law Courts have to be carried out according to prescribed routine, and can not, therefore, meet the requirements of an occasion demanding prompt action, some measure of this kind is unavoidable. The *Fiji* wonders that a section of the members in the Lower House are dissatisfied with the official amendments and have introduced a Bill of their own. Such a procedure is highly ill-advised, for the House of Peers is sure to reject any drastic changes, and without tolerably unanimous support the Government Bill can not be carried through both Houses.

The *Tokyo Asahi* strongly criticizes the action of the Mitsui Bank in deciding to espouse the cause of the Kanagafuchi Spinning Mill, and to retaliate against more than 40 mills in the Kei-Han districts that are boycotting the Kanagafuchi and its Hyogo Branch. The *Asahi* denounces the Bank's action as wanting in fairness and as a violation of the duties and obligations incumbent upon bankers, for banking is two-sided in its nature, and while pursuing its own private interests, must at the same time keep always in view the part that it plays in the mechanism of public economy. The Mitsui's resolve to sever transactions with the 40 mills is tantamount to sacrificing public interests on the altar of selfish aims, and may produce serious financial inconvenience. The *Asahi* takes no note whatever of the rights of the operatives for whose coercion the league of mills was formed.

Apart from the question of propriety or impropriety of process, the withdrawal of the Imperial Ordinance interdicting the free passage of Japanese to Korea, is regarded with satisfaction by the *Fiji*. Our contemporary thinks that to attempt to restrict the movements of reckless adventurers is not only useless, but even harmful, for whereas such adventurers, wherever they may be, are without credit or influence and therefore entirely impotent to bring about serious results, their compulsory detention at home simply deprives them of a chance of bettering their condition, and thus vicariously impedes the expansion of the country. In point of fact, not these "stalwarts," but rather men in high position, have hitherto engendered troubles in Korea. The *Fiji* advises the Government never to impose restraints on the movements of Japanese to or in Korea, but to suffer them to travel throughout the eight provinces of the Peninsula at their own free-will.

Mr. Miyake Yujiro makes an interesting point in the columns of the *Nippon* about the census of Japan. In turning over the pages of the last

Government yearly statistics he has discovered, in the Census Section, that at the end of 1894 the number of households shows a decrease ranging from 1 to 122, side by side with an increase of population, in 42 cities or towns holding over 10,000 souls. Further, in about 20 other cases the converse appears, namely, an increase in the number of households and a decrease of population; and in still 30 others, both households and population show more or less diminution. The subject is worth fuller investigation.

Now that the editor of the *Tokyo Economist* stands aloof from party politics, his articles about the situation in the tenth session of the Diet are specially worth notice. He considers the session to be the most remarkable of all since the inauguration of the constitutional system. In the first place, the so-called *Banshoku-Daijin* now seem to wield the real power in the administration, while the Premier, Counts Okuma and Kabayama, and so forth, though supposed to take the lead in the Cabinet, are apparently relegated to secondary positions. That is because the *Banshoku Daijin* have a strong backing. That is also the reason why the Ministry can not take decisive steps with regard to Viscount Nomura and his four ministerial colleagues, and why the Ministry have practically followed the financial programme marked out by the Ito Cabinet. The same anomaly is displayed by political parties, for the *Shimpo-to* are placed in the strange dilemma of supporting a Cabinet that has elaborated such a Budget, and the Liberals occupy no less embarrassing position since they oppose a Cabinet that has made no departure in its financial policy from that of its predecessors whom the Liberals supported. The National Unionists also, though dissatisfied with the present Cabinet, are precluded by the similarity of its Budget with that of the previous Ministry from adopting an openly hostile attitude. In short, the present session displays a collection of anomalies. The Editor concludes his article by declaring that if the Government fail to totally rescind the obnoxious clauses of the Press Law the *Shimpo-to* much as least suffer a split; a gloomy prediction for that Party, seeing that the Press Law amendments first formulated by the Cabinet are a compromise.

Though sympathizing in spirit, the *Fiji* is not satisfied with the manner of the so-called official and private conversations "that the Premier and other members of the Cabinet recently inaugurated for the purpose of bringing together men of note both within and without the Government. The *Fiji*'s dissatisfaction is based on the ground that those who engage in these conversations can not divest themselves of official arrogance towards non-official guests, but behave with as much haughtiness as when they are issuing orders to their immediate subordinates. So long as Government officials persist in their old manner, frank intimacy between them and leading citizens is out of the question.

EDITORIAL NOTES.

DEATH OF ARCHDEACON MAUNDRELL.

THE numerous friends of Archdeacon Maundrell in Japan will hear with deep regret that he died in England on November 3rd. Appended is the obituary notice that appeared in *The Times* a few days after the event:—The Venerable Herbert Maundrell, C.M.S., first Archdeacon of Southern Japan, died at 6, Clifton-terrace, Winchester, of pneumonia, aged 57. He became a student of the Church Missionary College at Islington in 1860, and was ordained deacon in 1863 and priest in 1864. From 1863 to 1873 he was a missionary of the Church Missionary Society in Mauritius and Madagascar. In 1874 he acted as curate of St. John's Chapel, Downshire-hill, Hampstead. From 1875 to 1890 he was a missionary of the Church Missionary Society and chaplain of the English Church at Nagasaki, in the diocese of Japan; and from 1886 to 1895 he was the Archdeacon of Nagasaki and Southern Japan.

As an author and editor he published a "Revision of Occasional Services and Ordinal of the Malagasy Prayer-book," Mauritius, 1873; "Sei Sho Ryakushi," or "Epitome of Old Testament History," in Japanese four vols., 1883; and "Kiristo-Shogai Reki-shi," or "Life of Christ," in Japanese, 1884.

YOKOHAMA LITERARY SOCIETY.

A HIGHLY successful meeting of this Society was held on Friday evening, at which Mr. Wilkin gave a most interesting paper on "How I spent Christmas at the North Pole." It was a charming medley; in which the "Waits" of his boyhood, the scientific inventions of 1945, the flora and fauna of the paleolithic age, spiced with a little romance, made a glorious hotch-potch. The whole paper exhibited Mr. Wilkin in a new light, and we trust we shall soon have further specimens of his powers in this branch of literary work. The musical programme was especially good, comprising Overture "Tancredi" (Miss Griffin and Miss Vincent); a delightfully refined rendering (such as is rarely achieved by an amateur) of Chopin's "Fantaisie Impromptu," by Mrs. Doering; excellent songs by Miss Lloyd Thomas and Mr. Fleet, while to crown all Professor Merx—the musical artist now in Yokohama—entranced the audience with three *morceaux* from his splendid repertory as a *virtuoso* upon the violoncello.

NAGASAKI NOTES.

THE Nord. Lloyd steamer *Hohensollen* was aground for 24 hours in Nagasaki harbour on her last voyage from here. She has been floated.—On Saturday, December 26th, we learn from the Nagasaki paper, two collisions took place in the harbour. The more serious accident of the two was caused by the *Tokuwa Maru*, belonging to Mr. Matsuda, running into the N.Y.K.'s chartered steamship *Balmoral*, Capt. A. McRitchie, which was lying at her moorings. The collision occurred at about 10.40 o'clock, when the weather was dark and thick with wild squalls and rain. The *Tokuwa* caught the *Balmoral* on her port side, dented half a dozen of her plates, sprung several rivets and bent two of her frames. The latter vessel will, however, be able to proceed to Moji without stopping for repairs, while the *Tokuwa Maru* had to dock. The other accident was caused by a *Mitsui Bishi* tug which moored to a buoy that was lying astern of the British steamship *Morven*, Capt. Ellis, which recently arrived here with oil from Philadelphia. The tug gave herself too much swing, having thrown out no anchor to steady herself on her moorings. Accordingly she swung around and knocked against the side of the *Morven*, which she sheered along until she slipped by under the stern of the latter. She bent a few of her own stanchions, etc., damaging herself to the extent of about \$30 or \$40, but did not injure the *Morven* at all.

BANK OF CHINA, JAPAN, AND THE STRAITS.

In the Supreme Court Hongkong, the Chief Justice Dr. Carrington, has given judgment in favour of the plaintiffs in the case of the Bank of China, Japan, and the Straits, Limited, v. Cheong Yau To, Cheong Yau Kung, and Lam Sin. The defendants were sued as executors and executrix of Cheong Kai, deceased, who had given a bond in the sum of \$100,000 to the Bank as security for Cheong Koon Sing, the Bank's compradore. The judgment establishes the liability of the defendants under the bond, but the adjustment of the accounts was referred to the Registrar in order that he might settle them and certify the amount for which judgment is to be entered, the amount, however, not to exceed \$100,000. The defendants contend, says the *Daily Press*, that the accounts will show that the Bank is indebted to Cheong Koon Sing and not Cheong Koon Sing to the Bank.

RIOTOUS JAPANESE SEAMEN.

THE *Nagasaki Shipping List* reports that Capt. McIvor, of the N.Y.K. steamer *Tairen Maru*, and Mr. Chas. J. Gibbs, second engineer on the same vessel, were set on at Nagasaki by the Japanese crew because they refused to contribute saké-

money at the New Year to other than the men immediately connected with either the deck or the engine-room. Mr. Gibbs was set upon when he returned to the ship on the 1st inst.; Capt. McIvor was pelted as he left the ship on the 2nd inst., and then followed to the Customs hatoba, where he had to give the men money to let him go. The paper continues:—We are in a position to state that in one case last year, an N.Y.K. purser who remonstrated against the crew's treatment of a foreign officer was badly mauled himself and suffered in his pocket as well for so doing; so it is not due to the Japanese company's officials so much as to the national laws that matters are in so bad a state.

ACCIDENT ON H.M.S. "CENTURION."

DURING a reception given by Admiral Buller and officers of H.M.S. *Centurion*, while that ship was at Singapore on Dec. 12th, Mrs. Bland, who was standing with several friends on the upper bridge, some 5 yds. behind the end of the shooting gallery, suddenly felt herself injured on the right side, being struck by a Morris tube bullet from the "range" below. Assistance was at once forthcoming, and a naval surgeon, with Drs. Middleton and Ellis, were promptly on the spot. Examination proved that the tiny bullet had cut through the hard material of the corset and had entered the lady's side. Search in the wound failed to find the bullet, and as it was feared it had penetrated deeply, arrangements were quickly made to have Mrs. Bland taken ashore and home for treatment. The patient passed a restless night, but Dr. Freer found the bullet next afternoon embedded in muscle. No satisfactory reason has yet been adduced as to the cause of the accident.

LORD WOLSELEY AND THE CHINESE.

LORD WOLSELEY retains his faith in the capabilities of the Chinese. Speaking at Edinburgh, the other day, on "Modern Armies," his lordship said that he believed the Chinese to be preëminently designed for fighting ashore and afloat, and that if he had a free hand and could select English officers as instructors, he would undertake to raise, in two years, a Chinese army invincible in the East and difficult to beat in Europe. On what basis of fact does Lord Wolseley build that wonderful creed of his? Foreign officers could not make the Chinese stand up against the Japanese in the late war, and a Chinese navy with a *personnel* long trained according to Western systems distinguished itself by its incapacity.

UNITED STATES CONSULATE-GENERAL.

OVER the signature of the U.S. Consul-General, the following was issued on Jan. 6th, 1897:—

Until further notice, the following tariff is established for the collection of fees at this office. Invoices should be made out in Silver Yen, which, for the purpose of this notice, are estimated as equivalent to fifty-one and one-tenth (\$.51) cents, U.S. Currency.

For Invoice Certificate	Yen 4.90
For Extra Copy of Invoice	3.92
Marriage Certificate	1.96
Landing Certificate	4.90
For Bill of Health	4.90
For Supplemental Bill of Health98
For Personal Effects Certificate98
For Emigration Manifest49

To avoid delay in transacting business at this office, persons paying fees are requested to present the exact change.

A COMING INVASION.

THE writer of "Sporting Notes" in the *Kobe Chronicle*, said on Tuesday:—Now that the holidays are at an end, or getting that way, the pursuit of sports will revive and proceed without further interruption. Preparations are being made to invade Yokohama and scoop all the glory that may be lying around loose, and next week more definite details may be announced. The Kobe Chess Club may send a contingent, and it is to be hoped an effort will be made to create a bit of a splash in this direction, to show that our newest organisation is not our weakest.

A HONGKONG FROST.

SAYS the *China Mail* of December 23rd:—"Ice at the Peak!" It is only a few winters ago since the Colony, figuratively speaking, had its breath taken away by a phenomenal blizzard

and the crystallisation of the Peak for a succession of days. Last night, the Colony had another cold experience, and this morning at the Peak ice three quarters of an inch thick was procurable at the Hon. E. R. Belillios' mountain residence, 'The Eyrie.' Ice was duly imported to the city this morning by other residents, and samples were being sent round Peak residences at an early hour. The lowest recorded temperature we have heard of at the Peak is 38 degrees, and we understand that 41 was recorded at Kowloon during the night. This is a big drop from 74 on Sunday and 69 on Monday."

LORD PORTMAN'S CLAIM.

REUTER recently took the trouble to inform British residents in the East that Lord Portman's claim of £400,000 from the Manchester, Sheffield and Lincolnshire Railway Company as compensation for the compulsory acquisition of about 14 acres of his Marylebone estate, had been reduced to £24,000 by arbitration. But the London journals show that the award of the arbitrators was £260,000. The latter sum is certainly not extravagant. It means only 150 *yen* per *tsubo*, approximately. The land must have been outside the active sphere of London life.

NEW YEAR'S ENTERTAINMENT AT THE SEAMEN'S MISSION.

ON Wednesday evening a second ship entertainment was given at the Seamen's Mission, and a very enjoyable evening was spent by a large gathering of officers and sailors from the ships in harbour. The programme consisted of vocal and instrumental music, and after an interval for refreshments, the cargo of the miniature ship was distributed, each man receiving a useful New Year's present. The Mission launch conveyed seventy-five sailors in her trips to and from the shipping during the evening.

A BANGKOK GYMKHANA.

THE *Singapore Free Press* reports a gymkhana at Bangkok, in which an animal race was a distinguishing feature. There were seventeen entries, including an elephant, a baby bear, a crocodile, a deer, a tortoise, two crabs, a cock, a hen, a goose, a duck, a weasel, a Ceylon bull, two dogs, a turkey, and an orang-outang. The turkey won, and the "croc" was a good second. Our contemporary publishes the report in all seriousness.

CONSULAR CHANGES.

SAYS the *Kobe Herald*:—We are to lose Mr. Chalmers shortly as he goes to H.B.M.'s Consulate at Yokohama, vice Mr. Wileman, who proceeds home on leave. The vacancy here is to be taken by Mr. Hobart-Hampden, who is now Acting Consul at Hakodate. Mr. R. de B. Lazard is on his way up from Formosa to take over charge of the Consulate in Hokkaido.

A BRIGHTON LANDMARK GONE.

A LONDON telegram dated 5th December says: The old chain pier at Brighton was destroyed in a gale last evening.

CURRENT POLITICS.

The secession of seven Liberals from their Party has caused much excitement in journalistic columns. A representative of the *Mainichi* interviewed one of the seceders, and learned that the split was attributable to corruption among the members of the Party, to the domineering conduct of certain members, special confidants of Count Itagaki, whose intellectual vigour is already enfeebled by age, and to the fact that collusion goes on with outsiders, as Barons Ito and Suyematsu. It was added that several other members, Messrs. Ishida Kannoosuke, Yamashita Chiyowo, Aizawa Neiken, and so forth, were determined to sever their connexion with the Party.

Mr. Yamada Taizo, a leading Liberal, has told a representative of the *Fiji*, that the seven may have resigned lest their continuance in the Party might result in their being dismissed. In fact, they withdrew to avoid a worse fate. Why they should have been placed in such a situation is not clearly explained by Mr.

Yamada. One paper gives as a reason that these seven had been "bought over" by the Ministry, and another surmises that the probable restoration of the Party's old system of nominating its President and so forth, which system had been broken down, or at least suspended through the exertions of the seven and their associates, must have dissatisfied them.

Mr. Minamino Doshin, an ex-soshi, now representing a constituency in Osaka *Ku*, has withdrawn from the Liberal Party and joined the Parliamentary Club, organized by Mr. Kawashima Jun and other unaffiliated members of Parliament.

Despite these troubles, the relations between the Liberals and a section of the Unionists are apparently growing more and more intimate. The two Parties are now negotiating with the view of moving together during this session, and devising measures calculated to bring about the downfall of the Ministry. Judging from a rumour that Viscount Shinagawa and other leading Unionists will attend a grand friendly reunion of the Opposition, to be held shortly, the Unionists must have been much strengthened. In the consummation of this *entente* Mr. Shirane Senichii, ex-Minister of Communications, is said to have been chiefly instrumental. Though confined in bed by illness, he concluded an understanding, on the one hand, with Barons Ito and Suyematsu, and on the other he persuaded Viscount Shinagawa and his leading followers to bring the Liberals and the Unionists closer together. But it is to be observed that about a third of the Unionists are not entirely satisfied with this tendency. They hold that the Party must stand by its original declaration of strict neutrality. Hence, according to the opinion of the *Yiji*, the adoption of any hard and fast anti-Government policy may involve a split in the ranks of the Unionists. We may note, here, that the two new members of Parliament, one from Kagawa and the other from Kumamoto, have joined the Unionists, so that the latter's numerical strength in the Lower House now aggregates 35.

The Liberals have decided to introduce an amended Press Bill, eliminating the suppression and suspension clauses so far as ordinary affairs are concerned, but retaining a measure of control in matters relating to the Imperial Household, or in the case of writing calculated to subvert the political system of the country. For offences coming under the two latter headings, imprisonment is to be employed, but only fines in other instances.

Since writing the above, we learn that the dissensions among the National Unionists are apparently approaching a climax. On the 7th inst. the parliamentary members identified with the Party held a general meeting, when Mr. Yumoto moved that members endeavouring to make the Party subservient to the Liberals, thus seeking to undermine its independent policy, should be expelled, and that the Party should resume the attitude of strict neutrality announced in its recent manifesto. This motion was the signal for great commotion among those present, the result being that eight members, Messrs. Sasaki Shozo, Tautsumi Teikyu, and so forth, declared their intention of severing connexion with the Party, and forwarded formal notice to that effect a few hours afterwards. Mr. Yumoto and 12 others thought it more prudent to await the settlement of other matters, but it appears that the continuation of an *entente* between the Unionists and the Liberals will culminate in the secession of 13 other members of the former Party, an event that may endanger its very existence.

A statement published by the *Chuo Shimbun* that four of the seceders from the Liberal Party had withdrawn their resignations, turns out to be inexact. According to later news, given by other journals only one member, Mr. Takahashi, has yielded to persuasion and decided to remain in the Party, on condition that the Councillors' Board system be not discontinued. However, two or three others may follow the example of Mr. Takahashi. Evidently Mr. Yamada Taizo's statements on this subject are incorrect.

IMPERIAL DIET.

FRIDAY, JANUARY 8TH.

HOUSE OF PEERS.

The House did not sit.

HOUSE OF REPRESENTATIVES.

The House met at 1.20 p.m., the Order of the Day being:—

- 1.—First Reading of an Official Bill relating to the amendment of the Press Law.
- 2.—First Reading of an Official Bill relating to the amendment of the Public Meeting and Political Association Law.
- 3.—First Reading of a Bill, introduced by Mr. Minoura Katsudo and 2 others, relating to the Press Law.
- 4.—First Reading of a Bill, introduced by Mr. Minoura Katsudo and 1 others, relating to the Public Meeting and Political Association Law.
- 5.—First Reading of a Bill, introduced by Mr. Hatoyama Kazuo and others, relating to expunging certain provisions from the Registration Law.
- 6.—First Reading of a Bill, introduced by Mr. Hatoyama Kazuo and others, relating to the abolition of the Special Municipal System in Tokyo, Osaka, and Kyoto.
- 7.—First Reading of a Bill, introduced by Mr. Hatoyama Kazuo and others, relating to the Supplementing of the City Organization Law.

Before proceeding to the Order of the Day, the President introduced a new member from one of the Kumamoto constituencies, and caused one of the secretaries to read a report about the election of the Settled Accounts Committee, the Disciplinary Committee, the Petitions Committee, and a list of the Bills introduced either by the Government or by members of the House, and so forth. He further informed the House that Mr. Hoshi Toru had tendered his resignation. The letter accompanying the resignation was characteristic of the sender. He wrote that, although it was customary for the President of the House to try and dissuade a member from resigning his seat, any trouble of that kind might be dispensed with in the present case.

The first Bill on the Order was then taken. Mr. Tokumasa (Liberal), desired to put some questions to the Government Delegate. When the present Cabinet was organized, the Premier had announced the Government's policy at a meeting of the Local Governors, and had declared, among other things, that it was intended to respect freedom of speech and publication. Count Kabayama, the Home Minister, was also reported to have addressed the Governors in a similar strain. Yet this same Cabinet now introduced an amended Bill retaining the obnoxious clauses of suspension and suppression. He wished to have a satisfactory explanation from the Government Delegates.

Mr. Komuchi, Chief of the Legislation Bureau and Government Delegate, ascended the rostrum amidst loud queries from several members as to why the Home Minister did not appear. He observed that the Government contemplated due respect for freedom of publication and speech, and that the Bill now before the House was drafted in that spirit, though the retention of the suppression and suspension clauses might appear to conflict with the theory. The suppression clause was retained, but would be enforced by the sentence of a Court of law and not by arbitrary command of the Administration. A similar amendment had been made with regard to the suspension clause, for newspapers would no longer be suspended on the ambiguous ground of *chian bogai* (disturbing public tranquillity). The cause of suspension was to be explicitly stated, as prescribed in the Bill, and the provision was not to be enforced with respect to ordinary political matters. The House ought to give calm attention to these contrasts between the Bill and the existing Law, and should not hastily condemn the former merely because it retained the suspension and suppression clauses.

Mr. Komuro (Liberal), wished to know why the Home Minister did not attend, and moved that the discussion of the Bill should be adjourned till the Minister appeared. This motion being supported by members, the President announced that he should despatch one of the Secretaries to invite the presence of the Minister.

Mr. Kusakari (Liberal), suggested the advisability of the House's taking a recess till the Minister's answer should arrive. The President

did not at once adopt that suggestion, but after some 10 minutes a recess was announced.

About a quarter of an hour later, the members were summoned to the chamber, and were informed by the President that the Home Minister could not attend. Mr. Komuro (Liberal), speaking from his seat, said that, in that case, he had no choice but to address his questions to Mr. Komuchi, a new Government official. He then proceeded to urge the absolute necessity of rescinding the obnoxious clauses; demonstrated the impossibility of preventing the circulation of a newspaper containing obnoxious matter; contended that the purpose contemplated by the clause in question could never be attained, and demanded an explanation why the clause was considered necessary.

Mr. Komuchi, Government Delegate, replied from the rostrum in much the same strain as he had previously spoken. He to wished remind Mr. Komuro that the transfer of the control of the press from the Administration to the Judiciary would impose a powerful moral check upon the former, should they purpose to provisionally enforce the suspension clause, for should a law court deliver judgment in a sense opposed to the step taken by the official censors against a paper, the Administration would be put to great shame and humiliation.

Mr. Kusakari (Liberal), asked permission to introduce an urgency motion, namely, that the discussion of the Bill be postponed till the Home Minister could appear in person to offer explanations. But this ready-tongued orator was not content to confine himself to the motion. He dwelt at great length on what he called the flagrant inconsistency of the Government, for while pledging themselves to respect personal rights and freedom, they had considerably widened the scope of press censorship. According to the existing Law, the control was vested in the Home Minister alone, but the Bill now before the House proposed to add the Minister of Colonization and the Law Courts. Even a petty judge, drawing a salary of only 300 *yen* annually was to be entitled, according to the amended law, to suspend a newspaper. The discussion of the Bill must be deferred, however long, till the Home Minister could attend to offer explanations in person.

This motion was supported by Mr. Yamada Taizo (Liberal) who argued that, judging from the universal belief that the Cabinet had promised the *Shimpo-to* to totally rescind the suppression and suspension clauses, there must be some special reasons inducing the same Cabinet to present such a Bill, reasons which the Cabinet Ministers, and above all the Home Minister, were alone competent to explain.

The motion was rejected by a small majority. As to the nomination of a Special Committee to consider and report on the Bill, one member proposed that 18 members, two from each section, should be elected, and that their choice be left to the President. But this was opposed by another, who argued that, as the Bill was one of grave importance, the election should be made by the respective sections and not left to the President. The first motion was approved by a large majority, and the Bills standing second, third, fourth, and fifth on the Order were entrusted to the same committee. With regard to the remaining two Bills, the President announced that their introducers wished to have them withdrawn from the Order of the Day.

The House rose at 2.40 p.m., to resume its session on Monday, the 11th instant.

A CANARD.

The *Nichi Nichi Shimbun* contains a long and circumstantial account of an incident said to have occurred recently in the streets of Tokyo. The gist of the story is that His Excellency the German Minister, while driving along Bancho, struck one of two students with his whip, and that the lads, who wore the uniform of the Officers' Preparatory College, preferred complaint to the Foreign Office and to the Bancho police. We have made inquiries which enable us to say that the story is entirely incorrect.

ARMY ENLISTMENT REGULATIONS.

The Army Enlistment Regulations have been issued in the form of a notification by the Department of War. According to the new Regulations the undermentioned persons are disqualified from entering the Military College, the central and local Preparatory Military Schools, and other institutions under the control of the Department of War:—

1. Married persons, candidates for Military Surgery and Veterinary Schools excepted.
2. Persons who have been declared bankrupt, or whose fathers, or heads of family, have been declared insolvent or bankrupt, and have not yet been rehabilitated.
3. Persons who have been convicted in criminal courts or have been punished for gambling.
4. Persons of notorious bad behaviour.

The limits of stature and age are as follow, the age being computed from the date of enrolment, or admission into the school: Cadets:—18 to 23 years of age, and at least 5 Japanese feet.

Central Preparatory Military School:—16 to 18 years of age, and at least 4.8 ft. for those over 17 and under 18 years.

Local Preparatory Military School:—13 to 16 years of age, and at least 4.5 ft., for those under 14 years, 4.6 ft. for those over 14 and under 15 years, and 4.7 ft. over 15 and under 16 years.

Students of the College of Medicine who wish to become military surgeons:—12 to 28 years of age, and at least 5 ft.

Students of the Military Surgery School:—20 to 30 years of age, and at least 5 ft.

Students of the Military Veterinary School:—18 to 25 years of age, and at least 5 ft.

Students of the Non-Commissioned Officers School:—At least 5.2 ft. for the artillery and engineer corps; 5 ft. for infantry, cavalry, and commissariat corps.

Students of Gunnery School:—18 to 25 years of age, and at least 5.2 ft.

Students of the Military Artizans School:—18 to 25 years of age, and at least 5 ft.

Candidates for examination, except those serving in the Army, and candidates for local preparatory military schools and non-commissioned officers' school, must forward their photographs, recently taken, to the surgeon of the examination committee, with their names and status written on the back.

Subjects of examination for cadetship, as based on the scholarship of graduates of Ordinary Middle Schools, are as follow:—Chinese, Sinico-Japanese composition, arithmetic, algebra, plane and solid geometry, plane trigonometry, Japanese and foreign geography, and physical geography, Japanese and foreign history, physiology and hygiene, zoology, botany, physics, inorganic chemistry, geometrical and freehand drawing, and one foreign language. The examination in a foreign language is optional, and will be conducted in either English, French, or German, according to the wish of candidate.

The examination of candidates for the central preparatory military school is based on the scholarship of those that have successfully passed through the 3rd year class of an Ordinary Middle School, and the subjects are as follow:—Examination in foreign languages, optional; Chinese, Sinico-Japanese composition, arithmetic, algebra, plane geometry, Japanese and foreign geography, Japanese and Chinese history, physiology and hygiene, rudiments of physics and chemistry, geometrical and freehand drawing.

The examination of boys for local preparatory military schools is based

on the scholarship of the 1st year pupils of an ordinary middle school, and the subjects are as follow:—Reading of Sinico-Japanese passages, Sinico-Japanese composition, writing, rudimentary arithmetic, primary Japanese, geography and history, rudimentary ideas in physical sciences, freehand drawing.

Boys admitted into the central or local preparatory military schools must pay a fee of 32 yen for initial clothing expenses, besides paying 6½ yen monthly.

The subjects of examination of candidates for the non-commissioned officers' school, military artizans' school, and military accountants' school, are as follow: Chinese, Sinico-Japanese and Japanese colloquial composition, and arithmetic.

An appendix to the Regulations states that, for the present, the age-limit of candidate for cadetship, students of non-commissioned officers' and gunnery schools will be 18 to 26 years. In another notification the number of students to be admitted next year has been fixed as follows:—Cadets, about 600; boys of the central military preparatory school, 150; boys of the local military preparatory schools (six in all) 50 at each; students of non-commissioned officers' school, 1,300; students of the gunnery school, 176.

THE "GOROTSUKI."

Gorotsuki is a term used in Tokyo to designate a class of social pests who spend their time in gambling, when they have anything to stake, in obtaining money from honest citizens by threats, and sometimes in acting as intercessors when a quarrel breaks out among a certain class of citizens, such as restaurant or brothel keepers; in a word pursuing low professions. Thousands of these pests frequent Tokyo, and strange to say, generally succeed in pursuing their criminal programmes with impunity. Whether they gamble or intimidate, they do not seem to be subjected by the police to control as strict as that exercised in the case of other wrong-doers. They are suffered to perpetrate their knaveries in broad daylight under the very noses of constables. Though this is partly due to their clever way of eluding the grasp of the law, it is mainly attributable to a secret understanding between them and the police, especially the detective force. Detectives maintain intimate relations with the *gorotsuki*, making use of them to facilitate the discovery of criminals. But there is another potent consideration, according to the *Kokumin no tomo*, that undermines the efficiency and discipline of the detectives towards the *gorotsuki*. When a detective wishes to start business on his own account, and wants funds for the purpose, he enlists the support of his comrades, and the latter set about assisting in a peculiar manner; a manner simple enough, but decidedly shady. The would-be business man orders thousands of Japanese towels, and these his comrades distribute to each *gorotsuki* living in Tokyo. The latter are then obliged to contribute one or two yen towards the fund, and a sum of 1,000 to 2,000 yen can thus be obtained easily. It follows that a detective can raise 20 yen with less difficulty than an ordinary constable experiences in procuring a few sen; a circumstance that constitutes a source of perpetual discontent to the latter. According to the *Kokumin no tomo*, the benefit that the detectives derive from the *gorotsuki* in discovering criminals cannot bear comparison with the trouble and even danger to which ordinary law-abiding citizens are subjected by these same personages, while the existence of such an understanding between the "idlers" and the detectives will ultimately reduce the latter to a corrupt and useless body. The Metropolitan Police Board must effect a drastic reform in the system of its detectives, and must exercise strict control over these social pests, the *gorotsuki*.

COUNT ITAGAKI AND THE LEADING LIBERALS DEFRAUDED.

The *Yomiuri* publishes an extraordinary story connected with Count Itagaki and his leading partisans. Some years ago, a man named Yasukawa Jinichi came to Tokyo and applied to be admitted into the Liberal Party. He declared himself to be a native of Yamato, and said that his property did not fall below that of Mr. Dogura Shozaburo, a millionaire of the same province, popularly called the "Forest King of Japan." Gradually he established intimate relations with several members. His conduct bore out his original account of himself, for he spent money freely, and now and then contributed to the funds of the Party. His influence, therefore, steadily increased, until he came to be counted among the principal members of the Party. Yasukawa being a batchelor, some Liberals conceived the idea that he should marry a daughter of Count Itagaki, so as to cement the relation between him and the Party. Yasukawa evinced much satisfaction at becoming a son-in-law of the Leader of the Party, and the marriage was at last consummated, though the outlay connected with it caused considerable embarrassment to Count Itagaki, his circumstances being very straitened at the time. After this Yasukawa's influence naturally grew greater, so much so that it was thought necessary, even by the leading Liberals, to have his preliminary endorsement whenever a member advanced any proposal for the approval of the Party. When Yasukawa had succeeded in completely hoodwinking the Count and his followers, he began quietly to profit by the occasion. He induced several leading Liberals to endorse his documents, and in that way raised a sum amounting to over 20,000 yen. In the latter part of the year just concluded, he suddenly disappeared and could not be found anywhere, to the alarm and anxiety of his wife, her father, Count Itagaki, and others who had acted as his sureties. A few days subsequently, a sealed letter reached Count Itagaki from Yasukawa, posted in his native place. On opening the envelope, the Count, to his amazement and anger, found only a note of divorce to Yasukawa's wife, and nothing whatever about his mysterious conduct. The Count despatched a messenger at once to Yamato, but the envoy returned *re infeld*. He had seen Yasukawa, indeed, but failed to obtain any definite reply to the demands preferred on behalf of Count Itagaki. The messenger learned, while in Yamato, that Yasukawa belonged to one of the oldest families in the neighbourhood, and had once been very wealthy, but that his affairs had subsequently fallen into a state of complete embarrassment. Mrs. Yasukawa deserves much sympathy, and so do the Liberals that endorsed Yasukawa's paper, though their prudence leaves a great deal to be desired. It was in connexion with this affair that more than twenty members of Parliament, identified with the Liberal Party, had their half-yearly Parliamentary allowances, which fell due on the 26th of last month, suddenly seized by creditors who had furnished money to Yasukawa. It is said that not one influential member of the Party escaped pecuniary entanglement with the sharper.

MERCANTILE METHODS IN CHINA.

From Canton comes news of a transaction, not novel of its kind, but worth noting as an illustration of the shrewd, far-seeing ideas of the Chinese merchant. A native rice-exporting hong in Wuhn failed for 8,000 Tls. Thereupon the Canton Guild and several of the largest firms in the same line of business, fearing that unless the defaulting hong's liabilities were discharged, the credit of the Cantonese might suffer, put up the eight thousand taels. We have never heard of anything of that kind in Japan. It speaks volumes for the commercial insight of the Chinese.

THE LIBERALS.

The Liberal Party has decided to convoke an extraordinary general meeting for the 10th January, at which it will nominate a President and elect three general commissioners to posts now vacant owing to the resignation of Messrs. Hayashi, Kono, and Matsuda. It should be remembered that when these leading members of the Party represented the advisability of supporting the National Unionists in the Diet and the wisdom of voting for the candidate of that Party for the Presidency of the House of Representatives, their advice was overruled by a majority of the Liberals present. This placed the three politicians in an embarrassing situation, virtually making them break faith with the Unionists. For it is said that an understanding had been arrived at between them and the leaders of the National Unionists in regard to this matter. Hence Messrs. Hayashi, Kono, and Matsuda resigned, and Mr. Kataoka Kenkichi was temporarily appointed to direct the Party's affairs. The course pursued by the Party seems to have caused dissatisfaction to Count Itagaki, and he is understood to have sent a letter to the Office of the Party intimating that he should like to resign the leadership both in fact and spirit. In the meantime, the temporary ill-feeling entertained by the National Unionists towards the Liberals seems to have disappeared, and an understanding has been arranged, judging by the result of the election of a chairman of the Committee of the Whole House, and the composition of the Standing Committees, most of which posts have fallen to either Liberals or Unionists. This has given considerable encouragement to the progressive section of the Party; and the members that advocate an aggressive policy have begun to declare that anti-Government steps should be taken with vigour at a favourable juncture. To successfully attain this purpose, the Party must elect a President and General Commissioners: that is their contention. This opinion seems to have prevailed, for on the 28th inst. the Liberals having seats in the House, held a meeting at which there was no dissenting voice. Needless to say, Count Itagaki will be again placed at the head of the Party, and Messrs. Kono, Hayashi, and Matsuda will be re-elected General Commissioners. It has also been decided to persuade certain influential publicists who view the Liberals with favour to join the party—a resolution that may bring about the entry of Barons Ito and Suyematsu into their ranks.

It has already been noted in these columns that some friction existed in the ranks of the Liberal Party, owing to the development of an idea that too much influence was wielded by the Tosa section; in other words, by Count Itagaki and his immediate followers. For a time, indeed, there seemed to be some probability that Count Itagaki would retire from the nominal leadership of the Party, and that its affairs would be managed by a committee of councillors. But it was ultimately found that a very large majority favoured the old organization, and desired to see Count Itagaki restored to his original position of authority. A resolution in that sense was adopted at a meeting of the parliamentary members of the Party on the 31st of December. Last Sunday, however, seven members sent to the head office an announcement that they wished to have their names erased from the Party's roll. The general supposition is that their reason for taking such a step is a feeling of resentment towards the Tosa section, but the *Nichi Nichi Shimbun* thinks that some other considerations have been operative. The loss of seven votes in the Lower House, says our contemporary, is, of course, a thing to be greatly regretted, but if the secession of these lukewarm associates has the effect of consolidating the union of these remaining, the Party will be a gainer.

THE KANAGAFUCHI SPINNING MILL.

A representative of this journal called on Mr. Wada, manager of the Kanagafuchi Mill, at the office in Horidome, Nihonbashi, to seek information about the boycotting affair. Mr. Wada declared, with some amusement, that he had been disappointed by an apparent want of pluck on the part of the boycotters. The Kanagafuchi Mill was resolved to fight a good square battle for the cause of the poor female operatives, but it seemed that an opportunity for the contest would not be forthcoming. The fact is that the Boycotting League has discovered this self-sought quarrel to be a costly affair. The League represents more than 600,000 spindles, and it was decided that a fund for prosecuting the campaign should be obtained at the rate of from 8 to 10 *sen* per spindle. By that means a sum of over 40,000 *yen* is said to have been collected, but rumour alleges that the money is already nearly exhausted. It was spent on inserting long declarations against the Kanagafuchi mill in nearly all the journals of Tokyo and of the Kei-Han districts; on paying *soshi*—who numbered at one time as many as 160—at the rate of 40 *sen* per head, exclusive of their food and drink—which latter item probably cost more than their regular wages—and so on. As the complication commenced about the middle of last month, and as the League spent about 3,000 *yen* a day, all for the purpose of coercing helpless female operatives to work at low wages and under bad treatment, the forty thousand *yen* did not last long.

To the Kanagafuchi Mill the trouble costs virtually nothing. It has simply to provide against its operatives being decoyed away under false promises, and is therefore entirely unconcerned whether it be boycotted by 46 mills or by all the mills in Japan combined. It experiences no embarrassment whatever even when boycotted, for, comically enough, while the boycotters warn the business men with whom they are regularly connected not to deal with the offending firm, the Kanagafuchi mill is able to obtain a supply of raw material and to dispose of its products just as easily as before. The menaces of the boycotters are entirely futile. Hence Mr. Wada thinks that the League will collapse out of pure impotence, and because of the heavy expense involved in prolonging the campaign. This forecast seems to be justified, for the shareholders of the 46 boycotting mills are dissatisfied to see so much money wasted on hiring and feasting *soshi*. At an extraordinary meeting held by the boycotters at the end of last year, signs of dissension are reported to have appeared. So the Kanagafuchi Mill is calmly awaiting further developments, and has no desire that any one should act as intercessor. It is determined to reject every proposal in that sense, coming from whatever quarter, be the medium Count Inouye or Mr. Shibuzawa. As to the question of adopting coercive measures for the control of operatives, Mr. Wada is of opinion that such a course would be not only highly improper from the standpoint of personal freedom, but also entirely ineffectual. Any system devised for the purpose must result simply in waste of trouble and money, for operatives have only to assume new names when they enter the service of another mill, and it becomes virtually impossible to identify them. The best, and in the long run, the most economical way of controlling operatives is to give them as high wages as possible, and to extend to them the best treatment consistent with business conditions. Mr. Wada was at once amused and indignant about the fact that the Boycotting League had succeeded in decoying some 80 operatives from the Hyogo branch of the Kanagafuchi Mill. The 80 girls are kept in the house of a certain headman of coolies in Osaka, under the guard of a number of men. Though successfully decoyed, the difficulty now is what to do with them, for however simple they be they will not consent to be distributed like mere chattels among the 46 boycotting mills; while, if the choice of location be left to the girls, trouble will be engendered among the mills.

Hence they are kept in a house and paid wages for doing nothing, but are restrained from going abroad freely. The maintenance of the girls must involve considerable outlay. Apart, too, from the question of cost, the step is to be strongly denounced, for it amounts, in effect, to illegal confinement. In a word, the boycott is sure to break down, though there is no corresponding certainty that their failure will teach a lesson to the boycotters, and that they will give better wages and extend better treatment to their operatives. The Kanagafuchi directors are gratified to observe that the starting of their branch mill in Hyogo has been instrumental in improving the condition of spinning operatives throughout the Kei-Han districts.

RESIGNATION OF THE CHIEF SECRETARY OF THE HOUSE OF REPRESENTATIVES.

Considerable friction appears to have occurred in connection with the election of a President of the House of Representatives. The Liberals and the National Unionists had come to an agreement to vote together, but had not been sufficiently definite as to the choice of a candidate. The Liberals maintained the advisability of a double ticket, bearing the names of Mr. Kono Hironaka (Liberal) and Mr. Sassa Tomofusa (National Unionist), but the Unionists, regarding such a course as precarious, urged that both parties should vote for Mr. Sassa only. An agreement on the latter basis proving impossible, and neither side being willing to abandon its own project, it became evident that the strength of the two parties could not be combined unless some heroic course were adopted. Accordingly, Mr. Kono Hironaka sent in his resignation as a member of the House. Considering that Mr. Kono is the parliamentary leader of the Liberals, it is difficult to believe that he was quite serious in his expression of desire to resign. The simpler course would have been to withdraw from the presidential contest. On the other hand, he may have supposed that such an indication of earnestness would ultimately have the effect of bringing the two parties definitely into the same camp; and if that was his forecast, it seems to have proved accurate, for the Liberals and Unionists certainly worked together subsequently at the election of standing-committee members and of the chairman of committee of the whole. But Mr. Kono's action produced an unlooked-for complication. The Chief Secretary of the House, Mr. Okuda Yoshindo, ought naturally to have consulted the Vice-President with regard to Mr. Kono's resignation. He did not do so. He returned the document to Mr. Kono, who had been persuaded to alter his decision. Now the Vice-President of the House is Mr. Shimada Saburo, a prominent member of the *Shimpo-jo* and virtually leader of that Party in the Lower House. Had Mr. Kono's resignation reached the hands of Mr. Shimada, its recall might have been a matter of much difficulty. From that point of view, the Chief Secretary's conduct was open to emphatic criticism, and we cannot be at all surprised that he has been roundly charged with partiality in the discharge of his duties. On what rule of procedure he acted, we do not know. Probably he thought that if a member wished to withdraw his resignation before it passed into the hands of the President or Vice-President, there could be no impropriety in acceding to the wish, for the Secretariat of the House is, after all, nothing more than a species of post office for the convenience of the members. Certainly a draft of law transmitted to the Secretaries by a member, would be returned at any moment to the latter so long as it had not reached the President and been placed on the record. However, it would have been more prudent on Mr. Okuda's part to consult the Vice-President before taking action. The result of his failure to do so was a commotion leading him, in turn, to resign office. His resignation was tendered on the 29th ultimo, and the *Tokyo Asahi* says that he intends to take a trip to Europe.

THE GOVERNMENT AND THE OPPOSITION.

No one seems to be quite sure about the course that the Liberals intend to take when the Diet re-assembles. Some journals allege that a motion of want of confidence will be introduced at once. Others are equally positive that no extreme action will be taken by the Liberals unless a specially favourable opportunity presents itself. Others, again, say that the passing of a vote of want of confidence would be welcomed by the Government and its parliamentary supporters, since a general election would probably strengthen the latter materially. We are without means of discriminating between these assertions, and it does not appear likely that any plain clue will be furnished until after the extraordinary general meeting of the Liberal Party on the 10th instant. What seems pretty certain, however, is that the Liberals and the National Unionists are now working hand in hand. The National Unionists lent their aid to elect a Liberal to the position of Chairman of Committee of the Whole House, and the Liberals returned the compliment by electing a Unionist to the chair of the Budget Committee. The Liberals hold 104 seats in the Lower House, and the Unionists 33. Thus the two parties in combination cast 137 votes against the *Shimpo* 10's 95. Sixty-six members are not affiliated to any party, and there are two unoccupied seats—one for Kagawa Prefecture and one for Kumamoto. At present, therefore, the Cabinet's opponents are in a position to force the situation, if they please. It is by no means certain, however, that the Liberals and National Unionists could carry a vote of want of confidence. The unaffiliated members generally support the Government, and are especially likely to do so when Count Matsukata is in power, for his popularity in business circles is very great. Meanwhile, two facts are noteworthy. The first is that, despite confident predictions lately circulated, no split has taken place, or seems lately to take place, in the ranks of either the Liberals or the National Unionists. The second is that the situation in the Diet is very unstable, and at any moment a crisis may be precipitated.

AMENDMENT OF THE PRESS LAW.

The Press Law now in force was promulgated on December 28th, 1887. From its first session in 1891, the House of Representatives passed sweeping amendments of the Law, but the House of Peers invariably threw out the Bill. Long ago a compromise could have been effected, had the Lower House recognised the truth of the adage that half a loaf is better than no bread. The House, however, insisted on treating the matter emotionally rather than practically, and thus the Law stands unaltered to this day. In our last issue we gave a sketch of the amendments embodied in a Bill now submitted by the Government to the Diet. For the sake of clearness, however, it may be well to explain the proposed changes more fully.

According to the Law of 1887, the Minister of State for Home Affairs is competent to suspend for any length of time, or to suppress, a newspaper or periodical containing matter which, in his opinion, is calculated to imperil public peace and good order or to impair public morality. Further, when a public prosecution is instituted against a journal or periodical, the public procurator is authorized to seize the journal or periodical. Finally, the Ministers of War and of the Navy are competent to issue special orders prohibiting the publication of matters relating to military or naval affairs.

According to the amended Law, the Minister of State for Home Affairs is no longer competent to suspend and suppress a journal or periodical, but is competent only to seize, and prevent the sale or distribution of, the particular number containing matter calculated to imperil public peace or good order; or to injure morality; or to impair the dignity of the Imperial Court; or to subvert the political system; or to disturb the laws of the realm; or containing

diplomatic, naval, or military intelligence in violation of a prohibition issued by the Minister of Foreign Affairs, the Minister of the Navy, or the Minister of the Army. (It will be observed that the prohibiting power is extended to the Minister of Foreign Affairs). Should it be deemed advisable to penalize the offending journal or periodical more severely than by the seizure of a single issue, then recourse must be had to a Court of Law. In that case, the Minister of Home Affairs or of Colonization has competence to suspend the incriminated journal for one week, or the incriminated periodical for three issues. Moreover, the Judiciary is vested with competence to suppress the publication of a journal or periodical convicted of any of the above offences, and to confiscate the plant used in printing the incriminated matter.

Thus the proposed changes are, first, that the power of suppression is altogether taken away from the Administration and transferred to the Judiciary; secondly, that the exercise of the power of suspension is limited to one week, instead of being unlimited; and thirdly, that suspension can not be ordered, as at present, without designating the incriminated matter, but must be concurrent with a legal prosecution in which the cause of offence will be clearly set forth for the judgment of a Court of Law.

These are very large amendments; quite as large, in our opinion, as can safely be made at present. If any one can persuade himself that the press of Japan has already established its title to be freed from all Administrative supervision, we admire his optimism much more than his discernment.

THE VICE-MINISTER OF STATE FOR HOME AFFAIRS.

According to the *Mainichi Shimbun*, Mr. Matsudaira, who was recently appointed Vice-Minister of Home Affairs, finds himself unable to retain the post, and will probably be relieved at an early date. His successor is expected to be Mr. Misaki Kamenosuke, new Chief of the Bureau of Local Government. Mr. Misaki's career is not easily explicable. Throughout the first seven sessions of the Diet he figured as a prominent Liberal, and his appointment to the position of Chief of the Local Government Bureau was generally understood to be one of the consequences of the alliance between the Cabinet and the Liberals. Yet we now find him not only retaining office though the Liberals are in opposition, but also receiving marked promotion from a Cabinet supported by the Liberals' enemies. It is true that Mr. Misaki was originally an official, and that his political colour probably lost much of its vividness when he once more re-entered official life. Still, there is no denying the fact that in these days of transition from the old order to the new, a good many anomalies present themselves.

RESIGNATION OF MR. SAMEISHIMA.

Mr. Sameishima Takenosuke, who served for several years as Private Secretary to Marquis Ito, and was subsequently promoted to be a Minister Plenipotentiary *en disponibilité*, has resigned his official position. Mr. Sameishima is so well known to foreigners in Japan that many persons will be curious to learn the reasons of this act. We have no direct information, but the *Yomiuri Shimbun* alleges that Mr. Sameishima is strongly opposed to the amendments of the Press Law, as proposed by the present Cabinet, and that so soon as a Bill embodying those amendments was presented by the Government to the Diet, he sent in his resignation. Whether he is in favour of granting a fuller measure of freedom, or whether he thinks that the old restrictions should be preserved, the *Yomiuri* does not say, but the tone of its note leads us to suppose that Mr. Sameishima does not think the time has come for removing the restraints now imposed by law. Evidently this problem is destined to disturb Japanese politicians and legislators for many a day still.

JAPAN'S ECONOMY PRIOR TO AND AFTER THE WAR.

The Department of Agriculture and Commerce has carried out inquiries into the comparative condition of Japan's economy prior to and after the Japan-China War. It has obtained the following results:—

Volume of currency in circulation	June 1893.	June 1896.
(yen)	41,738,007.85	30,419,709.85
Government Loans to be redeemed	280,519,621.00	307,005,034.00
Joint stock companies	2,135	2,471.00
Capital (gross amount) (yen)	108,500,779.00	180,308,082.00
Capital paid up	66,189,073.00	106,500,731.00
Banks	125	1,297.00
Capital	62,916,100.00	111,430,443.00
Private railway companies	38	40.00
Capital	73,232,000.00	231,238,000.00
Joint mileage of Government and private railways (miles)	2,500.00	3,100.00
Lines opened for traffic	1,280.00	1,190.00
Lines not yet completed	640.00	900.00
Bonds and shares. Quotation = (time bargain for July).		
Redemption Bonds 100 yen face value	107.00	103.00
Sanyo Railway shares, 27 yen face value	33.37	36.30
Kobe Railway, 45 yen face value	139.00	172.00
Domestic Transportation shares, 50 yen face value	41.70	30.40
Kanagafuchi Spinning, 50 yen face value	58.31	69.50
Nippon Yusen Kaisha, 50 yen face value	76.62	109.30
Tokyo Electric, 45 yen face value	66.25	85.70
Hokkaido Tanko, 50 yen face value	75.00	110.00
Nippon Mess-work, 12.5 yen face value	1.00	11.00
Interest on money at Tokyo (per 100 yen):—		
Interest on loans	5.00	5.00
Discount on commercial bills	1.3	per diem 1.4
Discount on cheques drawn at other places	1.3	per diem 1.4
Interest on current loans	1.7	per diem 1.5
Market price of staple commodities in Tokyo:—		
Cleaned rice 1st grade per s yen	9.6	7.5
Cleaned rice 5th grade per s yen	21.8	8.9
Soy (best) per yen	73	per cash 69
Sake (best)	24.50	19.50
Table salt (per yen)	3.50	3.10
Sugar (per kwamme)	44 yen	41
Wages in Tokyo:—		
Carpenter 1st class, daily wages (yen)	55	.60
Carpenter 3rd class, daily wages (yen)	45	.50
Stone mason, 1st class	70	.75
Stone mason, 3rd class	65	.70
Plasterer, 1st class	35	.60
Plasterer, 3rd class	45	.55
Labourer	30	.35

In the above table the figures for joint stock companies given under June, 1893, represent returns to the end of March, 1894. This is due to the fact that official acknowledgement of existing companies in conformity with the Commercial Code was first announced in 1894. The loans represent the amounts in December, 1893; the mileage of railways for 1893 represents the figures for March 1894, and the figures for 1896, are for March of that year. For bonds and shares the average monthly quotations in the Tokyo Stock Exchange are used; and bonds and shares not regularly quoted are necessarily omitted. That the quotations for shares of the Nippon Yusen Kaisha and the Hokkaido Tanko Kaisha rose suddenly in June, 1896, was chiefly because of additions to their capital. The market prices of commodities are the averages for the respective months; while wages are based on those fixed by the respective guilds.

NUMBER OF COMPANIES IN JAPAN.

Statistics collected by the Department of Agriculture and Commerce show the number of companies in existence on the last day of October, and their capital, together with other particulars, to be as entered in the following table:—

Number of Joint Stock Companies	1,607
Capital	yen 931,441,570.75
Number of Companies that have increased their capital	00
Amount of capital	yen 14,309,239.40
Total number of Companies	2,656
Total amount of capital	yen 945,531,430.15
Number of Companies dissolved or that ceased to be in operation during the month	7
Capital of the above	150,000
Number of Companies that reduced their capital during the month	5
Capital reduced	45,430
Grand Total of Companies	2,651
Grand Total of Capital	yen 945,330,000.15

These figures, as compared with those for the last day of the preceding month, show an increase of 48 companies, and of capital to the amount of 14,187,430 yen.

THE CONCOCTION OF SCARES.

AMONG the marvels published constantly by sensational journalists, two of recent circulation are particularly striking. One comes from Australia. It is based on a conversation said to have taken place in a railway carriage between several Japanese military men. The conversation being overheard by a foreigner, "well versed in the vernacular," was by him communicated to the Australian tourist who gives it to the world. Its gist was that the people of Australia, though numerically unable to develop the resources of their splendid territory, were nevertheless such dogs in the manger that they wouldn't let anyone else come to develop them, and that, under such circumstances, it might be the duty of Japan to take a forcible hand in the game. The other story appears in the columns of the *Courrier de Saigon* and is given on the authority of a high official of Cochin-China whose initials are "M.C." During a recent visit to Japan this high official was one day addressed by a Japanese Prince, a General of Division—evidently H.I.H. Prince FUSHIMI—to the following effect:—

We Japanese have become a strong and redoubtable people. We produce much, and colonies are therefore necessary to us. Our motto is "Asia for the Asiatics," but especially and by preference for the Japanese. Manila in five years, the Malay Peninsula, a few of the islands of Netherlands India, and other trifles of territory in certain parts of China will satisfy our ambition for the present. After that we shall see.

Of course we are not in a position to denounce either of these tales as an absolute falsehood. Indeed, we think it very probable that the Japanese are highly incensed about Australia's exclusive policy. Already an undercurrent of murmuring on the subject of "*Hai-Nippon*" (exclusion of the Japanese) begins to be apparent in vernacular newspaper columns and in political discussions. No wonder. Forty years ago, Great Britain was summoning Japan to open her gates to intercourse with the world, and preaching to her in tones of menace the doctrine that international exclusiveness in any form had become intolerable to civilization, and might properly be broken down by force, if it did not yield to reason. To-day, a great British colony is legislating for the exclusion of all Orientals, thus re-establishing the line of racial demarcation that has always been denounced by Englishmen themselves as immoral and unprogressive. The Japanese would be fools if they did not detect this flagrant contradiction, and they are not fools. But they can not have forgotten that when the obtrusive Occidental forced his society upon them, *bon gré mal gré*, they, too, asserted their theoretical right to be left alone, and would gladly have made it a practical right had their strength permitted. Thus they would themselves be guilty of inconsistency did they now attempt to apply to Australia the cannon-ball per-

suation in deference to which their own portals flew open when PERRY appeared in the foreground with an English fleet in the middle distance. Military men, however, would not be likely to respect all these considerations, and the reputed railway conversation did, perhaps, take place. We may take it for granted that all Japanese of the better classes are highly incensed against the Australians, and that the latter's panicky and ill-considered legislation has created a real and tangible ill for the sake of averting an unreal and intangible inconvenience. Suppose that the Japanese Diet were to retaliate by a law discriminating against Australians in Japan as Japanese subjects are now discriminated against in Australia. There would be great outcry, of course, and we should hear much talk of a recrudescence of anti-foreign sentiment in Japan. But it is contrary to all experience of human nature to expect that Australia's procedure will not be resented by the Japanese. It is already resented, indeed, but we are persuaded that many a year must pass and many a radical change must occur before the Japanese make any practical effort to display their resentment in the manner said to have been indicated by the party of military officers in a railway carriage.

The story about Prince FUSHIMI is another affair altogether. It is impossible to believe that the Prince ever used the language attributed to him, or any similar language. The boastful tone adopted at the outset of the alleged statement is not only foreign to the habits of Japanese in general, but also ludicrously inconsistent with the modest reserve that invariably characterises Prince FUSHIMI in particular. Moreover, no official in a responsible station, above all an Imperial Prince in command of a *corps d'armée*, would suffer himself, under any circumstances, to be betrayed into such wildly indiscreet affirmations. The story is manufactured out of whole cloth. We do not believe that this "high official of Cochin China" ever exchanged half a dozen words with Prince FUSHIMI. We doubt whether he ever set eyes on the Prince.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

The dissensions among the Buddhists, to which we briefly referred in our last Summary, are of three kinds:—(1) There is a disturbance at the Higashi Hongwan temple owing to the alleged misappropriation of money by Mr. Atsumi Keiyei, the Presiding Manager of the temple, and owing to general dissatisfaction with the existing rules of the Shin sect. (2) The perturbation in the Zen sect resembles the above in respect of its consisting of a demand for reform put forward by a strong body of adherents. (3) The third cause of dissension is connected with the publication of a book, the *Bukkyō Kakushū Kōyō* (An Account of the Leading Features of the Various Buddhist sects), to which we referred in our August Summary. The compilers of this work took upon themselves the responsibility of omitting from the articles of faith of the Nichiren Sect certain offensive

allusions to 4 other sects, one of the objects of the book being to bring the various sects into closer union with each other. The allusions referred to consist of 4 epithets said to have been employed by Nichiren himself, the founder of the Sect, in describing 4 other leading Buddhist sects. The term used to describe the Jōdo Sect (founded in Japan by Hōnen Shōnin A.D. 1211), from which the Shin Sect took its origin, was 念佛無間 *Nembutsu-mugen*, which implied that the adherents of this Sect were destined to pray for ever in a well and never find rest. The Zen Sect is referred to as 天魔 *Temma*, a Heavenly Demon, implying relationship to this August personage. Coupled with the characters for the 真言 *Shingon* Sect are 亡國 *bōkoku*, implying that the doctrines of this sect are most destructive. The 律 *Ritsu* Sect is designated a 國賊 *Kokusoku*, a traitor to the country, a rebel. It seems that these offensive epithets were included in the history of the Sect supplied by its leaders to the compilers of the above named book, and that the compilers, without consulting the Sect concerned, omitted them, for which they have been sued before a court of law.

The *Bukkyō*, commenting on the above disturbances, sympathises with the first two classes of agitators, thinking that the reforms which they urge are much needed. But the feud over the insertion or omission of terms in a historical work it thinks childish. Since it is known that the Nichiren Sect is one of the most bigoted in Japan, the insertion of the terms in question would have been no surprise to anybody, says the *Bukkyō*. Their omission, however, was not worth making a stir about. The real cause of the strong feeling is to be found in the fact that the compilers of the book in question are mostly Shinshū men, that is, they belong to a sect to which the Nichiren adherents have for centuries been opposed. In Ōda Nobunaga's time, heated controversies between the two sects were carried on. The *Bukkyō* thinks that it would be difficult to show that the epithets in question are essential elements of the teaching of the Nichiren Sect. The idea of a sect's appealing to a court of law to sanction its slandering other sects certainly has the charm of novelty.

Information that has reached us since writing the above represents the troubles of the Shin Sect to be of three kinds, as follow:—(1) Abuses of which it is alleged the leaders of the Sect are guilty (2) Financial irregularities (3) Educational evils. (1) The feeling against Ōtani, the head, and Atsumi Keiyei, the business manager of the Sect, is very strong. Various religious organs publish virulent attacks on the methods adopted by these two prominent men and urge their resignation. But Archbishop Ōtani treats his detractors with supreme contempt, and proposes to substitute representative government for the alleged despotism of Atsumi Keiyei. (2) The financial irregularities are said to consist of improper methods of raising money and of misappropriation of the sums collected. It is said that ecclesiastical offices and preferments have been sold, and that even the rank occupied by priests has been bartered. The sums collected in this manner have amounted to millions of *yen*, and the temples that have been erected have not cost anything like the amount accumulated.

(3) The education of priests carried on by this Sect is asserted to be most deficient and to be constantly undergoing objectless changes. Representations on this subject have been disregarded. Money collected for educational purposes has been squandered on other objects. Having appealed in vain to the leaders of the Sect, the advocates of reform are now determined to appeal to the public, and in order to do this more effectually have started a new magazine called the 教界時評, *Kyōkai Jigen*.

The latest number of the *Bukkyō* reverts to the disputes and commotion taking place among the adherents of the Shin sect. The Tōkyō dailies having now taken sides on the questions at issue. The *Nihon Kokumin Jiji*, *Yomiuri*, *Hōchi*, *Mainichi*, and *Yoroku Chōhō* are all supporters of the agitators and in favour of the power of Archbishop Ōtani's party being

curtailed. Many prominent Buddhist scholars like Dr. Inouye Yenyō, Dr. Nanjō Fumio, and Professor Murakami also take the side of the advocates of reform. The agitation is spreading and is proving a serious hindrance to education. Professor Murakami has resigned his position as Director of the Tōkyō Shin Shū Chūgakkō, and no less than 100 pupils have left the school in consequence. Other middle schools established by the Sect have been affected. In some the excitement has been so great that it has been found necessary to close the schools.

We also learn from the *Bukkyō* that judgment was delivered on the 5th instant in the case to which reference has already been made in these columns—the Nichiren Sect v. the compilers of the *Bukkyō Kahushū Kōyō* in favour of the defendants. The Nichiren-shū have appealed.

The *Bukkyō* protests against the zeal shown by Buddhist sects in founding Life Insurance Companies during the past ten years. There are the Meikyō, the Bukkyō, the Shinshū, and Nishū, Hoken Kaisha; and the Zen sect are about to start one of their own. We are aware, says the *Bukkyō*, that it is the fashion for people to use their religion as a stepping-stone to wealth. But the movement to which we refer is specially objectionable, as it does not possess the advantage of being based on business principles. The men who have started these companies are mostly men of slender means. They rely on the premiums to help them through, but it does not require much foresight to predict that in 30 or 40 years' time, when deaths become frequent among policy holders, a general collapse of these fragile structures must follow. To call them 保險會社, *Hoken Kaisha*, is a misnomer. They should rather be named 危險會社 *Kiken Kaisha* (Dangerous Companies). They will prove to be no credit to the sects that have shown such eagerness in their establishment.

The *Bukkyō* announces that the January number of the magazine will contain the first part of a translation of a very noted and a very rare Tali work, originally published in Ceylon, called the Mahāvānsa, which is a Tali chronicle of Ceylon from the earliest ages to the time of Mahanama-thera, its first compiler (432 A.D.). It was carried on by various authors down to 1756. Like the Dipavansa, a still earlier history of the island, it opens with a preliminary sketch of Buddhistic India. An English translation of the first thirty-eight chapters was published by the Hon. George Turnour, in Candy, 1837, and Mr. Rhys Davids has edited some others, but the Ceylon Government, many years ago, entrusted the completion of the work from Chapter XXXIX. onwards to the chief priest Sumangala and Batwan Tudawa Pandit. The *Bukkyō* purposes giving the English translation and a Japanese rendering as well.

Among a good list of articles, the *Shūkyō* has one on Charity, in which so-called benevolent gifts are divided into 5 classes, as follow:—(1) Gifts from compulsion, where the individual is constrained by the actions of others to give against his will. (2) Gifts with the object of making a reputation, in which love or notoriety is the prevailing motive. (3) Gifts prompted by business considerations, where the donor hopes his subscription will in some direct or indirect manner lead to business. (4) Gifts suggested by purely benevolent feelings. (5) Gifts bestowed on rational grounds, when the donors argue themselves into giving, recognising that it is the duty of society as a whole to extend help to unfortunate members thereof. The *Shūkyō* is of opinion that the two last kinds of gifts are very rare, and that the great majority of donors are influenced by one or more of the three first named motives.

The magazine just quoted furnishes an account of the proceedings of the Comparative Religion Society at their first session, which commenced on September 26th. The Society

is engaged in investigations connected with the worship of dragons and serpents in India and China, with the connection of this worship with the Japanese dieties Benzaiten (Benten Sama), Gion, and Suwa, and with a comparison of the terms used for these objects of worship and of the relation of the subject with the worship of crocodiles, newts, and the like. Other interesting subjects of inquiry are the history of the rite known as the Goma,* the worship of Fudō (a Buddhist idol) and religious practices and ceremonies of a lascivious kind. The Society is now confined to 20 members. Its meetings are held at the Seinen Kwan, Kanda, Tokyo, on the second Saturday of every month.

The *Uchūshinkyō* discusses the *vendetta* in Japan, and the subject of revenge generally, the writer maintaining that private vengeance, such as is described in the *vendetta* stories so popular in Japan, is barbaric, and that the prominence given to this class of history in the *yōse* and the theatres is injurious to the minds of the rising generation. It is alleged that these tales promote filial piety, in that the heroes encountered untold dangers in order to fulfil their obligations to relatives. To this the *Uchūshinkyō* replies that in the minds of the audiences at public places of amusement the savage elements of the story obliterate altogether the moral lessons which it is claimed they are designed to teach.

The same magazine has an article on "The Dignity of Labour," and an account of an interview with Mr. Taguchi, the eminent economist, contributed by a writer who signs himself "Koken." We select the following as specimens of the views expressed by Mr. Taguchi on religion, allowing him to speak for himself:—With nations and individuals alike, religious feeling ebbs and flows, increases and declines according to circumstances. There have been times in my life when I seemed to be moved by religious faith, and there have been times when I seemed to have no connection with religion whatever. Seeing there are these variations, it would be misleading to test the power of religion by its influence on individuals at any special time. I believe that man has a soul, but that this soul is not capable of being separated from other parts of him, that its working is like that of magnetism or electricity in combination with other bodies, and that it is precisely the same in nature as that possessed by horses, cows, and dogs. With the religious Conference of the Sects held in Shiba a few months ago, I have great sympathy; nothing but good can result from such meetings. The interviewer informs us that hitherto Mr. Taguchi has been very reticent about his religious belief, and adds that, meagre as the details given may seem to be, they are better than nothing.

An article of a historical nature giving an account of the introduction of Christianity into Japan in the sixteenth century is published in the *Uchūshinkyō*. The writer contends that the reason of the failure of ancient Christianity was that, unlike Buddhism, it did not adapt itself to the circumstances of the Japanese and qualify itself to become a national religion.

The *Aoyama-hyōron* laments the materialism of the age, maintaining that, morally, Japan has lost by the late war. The fame she has gained is nothing to boast of. Instead of the body being subjected to the mind, as is the case in all really prosperous states, in modern Japan, says this organ, we see religion and education, the two great sources of national life and energy, sacrificed on the altar of commerce and industry. Even in Christian circles in numerous instances the Bible has been abandoned in favour of the abacus.

In an article on evangelisation, the *Nihon Shūkyō* says that a large proportion of modern evangelists are men of little faith. They question the trustworthiness of many of the so-called truths of religion, and hence, instead of propagating religion, they preach on science and a

* It seems there are four different methods of performing the *goma*, each requiring its own special utensils.

number of secular subjects. Complaints are such on every hand that preachers effect little good. The fault lies with the character of the preachers. No longer accepting the supernatural parts of their creed, when modern evangelists preach, their trumpets cannot but give an uncertain sound; hence it is not to be wondered at that no satisfactory results are forthcoming.

In an article appearing in the organ just quoted, entitled "A Word to Religious Office-bearers," the writer asserts that both in Buddhist and Christian ranks there are a large number of thoroughly worldly adherents to whom the chief attraction of religion is its power to distribute "loaves and fishes." With the vital parts of the two religions they are not concerned. They amuse themselves with their external trappings and appendages. According to this authority, both among Buddhist priests and Christian ministers a large amount of perfunctoriness is visible. In the Christian Church the willingness with which Japanese converts accept foreign money cannot be too strongly condemned. The spirit of independence in many quarters seems quite dead.

We are struck by the number of magazines that write in the above strain. To quote a few only, the *Yōgaku Zasshi* in an article entitled *Kirisuto-Kyōkai no Jiseiron*, enumerates the particulars in which Christianity is on the decline in Japan. The 明教新語 *Meikyōshinshū*, under the title of *Shinkō no daraku* (Religious Apostasy) maintains that there never has been any such falling away from the Christian faith as characterises the present age. The *Taiyō* harps on the same note, and the *Hansei Zasshi*, a Buddhist organ, expresses the opinion that in the Buddhist world things are no better.

Another subject which is being earnestly discussed by various Christian organs is the relation of Christian Churches to foreign missionaries. Writing on this topic, the *Kirisutokyō Shimun* says the much vaunted union between Japanese and foreigners is in reality unworthy of this name. Foreign and Japanese Christians do not meet on equal terms. The foreigners are the lords, and we are the servants. The foreigners deny to us the liberty that they themselves enjoy. Though there is a great deal of talk about foreign and Japanese Christians working unitedly for God's sake and for the sake of establishing the kingdom of heaven in this country, there is no hiding the fact that a form of slavery is practised in the Christian Church. Impressed with this feeling, not a few Japanese have urged that in future foreigners should be treated as visitors and that Japanese should assume the position of masters of the Christian household. To this course, however, foreigners have objected, and the effect of the free expression of opinion on both sides has been mutual estrangement. Regretting this, some Japanese Christians seem inclined to go back to the position they formerly occupied *vis à-vis* foreigners and again become objects of charity. This would mean death to the cause of independence, to promote which so many efforts have been made. The only possible way of effecting union between foreigners and Japanese is for the former to recognise our independence and to show themselves ready to meet us on equal terms. Among the missionaries there are not a few men of discernment, who surely will understand and appreciate the attitude we wish to assume in this matter. Our best plan is not to precipitate matters, but to wait till the missionaries come around to our way of thinking. To obtain peace at the expense of independence is not a course that we should follow under any circumstances.

Commenting on the same subject, the *Fukui Shimpō* writes, the effects of the disagreement between the Dōshisha and the American board have been bad. The Dōshisha adopted a narrow-minded, anti-foreign policy, and their action in reference to the missionaries has not met with the approval of Christians generally. Its tendency has been to awaken sym-

pathy with the missionaries, and even to deter those who for the sake of greater independence had purposed separating from foreigners for carrying out this project. Hence the episode, instead of furthering the cause of independence in the Christian Church, has proved a hindrance to it. Much as we favour independence, we are decidedly opposed to treating the missionaries in an inconsiderate manner.

Another writer in the *Fukuin Shimpō*, Mr. Tagawa Takijirō, who has lately become the editor of the *Taiwan Shimbun* (The Formosa News), remarks that in so far as Japan becomes Europeanised, so far will she grow rich, and that, while importing western ideas wholesale, for her to object to the persons with whom these ideas originated is, to say the least of it, most inconsistent and narrow-minded. The day is not far distant when mixed residence will be allowed and foreigners will be settling in the interior and practising their religion in our very midst, and will it not be an immense gain to the cause of Christianity that we should be on friendly terms with such men? I cannot but regard with extreme regret the anti-foreign attitude adopted by many Christian Churches at the present time. It must be looked on as an anachronism; for if ever there was a time when events were favourable to intimate intercourse between Western and Eastern Christians it is now. To engender thorough cordiality of feeling between Japanese and foreign Christians should be considered by everyone of us to be one of the most obligatory of all our duties.

According to the *Kirisutokyo Shimbun*, an attempt is being made by certain persons to devise a method of surmounting the difficulty existing between the American Board of Missions and the Dōshisha, and there is a possibility of these two bodies becoming connected with each other again.

The *Seikyō Shimpō* (the Greek Church organ) defines Christianity as a religion of progress, as distinguished from a religion of change. Its function, according to this organ, is not to disorganise and destroy, but to fulfil. It is constantly being said that if such doctrines as the divinity of Christ and the reality of miracles were no longer taught and purely rational doctrines were preached, that Christianity would make more rapid progress. But does not the history of the sects who have laid themselves out to thoroughly rationalise Christianity prove the opposite? Have not these sects diminished their influence by the adoption of this course. This subject resolves itself into the question of who is to lead and who are to follow. Is religion to dictate what is to be believed, or is it to alter its doctrines to suit the demands of successive ages? In our opinion, many of the doctrines of Christianity necessarily transcend human intelligence, and it is preposterous to require them to be shaped to suit the notions of man's finite mind. It is recorded that an ancient lord residing in Eastern Europe, in response to the demands of his retainers, bequeathed most of his lands to them, but that they were in no way satisfied, and were of opinion that nothing would satisfy them but that the position of ruler and ruled should be exchanged. Modern rationalistic proposals are of the same nature. What they really aim at is the usurpation of the authority hitherto exclusively enjoyed by the Church. On this point the Greek Church at any rate will stand firm. Whatever concessions she may make on non-essentials, on the great fundamental doctrines of Christianity she will teach what she has always taught, resent it who will.

We learn from the magazine just quoted that Bishop Nicolai and Mr. Nakanishi have for some time been engaged on a new translation of the Bible, and that they have already finished the whole volume with the exception of the book of Revelations. Though the new version is to undergo further revision before being printed and circulated, it is being used at the religious services of the Greek Church.

According to the *Tōyōtetsugaku Zasshi*, (Oriental Philosophy) a very interesting meet-

ing was held at the Tetsugakkan, on October 25th, in commemoration of the birth of Confucius. Among the speakers were Dr. Inouye Yenyō, Mr. Kusaka Kan, Mr. Sugiura Jūgō, and Dr. Kaiō Hiroyuki. The speakers dwelt on the enormous influence exercised by Confucius in China and Japan, on his high moral qualities, and on the applicability of his doctrines to various political and social situations. Mr. Sugiura was of opinion that, on the whole, Confucius had done more for Japan than for China, the Japanese having entered into the spirit of his teaching and made it the basis of numerous reforms in past ages. Dr. Inouye explained that the object of the meeting was not to encourage the religious worship of Confucius, but to promote his veneration as one of the great sages of antiquity.

The *Tōyōtetsugaku Zasshi* draws attention to the publication of a Shintō historical work of considerable importance. The compilers are Messrs. Nakajima Hiromitsu and Omiya Hyōma, and the work has met with the approval of Messrs. Motoori, Inouye, Naito, Kurita, and other Shintō authorities. The title given to it is *神道叢書 Shintō-sōsho* (A Collection of Shintō books). It will consist of 12 volumes, the first of which is about to appear, each volume containing over 300 pages. The price is to be 35 cents per volume. The Jingū-Kyōin, a Yūrakuchō, 3 chōme, Kōjimachi-ku, is publishing the work. The *Tōyōtetsugaku Zasshi* is of opinion that these volumes will contain a carefully compiled history of Shintō teaching from the earliest days. The magazine we are quoting holds that the data for forming a true estimate of the Shintō religion, if religion it be, have hitherto been inaccessible to the ordinary student.

The *Rikugō Zasshi*, the most learned, perhaps of Christian magazines is, we observe, to undergo further improvement next year. The names of 44 intending contributors to the new series are given. This organ has been in existence sixteen years, and is, we understand, widely read by thoughtful Christians throughout the empire. The number which lies before us has articles on the "Religious movement in Japan," by D. Ebina; "Past Phases of Religion," by T. Yokoi; "Naturalistic Explanation of the Biblical Miracles" (not complete), by S. Iizuka, and an editorial on the lessons to be learnt from the Otani affair, the gist of which is that reform in methods is imperative not only among Buddhists, but also among Christians.

A Christian publication which hitherto has not been noticed in these columns is the *Hokkai-do-hikari* (The Hokkaido Light) published by the converts of the Church Missionary Society in Hakodate. This monthly magazine has now reached its 41st number. From it we learn that the church known as the Nihon Seikōkai has no less than eight branches in Yezo. At a conference of representatives of the various churches, held a short time ago, Mr. Andrews, the President of the Church Council, urged on the councillors the necessity of rendering the churches quite independent of foreign support, and, in order to effect this, he proposed that they and the Christians connected with their churches should agree to set aside 10 per cent. of their earnings for religious purposes. Estimating the houses of believers at 300, and supposing each house to make 6 yen a month, the amount made annually would be \$21,600, which would represent a sum of \$2,160 for church work, which would be ample for all requirements. The proposal is strongly endorsed by the editor of the *Hokkai-do-hikari*, but whether, with all their willingness, the finances of Hokkaido Christians allow of their subscribing 7 yen 20 sen each per annum remains to be seen.

Mr. Hayashi Mikāomi, in conjunction with Count Ōki, has founded a society called the 君民同祖會, Kummin-dōso Kai. A society (founded on) the identity of the Imperial and National ancestry. This new body has issued a magazine which has reached its second num-

ber. The *raison d'être* of the Kummin-dōso Kai is not very apparent. It professes to be founded with the object of enabling people to obey the commands published in the Imperial Rescript on education issued on October 30th, 1890. The principles insisted on in the two numbers of the magazine already published differ in no important particular from those enunciated in other Shintō organs of a conservative type.

PERSONAL ITEMS.

The mother of Baron Nogi died in Formosa on the 27th December at the age of 69. She was suffering from bronchitis when she left Japan, and the unwholesome climate of Formosa must have aggravated her malady.

The Korean Minister to Japan, who has just left for home, has acted in a manner quite unworthy of the Government he represented. In the summer of this year, he borrowed 3,000 yen from the Mitsui Bank on a promise to repay the loan within a month. He repaid 1,000 yen, but still owes the remainder. The *Jiji* satirically asks whether this should be counted among the privileges enjoyed by a Foreign Representative.

Mr. Matsudaira, Vice-Minister of Home Affairs, has tendered his resignation though he was only appointed to the post a few weeks ago. Rumour has it that he is dissatisfied with the alleged change of opinions of Count Kabayama in regard to the amendment of the Press Law.

The removal of the Governors of Fukushima and Ishikawa prefectures is attributed by the vernacular press to their partiality towards the Liberals, and to various troubles this has caused in local administration. In Fukushima a sum of 130,000 yen, voted by the Local Assembly for river control work, was very irregularly expended, while the civil works expenses have occasioned grave trouble in the other prefecture. Certain members of the Local Assembly of Ishikawa and one or two local officials have been arrested on a charge of peculation.

RUSSIA'S NAVAL EXPANSION.

It is a curious coincidence that the contemplated completion of Russia's immense programme of naval expansion should synchronise with Japan's. Russia, we are told by a Berlin correspondent of the *London and China Express*, intends to spend eight hundred million roubles upon increasing her Navy between the present time and 1906; in other words, between the present time and the opening of the whole of the Trans-Siberian Railway. We have not the slightest desire to suggest alarms or discover snare's nests, but the dates are too striking to be overlooked. Japan purposes having a fleet of two hundred thousand tons displacement by March 31st, 1907; Russia projects an outlay of eight hundred million roubles on naval increment, and is to spend the money by the end of 1906. Eight hundred million roubles is the equivalent of nearly eight hundred million yen, or, say, eighty million pounds sterling. If that sum is to be expended upon ships in ten years, the great Northern Power will have an immense fleet by the end of the time. But where is the money to be expended? Russia's ship-building resources do not extend to the undertaking of any such programme. She must go abroad for the greater part of the ships. In that respect she resembles Japan, though, of course, the comparison is true only to a limited extent. We are inclined to think that the amount mentioned by the Berlin correspondent needs confirmation. But however that may be, the fact that Japan and Russia have each selected ten years as the period during which preparations are possible, will certainly afford material for many alarmist paragraphs and sensational rumours.

CHINA, ENGLAND, AND JAPAN.

The *Fiji Shimpō* lends its columns to circulate the story that when China, having been beaten to her knees by her little neighbour, saw the moment of surrender becoming imminent, she asked England to interfere, and offered Formosa as the price of interference. The reason alleged by the Peking Government for giving away territory lest it should be taken from them, was that Japan in Formosa would be a treacherous enemy virtually standing at China's gates, and would be within easy striking distance of the Yangtze, the neutrality of which had been guaranteed by British fleets. Lord Kimberly, however, the then Foreign Secretary in London—replied that the transfer of Formosa to England would be the signal for other Powers—notably Russia and France—to demand a slice of the spoils for themselves, and that when Japan came to discover the existence of such a secret agreement between the British and Chinese Governments, she would be naturally indignant, and would insist on extorting from China terms more onerous than ever. If a proposition of the kind was made by the Chinese, and if the British Government condescended to offer an explanation of its inevitable refusal, the reasons advanced by Her Majesty's Foreign Secretary would probably have been very like those set forth by the *Fiji Shimpō*. Our contemporary's statement contains, however, one strange point; namely, that, in making the above offer, China was not in earnest, but merely intended to let England have the island in temporary possession—intended to play fast and loose with her, in short. It is curious to observe the low esteem in which British statesmanship is held by some Japanese publicists. They appear incapable of comprehending the significance of England's calm independence of attitude, or of appreciating the strength of self-reliance necessary for playing such a part as she plays in the world. She does not underestimate the potentialities of her sister-states, or the value of their friendship, but she is not to be driven into the arms of any Power, or group of Powers, by chimeras that have no terrors for nations of a wholesome moral tone, sensible of their capacity to defend themselves, and her seeming inaction is referred by short-sighted critics to timidity. We think we may safely assure the *Fiji Shimpō* that were England sufficiently unprincipled to entertain the offer said to have been made by China, she would also be sufficiently shrewd and resolute to take care that it was not a mere bogus offer on China's part.

FEMALE ORPHANAGE AT OJI.

About a mile west of Oji railway station, and in the midst of cultivated fields, stands an unpretentious one-storied building. This is the Female Orphanage, founded by Mr. Osuka soon after the calamitous earthquake of Mino in 1890. Mr. Osuka, who is a young Christian of about thirty, resolved, seven or eight years ago, to devote his life to improving the condition of Japanese women of the poorer class. He was educated in a mission school at Tsukiji, and was first engaged as a teacher in a girls' Christian school in the same division of Tokyo. At that time he lived at Oji, and daily trudged from thence into Tsukiji, a distance of about eight miles. The salary he earned at school he devoted to the School Fund, not appropriating a *sen* to his own use. The Superintendent of the School was temporarily at home in America at the time, and when he heard the story from one of the staff he was highly struck with the earnest sincerity and disinterestedness of Mr. Osuka, and subsequently confided the whole of the school's affairs to his charge. Some time after, Mr. Osuka removed to Shitaya, Tokyo, so that he might carry out more conveniently his cherished idea of bringing up female orphans. With this object in view he undertook the care of two little orphan girls. The news of the disastrous earthquake in 1890 and the further fact that procurers and procureresses were starting for Mino and Owari with a view to obtaining all the likely orphan girls for their infamous

houses, impressed Mr. Osuka very much, and he too set out for the afflicted districts to rescue as many poor children as he could from the clutches of these heartless harpies. He brought back with him to Tokyo 14 orphans, one of whom was only 15 days' old. The benevolent intentions of the young man evoked the admiration of the station master at Nagoya, and this official specially undertook to reduce the railway fares of Mr. Osuka and his little orphans. About a year afterwards Mr. Osuka brought a plot of ground in Oji, his family being well-to-do, built a house there, and moved into it. The inmates at this private orphanage have since increased in number, and now total more than 60. The history of each of the inmates of the orphanage is a tale of misery and crime. One was rescued from starvation to which she had been doomed by her step-mother, and the cruel woman's marks still disfigure her tiny body. Another was saved from the horrible fate of being sold to a Chinaman. Mr. Osuka is now in America with a view to investigating the best system of educating imbeciles, for he finds among his children not a few belonging to this unfortunate class. His benevolent enterprise, though conducted in an unobtrusive manner, has gradually attracted the attention of the philanthropic public, and such influential ladies as Princesses Mori and Konoze, Marchionesses Kuroda and Nabeshima, Countess Omura, Baroness Sannomiya, Baroness Hanabusa, and so forth, intend to undertake a charity fair next spring the funds of which will be devoted to the Orphanage. Mr. Osuka is expected to return home early in January.

THE CORPS DIPLOMATIQUE.

We learn with satisfaction, which will be reciprocated by our readers, that His Excellency the Chevalier de Martino has succeeded in arranging in a most successful manner the complications on account of which he was recently sent on a special mission to Brazil. So much ability and tact were displayed by the Chevalier in this difficult negotiation that the Italian Government have marked their appreciation of his services by replacing his name on the active list, and appointing him to represent his country in Rio de Janeiro. Italy's interests in Brazil are of great importance, for the Italian element prevails in all the northern provinces of the Republic.

Mr. José Caro has been promoted to be Second Secretary of Legation in Lisbon. For Mr. Caro's sake the news is most welcome, but his departure from Japan will be widely regretted, for during his stay of nearly three years in this country, he has made innumerable friends.

The German Representative goes home on leave in March, and during his absence the Secretary of Legation, Herr von Treutler, will be *Chargé d'Affaires*.

Dr. Weipart, of the German Legation, has returned to Tokyo after a year's leave of absence.

H.E. Baron d'Anethan, the Belgian Representative, is to start for Europe in March, on leave of absence. The Baron has not enjoyed robust health during the past year, and it is universally hoped that his trip home will completely restore him, so that he may soon return to Tokyo, where he is sincerely esteemed and liked by all nationalities. His Excellency's *locum tenens* has not yet been nominated, so far as we are aware. Meanwhile, a Second Secretary of the Legation, Mr. Paul May, has arrived in Tokyo, and is staying in the Imperial Hotel. Vicomte de Dresnay, Second Secretary of the French Legation, who comes in succession to Mr. Paul Vieugué, has arrived in Tokyo and is putting up at the Hotel Métropole, in Tsukiji. The Vicomte is accompanied by the Vicomtesse, and by his mother-in-law, Madame Menier.

The Russian Legation in Tokyo has now a Military Attaché, Colonel Yanjoul, and a Naval Attaché, Lieut. Chaghin, as he spells his name in English, or Tchaguine, as he spells it in French.

The departure of Colonel Sartorius, V.C., C.B., from Japan has created a misconception which

it may be well to remove. Colonel Sartorius had not been appointed Military Attaché to Her Britannic Majesty's Legation in Tokyo, as was generally supposed. He had been sent to Japan on a special mission, and doubtless it will largely depend upon his report whether the British Government decides to create the post of Military Attaché in Tokyo, or to leave things as they are now. We trust that the decision may be in the former sense. All the great Powers of Europe now have military attachés in Japan, and there is no conceivable reason why England should not possess a similar channel of information. No one under-estimates the zeal and ability of the Queen's diplomatic and consular officials in this country. Their excellent reports have constantly thrown light on many interesting topics. But military and naval affairs demand expert knowledge for investigation. It would be in the last degree unreasonable to expect that a Secretary of Legation or a Consul should compile an intelligent and exhaustive statement of the condition and development of the Japanese Army and Navy. Yet the British Government, we presume, is at least as much concerned as any other Western Power in obtaining a clear knowledge of such matters. There is further the consideration that to be singular in not having military and naval attachés is to create the impression at any rate of indifference and most probably of inefficiency. The mere fact of sending out military and naval attachés is an evidence of activity not without effect on a country's prestige. We should be the last to advocate any wasteful rivalry of empty display, but since nothing in the whole world can be more certain than the importance to Great Britain of a thorough insight into Japan's military and naval competence, we are unable to find any argument against the expediency of adding a military and naval attaché to the staff of Her Majesty's Legation in Tokyo. Had England possessed military and naval attachés in China and Japan before the war broke out, she would have been saved from a very unfortunate and injurious misconception as to the relative belligerent strength of the two empires.

DISASTER IN A CHINESE THEATRE.

An awful accident is reported by the *Foo-chow Echo*—

On the evening of the 12th ult. a theatrical performance was held for the first time in a Temple at Kwang Tow, and being a novelty the place was perfectly packed with people, women and children (contrary to custom) being present. Of the three entrances to the Temple, the large central door was closed, and outside it a gambling table had been placed. In adding oil to their lamp at this gambling table some was spilled on the ground, and afterwards a piece of lighted candle being carelessly thrown down set the oil alight. In getting boards from the stage to beat this fire out they struck a lamp hanging in the Temple, which broke and set the place inside on fire. The crowd, panic-stricken, tried to force a way out through the two small doors which soon got so choked that there was no means of egress. It is said that, counting women and children, quite 300 must have perished. Of the forty actors only four escaped. Two of the survivors have been brought to the Native Hospital. It is feared that one of these is so badly injured he cannot recover.

BITTER WINDS.

The piercingly cold winds that began to blow in Tokyo and Yokohama two or three days before Christmas and continued with little intermission until two days after the New Year, synchronised at the outset with a fierce blizzard experienced at Shanghai and along the Yangtze. The P.M. steamer *City of Rio de Janeiro*, entering the river, found herself covered with ice, and it is alleged that slabs as big as doors fell off her when the sun came to thaw her out.

KOREAN NEWS.

The Korean Judiciary and Ministry of Justice has received, or seems likely to receive, some additions that will seriously injure its reputation. A certain Mr. Cho Pyensik has been appointed Minister of Justice. The record of this gentleman is given thus by the *Independent*:

When he was Governor of Chung-chong Province he stole \$8,000 from the people of the province, which fact was reported to His Majesty by a special Inspector. So he was dismissed from the Governorship. But later on he was promoted to Minister of Justice. He made another brilliant record while he was holding the portfolio of Minister of Justice:—One day, when he was passing a certain place in the city, he noticed his former Private Secretary who was with him while he was Governor of Chung-chong. [This Private Secretary had given rather free information to the special Inspector in regard to the robbery the Governor committed]. He ordered his servants to seize him and took him into the Law Department where this unfortunate man was murdered by the Minister. On account of the crime, he was banished from Sŏul for a few months. He was soon appointed Governor of Ham-kyŏng Province, where he ordered the export of grain from the port of Wonsan to be stopped. The Japanese Government made a strong protest against this order, and made the Korean Government pay \$90,000 indemnity for the little fun of the Governor. This Government did not mind paying the trifling sum of \$90,000 as the Governor's service to the country was considered worth more than that amount. Therefore he was again appointed Governor of Chung-chong. The consistent Governor kept up his former record of robbery in that province by taking \$12,000 and killing twenty-two innocent people while collecting the money. He was again arrested on the charge of robbery and murder and sentenced to so many years' imprisonment. But the Government could not spare him so long in the prison, so after serving one year in the jail, he was again appointed Grand Master of Ceremony in the Royal Household Department. Some months ago he memorialized the Throne to reestablish the old system of Government, to abolish the use of the *Unmun*, to kill the relatives of political criminals, to wear the old style court dress by the officials, etc., but his suggestions were not accepted by the Throne. Now he comes out again as Minister of Justice and Councillor of the State.

It is also stated Ye Sejik, the would-be assassin Pak Yong-ho and forger of a royal edict authorizing the act, will be appointed a judge in the Supreme Court; and that Hong Chong-wo, the murderer of Kim Ok-kyu, is to be Vice-Minister of Justice. The nominations indicate that Korea has distinctly entered the retrogressive grade, and that the good influences at work in the Government during recent times have wholly ceased to be operative. Russia must be getting weary of affording the shelter of her Legation to a Court that disgraces itself by such doings.

The American Representative in Sŏul is evidently an exceptional person. We observe that he delivers lectures in the Sŏul Union Reading Rooms. The subject of his address on December 18th was "The Structure of English Verse."

With reference to the new Royal Korean Body Guard now under training by two Russian officers and ten non-commissioned officers, under the supervision of Colonel D. Pontiat, of the Russian General Staff, the *Independent* says:—

The new regiment is composed of 800 men who were picked from the different regiments after a thorough physical examination by Dr. Chervinsky of the Russian Army. They are drilled every day from 9 to 12 o'clock in the morning, and 2 to 5 in the afternoon at the 4th and 5th regiment barracks. They carry the Berdan rifle and the commands are given in Russian. It is really remarkable that the men understand the Russian commands so readily having been instructed for so short a time under the foreign teachers. The thirty cadets who were drilled by Lieut. Hmeloff of the Russian Navy are now under the instruction of Lieut. Afanaseff. They come to the barracks every morning from the Cadet School behind the Russian Legation and receive their instructions at the barracks. They are trained in gymnastics as well as drills under the immediate supervision of one of the Russian officers. During the march back and forth from the school to the barracks the cadets carry a national colour headed by a band of

buglers and drummers presenting altogether a very military-like appearance.

The twelve officers and officials arrested on suspicion of being engaged in a plot to abduct the King of Korea from the Russian Legation, were brought up for trial on the 18th of December. Mr. C. R. Greathouse, Adviser to the Department of Justice, has been invited by the Minister of Justice to assist at the trial, so it is permitted to hope that the accused will be treated fairly.

The Sŏul-Chemulpo Railway is to enter the latter city from the east, not from the west as originally expected. The site of the terminus is said to be conveniently situated near the Customs House.

A Government Inspector of Gold Mines asked the Department of Agriculture to give him a monthly allowance for the purpose of offering sacrifices at the Demon Temples in Chungchang. He proposed to offer two bulls per mensem. The Department sent him his discharge, instead of the bulls.

The battalion of Japanese troops now stationed in Sŏul organized an entertainment on the 19th of December to commemorate the twenty-second anniversary of the presentation of the standard of the First Regiment—to which the Battalion belongs—by the Emperor of Japan. The affair seems to have been on a large scale. In different parts of the barrack-grounds life-size figures were grouped, representing various historical scenes; there were also two theatrical performances, gymnastics, slack-rope dancing, a tiffin, and speeches.

The thieves that stole a large sum of money some time ago from the Government Granary in Sŏul, have been captured, with two exceptions, and \$3,501.84 of the money has been recovered.

The new Kyewang Palace is to be guarded by the regiment of Korean soldiers now under the instruction of Russian officers. That is another nail in the coffin of Japanese influence in Korea.

AFFAIRS IN MANILA.

Mr. O'Shea, editor of the *China Gazette*, is now in Manila acting as correspondent for his journal. From his last letter, dated at Cavite, December 15th, we learn that the Spanish Authorities will refrain from making any concerted movement against the insurgents until large reinforcements arrive from Spain. The new Governor-General, Marquis Polaveijo, has 28,000 troops under his command, but one-third of them are natives, concerning whose loyalty grave fears are entertained. Mr. O'Shea describes the native soldiers as veterans inured to the country and the climate, hardy, brave, active, and excellent for guerrilla operations, but treacherous and disloyal. He regards them as formidable foes for fresh European troops to encounter, and he mentions, in the same breath, that the Spanish forces consist chiefly of very young lads, just recruited. From Governor-General Blanco he learned that twenty-five thousand men had already embarked, or were soon to embark, from Spain for Manila. The Spanish transport steamers appear to have remarkable carrying capacity, for we read that, during the first week of December, the *Leo Thirteenth* arrived with 1,985 *Casadores* (light infantry). At that rate it will not take long to carry twenty-five thousand men to Luzon, but when we remember the immense quantity of material and the vast organization required for such overseas operations we find difficulty in crediting Spain with such competence. Whatever be the end of the terrible troubles in which she is now involved, her efforts are certainly magnificent. No one can withhold sympathy and admiration from a nation so permeated with patriotism and high courage. All the Spanish troops arriving in Luzon are said to be armed with the Mauser repeating rifle. When the full tale of reinforcements are landed, Marquis Polaveijo will have about forty-three thousand Spaniards under his command, and some ten thousand natives. Omitting the latter for the account, he should then be able to put about

thirty thousand men in his fighting line. The insurgents, on the other hand, are said to number a hundred thousand, though not more than a third or a half carry weapons of precision. They possess the great advantage, however, of acting on the defensive, and as they are said to show much skill in planning and building earthworks, and considerable tenacity in defending them, a heavy task lies before the Spanish General. Even if we reckon the disciplined and armed section of the rebels at only twenty-five thousand, and assume that they have shown the most ordinary diligence in devising and constructing works of defence, it seems highly problematical, according to the rules of modern warfare, that their dislodgement and final defeat can be effected by the forces at Marquis Polaveijo's disposal. But there is a strong probability that the strength of the insurgents is over-estimated. The invariable tendency is to exaggerate under such circumstances. We learn now that the rebel leaders are nearly all Chinese "mestizoes" (? mestizoes); that is to say, the progeny of Chinese and natives of Luzon. They are said to aim at asserting independence of Spanish rule. Mr. O'Shea, speaking of the Chinese resident in Manila, of whom there are a very large number, says:—"They are hated and oppressed here as much as in the woolliest part of the wild and woolly west, but despite all their disabilities, they contrive to amass great wealth." Should it appear that the Chinese are connected with the rebellion through the mestizoes, the difficulties of their situation in Luzon will not be mitigated. But, in truth, the public has still to learn the true origin of this formidable insurrection. Mr. O'Shea speaks vaguely of its being "largely directed against the friars," but inasmuch as he also alleges that the friars "over-educated the people and filled them with new aspirations," we cannot apprehend the sequence of his reasoning. He adds, however, this significant assertion:—"The Spanish officials are probably the hardest and most difficult to deal with in any part of the globe. People in China complain of the restrictions and annoyances of doing business where the Chinese authorities had to be dealt with. But they know nothing of Manila or they would not complain. It is simply incredible to hear how every regulation is twisted by the local officials to annoy and embarrass the merchant, whether Spanish, foreign, or Chinese, and the wonder is not that the trade of this magnificent country is disgracefully small after nearly four hundred years of Spanish administration, but that any exists at all." Perhaps the real explanation is to be sought in the mal-administration here outlined.

The military situation at present seems to be very curious. At a distance of 8 miles by sea from Manila stands the stronghold of Cavite, held by a Spanish garrison under General Aquirre. It is invested on three sides by the rebels, whose occasional bombardment of the place can be observed from Manila. With the sea, however, its communications are kept open by two Spanish cruisers—the *Reina Cristina* and the *Villabois*—and some twelve gunboats. But the whole coast-line from Manila to Cavite is not in Spanish hands, the portion screened from ships' fire being held by the rebels. Now and then, the latter make raids upon the suburbs of Manila, but these attacks are evidently of a desultory, half-hearted nature. With the exception of Manila and Cavite, the whole island is said to be in the hands of the insurgents. Yet, instead of making a resolute effort to gain complete possession while the garrison is still comparatively weak, they appear to be quietly waiting until twenty-five thousand reinforcements arrive from Spain to attack them. Certainly that does not suggest either spirit or overwhelming strength. Concerning affairs in Manila itself, Mr. O'Shea writes:—

We are living in a state of siege under martial law, but admirable order is maintained. Executions of rebels are of such common occurrence that they have quite lost all excitement or novelty. We had 21 yesterday at Cavite, 4 on Monday on the Luneta of Manila, which is the Manila Bubbling Well Road, a fashionable, but more beautiful drive. All the streets are guarded by troops, but

there is no panic, and confidence seems to be again growing. Bands play every afternoon on the Lunetta, society drives out in its best dresses as usual, and the cafés on the Escolta are thronged all day, mostly by officers.

General Blanco, of whom the public has heard nothing but good, goes back to Spain, not disgraced, indeed, since he receives the appointment of Captain of the Queen's Body-guard, but superseded by a man credited with larger energy and determination. The transfer of the local government to Marquis Polaveijo seems to have been conducted with much pomp and ceremony. Attended by his staff, in full uniform and in the presence of an immense throng of people, the Marquis received from the hands of the Mayor of Manila the massive silver key of the city and swore to guard it well and truly. Then a procession was formed to the cathedral where a grand religious ceremony took place. The reason of General Blanco's recall seems to perplex the public, but, after all, it is not a question of General Blanco's competence to deal with the situation. What the Government in Madrid thinks of is that such a situation occurred under his administration. This is an unpardonable fact.

THE KING OF KOREA.

The *Kokumin-no-Tomo* writes of the King of Korea in appreciative terms. Its essay is evidently from the pen of a publicist well versed in Korean affairs.

The King was born on July 25th, at the Unhyön Palace, the residence of his father, the Tai Wön-kun. At that time, the administrative power was in the hands of the *Kim* family, to which the Queen of the day belonged, and the Tai Wön-kun, chiefly with the view of lulling the suspicions of the ruling family, but also because he laboured under a sentiment of umbrage against the latter, led a reckless life, associating freely with adventurers and gamblers. His extravagances severely taxed his resources, and it was only through the clever management of his wife, a *Min*, that his household could be maintained in the condition of dignity proper to a brother of the reigning King. From childhood the Tai Wön-kun's son, that is to say, the present King, enjoyed a reputation for cleverness and good sense. At the time of the King's death, the lad was 12 years old. The King left only one daughter. She married Pak Yong-ho, and the question of nominating a successor to the Throne became at once a subject of dispute among the rival factions. The law of the land interdicted the accession of a female, and the sceptre ought naturally to have passed to the son of the King's brother, the Tai Wön-kun. But Dowager-Queens of three monarchs were alive at the time, and though all three concurred in advocating the accession of the second son of the Tai Wön-kun, they disagreed about one point, namely, which of the three deceased sovereigns should be declared the immediate source of the young Prince's title—a question of vital importance to these ladies, since to be the mother of the future King meant to be a great public personage. How the rival claims of the Dowagers were settled we are not told, or what heart-burnings the settlement entailed. A dignitary of State was sent to announce to the young Prince the of his nomination and to conduct him to the royal palace. The old courtier found the lad flying a kite with other boys in the garden of his father's mansion, and it was with difficulty that he could be brought to believe the intelligence of his succession. Of course there was immense joy in the Unhyön Palace. The little Prince's mother ran out of her apartment, and fondling the child's hand, exclaimed, with mingled feelings of joy and sorrow, that such caresses could no longer be repeated. The Prince was carried to the royal residence under escort, and the streets through which the carriage passed were so crowded with Koreans seeking to obtain a glimpse of their new Sovereign, that progress was almost impossible. At last the drivers raised their whips and began to flog the sight-seers crowding around the carriage, but the Prince

remonstrated against the cruelty of chastising persons that had flocked to congratulate him on his accession, and his remonstrance being heard by the people, they raised a loud shout of joy and gratitude. Thus amid the glad cheers of his subjects, the youth passed forward to his throne of thorns. In the following year he was crowned, the Dowager-Queen Cho acting as Regent. Then followed the important business of settling the status of the Tai Wön-kun and the relation in which he should publicly stand to his son, the King. Though opposed by some it was finally decided that the Tai Wön-kun should be treated as Prince-Parent, and should act as Regent during the King's minority. The tenure of power by this crafty and cruel statesman was marked by the erection of a royal palace, at enormous expense; by the murder of Roman Catholic priests and converts, and by the cannonading of Japanese ships.

When the king reached the age of 16, the question of his marriage absorbed the attention of the Court and the public, for it had always been customary in Korea that the family furnishing a Queen to the reigning sovereign should take an important part in the administration of the country. One of the *Min* had a daughter aged 16, reputed for beauty and accomplishments. The Prince-Parent, however, did not like to have a Queen from the *Min* clan, his shrewd prescience indicating the danger of providing such an opportunity for that great faction. But his distinguished and noble wife, herself a *Min*, naturally espoused the cause of her kinswoman, and as there was no really serious rival, the Prince-Parent was at last prevailed upon, and the lady destined to play such an important part in her country's history and to meet such a tragic end, was nominated Queen. But from the first the Prince-Parent became unfriendly to his son's wife, probably because she showed herself to be a girl of great shrewdness and capacity. A letter that the young Queen sent, a short time after her marriage, to the Prince-Parent to wish him the compliments of the season, deepened his antipathy. It is said that he was dissatisfied with the wording of the epistle, and that he contemptuously called the writer a prig. Thenceforth the gap between the Prince-Parent and the Queen grew wider and wider, and for the following 30 years the history of Korea was practically the history of quarrels between the old statesman and the Queen, quarrels that often culminated in scenes of bloodshed, and ended at last in the assassination of the Queen. As the King advanced in years, he began to espouse views not compatible with those of the Prince-Parent, who was at that period the guiding spirit of the conservative faction. The King entertained progressive ideas, and when, about 1883, the late Kim Ok-kyun, Pak Yong-ho, and other promising young men, returned from Japan whither they had been despatched years previously for the purpose of prosecuting their studies, and made representations about the rapid progress of Japan, the King secretly countenanced their views, and maintained the necessity of introducing postal and telegraphic services, starting public works, and reforming the military system. He caused Japanese officers and engineers to be engaged, and he tried to lead the country out of its conservative groove. But the nation was still dominated by Chinese influence. China had assumed the position of suzerain, and as the majority of Korean statesmen and influential courtiers were servilely disposed to recognise that assumption, the King found it no easy task to carry out his cherished views of progress and reform. The essayist refrains from reviewing the events that transpired subsequently, for being intimately connected with the recent history of the Far East, they are already familiar to the public. A few words are added, however, about the King's present predicament, and his refuge in a foreign legation, where he is subjected to innumerable inconveniences, and is attended, for the most part, by eunuchs and court ladies. He continues to wear mourning for the late Queen, and apparently her memory is still with him; for he is extremely tractable and seems to be wrapped in melancholy, though his clear, distinct tones,

quick and intelligent utterance, easy mien, and bright face when he gives audience to his favourite subjects, indicate that he retains all his original capacity. He is about 5ft. 3in. in height, somewhat plump, and strongly resembles his father in countenance. That he is richly gifted in the royal attributes of magnanimity and benevolence, is a fact fully appreciated by the Foreign Representatives. His star has thus far been constantly obscured by clouds. His Queen has been assassinated, and that, either directly or indirectly, by his own father, who now leads a life of confinement. One of his sons is living abroad; his nephew can not return home, and more than 30 of his most prominent subjects are in voluntary exile. Surely he deserves more pity than any of the crowned heads in the world.

CALENDARS.

Designing calendars and pictorial advertisements is becoming almost a branch of fine art, and doubtless one day the public will be startled by statistics showing the total amount expended annually by Insurance offices and business firms on these combinations of prettiness and utility. The specimens for 1897 are particularly attractive. Even where business instincts have rebelled against anything notably ornate, some happy fancy has been enlisted to relieve the impression of severity. The London and Lancashire Fire Insurance Company—Yokohama agents, Messrs. Butterfield and Swire or Mr. W. J. S. Shand—send out a remarkably serviceable calendar. On the front of each page we have the days and dates, and on the reverse a sheet spaced for memoranda; while the back of the block has three valuable tables for facilitating financial calculations. Curiously enough, one of these tables—that of foreign money—shows the coins of 29 countries, including even Chili, Java, and Peru, but fails to take any note of the Japanese *yen*; a singular omission. We observe, also, that the compilers of the table write *condemns* as the hundredth part of the *tael*, but probably the printers are to blame for that.

The South British Fire and Marine Insurance Company—Yokohama Agents, Messrs. Smith, Baker and Company—adhere to their old octagonal form with central brass pocket, but have, this year substituted a decidedly æsthetic green for the red of 1896. We observe that, since the 1896 calendar of this Company was compiled, the subscribed capital has grown from £1,000,000 to £1,227,932, and the losses paid since 1872 have increased from £2,462,374 to £2,725,701.

The calendar of Mr. T. Tamamura, the well known photographer of Yokohama, is a very charming example of designing and photography. Indeed, it can scarcely be called a calendar, in the ordinary sense of the term, for the record of months and days occupies an entirely subsidiary place. A beautiful colotype of a Japanese waterfall, the original of which we do not identify, set in a stone-grained cardboard frame with supporting leg, forms the basis of this delightful fancy, and suspended, curtain-wise, over the face of the photograph, is a sheet having the twelve months and their days disposed variously within twelve differently shaped scrolls, the lowest of which, a *makimono*, over-shadows a misty river-scape with maple leaves floating in the foreground. The almanack itself is a happy example of the symmetry without regularity for which Japanese artists are famous.

The Calendar of the Imperial Insurance Company (Limited)—Yokohama agents, Messrs. Browne & Co.—is distinguished from the calendars of other great insurance associations by being compiled specially for Japan. The almanack occupies the centre, and the space around it is filled with tables of a most useful character, showing the course of exchange since 1868, the holidays observed in Japan, the differences in time between Yokohama and various other places, railway fares, postage and telegraph rates, and latitudes and longitudes. This Company has been doing

business for 93 years, and during that time has paid losses aggregating 14½ millions sterling.

The Calendars of the London Fire—Yokohama Agents Messrs. Dodwell, Carill and Co.—the Guardian Fire and Life—Yokohama Agents, Messrs. Smith, Baker and Co.—and the Pacific Mail Steamship Company, are all of a similar type; large sheets, with block almanacs in one of the lower corners. The first two have designs without any local significance; the last, has a seascape with one of the Company's fine steamers in the fore-ground and Fuji-yama in the back-ground.

The Palatine Fire, Accident, and Guarantee Insurance Company—Yokohama Agent, Mr. W. J. S. Shand—issues two calendars. One is of a comparatively ordinary type, a medium-sized sheet with a block almanac in the centre. The almanac, however, differs from the common form inasmuch as each of its sheets shows the six working days of the week only. Below the block is a regular almanac with monthly divisions. The second of this Company's calendars is a combined almanac, blotting-book, and atlas, the last consisting of twelve well printed and useful maps. We need scarcely descant on the serviceability of such an article as this, or applaud the enterprise of the Company issuing it.

The Phoenix Assurance Company—Yokohama Agents, Messrs. Kingdon, Schwabe and Company—also issues two calendars, one of the sheet type, with block almanac; the other, a pocket almanac and diary, very conveniently designed, and having a number of useful tables at the end. This is one of the oldest assurance companies in the world. It has been doing business for 115 years, during which time the claims paid by it aggregate over twenty millions sterling.

Mr. G. Sobey sends round a pretty calendar, though the design is of a somewhat hybrid nature. The frame of the almanac is filled with a peony scroll, which would be in pure Japanese style were it not disposed about a straight bar running through its entire length. At two opposite corners are plum and pine sprays. Possibly the *ai-no-ko* element in this design is intentional, for the same reason that induces the celebrated mercer to transform his Japanese name "Sobei" into "Sobey," and to introduce so many foreign features into his wares.

Of Mr. J. W. Hall's calendar we have spoken on previous occasions. It is a tasty little affair, worthy of the excellent wines tabulated on the inner faces, wines for which Mr. Hall is steadily acquiring a high reputation.

We have received, also, a copy of the "Parisian Almanac" for 1897. It is illustrated with great talent, but several of the pictures are decidedly *risqué*, and the subjects of some of the advertisements are not fitted for drawing-room discussion.

TAEL COINS FOR CHINA.

Apparently another coin is to be added to the number already existing. Taotai Sheng, Director-General of the Great Western Railway, has suggested to the Throne that the new Imperial Bank projected by him be permitted to coin one-tael pieces, to the extent of a million in number, and has received the Emperor's sanction on the recommendation of the Board of Revenue. If the coins are found to circulate readily, it is said that a mint will be established in Peking for the purpose of coining them on a large scale. We do not see what advantages can be expected to accrue from the scheme. The coining operation will not bring any profit to the Government, and a silver coin half as large again as a Mexican dollar will not be much more convenient as a medium of exchange than the sycee now in use. If the tael coinage is intended to preface an issue of tael bank notes, the programme assumes a new complexion. That, indeed, would immensely facilitate monetary transactions.

MR. FENOLLOSA ON FINE ART.

In a recent number of the *Taiyō* appears an unsigned article bearing the above title. The writer says that though Mr. Fenollosa's name is familiar to everybody in connection with the revival of Japanese Art, for which, while he was Professor of Philosophy in the Imperial University he laboured so earnestly, there are few who know what are his present views as to the existing condition and prospects of that art. The writer has taken the trouble to ascertain these by direct inquiry, Mr. Fenollosa, as is doubtless known to some of our readers, having returned to Japan on a visit a few months ago. Of these views, as stated in the "Sun," we give the following *résumé*.

The knowledge of Fine Art, the world over, cannot be said to have reached the state of certainty which science has attained. There are no such things as universally received theories, and, prior to the nineteenth century, there was no general study of art in all its branches. Even in Europe the widest diversity of opinion on fundamental principles existed until quite recently, and in the East the subject was hardly studied at all.

Eastern and Western art differ so essentially in purpose, methods, and subject matter that it is impossible to judge them by the same standards, nor is it possible to find anything common to both systems by which to test specimens. Hence it is impracticable to decide exactly as to what is and what is not Fine Art. Writers use the term "Fine Art" in different senses, and it is rare to find more than two men in agreement as to its meaning. The Greeks, though such consummate painters, had no abstract term corresponding to our modern "Fine Arts," and did not feel the need of one. The only word they had resembling our modern term was *μουσική*, which included any art over which the Muses presided, especially lyric poetry set and sung to music. But this term did not include either sculpture or painting. The English word Art is derived from the Latin *ars*, and is the equivalent of the Greek *τέχνη*, which only refers to skill or craft in workmanship. The term *artes liberales* has been in use for nearly 2,000 years. This included not merely a knowledge of the mechanical arts, but skill in grammar, logic, music, mathematics, geometry, rhetoric and Astronomy. In addition to this, the term *ars poetica* was used to describe the power of originating ideas, of creating structures out of airy nothings. The term *poetica* is derived from the Greek *ποιητικός*, capable of making, productive, which when used of persons is equivalent to our term inventive, ingenious. The *ars poetica* was considered in ancient times as far superior to the *artes liberales*.

In ancient times, both in the East and the West every kind of manual labour was considered beneath the dignity of the upper classes, and was delegated to slaves or the lower orders, and its merit or demerit was as a rule considered to be not worth the notice of the upper ten thousand. So that the work done by the artisan was not fully appreciated. In the middle ages, certain pictures attracted attention, but skill in drawing and painting was by no means generally appreciated. It was a long time before the talent of the architect was distinguished from the skill of the carpenter. What appreciation of fine art there was, either in the East or West, was not on its own account, but as a means to effect some definite object. The artists who were instrumental in bringing about a revival of art in Italy were unconscious of their own merits. From age to age difficulty was found in keeping up the public interest in art. It was only when it was patronised by the rich that it really prospered. It was not until the 18th century that it was found desirable to invent a term that should include poetry, painting sculpture, and the like, and so the French *beaux arts* was called into existence. No sooner was the term brought into general use than numerous attempts were made to define it, and a separate branch of knowledge was created known as æsthetics, and gradually it was perceived that

the beauty of the ideas expressed in language or embodied on canvass was one and the same.

It is only since the beginning of the present century that music has established its claim to be included among the fine arts. Prior to that, it was regarded only as a means of giving greater force to poetry. At the commencement of the nineteenth century, Fine Art was divided into representative and non-representative art, that is into art which represented nature and art which did not fulfil this function. The former class included poetry, painting, and sculpture; the latter music and architecture. But since 1860 this division of art has been shown to rest on no essential difference, for it is not true to say that poetry, painting, and sculpture exclusively represent nature, nor is it correct to affirm that music and architecture do not in any way fulfil this function.

We must confess that the writer in the "Sun" who undertakes to expound Mr. Fenollosa's views has done little more than give historical details which might be taken from any standard work on Art, and we fail to see anything distinctively Fenollosian, if we may be allowed the expression, in the opinions given.

THE LATE SIR ED. HORNBY.

The Times has the following notice of the late Sir Edmund Hornby:—

The death occurred on Tuesday at Rapallo, Italy, of Sir Edmund Grimani Hornby, who had a career of great usefulness and interest extending over a large number of years. Long residence in Turkey and in the Far East had given him a deep insight into problems of government and into the special conditions of the countries in which he lived, and his knowledge was on various occasions brought to bear upon current movements in letters which appeared in The Times.

Born in 1845 and called to the bar in 1868, he began his public career as private secretary to his uncle, Mr. Henry Southern, while the latter was British Minister at Lisbon and at Rio de Janeiro. He then laid the foundations of that extensive acquaintance with questions of diplomacy and international jurisprudence which distinguished him through life. His industry brought him early advancement, for in 1883 he was appointed one of the commissioners to settle outstanding claims between Great Britain and America. Two years later the Foreign Office sent him to Turkey as Commissioner in relation to the Turkish loan. At this period Mr. Hornby also acted as judicial assessor at Constantinople and arbitrator in all disputes respecting supplies to the Army in the East. The experience he gained in this way was turned to good account very soon, for at the instance of Lord Clarendon, then Minister for Foreign Affairs, he was selected to organize and administer the Consular Courts of the Levant and in 1885, given the appointment of Judge of the Supreme Court at Constantinople. So successful was he in his tenure of this post that some eight years later he went to China and Japan to undertake the work of organizing Consular Courts in those countries. He acted as Chief Judge of the Supreme Court of China and Japan until his retirement in 1896. The building up of the Consular Court system in these countries, as well as in the Levant, was, to a very large extent, Sir Edmund Hornby's work, and in many ways it continues to show evident traces of his influence and discretion. The enormous extent of his jurisdiction in the East may be gathered from the fact that he was once called upon to try a charge of murder at Khartoum, actually got half-way there, but eventually turned back, being convinced that there was no case to be decided. That he was able to get half-way and was confident of completing his journey without hindrance shows how great is the difference between the state of the Sudan now and then. Long residence at Constantinople convinced him of the rottenness of the system of administration prevailing there, and though he admired the Turks as a nation he could not speak strongly enough against the Palace intrigues and enervating, underground influence by which Turkey was, and is still, being sorely injured.

Sir Edmund Hornby was a lifelong friend of the late Lord Hannen, and accompanied him to Paris for the sitting of the Behring Sea Arbitration Court. The subject of arbitration was one that occupied much of his thoughts, and a few years ago he wrote a pamphlet for the Peace Preservation Society, advocating the establishment in Switzerland of a school or faculty of international law to be kept up jointly by the Powers.

Sir Edmund Hornby, who was knighted in 1892, was three times married—first, in 1860, to a daughter of Count Maceroni, aide-de-camp of General Murat; secondly, in 1868, to a daughter of Mr. Thomas Hudson, of Hull; and thirdly, in 1875, to a daughter of Captain Roberts, of New York. His first wife was prominent among the ladies who acted as hospital nurses during the Crimean war, and she published two books at the time—"In and Out of Stambul" and "Letters from Constantinople." Lady Hornby is still living, and Sir Edmund leaves one son—Mr. F. V. Hornby, of the Home Office—and three daughters.

The pawnbrokers of Tokyo are contemplating the formation of the Shichiya Kabushiki Kaisha (Joint-stock Pawnbroker's Company), with a capital of yen 200,000, and intend establishing a branch in every ward.—*Nippon*.

HIGH SPEED ON ENGLISH RAILWAYS.

From an interesting table recently published, we learn that the highest speed on the Great Western Railway Company's line in England is developed between Paddington and Bath, the train covering a distance of 107½ miles in one hour and fifty-eight minutes, which is at the rate of 54.4 miles an hour. The interval of 194 miles that divides Paddington and Exeter is negotiated in three hours and forty-five minutes, which means 51.7 miles per hour. Turning to the London and North Western, we find that the distance between Preston and Rugby, 128 miles, is covered at the average speed of 56.4 miles an hour. The highest speed on the Great Northern Railway is 55.3 miles per hour, between King's Cross and Grantham, a distance of 105½ miles. It may be pointed out, for the information of the railway expert whose views the *Fiji Shimpō* reproduced recently, that the locomotives by which the above trains were drawn, are just as old fashioned and out of date as the engines running between Tokyo and Yokohama. If the average speed developed on the four English lines that we have quoted, were attained on the Tokyo-Yokohama line, the distance (18 miles) between the two places would be covered in about 20 minutes. As a matter of fact, it was covered in 30 minutes by a special train in 1874, though the locomotive had to slow down to four miles an hour in crossing the wooden bridge then spanning the Roku-go River at Kawasaki. That was the record run for a Japanese train; it meant 36 miles an hour. Better time could be made now, despite the "old-fashioned and out-of-date" character of the locomotives. Lately, however, another record was achieved, namely, 61 minutes between Tokyo and Yokohama. Up to September last, the prize for slowness belonged to a train that spent 55 minutes loitering along the same road. It appears to us that not the tools but the workmen are in fault in Japan. Instead of accusing the locomotives, and the rolling stock generally, the blame must be laid on the engineers, the engineers, and the officials responsible for the working of the lines.

ENGLAND'S EXPANSION.

Great Britain is popularly supposed to have abandoned the process of swallowing and to be engaged in that of digesting what she has already swallowed. But no earnest student of history can credit anything of the kind, unless he also supposes that the monster empire has entered a period of decline, which happily is not yet the case. Nature has decreed for all one universal law—growth or decay: there is no intermediate position; no resting content and constant. Lord Rosebery, in his recent speech at Edinburgh, showed that, during the past few years, 2,600,000 square miles have been added to the territories which are either dominions of the Queen or over which the Queen exercises influence. Two million six hundred thousand square miles means sixteen Japanese empires (including Formosa and the Pescadores). So Great Britain has added sixteen Japans to her territory or sphere of influence during as many years. It that be not rapid swallowing, we should like to hear another name for it. We commend the fact to Japanese publicists who are wise enough to think that England is effete, played out, no longer a great actor in the drama of nations. But we desire, at the same time, to bring to the notice of Japanese publicists generally some remarks made by Mr. Chamberlain in a speech in Birmingham on November 13th, with reference to this very question of British expansion. The Rt. Hon. gentleman said:—

I should be perfectly prepared to admit that if other nations would only stand aside it might have been wiser that we should have proceeded more gradually, that we should have developed the countries that we already possessed before seeking this vast extension. But there was no appearance of such an inclination on the part of other nations. I can truly say that we were not the first or the most eager to move; but if we had remained passive what would have happened? Is it

not as certain as that we are sitting here that the greater part of the continent of Africa would have been occupied by our commercial rivals, who would have proceeded, as the first act of their policy, to close this great potential market to British trade? Let me make one remark here, the proper consideration of which would, I think, do very much to modify that jealousy with which undoubtedly foreign nations regard our extension. My remark is this—that we, in our colonial policy, as fast as we acquire new territory and develop it, develop it as trustees of civilization for the commerce of the world. We offer in all these markets over which our flag floats the same opportunities, the same open field to foreigners that we offer to our own subjects, and upon the same terms. And in that policy we stand alone, because every other nation, as fast as it acquires new territory—acting, above all, in the interests of the countries that they administer—every other nation seeks at once to secure the monopoly for its own products by preferential and artificial methods. Under these circumstances, I say, it was a matter of life and death to us that we should not be forestalled in these markets of the future to which we may have learned to look for the extension of our trade and even for the subsistence of our people, and in considering the results of our policy I think we Britons—I must not say Englishmen, because my Scotch friends would think I was excluding them from a field in which, indeed, they have taken even more than their fair share—but I say that the results of our policy are results upon which we Britons can look back with satisfaction. It is interesting to notice that we alone have been successful in making these acquisitions profitable. Every addition to the colonial possessions of France or of Germany adds immediately, and continues to add, to the latest date, a heavy burden upon the taxpayers of the mother country. Whereas in our case all our colonies and territories are either self-supporting from the first or become self-supporting in a very short space of time, the French colonies and the German colonies seem somehow or other to fail to attract any commercial and civilian population. I think the recent official returns of the German Empire show that in their colonies, which extend over more than a million square miles, there are less than 700 civilian Germans—less, in fact, than there are of that nationality in many of our own colonies. While in the foreign colonies no population from the mother country is attracted, in our colonies we find that settlement proceeds gaily, and they take off all our most adventurous spirits and relieve us of some of our surplus population. And I think I may go further and say that this system, while it is certainly satisfactory to ourselves, is productive of advantages to the people over whom we exercise control. It is said that you cannot make omelettes without breaking eggs. You cannot exercise control over savage countries which previous to your arrival have been in a state of constant anarchy and disorder without occasionally coming into conflict with their savage rulers and having to shed some blood; but I say that universally it has proved to be the case that after a time we have secured the pacification of the country, we have put an end to the tribal conflict which has previously interfered with progress, we have destroyed those slave-raiding expeditions which have been fatal to commerce, and we have secured the permanent improvement of the country and the increase of the population. Now that is a statement which I believe applies universally to all the new acquisitions which we have made on the continent of Africa, and I cannot help thinking that it justifies even that large extension of territory which has been forced upon us.

I said I was going to make a claim for the Government. I have been describing to you that policy which commends itself to our minds, and which hitherto has been so successful. I go on to say that during the last 12 months we, the present Government, have redeemed from barbarism in Ashanti and in the Sudan, with a small expenditure of life and treasure, by expeditions which have been admirably planned, splendidly led, and successfully prosecuted, two provinces where previously trade was impossible because no man could call his life or his property his own or consider himself to be safe from the tyranny and cruelty of his native rulers. I note here a certain inconsistency in some of those men of light and leading who professed to instruct and to guide public opinion in Dongola and in Ashanti. These countries were ruled by two princes, whom I think I may describe as "great assassins." In these two countries the number of the victims was tenfold the number of all that had suffered by Turkish tyranny and Turkish cruelty in the last few years, and the kind of cruelty that was practised upon them was, if possible, even more horrible than that which struck so deep a chord of indignation and sympathy in regard to the Armenian massacres. We all sympathize, I am sure, with the people who in Asia Minor have suffered from the cruelty of the Turk, from the anarchy which has prevailed in their land. We sympathize with those who desire by every practical means to come to their aid and to prevent the continuance of these cruelties, but is the fact that the Armenians are of the same colour as ourselves, or that they profess the Christian religion, a reason why the sympathy which we feel for them should not be extended to still larger populations in Africa and elsewhere who are suffering from at least equal tyranny? And yet I find that those who have been preaching a

crusade for the Armenians, in spite of the knowledge that such a crusade might easily produce even greater evils than those which we seek to avoid, said not one word of sympathy, one word of approval, for a policy which at comparatively small sacrifice has, I believe, diminished the sum of human misery by a greater amount than even if we had secured the destruction of the Turkish Empire. I say that to my mind this inconsistency needs to be explained, and I want to know how one and the same man can preach a crusade and encourage this country to take risks on behalf of the Armenians, whom I admit to be well worthy of your sympathy, and then can describe the expedition in Egypt—which rescued a whole province from the greatest possible suffering, and has restored it to civilization and to peaceful industry—can describe the policy as "wanton folly" and an "infatuated policy." It is not only in Egypt, in the Sudan, or in Ashanti that this policy has been pursued. Two other expeditions which seem almost to have escaped public attention, although their results are of the utmost importance to humanity at large, have also been successfully conducted, one in East Africa, the other in Nyasaland, under Sir Harry Johnston. Both these expeditions have been successful, and have struck a heavy blow at that system of slave-raiding which has been for probably centuries the curse of Central Africa, and has prevented the civilization and the improvement of that vast continent.

CORRESPONDENCE.

HELP WANTED FOR A GOOD CAUSE.

"TO THE EDITOR OF THE JAPAN MAIL."

SIR,—Will you kindly make known in your columns that our coffee bar, &c., is now open, and the useful and much needed work it was intended to accomplish has already begun. From the few days we have been working there seems to be every prospect of the building being a great success. The fitting up has cost in round figures 1,200 yen, while we are anxious also to fit a water supply to the bed rooms and hot water apparatus for the baths. The latter will, perhaps, cost another 300 yen; up to the present we have received 900. May we appeal to your readers to help to clear off the balance and so put in the much needed water supply?

Donations will be gratefully received and acknowledged by

ENSIGN HATCHER,
Salvation Army Coffee House,
Settlement, Yokohama.

The capital is to be five millions of roubles and the shareholders must be Russian or Chinese. The work is to be completed in six years and the Russo-Chinese Bank are the promoters.

London, December 30.

M. Wm. Nelthorpe Beauchamp, Secretary of Legation at Peking, has been appointed Consul-General for Great Britain at Buda-Pest.

(FROM THE "CHINA GAZETTE.")

Manila, December 27.

Doctor Rizal, who is accused of organizing the rebellion, has been sentenced to be shot. He will pay the last dread penalty to-morrow (Monday), December 26th.

Manila, December 29.

The brigade under General Rios, has met with some heavy fighting at the town of Balinag, which is on the borders of the province of Bulacan, near Nueva Ecija.

General Rios knew that a formidable force of rebels was established, and a stubborn resistance was anticipated. After offering a

desperate resistance, the rebels were driven out of their stronghold with great slaughter. The wounded were carried off by the retreating rebels, but the Spanish troops buried over three hundred and fifty bodies of those left dead on the field. The Spanish loss was trifling.

The rebels were found to be very badly armed with weapons of obsolete, antiquated, and defective patterns. The fearful punishment inflicted upon the insurgents is attributable to the superior range of the Mauser rifles, which kept them at a much longer distance than weapons similar to their own would have done.

Manila, December 30.

Doctor Rizal, the rebel leader, was executed this morning in the presence of a vast concourse of spectators. The Doctor, when marched out, walked with a firm step to the place of execution. When before the soldiers told off to carry the last dread penalty into effect, he never wavered, but to the last maintained a perfectly calm and dignified attitude.

Of course, the execution has had a deep effect upon the people, but Manila itself is perfectly tranquil.

(FROM THE JAPANESE PAPERS.)

Kyoto, Jan. 6.

Great preparations are being made at the Higashi Honganji, as Their Majesties are likely to put up there during their stay in the ancient capital.

Osaka, January 7.

Quotations have fallen on the Osaka stock market, but everything is quiet.

The Chuwo Menshi Domeikai (Central Cotton Yarn Union) will hold a special meeting on the 18th inst. to protest against the action of the Mitsui Ginko.

The Osaka rice and stock exchange will declare a dividend for the latter half of last year at the rate of twenty-four per cent.

Nayodzu, January 7.

The Nayodzu rice and stock exchange, has been temporarily suspended owing to differences among the members.

The weather is fine. New Year's entertainments are being held everywhere.

Shidzuoka, January 7.

H.I.H. Prince Kikuma arrived here this afternoon from Kyoto. To-morrow he leaves for Tokyo.

Yokkaichi, January 7.

The new Principal of the Yokkaichi Commercial School has arrived from Tokyo.

Otaru, January 7.

The *Hiryu Maru*, owned by Mr. Yoshiga, collided with the *Ryoha Maru*, belonging to Mr. Asazoto, to-day. The former sank immediately while the latter escaped with only slight damages.

CHRISTMAS POEMS.

The two following poems, written by Mr. Henry Hartshorne, M.D., LL.D., of Philadelphia, U.S.A., were read by the author at the Christmas celebration of the Sunday School of the Union Church, Tunkiji, on Thursday evening, Dec. 24th, and are published in these columns in answer to the unanimous request of those present on that occasion that the verses should have a wider circulation:—

A LEGEND OF CHRISTMAS.

When Christ was born in Bethlehem,
Ages long ago,
Songs of glory sung in heaven
Reached mortal ears below.
A manger was His mother's bed,
So lowly was her fare;
Yet light from heaven crowned her head,
And angels gathered there.
There knelt the wise men from the East,
Rejoicing at His birth;
The Holy Child, come down from heaven
To bless our sinful earth.
Three wise men: one from India came.
A tall and noble man;
From China, clad in silks, came one,
And one from far Japan.
With gold and myrrh and frankincense
They worshipped at His feet:
The richest gifts this world could bring,
Alone for Him were meet.

King of the Jews they called His name;
But King of kings was He;
East, West, and North and South alike
Are all His monarchy.

Glad were they when they saw His star,
More glad to see His face,
Then turned they towards their homes afar,
Heart-lightened by His grace.

In India one the story told
Of Him, the manger-born;
But when he named Him Child of God,
Men heard the tale with scorn.

In China other wise men heard,
But judged themselves too wise
To give their thoughts to such a word,
They listen, and despise.

In far Japan great temples rose,
With idols in each shrine;
Their priests too busy were to hear
Of God, alone divine.

Sad-hearted then were those wise men,
But year by year they met,
To look again for that fair star
They never could forget.

No more it shone to point their way
To Bethlehem afar;
But in their hearts the light of God
Was brighter than the star.

Through thirty years, each Christmas morn,
All thirty years and three,
They prayed, the Holy One then born
They once again might see.

At last, one Christmas day, appeared
Their ever wished-for star;
Then, He they longed for, year by year,
Came down from heaven afar.

He came, the Christ, the Crucified,
The Risen from the dead;
Transfigured now, and glorified,
Of angels all the head.

He shone on these rejoicing men,
Veiling His glory bright;
Not dazzling, as when stricken Saul
Was blinded by the sight.

He spoke with gentle words to them,
Sweet words of love and peace,
He told them how His kingdom now
Must evermore increase.

He told them how from Palestine,
When He was crucified,
The story of his love would pass
O'er land and ocean wide;

Till countless millions know His truth,
And worship as He taught;
Spreading through all the living world
The good news that he brought.

Then, India, China, and Japan
Will worship in His name;
Will bless the ever glorious day
When He from heaven came.

Not yet, not yet that happy time,
When all will join the song
Glad angels sang His birth-day morn;
But He will come, ere long!

He comes, He comes, to rule the earth;
His day is dawning now;
Before the glory of His reign
All heaven and earth must bow.

Let us our humble offering bring:
Our hearts, our all, to Him;
Welcome are praises infants sing,
As songs of seraphim!

MY CHRISTMAS ROSE.

My home is not in the Northland,
Where the Frost-king keeps his throne;
Nor yet in the far, far Southland,
Where winter is never known.

My garden lies in fair Japan,
Where flowers bloom all the year;
Palm trees spread green leaves every month;
Yet winter nights are dear.

Under my window a rose-bush grows,
With leaves and stems full strong,
O, the beautiful buds it bears!
Will it bloom all winter long?

I watched those buds in the autumn time;
Small were they then, and green;
Twenty young buds, I counted them all;
Fairer, scarce Summer has seen.

Then wild winds blew, with hoar frost;
My buds kept green and small;
Soft snow-flakes fell around them;
But they withered not at all.

Cold came the winds of December;
Yet the noon-day sun shone warm;
Though the night was chill, they felt no ill,
Their green coats shut out harm.

Rosy petals are peeping through;
My buds are swelling, swelling!
To-morrow is Christmas day, I know;
What tale will my rose-bush be telling?

Christmas will welcome my rose in bloom;
Three, four, five, six buds together.
Brave rose, yet alive in the warmth of the Sun,
Through all the winter weather!

My heart, hast thou been, like my winter rose,
Brave still, while cold winds were blowing?
Dost treasure the warmth of the sun through all,
In thy depths still growing, growing?

Wait, through thy days of darkest clouds,
Trust, through thy nights of gloom;
Then the sun of thy soul will bid faith, hope, and love
All burst into heavenly bloom.

Tokyo, Dec. 24th, 1896. H. HARTSHORNE.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 273.

MOSCOW.

Nothing fresh this week. Probably we may soon hear that Lasker has succeeded in giving his opponent the coup de grace.

PROBLEM No. 277.

By F. VOSS.

White to play and mate in three moves.

PROBLEM No. 278.

By JOSEPH SMITH.

White to play and mate in two moves.

MR. BLACKBURNE IN SCOTLAND.

Mr. J. H. Blackburne, after fulfilling his engagements in Glasgow, visited Aberdeen, Dundee, and Edinburgh. On Tuesday, 3rd Nov., he played 21 games simultaneously at the Aberdeen Chess Club, winning 19, losing 1, and drawing 1. On Wednesday,

the 4th he played 31 games at the Dundee Chess Club. Mr. H. T. Baxter was his only opponent who won a game. There were about five games drawn.

On Friday and Saturday, 6th and 7th Nov., he played at the Edinburgh Chess Club, 46 Hanover Street, in the afternoon and evening. Altogether 47 games were played. Of these he won 28, lost 5, and drew 14. The large preponderance of draws was due to some extent to the improbability of games being finished before adjournment. Mr. Blackburne offering draws in positions where he had no marked advantage. The wins against him were secured by D. Y. Mills, J. G. Thomson, C. E. Tankard—1 game each; and D. Forsyth—2 games. Mr. Robert Rankin played 4 games, and drew them all. Others who drew were Messrs. C. S. R. Simson, J. S. Pagan, Morgan, Spence, Dewar, Whitelaw, Luck, Feary, and Dr. Kennedy. The following is one of the games, drawn by Mr. Rankin, with notes by himself:—

GAME No. 631.

VIENNA GAMBIT.

- | WHITE. | BLACK. |
|------------------|---------------------|
| Blackburne. | R. Rankin. |
| 1—P to K 4 | 1—P to K 4 |
| 2—Kt to Q B 3 | 2—B to B 4 (a) |
| 3—Kt to B 3 | 3—Kt to Q B 3 |

| 5—Kt to K Kt 5 | 5—P to Q 4 (c) |
| 6—P takes P | 6—Kt to R 4 |
| 7—B to Kt 5 ch. | 7—P to Q B 3 |
| 8—P takes P | 8—P takes P |
| 9—B to K 2 (d) | 9—Kt to Kt 3 |
| 10—P to Q 3 | 10—Castles |
| 11—Castles | 11—P to B 3 |
| 12—K Kt to K 4 | 12—B to Kt 3 |
| 13—B to Q 2 | 13—Kt to Kt 2 (e) |
| 14—Kt to R sq. | 14—P to K B 4 |
| 15—Kt to Kt 3 | 15—Kt to Q 3 |
| 16—P to B 4 | 16—P takes P |
| 17—B takes P | 17—Kt takes B |
| 18—R takes Kt | 18—B to K 6 (f) |
| 19—R to K B sq. | 19—B to K 3 (g) |
| 20—B to B 3 (h) | 20—Q to B 2 (i) |
| 21—Q to K 2 | 21—P to B 5 |
| 22—K Kt to K 4 | 22—Kt to B 4 |
| 23—B to Kt 4 | 23—Kt to Q 5 |
| 24—B takes B ch. | 24—Kt takes B |
| 25—Q to Kt 4 | 25—Q to K 4 (j) |
| 26—Kt to K 2 | 26—Q R to Q sq. (k) |

(a) Played in preference to Kt to K 2, in anticipation of 3—P to B 4, 4—Q to Q 3; 4—Kt to B 3, was resuming the game into King's Gambit Declined, with which I am well acquainted. In the game between the two opponents, Black played here 2... B to K 2, resulting in a dull game which was drawn.

(b) Kt to B 3 is the correct move. The game turns now into a kind of Two Knight's Defence, unfavourable for the second player.

(c) Of course if 5... Castle, then 6—Q to R 5.

(d) Better than 9—B to R 4.

(e) This Knight must be brought into play somehow.

(f) A good move, compelling the retreat of the adverse Rook. Black had this in view when he played 14... P to K B 4.

(g) Stronger than 19... P to B 5 at once.

(h) White has not much choice of moves, his position being cramped.

(i) The proper continuation was now 25... P to B 5, as the Q R P cannot then be taken. 25... B to B 3, 26—Kt to K 4, Kt to B 4, 27—B to Kt 4, 28—Kt to Q 2, 29—B takes B ch., Kt takes B, 30—Q to Kt 4, 31—Kt to Q 3, 32—Kt to K 2, 33—Kt to K 3, 34—Kt to K 4, 35—B takes B, 36—Kt to K 5, 37—Kt to K 6, 38—Kt to K 7, 39—Kt to K 8, 40—Kt to K 9, 41—Kt to K 10, 42—Kt to K 11, 43—Kt to K 12, 44—Kt to K 13, 45—Kt to K 14, 46—Kt to K 15, 47—Kt to K 16, 48—Kt to K 17, 49—Kt to K 18, 50—Kt to K 19, to K 611, 643—Kt to K 612, 644

(d) The H should retire to H sq, for at K he prevents the Kt when attacked from going to K 4.
 (e) At this point White has already obtained a distinct superiority of position, but at his next move Black should have played P to Q 3 instead of P to Q 3.
 (f) And here at all risks he should have followed with P to Q Kt and then P to Q 3.
 (g) If H takes P, White wins by Kt to Kt 5.
 (h) When Maroczy gets a position like this, shutting in his opponent's pieces, there is very small hope of escape, even for a Lasker or a Pillsbury.
 (i) Trying ineffectually to force an opening on the Q's side.
 (j) Most players would have been content with Kt takes B, and that probably would have won, but it was not good enough for Maroczy.
 (k) If 24.....
 25—Kt to B 6 ch. 25—Q to B sq.
 26—Q to K 4. 26—P to K 3.
 27—Q to K R 4. 27—P to R 4.
 28—Kt takes R P. 28—Kc.
 (l) Much stronger than P takes Kt at once, which would relieve Black considerably.
 (m) White might still continue with 26—Kt to B 6 ch, but after P takes K, 27—B takes P, Q to K 3; 28—Q to B 4. Q takes B; 29—Q takes Q, R takes Q; 30—P to B 3, R to Q 5; 31—R takes R, P takes R, 32—K to Q 8.
 (n) If Q to K 3, then 27—Q takes Q, P takes Q; 28—Kt to Q 6 &c.
 (o) Q R to K sq. would be no better, for then likewise, 30—R takes P, and if Q takes B, 31—K takes Q; or if 28..... Q takes K; 29—Q takes Q, R takes Q; 30—P to B 3, R to Q 5; 31—R takes R, P takes R, 32—K to Q 8.
 (p) The finish is splendidly played by Maroczy; he might perhaps have won in a commonplace way by Kt to Q 6; but the text move leaves a subtle trap, and if Black had not fallen into it, White would still have decided the game by P to R 4.
 (q) If 30..... Q to R 3; 31—Kt to Q 6, R to K B sq., 32—Q to K 7 and wins.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon me, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 16TH, 1897.

SUMMARY OF NEWS.

THE plague is increasing in Bombay and trade is paralyzed.

ALL the Armenian prisoners at Constantinople have been released.

DR. CARRINGTON, Chief Justice of Hongkong, has received the honour of knighthood.

It is reported in New York that the Cuban insurgents have made overtures for peace with Spain.

THE immediate advance of the Niger Expedition is expected, but its objective has not been divulged.

H.I.M. THE EMPEROR, who had been slightly indisposed since last December, has quite recovered.

FREIGHT per ton on coal from Moji to Yokohama, hitherto about one yen ten sen, has fallen to eighty sen.

The Times states that Germany has notified Mr. Cleveland that in the event of a conflict she will support Spain.

COUNT SANO, President of the Japan Red Cross Society, who was recently reported to be seriously ill, is now recovering.

A DESTRUCTIVE hurricane has swept over Port Darwin, South Australia, and nearly the whole town has been wrecked.

THE profits of the Shinagawa Electric Light

Company for the latter half of last year, announced at the regular general meeting held on Monday, were yen 8,666.

ONLY urgent business will be transacted at the various Government Departments until the close of the period of official mourning.

CONTINUED local bank failures are taking place in the Western United States, and two bank managers have committed suicide.

A LOW temperature and snow and rain have prevailed in Yokohama and neighbourhood during the greater part of the past week.

ACCORDING to reliable accounts, the Cuban insurgents are in a demoralized state, their munitions having become exhausted.

ALL the foreign Legations in Tokyo have their flags flying at half-mast as a token of mourning for the death of the Empress Dowager.

TRADERS are injoyed till January 19th for India Bills to the amount of one million pounds sterling, payable in three, six, or twelve months.

MR. NORT, the inventor of dynamite, has left nearly the whole of his vast fortune to establish an international fund for the encouragement of scientific research.

NO. 2 dock of the Yokohama Dock Company was completed on the 30th ultimo. It will not be opened until April next, however, as the works are not yet in good order.

THE foreign Representatives in Tokyo proceeded to the Foreign Department on Tuesday morning to deliver messages of condolence on the death of Empress Dowager.

THE Tokyo Tramway Company held its regular general meeting on Monday. The net profits for the latter half of last year amounted to yen 123,303 in round numbers.

THE Tokyo Cotton Spinning Company held its regular general meeting on Monday. The profits of the Company during the latter half of last year were yen 143,317, including the sum brought forward from last account.

H.I.M. THE EMPEROR AND EMPRESS being greatly grieved at the recent conflagration in the Yoshino-machi, Tsukui-gun, Kanagawa Ken, on the 29th of December, have contributed yen 200 towards the relief of the sufferers.

THE regular general meeting of the Tokyo Stock Exchange took place on Monday. The net profits for the latter half of last year, together with the sum brought over from the previous account, amounted to yen 208,266.

THE Admiralty during this year will despatch twelve selected workmen to Europe for three years at a cost of yen 56,030, with the object of their acquiring the method of building iron-clads and other vessels.

HER IMPERIAL MAJESTY THE EMPRESS DOWAGER, Consort of the late Emperor Komei, died on the 11th inst. Court and Official mourning has been ordered. The interment will take place at Kyoto, the Emperor and Empress attending.

THE British Minister, Sir Ernest Satow, proceeded to the Aoyama Palace on Tuesday, on a visit of condolence on the death of H.I.M. the Empress Dowager. His Excellency afterwards proceeded to the Imperial Palace on the same errand.

THE Shogyo Ginko (Commercial Bank) of Yokohama held its regular general meeting on

Monday last, at which a dividend of twelve per cent. was declared. A discussion followed in reference to the purchase of other buildings for the bank.

IN consequence of the death of the Empress Dowager, the Jikei-in, Ikuji-in, and Yoiku-in, charitable institutions, as well as persons over the age of seventy years, will receive presents of money from the Authorities.

THE criminal libel action brought by Earl Russell against Lady Selina Scot, John Cockerton, and William Aylott has terminated in a verdict of guilty, each of the accused being sentenced to eight months' imprisonment; Lady Scott is to be treated as a first-class misdemeanant.

SIR CHARLES BRUCE, K.C.M.G., Governor-in-Chief of the Windward Islands, has been appointed Governor of Mauritius, and Sir Hubert E. Jerningham, K.C.M.G., Governor and Commander-in-Chief in Mauritius, has been appointed Governor of Trinidad.

TELEPHONE wires throughout Tokyo having been damaged more or less by the fall of snow, the Telephone Call Office despatched a large number of workmen to repair them, but as they were unable to do the work with the necessary expedition, the engineers of the First Army Division were called upon for assistance.

THE 100th National Bank held its regular meeting on Monday. The total profits during the latter half of last year amounted to yen 107,023. Of the above, yen 50,000 were set apart as a reserve, yen 30,000 distributed as a dividend at the rate of 7½ per cent., and yen 27,023 carried forward to the next account.

THE wedding of H.I.H. Prince Hiroyasu, Naval Sub-Lieutenant, with the Lady Tsune-ko, ninth daughter of Prince Tokugawa Keiki, took place on Saturday last at the former's Palace, Mita-Daimachi, Shiba. After the ceremony, the happy pair proceeded to the Imperial Palace to return thanks for the presents given by Their Majesties.

THE 30th anniversary of the death of late Emperor Komei will be celebrated at Kyoto on the 30th inst., and the Princes of the Blood will accompany Their Majesties to Kyoto to attend the ceremonies. H.I.H. Prince Komatsu (senior) will leave Tokyo for the ancient capital about the 23rd inst.

A SURPRISING episode in the Carew trial occurred on Sunday, when Miss Jacob, who had been the Carews' nursery governess, was arrested and charged the following morning with the murder by Mr. Carew. After she had been before the Assistant Judge on two occasions, the case was remanded till the 25th inst., Miss Jacob being admitted to bail.

THE Import trade remains without material alteration, and prices for most commodities are more or less nominal. No movement is apparent in Textiles, and the same may be said of Metals, though in the latter trade there is talk of prospective improvement. There has been a little more done in Kerosene since the commencement of the year, but the total business of the week does not amount to much. The Sugar market is quiet, and buyers seemingly have a full stock in hand to go on with. There has not been much Silk sold, as holders do not seem anxious to take the rates offered, and the Waste business has been small with weak prices. Very little done in Tea. Rates of exchange have been fairly steady, but the wires were down part of the week, and no communication could be obtained with the outside world.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

This week has been eventful to political parties, especially to those ranged on the side of the Opposition. Seven of the Parliamentary members identified with the Liberal Party have seceded, and eight of the National Unionists have taken a similar step. One of the Liberal seceders has been induced, however, to withdraw his resignation, and it is rumoured that four others will follow his example. On the side of the Unionists the situation is worse, for the eight that have seceded are likely to be followed by eight others, thus reducing the Party to about one-half of its original number, so that its total disintegration is by no means improbable. The cause of the trouble among the Unionists is believed to be dissatisfaction because the leaders of the Party have abandoned their independent attitude and established an *entente* with the Liberals.

Another incident that had produced a ripple of public excitement is an alleged assault upon two students in the Seijyo Gakko by the German Minister. The Opposition papers, as the *Nichi Nichi*, the *Tokyo Shimbun*, and the *Chuo*, are evidently anxious to make capital out of this insignificant affair, for they ask the Minister of State for Foreign Affairs whether he intends to be true to his public promise of a firm foreign policy, and whether he will deal with the case in a proper manner. The thing furnishes a topic even for leading articles in the *Tokyo Shimbun* and the *Chuo*, which latter, we may note, represents the opinion of only a part of the Unionists in political affairs, and probably the opinion of the editor alone in this instance.

Trifling as the incident is, writes the Liberal organ, and whatever be the motive that betrayed the German Representative into committing such an act, the matter must not be overlooked, since the Minister represents his country, and since indifference under such circumstances may invite graver and more serious discourtesies from Germany or other Powers. The *Tokyo Shimbun* wants to know whether Count Okuma is competent to make the German Representative acknowledge his fault, and in the event of the Minister's refusing to adopt this course, whether Count Okuma will take the step proper in the case of a foreign Representative who is not suited to promote friendly relations between Japan and his country. It asks the papers habitually opposed to it why they are silent about the affair, and why they do not avail themselves of the opportunity to advocate practical recourse to their much-vaunted "strong foreign policy."

The *Chuo* fears that the incident, though trifling in itself, may ultimately have the effect of provoking international umbrage, for the person that committed the assault is the representative of Germany, and the sufferers are future military officers of the Japanese Empire. That the Minister neglected to apologise for his error or oversight so as to save the students from humiliation, is much to be regretted, for they were obliged to have recourse to public means of obtaining redress. The *Chuo* advises Count Okuma not to be absorbed in Parliamentary manoeuvres alone, but to take prompt measures for vindicating the lads' honour. This same paper prints a note to the effect that the German Minister is prone to outbursts of violent passion, and alleges that he is regarded in diplomatic circles as an eccentric person, if not as something worse. The blow received by one of the lads is said by the vernacular papers to have produced a swollen face.

The *Kokumin* advises the Ministry not to be engrossed in devising petty and hackneyed Parliamentary manoeuvres, but to devote their attention to winning the good will and support of the nation. As measures to compass that end, our contemporary suggests two things, namely, the withdrawal of the official amended Press Law in favour of another drafted in a

more liberal spirit, and a drastic change in the personnel of Local Governors. As to the latter—for the first measure is now out of date—the *Kokumin's* idea is that Governors too old for service, or tainted with clannism, must be superseded by younger men of ability, selected from the public at large, regardless of party connexions. The Governors changed, the Ministry should then dissolve the House of Representatives, and they would be sure to have a new House faithfully supporting them.

Among what it calls the utterly confused state of social rites and usages in Japan, the *Nippon* finds one point of satisfaction, namely, the universal prevalence of customs immemorially observed at the New Year. That is the more satisfactory as the New Year's ceremonials are entirely national, and even the poor can afford to buy *mochi*, *tosu*, dried sardines, herring's roe, and so forth, and to celebrate the season in strictly orthodox style.

The *Fiji* devotes two leading articles to the problem of Naval expansion. It thinks that the means now employed for bringing home to the mind of the people the nation's need of a strong navy are defective. In the first place, an object lesson must be given by the Imperial Court. The Emperor, being the Commander-in-chief of both the Army and the Navy, must wear naval uniform, and not military as at present, when His Majesty has occasion to visit the Fleet, or to attend any ceremony connected with the Navy. The Crown Prince, also, while acting as an officer of the Army, must combine the functions of a naval officer; and the officers attached to His Imperial Highness must be appointed from both services. Again, greater facilities should be provided for naval education, and graduates from ordinary middle schools should be admitted to the Naval College without such strict qualifications as those now required. For popularizing maritime ideas, books and picture-albums published by the Navy should be sold as cheaply as possible, and at the same time a naval museum should be established as in Western Countries. If all these points be carefully attended to, the public will be gradually led to pay due attention to the Navy, and will cease to be absorbed by military defences alone.

In another article the same paper argues that the disbursement of the necessary outlays for the expansion of the Navy will not be grudged by the people when they are convinced of the necessity of the step, and as the national resources can, without any difficulty, bear the burden imposed by the expansion, there should be no hesitation about forcing this subject into the very forefront of the country's most urgent duties.

Advice to the *Shimpo-to* not to attach too much importance to the problem of the freedom of the press, comes from two different quarters, the *Fiji* and the *Tokyo Asahi*. The former declares that the Cabinet's amendments of the laws relating to personal rights are such a marked improvement as to strike any unbiassed observer with astonishment. They display really admirable courage on the part of the Government. Yet the retention of the obnoxious clauses, however limited their application, causes much uneasiness to the *Shimpo-to*, and even endangers their relations with the Ministry. The *Fiji* asks the Party whether a rupture with the Ministry on such paltry grounds could be reconciled with the manifesto that the Party issued soon after the Cabinet had announced its policy. The *Shimpo-to* should support the Government when the latter's procedure is, on the whole, satisfactory. It will be time enough to think of opposition when the Ministry's actions become seriously unsatisfactory. If the *Shimpo-to* allow their attitude to be governed by the problem of personal rights in its present form, they will find themselves roundly condemned by the public.

A pro-Government Party, writes the *Tokyo*

Asahi, that has declared itself content with the Cabinet's policy, all things taken into consideration, as the *Shimpo-to* has done, must not be thrown into a state of perturbation because the Government is betrayed into committing a minor fault. It must not be deterred from resolutely supporting the Government merely because to do so may involve the risk of being called "moderate," an epithet to which undeserved odium has hitherto attached. It is necessary to remember that the term "strong" and "moderate" do not apply solely to assaults upon the Government, but have equal reference to the bearing of a political party acting on the defensive.

The *Osaka Asahi* offers certain pertinent suggestions with regard to the finances of Formosa. It is inevitable that an annual deficit of 2 or 3 millions should appear, for some time to come, in the ordinary account alone, and that as appears from the Budget now in the hands of the House of Representatives, the deficit must exceed 6 millions, if extraordinary outlays be added. Yet the Matsukata Cabinet, following in the wake of its predecessor, has failed to elaborate any permanent financial programme, and is content to tide over the trouble by appropriating a sum from the Indemnity. Let the Diet include an item of Formosan expenditures in the category of continuing expenditures, voting a sum of from 4 to 5 million a year for the space of, say, a decade. With that end in view, the appropriations for the Second-period Expansion of the National Armaments may be more or less reduced, seeing that Formosan affairs are just as urgent as military and naval development. The Speech from the Throne to the Imperial Diet distinctly indicated that fact.

The troubles and agitations that have overtaken the various political parties furnish a theme of discussion to the *Nippon* and the *Kokumin*. The former is of opinion that the year 1897 marks an exceptional period, inasmuch as all the political associations have stumbled over one obstacle or another, and none has escaped humiliation. It is true that the disintegration of the Sat-Cho combination, its forfeiture of power, and the break up of the National Unionists, an outgrowth of clan influence, are incidents belonging to the past, as is also the failure of the Liberals in their new rôle of a pro-Government party. The Satsuma clique, as an independent factor, and the *Shimpo-to* had been comparatively free from such painful episodes, but the present conflict of ideas between the two bodies with respect to the *pritis* problem has dragged them down to the same level with their opponents. However, failures are the ladder to improvement and development. The anarchy that now reigns among political bodies must be hailed with delight rather than regret.

The *Kokumin* observes that the lack of a distinct line of demarcation between political parties' platforms and the moral corruption of politicians must be counted the principal causes of the embarrassments now existing. Personal sentiments, past history, and their relations towards their constituencies barely suffice to save political parties like the Liberals and the Unionists from complete disorganization.

The *Fiji* calls public attention to the relations between the Imperial Court and the people. Our contemporary is of opinion that the mystery now enshrouding the Court precludes any closer approach to it on the part of the people. The Court should issue fuller intelligence and should endeavour to relieve the nation's uneasiness. Another point to be considered is the grant of allowances to Ministers of State and to new Peers out of the Sovereign's income. That habit must be discontinued; the monies should be paid out of the Treasury, if necessary, lest the Court become entangled in political broils.

EDITORIAL NOTES.

R.M. QUEEN VICTORIA.

A LONDON paper asserts that it is authoritatively stated that the Queen is in better health and spirits just now than she has been for many years, and that Her Majesty is looking forward with much pleasure to the opportunity she will have next year of entertaining many foreign Royal personages on the occasion of the celebration of her exceptionally long reign. Although invitations have not yet been formally sent out, enough is known to show that the gathering of Royalties will be greater than on the occasion of the Jubilee celebration in 1887. It is stated positively that the Tsar and Tsarina, as well as the German Emperor will come to England. A special Masonic service to commemorate the long reign of the Queen was held on 22nd Nov. at St. Catherine's Church, Hatcham, under the auspices of the Lodge of the Royal Leopold No. 1669, by special dispensation granted by the Most Worshipful the Grand Master, the Prince of Wales. There was a crowded congregation, and about four hundred Masons attended, wearing Arch and Craft clothing and jewels. The service, which commenced with the singing of the National Anthem, was taken part in by the Rev. Bros. H. J. H. Truscott (vicar), Harrison, and E. A. Thelwall, while the Rev. Bro. J. S. Barrass (rector of St. Michael's Basilshaw, City), preached the sermon. The collection was in aid of the Royal Masonic Benevolent Institution, and also for the placing of a suitable memorial in the church. Prior to the service the following congratulatory telegram was sent to the Queen at Windsor Castle:—"May it please your Majesty to accept the loyal and heartfelt congratulations of the vicar and brother Masons assembled on the occasion of a special Masonic Service at St. Catherine's, Hatcham, to commemorate the sixtieth year of an honoured and beneficent reign. Wishing your Majesty future blessings—Howard J. H. Truscott, St. Catherine's Vicarage, Hatcham." The following reply was received later in the evening, addressed to the Vicar:—"The Queen thanks you and your brother Masons for kind congratulations."

NAGASAKI HARBOUR.

The Nagasaki journal reports that the *Hohenollern* got aground on the 30th ult. at Nagasaki. The *Benlomond* offered to tow her off for £200, but Captain Harrasowitz, was not willing to pay more than £150. She grounded on a shingle reef. The *Hohenollern* left Nagasaki for Hongkong the same day so that apparently she sustained little or no damage by the mishap. From the same source we gather that a Russian warship—the *Admiral Nachimoff* presumably—in taking up a berth, fouled a sailing vessel and carried away the latter's jib-boom, and then ran down some lighters on which sheer-legs had been erected for the cargo lost overboard from the *Orestes*. The sheer legs are stated to have been destroyed. The Mitsu Bishi Co.—whose tug, the *Yugao Maru*, swung from her moorings and damaged her upper works by banging against the sides of the *Morven*—sued Captain Ellis, the master of the latter craft, in the British Consular Court at Nagasaki, for \$95 damages sustained by the *Yugao Maru* through the accident. In the British Consular Court it was proven that the *Yugao Maru* was in fault, and the complaint was accordingly dismissed. No damage was suffered by the *Morven*.

BOMBAY AND THE PLAGUE.

PRIVATE telegrams received in Shanghai on Jan. 7th, from Bombay, remarks the *N.-C. Daily News*, report that four mills have stopped working altogether, owing to the prevalence of the plague, and the others are only employing two-thirds of their ordinary number of hands, which will be reduced to one-third unless the plague abates. We know by wire that it has already reached Kurrachee, and there is some reason to fear that it may again travel into Europe, as it is known to have done in every century since the 14th. It attacked England last in the 17th century, but in 1720 it destroy-

ed nearly half the population of Marseilles, and it prevailed in Russia and Poland only a hundred years ago.

NAGASAKI.

A CUTTER's crew from the U.S.S. Flagship *Olympia* has beaten H.M.S. *Undaunted's* cutter in a 3½ mile race at Nagasaki. Says the local paper:—"The event, which resulted in an easy victory for the *Olympia*, was rowed in 35 minutes. The *Undaunted* crew did not cross the line at the finish, but switched off just as they touched it, being at that time 1 minute and 40 seconds behind the winners. The *Olympia* cutter, which is a lighter boat and lower in the freeboard than that of the *Undaunted*, was painted with shellac to make her run freely in the water, and was the colour of a red herring, while the *Undaunted* boat had a white freeboard, though below the water-line she was painted with a lubricating composition of black-lead, beer, and eggs. The result apparently demonstrated the superiority of the red compound. The stroke may also have had something to do with the outcome; the *Undaunted* crew using very broad bladed oars which they tried to work with too fast a stroke. The *Olympia* crew pulled narrower oars and a longer stroke."

FLEET NEWS.

THE torpedo-destroyer *Handy*, that has just arrived at Hongkong, has been docked for the fixing of a new shaft and general overhaul.—H.M.S. *Porpoise*, which is soon going home, has been docked at Hongkong for a preparatory overhaul.—The rumour is once more circulated that upon the conclusion of H.M.S. *Centurion's* present commission—in May—H.M.S. *Renown* will be sent out to be the principal flagship of the China station.—A cutter belonging to H.M.S. *Swift* was capsized in Hongkong harbour on the 30th Dec., and afforded the flagship's look-out a chance of effecting a very quick rescue.

ACCIDENT TO THE "OLYMPIA."

DURING the gale of Tuesday night, says the Nagasaki paper, the Japanese steamship *Toyo-hashi Maru* dragged her buoy and drifted over so near to the U.S. Flagship *Olympia* that the next day the American cruiser determined to shift her moorings to avoid being fouled by craft that might moor at the displaced buoy. Accordingly she got up steam and was preparing to start, when a slight flaw was discovered in an eighteen inch copper feed-pipe which prevented the working of the engines pending repairs. The *Olympia* is said to be scheduled to leave here on the 20th inst.

A KOBE HOTEL DESTROYED.

THE Commercial Hotel, Kobe, proprietor Mr. Bodecker, was burnt to the ground on Monday morning. The fire broke out in the basement and quickly got a firm hold on the building. The occupants of the house were awakened by the smoke, and Mr. Bodecker ran out and gave the alarm. The Settlement Fire Brigade, under the Superintendence of Mr. Sin, says the *Chronicle*, promptly responded to the call, and several Japanese brigades, but their united efforts could not save the building, which burnt like a match box. Fortunately the flames were prevented from reaching the adjoining property.

THE "SAGHALIEN."

INQUIRY by Commission at Saigon into the boiler explosion on board the *Saghalien*, says the *China Mail*, showed that it arose from superheating. Japanese coal, taken in at Singapore, developed greater heat than the boiler appliances could stand. Precautions have been taken against superheating, and the *Saghalien* will proceed to Europe at slow speed. Three of her boilers have been disused.

A NEW DANGER IN YOKOHAMA.

THE electric light wires on the Bluff fell to the ground on Wednesday night and were permitted to remain so, to the danger of horse and foot, for several hours, no attempt to replace them in position having been made for a considerable time. There is a police station within

a few yards of the place where the wires were actually lying on the ground, and the electric works are less than a mile away. Are the authorities unacquainted with the horrors that have happened through fallen electric wires? It would appear to be so.

THE "SAGHALIEN."

THE French mail steamer *Saghalien*, on board which the fatal explosion occurred some weeks ago, will proceed to Marseilles at slow speed as a cargo boat, reports a Saigon contemporary. A correspondent informs us from Saigon that the First Lieutenant of the *Saghalien* left for France as a passenger on the *Ernest Simons*, and it is supposed that new boilers will be supplied from the M. M. Cie.'s works at Ciotat and sent out to Saigon. As the placing of the new boilers will necessitate the ripping up of the deck and deck fixtures, the total delay will not be less than six months.

THE NEW GOVERNOR OF INDO-CHINA.

M. PAUL DOUMER, the new Governor-General of Indo-China, says the *China Mail*, was born at Aurillac in 1857. He is a journalist and advocate, acted as private Secretary to M. Flouquet, and was first elected a Deputy in 1888. From 1st November, 1895, to 22nd April, 1896, he was Minister of Finance in M. Bourgeois' Cabinet. It will thus be seen that his parliamentary promotion was rapid, and he comes to the Governorship of one of the most important of the French Colonies a comparatively young man.

A LIFE FOR A FRIEND'S.

JOHN JONES, a blue-jacket on the U.S.S. *Forktown*, jumped overboard at Shanghai on the morning of the 31st Dec. to rescue a comrade named Anderson who had fallen into the river. Anderson was saved, but Jones went under when he struck the water and never came up again. A reward has been offered for the recovery of his body.

THE HONGKONG FORGERY CASE.

CHAS. S. MCKINLEY, an electrical engineer, has been found guilty in Hongkong of forging a letter, and sentenced to 15 months' imprisonment. In consequence of the forgery the Chief Officer of the *Hanoi* had been heavily fined on an alleged charge of opium smuggling.

NEW TREATIES.

We read in the *Fomiori Shimbun* that Japan is taking steps to conclude treaties with Turkey and Siam. Viscount Aoki has been entrusted with the negotiations in the case of the former country, and those with the latter are to be conducted by correspondence.

NAVAL PROMOTIONS.

THE *China Mail* announces that Commander McAlpine, at present acting captain of H.M.S. *Narcissus*, has been promoted to the rank of Captain. Telegraphic intelligence has also been received of the promotion of Lieut. Sir R. K. Arbuthnot to the rank of Commander.

SNOW.

SINCE the early hours of on Thursday morning a very severe snow storm prevails in Yokohama and the surrounding districts. The snow has already accumulated to a depth of several inches and many trees on the Bluff are breaking through its weight. It looks as though the storm will continue during the day.

THE ACCIDENT TO AN ORIENT LINER.

THE accident to the Orient liner *Oratopa*, while coaling at Tilbury, was caused, we learn, through her listing, and as the portholes were open she filled rapidly. The hull was submerged. Four persons were drowned.

RUMOURED SHIPWRECK.

RUMOURS were current in Shanghai on the 7th inst. that an outward-bound vessel was totally wrecked, but her name has not yet transpired.

JAPAN AND PERU.

THE revised Treaty of Navigation and Commerce between Peru and Japan was ratified on the 7th inst.

THE CABINET AND THE DIET.

According to the invariable practice of the vernacular press during the opening days of the Diet's session, innumerable conjectures are published with reference to the attitude of the so-called "independent" members of the Lower House towards the Cabinet. It is believed that these members number 57 in all, and that among them 21 are distinctly friendly to the Government, 5 hostile, and 31 not disposed to declare themselves either way. That, however, is the estimate of journals themselves inclined to support the Cabinet. But apart from the action of these "neutrals," there can be no doubt that the Government's prospects have greatly improved of late. In the first place, the Liberals have lost six members. Possibly the seceders may not vote against their old Party, but, under any circumstances, their coöperation with it is forfeited. Then, again, the *entente* that seemed to have been established between the Liberals and the National Unionists must be considered a thing of the past for all practical purposes, since a number of the Unionists have openly rebelled against the idea of being tied to the shafts of the Liberal car. Besides, there is a radical difference of opinion between the two parties with reference to the amendment of the Press Law. The Liberals want to wholly abolish the Administration's power of suspension and suppression, and to bring within the purview of the Judiciary all writings disrespectful to the Sovereign, or calculated to disturb the political system of the country, or of such a nature as to interfere with due military secrecy, or likely to injure good morals. The National Unionists, on the other hand, are in favour of the compromise proposed last session by the House of Peers, namely, that the power of suspension be still vested in the Administration, but that the period be limited to a week, or even three days. Thus, on that important point, the two parties will not be found in the same camp. Scarcely less important from the Cabinet's point of view is the fact that the "Members Club" (*Gün Kurabu*) has announced its intention of supporting the Government as far as possible, in consideration of the latter's steady adherence to the *post-bellum* policy of the last Ministry. The ranks of the *Gün Kurabu*, having received of late several accessions of strength, are said now to number 24, so that the Club's support is of some moment. With regard to the Budget, which usually constitutes the great bone of contention, it is difficult to see how either the Liberals or the Unionists can oppose it, since nearly all the expenditures either received their approval by construction, if not by actual vote, last session, or were suggested in Representations emanating from leading politicians of Liberal persuasion. Count Okuma's scheme for additional Consulates and Legations was long ago endorsed by public opinion, and, apart from that, nothing really new appears in the Budget except the appropriations of 2,180,000 *yen* and 800,000 *yen*, in round figures, on account of harbour improvements at Otaru and Nagasaki, respectively. On the whole, therefore, the parliamentary outlook is favourable for the Cabinet at present. But it must be confessed that the progress of politics in Japan is far from satisfactory. There is a distinct tendency towards disintegration; towards the re-

formation of petty coteries unworthy of the name of "parties," and chiefly competent for destructive purposes. On the one hand, we see the *Gün Kurabu* becoming once more an influential factor, and, on the other, it appears that the Reform Club (*Kakushin Kurabu*), which was absorbed into the ranks of the *Shimpo-to* at the time of the latter's integration in 1895, is again about to be organized as a separate association. We speak of the *Kaishin-to's* "integration" because, as many of our readers doubtless remember, that party is in reality a coalition of no less than six different groups which used to fight shoulder to shoulder so long as the Cabinet was the object of attack, but which had frequently given indications of inability to work together for purposes of constructive statesmanship. The Reform Club was one of these groups, and now it has emerged again from the combination and resumed its independent status. The Liberals have had a split; the National Unionists have had a split; the Progressionists (*Shimpo-to*) have thrown off a satellite (the Reform Club), which shows no inclination to revolve in the same orbit with the original party, and the Members Club also is moving independently. It seems idle to talk of inaugurating party cabinets so long as this difficulty of effective combination exists, and so long as Japanese politicians do not recognize that minor principles must be sacrificed on the altar of great causes.

FINANCIAL TOPICS.

According to the Budget for next fiscal year, the Ordinary Revenue exceeds the Ordinary Expenditures by 9,079,965 *yen*, but on the Extraordinary side of the account the situation is reversed, the Expenditures showing an excess of as much as 123,268,402 *yen*. Here are the figures:—

Ordinary Revenue	121,410,246
Ordinary Expenditures	112,330,281
Excess of Revenue	9,079,965
Extraordinary Revenue	4,075,777
Extraordinary Expenditures	127,344,179
Excess of expenditures ...	123,268,402
The Government intends to make good this great deficit in the following way:—	
Surplus of Ordinary Revenue (as above)	9,079,965
Brought over from the previous Account	10,573,783
Domestic Loan (Public Undertakings Loan)	59,280,600
Appropriation from the Indemnity	52,170,000
	131,105,348
The portion of the Public Undertakings Loan shown in the above table, does not represent the total liabilities to be incurred by the Government during the year. The full figures are:—	
Public Undertakings Loan	59,280,600
Issue of Exchequer Notes	28,000,000
Railway Loan	5,327,350
Redemption Loan	2,502,250
	95,110,200

On the other hand, since the sums devoted to redeeming bonds and paying interest on them will aggregate 27,193,052 *yen*, and since exchequer notes constitute, in effect, an addition to the volume of floating capital, the sums actually withdrawn from the market will not exceed 40 million *yen*.

Be the sources normal or abnormal, the increase of State receipts during recent years is very remarkable, as the following figures show:—

Fiscal year.	Ordinary Revenue (unit, 1,000 yen).	Extraordinary Revenue (unit, 1,000 yen).	Total (unit, 1,000 yen).
26th (1893-4) ...	85,883	3,159	89,042
27th (1894-5) ...	89,728	2,636	92,365
28th (1895-6) ...	87,527	2,666	90,194
29th (1896-7) ...	100,750	80,711	180,461
30th (1897-8) ...	121,410	118,340	239,750

Comparing the figures for the 26th fiscal year with those for the 30th year, the total of ordinary and extraordinary Revenues shows an increase of over 160 per cent. But since this immense difference is due to abnormal and temporary circumstances, no paramount importance attaches to it.

In the ordinary revenue the following items show the most marked increases:—

	30th year (unit, 1,000 yen).	28th year (unit, 1,000 yen).	26th year (unit, 1,000 yen).
Taxes and duties.....	90,084	70,902	70,004
Stamp Receipts	7,525	2,434	2,465
Receipts from Government property and undertakings...	21,280	12,290	11,743
Miscellaneous income	795	686	756
Interest on Deposits..	1,724	1,214	913

The Revenue for the next year, as shown in the Budget, aggregates 240 million *yen* in round numbers. But since more than 118 million *yen* represent loans and an appropriation from the Indemnity, the real increase of Revenue, that is to say, the *bona fide* development of national resources, does not exceed 37 per cent. as compared with the figures for the year (1893-4) prior to the war.

The proposed Revenue for the 30th fiscal year may be analysed as follows:—

Ordinary Revenue, 50 per cent.; loans and appropriation from the Indemnity, 43 per cent.; other extraordinary sources, 7 per cent.

Though much has been written about the Indemnity, an exact statement of the sums already appropriated, or about to be appropriated, will not be without interest.

Japan has received the following sums from China:—

	Yen.
1895 1st installment	74,143,054.376
1895 Indemnity for the retrocession of Liaotung	44,907,499.289
1896 2nd installment	75,925,339.337
Interest	9,490,667.418

Total 204,466,564.420

With regard to the immediate future, we have:—

3rd installment to be received in 1897.....	25,250,177.807
Interest	6,943,778.622

Grand total 236,660,540.849

In 1896, a sum aggregating *yen* 119,050,553.665 was appropriated from the Indemnity, and the Government contemplate taking 52,170,000 *yen*, approximately, from the same source in 1897; namely, 44,410,000 *yen* for the General Budget, 6,420,000 *yen* for a special Formosan fund, and 1,340,000 *yen* (all in round numbers) for extending Arsenals and other official undertakings. According to this arrangement, the actual amount of the Indemnity remaining at the end of the next fiscal year will be 65,440,000 *yen*, approximately. It is apparent, therefore, that should the Government find difficulty in floating the Public Undertakings Loan, they can easily meet the budgetary expenditures by further drafts upon the In-

demnity, though naturally such a course will be avoided as far as possible.

Omitting interest, the amounts to be paid by China from 1898 (inclusive) aggregate 124 million *yen*, and as 65 millions will remain in Japan's hands at the end of 1897, it appears that 189 million *yen* will be available from that source to meet the expenditures on account of military and naval expansion from next fiscal year.

THE GERMAN REPRESENTATIVE AND THE SCHOOL BOYS.

It will surprise our readers to learn that a Question has been presented in the House of Representatives with reference to the affair of the German Minister and the two students of the Seijyo Gakko. The Question was placed in the hands of the President on the 11th instant. It is signed by Mr. Suzuki Jyubei, Mr. Kono Hironaka, and a number of other members identified with the Liberal Party, and is concluded in the following terms:—

It appears to be an indisputable fact that, on December 30th, 1896, as Mayeda Masakichi and Arikado Shuji, two students of the Seijyo Gakko, were walking on the slope in front of No. 20, Kami-ni-bancho, in the Kojimachi District of Tokyo, the Representative of Germany in Japan, who was driving in a carriage, struck at Mayeda Masakichi with a whip, but, failing to reach him, struck Arikado Shuji. If that be so, the action of the German Minister amounted to a criminal offence. A Foreign Representative being beyond the reach of Japanese law, the case ought to be duly dealt with according to international law. What steps have been taken by the Government?

We read in the *Chuo Shimbu* that the two lads are showing remarkable obstinacy. On the 9th instant, the German Representative visited the Foreign Office, and explained that he had not entertained any intention of assaulting the students, but that his whip may have touched them: If so, he regretted the fact, and desired to make a suitable *amende* to the lads. Next day, Mr. Komura, Vice-Minister of Foreign Affairs, proceeded to the Seijyo Gakko in his private capacity, and communicated the statement of the German Minister to the students, through the medium of the School Authorities. At first the students declared themselves satisfied, but afterwards they changed their minds, declared their unwillingness to have the matter dealt with privately, and asked to have a public settlement. We do not vouch for the accuracy of all this, but if the German Representative took such a step, and if the boys remain still discontented, they deserve very little sympathy. As for the Liberals that presented the above Question, they have been betrayed, we think, into a ludicrous and ignorant course. It is impossible that the Foreign Office should take official action about such a bagatelle. Japan would become a laughing-stock throughout Europe. Were it possible to summon the German Minister for assault, in his capacity of a private individual, no civilized tribunal of justice would entertain the charge for an instant, especially after an ample *amende* had been made.

SECRET SERVICE FUNDS.

The *Fiji Shimpō* says that the settled accounts for the 28th fiscal year (1895-6) show that although some portions of the various Departments' ordinary appropriations remain unexpended, the secret service funds have in every case but two been wholly paid out; the two exceptions being the Departments of the Navy and of Justice, where small sums remain over. In consequence of the extension of the Departments' functions larger appropriations for secret-service purposes will be sought for the approaching fiscal year, the Naval Department asking for *yen* 30,000, instead of 22,000, its grant for the current year; the Foreign Department, for 80,000, instead of 60,000; the Local Governments, for 100,000 instead of 57,250, and the Gendarmerie in the provinces, for 16,488 instead of 15,640.

NATIONAL ARMAMENT EXPANSION PROGRAMME.

So much interest attaches to the question of the expansion of Japan's national armaments, that we proceed to summarize the programme set forth in the Budget now lying before the House of Representatives.

The First-period programme of military expansion is divided into five headings, namely, construction of forts; building and initiatory equipment of barracks; manufacture of arms; development of arsenals, and extraordinary constructions. But in the Second-period programme, as shown in the draft Budget for next fiscal year, the two last headings are struck out, and only the three first appear.

The "forts-construction" item in the First-period programme comprised the building of forts in the Strait of Naruto, at Kure, in the Aki-Iyo Strait, at Sasebo, and also an appropriation for armament and ammunition. In the Second-period programme, Tsushima, Nagasaki, Maizuru, and Hakodate are to be fortified, and an appropriation for armament and ammunition also included.

The construction of the above forts is spread over 6 years as follows:—

Fiscal year.	First Period.	Second Period.	Totals.
Yen.	Yen.	Yen.	Yen.
29th (1896-7)	1,020,000	—	1,020,000
30th (1897-8)	2,200,000	1,200,000	3,500,000
31st (1898-9)	2,400,000	1,200,000	3,700,000
32nd (1899-1900)	2,700,000	1,300,000	4,000,000
33rd (1900-1)	2,700,000	1,300,000	4,100,000
34th (1901-2)	2,700,000	1,200,000	4,000,000

Total ... 14,071,893 6,460,520 20,532,414
The above sums are all in round numbers.

The outlay on account of the building and initiatory equipment of barracks is spread over 8 years, as follows:—

Fiscal Year.	First Period.	Second Period.	Totals.
Yen.	Yen.	Yen.	Yen.
29th (1896-7)	12,900,000	—	12,900,000
30th (1897-8)	2,700,000	8,300,000	11,000,000
31st (1898-9)	1,400,000	3,800,000	5,200,000
32nd (1899-1900)	240,000	2,200,000	2,440,000
33rd (1900-1)	—	2,100,000	2,100,000
34th (1901-2)	—	1,160,000	1,160,000
35th (1902-3)	—	990,000	990,000
36th (1903-4)	—	570,000	570,000

Totals..... 17,342,070 19,363,736 36,705,817
The outlay on account of manufacturing arms is spread over 7 years, as follows:—

Fiscal Year.	First Period.	Second Period.	Totals.
Yen.	Yen.	Yen.	Yen.
29th (1896-7)	—	—	1,500,000
30th (1897-8)	1,500,000	1,600,000	3,900,000
31st (1898-9)	2,300,000	1,600,000	3,900,000
32nd (1899-1900)	2,300,000	1,600,000	3,900,000
33rd (1900-1)	2,300,000	1,600,000	1,600,000
34th (1901-2)	—	1,600,000	1,600,000
35th (1902-3)	—	1,600,000	1,600,000

Totals..... 8,486,766 9,854,538 18,341,305

The expenditure for developing arsenals and for special constructions during the First-period is 3,428,679 *yen*, so that the aggregate for that period becomes 43,329,408 *yen*. With regard to the Second-period, the expenditures shown above aggregate 35,678,805 *yen*, and to this must be added a sum of 2,679,790 *yen*, included in special account, for the development of arsenals, the total for the Second-period thus becoming 38,358,595 *yen*, and the aggregate for the two periods, 81,688,003 *yen*. It appears, further, that by April 1st, 1905, the Army will have been raised to a strength of 12 Divisions, in addition to the Guards; extensive works of fortification will have been completed, and full barrack accommodation will have been provided.

Turning now to the Navy, it will be remembered that the appropriations made for the First Period in the last session of the Diet, aggregated 94,979,685 *yen*. The Budget now before the House of Representatives puts the Second-period Expansion fund at no less than 118,324,718 *yen*, of which a sum of 5,338,920 *yen* is on account

of changing the designs of two cruisers belonging to the vessels in the First-period scheme, already in course of construction. The Navy Expansion Fund is divided into the three headings of shipbuilding, armament, and erection of buildings. In the programmes for the two periods, the funds are distributed as follows:—

	First-period Programme.	Second-period Programme.	Totals.
Yen.	Yen.	Yen.	Yen.
Ship-building.....	47,154,576	78,893,199	126,047,075
Armament.....	33,175,162	33,176,319	66,351,481
Erection of buildings.....	14,073,946	6,254,090	20,328,036

Totals 94,979,685 118,324,718 213,304,403

The Ship-building and Armament programmes for the Second-period are specified as follows:—

SHIP-BUILDING.	
Yen.	Between 30th and 38th fiscal years
Building of War-vessels.....	78,890,000 A.D. 1897-1906.
Building of Torpedo boats.....	7,100,000 Between 31st and 35th " A.D. 1898-1903.
Building of Miscellaneous vessels.....	1,100,000 Between 30th and 34th " A.D. 1897-1900.
Superintending expenses and workshop expenses.....	500,000 Between 30th and 35th " A.D. 1897-1903.

A sum of some 100,000 *yen* is appropriated for Dock-yard expenses at the Admiralties.

ARMAMENT.	
Yen.	Between 30th and 38th fiscal years
Armament for War-vessels.....	27,000,000 A.D. 1897-1906.
Armament for Torpedo-boats.....	3,000,000 Between 31st and 35th " A.D. 1898-1903.
Arms for Torpedo corps.....	900,000 Between 30th and 31st " A.D. 1897-1899.
Arms making at Admiralties' Reserve.....	550,000 Between 30th and 31st " A.D. 1897-1899.
Purchase of Guns.....	1,400,000 Between 32nd and 34th " A.D. 1899-1901.
Superintending and workshop expenses.....	300,000 Between 30th and 35th " A.D. 1897-1903.

ERECTION OF BUILDINGS.	
Yen.	Between 30th and 38th fiscal years
Maizuru Admiralty.....	2,000,000 A.D. 1897-1906.

Buildings at other Admiralties already established	
Yen.	Between 30th and 38th fiscal years
Buildings for Torpedo Corps.....	500,000 " 30th and 31st " A.D. 1897-1900.
Equipment of Maizuru Admiralty.....	300,000 " 32nd and 36th " A.D. 1901-1904.
Equipment of Torpedo Corps Buildings.....	700,000 " 30th and 35th " A.D. 1897-1903.
New or additional Buildings for Naval Institutions, Watch-towers, &c.....	240,000 " 30th and 38th " A.D. 1897-1906.

The appropriations for the respective years are tabulated as follows:—

Fiscal year.	First-period Programme.	Second-period Programme.	Totals.
Yen.	Yen.	Yen.	Yen.
29th (1896-7)	22,000,000	—	22,000,000
30th (1897-8)	36,000,000	24,000,000	60,000,000
31st (1898-9)	22,000,000	26,000,000	48,000,000
32nd (1899-1900)	7,800,000	26,000,000	33,800,000
33rd (1900-1)	2,000,000	18,000,000	20,800,000
34th (1901-2)	1,000,000	14,000,000	15,800,000
35th (1902-3)	1,000,000	4,100,000	5,150,000
36th (1903-4)	—	2,400,000	2,400,000
37th (1904-5)	—	530,000	530,000
38th (1905-6)	—	72,000	72,000

Thus by March 31st, 1906, the Japanese Navy will be increased, according to the two programmes, to a strength of 200,000 tons displacement.

It further appears, by adding the appropriations for the two periods, that the country is to spend a total of 295 million *yen*, approximately on the expansion of her armaments, and that the increased current expenses of maintenance incidental to the expansion, will amount to 21,623,488 *yen*, of which 13,822,669 *yen* will be required for the army and 8,800,819 *yen* for the Navy. As to the source whence the money is to be obtained, it is to be noted that out of the total Indemnity of 345 million *yen*, 79 millions were taken to cover war expenditures, so that only 266 millions remained available for purposes of Military and Naval Expansion. We see here at once a deficit of 29 million *yen*, to which must be added the supplementary fund of 6½ million *yen* appearing in the Formosa Budget for next fiscal year. Moreover, there are extraordinary expenditures aggregating 70½ million *yen* to be met during the next ten years, so that 106 millions have to be provided over and above the Indemnity. Doubtless the idea is to cover these outlays by means of the Public Undertakings Loan of 135 million *yen*, which will produce 133½ millions net.

DEATH OF THE EMPRESS DOWAGER.

The *Official Gazette* of the 11th instant contained the following:—

"From the forenoon of the 8th instant Her Majesty the Empress Dowager, who had for some time been suffering from cold, developed grave symptoms. Her Majesty's fever rose to 40° C., her pulse to 114, and her respirations to 30. There was pain in the thorax, and acute inflammation of the lungs was diagnosed. There has not been any improvement in the Imperial patient's condition."

An extra of the *Hochi Shimbun*, published on the evening of the 11th, said:—"It appears that Her Majesty had been suffering from cold since the close of last year. There was at one time a slight improvement, but a relapse occurred, and from the 4th instant the malady took the form of inflammation of the lungs. Doctors Ikeda, Hashimoto, Iwasa, Miura, and Baelz were in attendance night and day. Her Majesty's exhaustion is so great that she is unable to take any nourishment except small quantities of ice and milk."

From the evening of the 10th instant, the Princes and Princesses of the Blood, Ministers of State, Privy Counsellors, and other distinguished personages flocked to the Aoyama Palace to inquire for the illustrious sufferer, and Their Imperial Majesties the Emperor and Empress visited the Palace at 9 a.m. on the 11th.

Various official functions of a social character were postponed on the 11th instant in consequence of Her Majesty's illness, and from the morning of that day a fatal termination was anticipated at any moment by the physicians in attendance.

At 6 p.m. Her Majesty died.

Her Majesty belonged to the Fujiwara Family, being the sixth daughter of His Highness Prince Kujo Naotada. Born on Jan. 23rd, 1834, she became the Consort of His Imperial Majesty the late Emperor Komei, father of the present Emperor, on the 15th of December, 1849, and was declared Empress Dowager on the 18th of March, 1868. Her Majesty possessed the First Class of the Imperial Order of the Sacred Jewel. In accordance with the custom of widows in Japan, her share in public life has been small during the past twenty-eight years, but her name has been associated with many deeds of charity, and, like the present Empress, she may be said to have devoted her life to doing good.

Up to last evening the sad event had not been officially announced, and it is possible that for reasons of Court etiquette some delay in publishing the fact may be made. The Court mourning will probably be for a month, and during a week all public amusements will be suspended in the capital.

The two Houses of the Diet have risen for a week in consequence of the death of the Empress Dowager.

It will be regarded by many as a singular coincidence that the deceased lady was just on the eve of setting out for Kyoto, to take part in the ceremonies connected with the thirtieth anniversary of her late consort, the Emperor Komei, who died on January 30th, 1867. Her Majesty was to have travelled in advance of the Emperor and Empress, breaking the journey at two places *en route*, Okitsu and Nagoya, and reaching Kyoto on the third day.

An idea seems to prevail that Her Majesty's remains will be conveyed to Kyoto for interment. But we believe that Gokoku-ji, in the Koishikawa district of Tokyo, has been officially recognised as the Imperial Mausoleum. Their Imperial Highness the late Princes Arisugawa and Kitashirakawa were buried there, as was also the baby Prince, Mitsu-no-Miya, who died in August, 1894. Still, the old custom,

may be observed of interring Her Majesty in the Kyoto cemetery, where the remains of her Imperial consort lie.

At a very early hour on the 12th instant, an intimation of Her Majesty's decease was sent to the Foreign Legations in Tokyo from the Imperial Household Department, but the public official notice was not issued until about 5 o'clock in the afternoon of that day, when an extra of the *Official Gazette* appeared containing this very brief announcement:—

Her Imperial Majesty the Empress Dowager died at 6 p.m. yesterday, the 11th inst.

This being the first incident of its kind since the inauguration of the *Meiji* era, no precedent has been established, and, pending the issue of notice from the Imperial Household Department, it is impossible to say what the period of Court mourning will be. But that there will be a week of what is called *haichō*—that is to say, cessation of all forms of public amusement and Imperial abstention from Administrative duties—may be taken for granted. This interval of 7 days counts, we believe, from the hour of death as officially announced, and will therefore terminate at 6 p.m. on the 18th instant.

Many people seem disposed to believe that although Her Majesty's death is announced to have taken place at 6 o'clock on the evening of the 11th instant, it really occurred on the morning of that day. Such is not the case. From the morning of the 11th the case was pronounced by Her Majesty's medical attendants to be entirely hopeless, and the fact having been intimated to the Imperial Household, notices were immediately sent out postponing certain social entertainments for which invitations had been issued. But the patient's life was preserved by the aid of restoratives until the evening, and the hour stated in our columns on the morning of the 12th was the actual time of demise.

The *Official Gazette* of the 13th instant contains the following:—

With reference to the decease of Her Imperial Majesty the Empress Dowager, there will be public mourning for a period of thirty days, commencing from the 12th instant.

Professional singers, actors, and musicians will desist from the practice of their callings for fifteen days. In the event of the bier's being carried out or the interment's taking place subsequently to the expiration of the above fifteen days, they will further abstain from the practice of their callings on the day of the carrying out and the day of interment.

All other persons (*i.e.* non-professionals) will abstain from the above pastimes during the space of thirty days.

This is followed by a Notification of the Household Department:—

With reference to the decease of Her Imperial Majesty the Empress Dowager, the cessation of all public functions (*haichō*), is hereby ordered for a space of five days, commencing from the 12th instant.

Her Imperial Majesty having died on the 11th instant, the Court Mourning will be for one year, as follows:—

Total period, from the 11th of January, 1897, to the 10th of January, 1898; divided as follows:—

First Period	25 days.
Second Period	25 days.
Third Period	315 days.

Exactly what will be the modern interpretation of the term *haichō*, which we have here translated "cessation of all public functions," there is difficulty in ascertaining. The Diet, of course, is not sitting, and all the administrative offices are closed, but it appears to be uncertain whether, or to what extent, judicial affairs will be affected. The *Mainichi Shimbun* understands that on the day of the funeral Courts of Law will not pass any criminal sentences, and all criminal punishments will be suspended, and our contemporary thinks also that an amnesty may be proclaimed. The officials of the Department of Justice are said to be investigating these questions at present. In former times the proclamation of *haichō* would certainly have involved the commutation of capital sentences, and would otherwise have influenced the course of justice, but what precedent will now be established, we are unable to say.

Concerning the place of interment, we read in the vernacular press that Gokoku-ji, in Tokyo, was originally contemplated, but, after maturer consideration, it seems probable that the remains will be carried to Senyō-ji in Kyoto, where the Emperor Komei is buried. If that be so, Their Imperial Majesties, the Emperor and Empress, will accompany the bier to Kyoto, and the Imperial train will include the Minister President of State, the Ministers of State, the President and Members of the Privy Council, the Court Counsellors, and the Minister, Vice-Minister, and Secretaries of the Imperial Household Department. How long Their Imperial Majesties will remain in Kyoto has not yet been determined, but the Cabinet Ministers will, of course, return to Tokyo immediately on the conclusion of the funeral ceremony, as the Diet will then be in session.

The date of the funeral has evidently not been fixed yet, and that it may not take place before the 27th is plain from the Notification directing that, should the bier be carried out or the interment made subsequently to the period of fifteen days' rest prescribed for professional actors, musicians, and so forth, the day of the carrying out and the day of interment shall be similarly observed.

The cost of the funeral, according to the *Fomiori Shimbun*, is expected to be from three hundred thousand to five hundred thousand *yen*. The sum will be included in a supplementary budget for the current fiscal year, and the Diet, though not now in session, will be specially summoned to give its consent.

It is now expected that the funeral of the Empress Dowager will take place early in February. According to the programme arranged before Her Majesty's decease, the Emperor and Empress were to proceed to Kyoto at the end of the present month, in order to be present at the ceremonial connected with the thirtieth anniversary of the death of the Emperor Komei. That intention will be carried out, and as Their Majesties will leave Tokyo about the 28th instant, it is probable that the remains of the Empress Dowager will be carried to Kyoto at the same time, in which event the obsequies would be performed after the anniversary ceremony, that is to say, early in February. There will, of course, be a ceremony in Tokyo, also. The present programme, we understand, is that the cortège will start from the Aoyama Parade Ground on the 27th or 28th instant.

It was originally supposed that all the Ministers of State would accompany the remains of the Empress Dowager to Kyoto, but in view of the fact that the Diet will resume its sittings in a few days, and that the presence of the Ministers in Tokyo will then be a necessity, the idea now is said to be that the Minister President will alone go to Kyoto as representative of the Cabinet, and that the Ministers of War and the Navy will also attend the obsequies, the other members of the Cabinet remaining in the capital.

The *Tokyo Asahi* says that there is a strong feeling with reference to the appropriation for the funeral expenses of the Empress Dowager. The members of the Diet are said to think that the most becoming course would be that the nation should offer the necessary funds to the Throne, instead of waiting until a Budget is presented by the Government. But the Constitution does not empower the Diet to introduce any Bill granting supplies, or initiate any financial measure. The only apparent escape from the dilemma is that the Lower House should make a Representation to the Government on the subject, and it is expected that such will be the plan adopted.

The *Official Gazette* publishes a Notification of the Cabinet that, for the purpose of paying respect to the memory of the Empress Dowager, the national flag, whenever flown, shall be surmounted by a strip of black cloth, of the same length as the flag during the first fifteen days after the decease, and of half the flag's length during the ensuing fifteen days.

THE BUDGET.

For greater convenience of reference we give here the principal items of difference between the Budget just placed by the Government before the House of Representatives and that for the current fiscal year:—

Budget for 1897-1898.	Yen.	Increase as compared with Existing Budget.	Decrease as compared with Existing Budget.
Income tax	1,905,606	471,437	—
Tax on <i>sake</i>	20,893,852	11,415,985	—
Tax on tobacco	2,234,146	—	716,180
Tax on ships and boats	10	—	272,845
Business tax	5,874,186	5,874,168	—
Customs duties	6,626,829	460,100	—
Tax on confectionery	—	—	635,003
Tax on vehicles	—	—	799,798
Stamp receipts	7,525,516	—	1,323,920
Tobacco monopoly	859,698	859,698	—
Receipts from forests	1,359,773	434,585	—
Post and telegraph receipts	12,132,137	2,085,046	—
Railway receipts	5,425,773	1,402,169	—
Interest	—	—	3,115,750
Government loans	59,280,600	50,906,100	—
Carried over from previous account	10,573,783	—	6,903,549
Appropriation from the indemnity	44,410,177	4,316,788	—
Extraordinary loan fund	—	—	16,602,858
Total Increase	—	49,288,981	—

From the above table we have omitted differences that are less than 100,000 yen, as well as fractional amounts. Hence the figures, when added and subtracted, do not tally exactly with the total increase as shown in the Budget. The same remark applies to the following items of Ordinary and Extraordinary Expenditure, except that, in consideration of the comparative smallness of the various figures, we have included all amounts that do not fall short of 100,000 yen.

ORDINARY AND EXTRAORDINARY EXPENDITURES.			
	Yen.	Increase over 1896-7.	Decrease from 1896-7.
Foreign Office:—			
Legations & Consulates	1,328,418	372,555	—
Total increase	—	395,991	—
Home Office:—			
Fu and Ken	4,894,330	176,983	—
Tonegawa repair works	294,576	118,236	—
Kisogawa repair works	509,701	154,958	—
Yodogawa repair works	3,891,300	2,890,000	—
Shinanogawa repair works	200,000	—	100,000
Chikugogawa repair works	330,000	180,000	—
Rewards	166,093	166,093	—
Kobe Pier expansion	—	—	161,468
Total increase	3,557,108	—	—
Department of Finance:—			
National debt service	29,710,378	—	448,933
Rewards and pensions	3,495,404	135,011	—
Tax collection	2,326,120	344,172	—
Tobacco monopoly	522,454	522,454	—
Reserve fund	3,000,000	1,000,000	—
Subsidies (industrial banks and railways)	2,840,630	2,290,502	—
Tobacco monopoly offices and storehouses	3,460,167	2,225,207	—
Tobacco monopoly fund	4,000,000	4,000,000	—
Total Increase	10,154,715	—	—
Department of War:—			
Military expenses:—			
Salaries and allowances	7,224,686	1,216,065	—
Miscellaneous allowances	855,659	131,638	—
Provisions and fodder	5,634,768	752,228	—
Clothing	3,444,110	305,403	—
Arms and ammunition	2,135,009	569,843	—
Horses	1,543,776	172,072	—
Review expenses	771,821	383,811	—
Office expenses	622,563	124,049	—
Barrack necessities	534,139	117,956	—
Repairs	418,123	142,885	—
Miscellaneous salaries	981,090	165,598	—
Gendarmes	2,702,691	810,079	—
Construction of forts	4,603,237	2,489,668	—

New buildings and initiatory equipment	11,079,004	—	2,027,480
Making of arms	3,971,000	2,471,000	—
Expansion of arsenals	1,294,372	—	360,361
Temporary military communications and transport	1,371,506	1,371,506	—
Formosan gendarmes; building and initiatory equipment	212,438	212,438	—
Extraordinary war expenses	6,802,073	—	9,017,488
Total decrease	—	137,199	—
Department of the Navy:—			
Naval expenses	9,715,203	2,026,008	—
Shipbuilding fund	4,973,400	—	1,477,539
Public works fund	316,734	—	201,337
Naval expansion fund	61,860,965	—	39,668,255
Shimosa gun-powder factory erection	179,070	179,070	—
Armament of the <i>Kaiyo</i>	126,791	126,791	—
Kure Admiralty Dockyard repairs	120,000	120,000	—
Total increase	—	39,654,786	—
Department of Education:—			
Educational institutions and museum	1,166,656	186,916	—
Common schools subsidy	345,298	248,428	—
Total Increase	—	751,593	—
Department of Agriculture and Commerce:—			
Dendrological offices	742,113	180,654	—
Iron foundry initiatory outlay	1,741,621	1,161,859	—
Total Increase	—	39,654,786	—
Department of Communications:—			
Communication expenses	9,313,893	1,521,748	—
Navigation encouragement fund	1,720,313	1,428,265	—
Subsidies	1,733,791	460,512	—
Construction and repairs	1,388,033	—	630,437
Telephone expansion	577,373	—	1,100,590
Government railways improvement	3,000,000	—	1,500,000
Government railways materials fund	—	—	250,000
Total increase	—	65,239	—
Department of Colonization:—			
Hokkaido office	1,333,995	300,861	—
Sorachi-Asahikawa railway construction	275,130	—	628,068
Hokkaido 1st period railway construction	1,000,000	1,000,000	—
Otaru harbour reconstruction	250,000	—	250,000
Total increase	—	931,313	—
Formosan Revenue:—			
Domestic taxes	1,998,714	256,682	—
Receipts from official undertakings and property	5,452,666	1,168,303	—
Supplementary fund	6,420,330	6,420,330	—
Total increase	—	7,969,915	—
Formosan Expenditures:—			
Administration expenses	5,155,378	2,400,876	—
Communications	1,581,464	843,640	—
Medical factory	2,816,866	993,814	—
Reserve fund	300,000	300,000	—
Formosan public undertakings	4,017,794	—	675,008
Total increase	—	3,920,327	—

It will be observed that a "Supplementary Fund" is included in the Formosan Revenue. From what source the fund is to be obtained we have no definite information, but apparently it will be appropriated from the Indemnity.

Note must also be taken of the fact that, although a portion of the Public Undertakings Loan, namely 59½ million yen, in round figures, is to be floated during the year, and although 44½ million yen—omitting the Formosan fund—is to be appropriated from the Indemnity, making a total addition of 103½ million yen, the actual increase of Revenue under all headings is shown as only 49½ millions. That, however, is a mere question of comparative account. It means, not that the proceeds of the loan and of the indemnity are not available in full for purposes of expenditure, but that, as large amounts were available under the same headings in the preceding year, the difference

only between the totals are included in the comparative result. Thus, as 8½ million yen of the Public Undertakings Loan was floated in 1896-7, and 59½ millions is to be floated in 1897-8, the comparative excess is only 51 millions. Again, although 44½ million yen is to be appropriated from the Indemnity, yet since 40 millions were appropriated during the current year, the comparative increase under this heading is only 4½ millions.

With regard to the Tobacco Monopoly question, the revenue is put at 859,698 yen; the cost of collecting, at 522,454 yen; the outlay on account of store-houses and offices at 3,460,167 yen, and the capital fund at 4 million yen. Thus the expenditure in establishing the monopoly is to be 7,982,621 yen, and the revenue collected is to be 859,698 yen. Our readers are of course aware that the monopoly system is to go into operation from January 1st, 1898. On that date the Government is to purchase and store all the Japanese leaf tobacco in the country. Apparently a sum of only 4 million yen is allowed for purchasing purposes. The Government's original estimate was 8 millions, which sum would, we believe, be found insufficient by at least 2 millions. But whether we are right or wrong in that calculation, it is quite incomprehensible that 4 millions should be deemed sufficient. The average price of leaf tobacco being 8 yen per picul, the quantity purchasable with 4 million yen would be 500,000 piculs, and as a supply equal to two years' consumption is always on hand, the Government's estimate of one year's consumption must be 250,000 piculs, or 25,000,000 catties; that is to say, 28½ million lbs., approximately, allowing 15 per cent. for stripping and butting. Now the consumption in England is 52½ million lbs., from which it would appear that the Japanese Government believe the consumption in this country to be about one-half of the consumption in England. That is incredible. The estimate of outlay may, however, be based on the hypothesis that 4 million yen will suffice for purchasing purposes during the portion of the thirtieth fiscal year included in the Budget, namely, from January 1st to March 31st, 1898. In other words, the framers of the monopoly may look forward to purchasing in three months a quantity equal to one-half of the yearly consumption, or one-fourth of the stock in hand; which means that they expect to extend their buying operations over the whole year with perfect regularity. But in that case, what is to become of the tobacco that lies awaiting official convenience to be purchased? And how are holders to be discriminated? It may be that we totally miscomprehend this monopoly scheme, but, according to our lights, it is about the most impracticable conception we have ever examined.

One extraordinary point connected with the monopoly is that a sum of 3,460,167 yen is set down as the cost of establishing offices and store-houses. An appropriation of 1,234,960 yen appeared in the last Budget under the same heading. So it would seem that the offices and ware-houses are to cost 4,695,127 yen; an immense figure, it must be admitted. We had hoped that the Matsukata Cabinet would devote serious attention to this tobacco-monopoly scheme, and instead of pursuing the programme originally marked out—a programme that we have shown to be not only quite impracticable but also enormously costly—would adopt the English method of simply passing the tobacco through official ware-houses and levying a tax on it in transit. Judging from the present Budget, however, the old idea is to be adhered to. The result can not fail to be a huge and humiliating failure.

It is probable that the Budget will be withdrawn by the Government and re-submitted to the Lower House. This step, if taken, will not be for the purpose of making any amendment, but only to enable the House to comply with the law, which requires that the Budget Committee shall present its report within 15 days from the time of receiving the document.

We are not sure whether the difficulty has arisen in connection with the fact that the Diet rose for the winter recess immediately after the official opening, or in connection with the fact that a week's prorogation has been suddenly necessitated by the death of the Empress Dowager. Probably the former is the explanation. Last session, also, the Houses rose for the winter recess on the day after the official opening, but the Budget was not submitted to the Lower House until January 9th, that is to say, the day after the resumption of business. Consequently, as the session was thenceforth continuous, the Budget Committee could work uninterruptedly. This session, however, the Budget was placed in the hands of the House on Dec. 27th, and the winter recess commenced on that day. Hence, since the recess is included in the 15 days allowed by law for the completion of the Budget Committee's scrutiny, the Committee's report ought to have been presented on January 11th. But, as a matter of fact, no parliamentary function was carried on during the recess, and the Committee could not possibly have prepared its report by the 11th. Moreover, the session having been again interrupted on that day, no opportunity occurred of applying for a prolongation of the 15-days period, supposing such an application to be lawful, which point is open to dispute. Thus there appears to be only one solution of the dilemma, namely, the withdrawal of the Budget by the Government, and its re-submission on the 18th, when the Houses resume work. If that course be adopted, the Committee's report may not be presented until February 2nd, an unusually late period for commencing the discussion of this all important measure.

THE OPPOSITION AND THE MINISTER OF STATE FOR FOREIGN AFFAIRS.

The *Yomiuri Shimbun* predicts that when the Budget comes to be considered by the Budget Committee in the Lower House, strong opposition will arise with reference to the grant for the Department of Foreign Affairs. The reasons assigned by our contemporary for this action are first that, immediately after his assumption of the portfolio of Foreign Affairs, Count Okuma ordered the Japanese Representatives in Söul and Peking to return home, and has neither sent them back, nor appointed others in their places, though the Korean and Chinese capitals are the most important fields for the exercise of Japanese diplomacy; and secondly, that, instead of devoting his attention to affairs in Japan's neighbouring countries, His Excellency has occupied himself with the establishment of Legations in petty States like Siam, Brazil, Mexico, and Hawaii. If the Budget Committee adopts that attitude, we suggest that they had better appoint a sub-committee from among themselves to take charge of the Empire's foreign affairs.

POLITICAL PARTIES.

According to latest estimates, the strength of the various political bodies in the House of Representatives at present is:—

Liberals.....	98
National Unionists	27
Progressionists	96
Members Club.....	24
Liberal Club.....	6
Unionist Club	7
Reform Club.....	5
Business Men's Association	12
Unaffiliated	23

Total298

As to the general division of the above into supporters and opponents of the Government, it is extremely difficult to speak with certainty. The National Unionists, owing to their *entente* with the Liberals, have lost 7 members, the seceders forming the Unionist Club. It may,

therefore, be assumed that unless another split takes place, the remaining members of the National Unionist Party will vote with the Liberals, thus forming a solid phalanx of 125 against the Cabinet. On the other hand, the Members Club are understood to have announced their intention of supporting the Government, and in view of Count Matsukata's popularity in commercial circles, it is pretty certain that the Business Men's Association will be found on his side. On that hypothesis the Government's supporters—Progressionists, Members Club and Business Men's Association—aggregate 132. So far, the analysis is tolerably clear, but when we attempt to predict anything about the Liberal Club, the Unionist Club, and the Reform Club, we find ourselves perplexed. On the whole, however, it seems a fair assumption that two of these three bodies, namely, the Liberal Club and the Unionist Club, are more likely to vote with the Government than against it, for both being composed of seceding members, their immediate inclination will be hostile to their former colleagues. As to the Reform Club, however, we can form no opinion. It must remain an uncertain element. Assuming, finally, that 13 of the unaffiliated members vote with the Government, and 10 against it, our results are:

PRO-GOVERNMENT.

The Progressionists	96
Members Club.....	24
Liberal Club.....	6
Unionist Club	7
Business Men's Association	12
Unaffiliated	13

Total158

ANTI-GOVERNMENT.

Liberals.....	98
National Unionists	27
Unaffiliated	10

Total135

UNCERTAIN.

The Reform Club	5
-----------------------	---

But if, as many foretell, the Unionist Club, the Liberal Club, and the Reform Club all vote against the Government, then the figures stand:—

Pro-Government	145
Anti-Government	153

We do not profess to pin our faith to either estimate. The unexpected interval of 7 days that must elapse before the Diet meets again, may sensibly affect the situation by re-uniting the Liberal and Unionist Parties with their recalcitrant sections. The upshot of the matter is that no confident forecast can be formed at present, but certainly things look much better for the Government than could reasonably have been anticipated at the opening of the Diet.

AMATEUR THEATRICALS IN TOKYO.

We learn that the amateur theatricals which were to have taken place in Tokyo on the 23rd instant, have been given up, in consequence of the death of the Empress Dowager. It seems a pity that such an extreme step should have been adopted, nor can we appreciate the reason. On February the 10th the period of thirty days will come to an end during which all histrionic or musical performances by amateurs are interdicted, as a token of respect to the memory of the deceased lady. Why could not the theatricals have been postponed until the middle of February, or even until the close of that month? Had they been fixed for February the 23rd instead of January 23rd the rehearsals would not have been inconveniently curtailed, the public would not have been disappointed, and the trouble hitherto taken by the members of the Theatrical and Musical Association would not have been wasted. Probably some considerations undiscernible by outsiders influenced the decision of the Committee, but, as things stand, the total abandonment of the performance seems an extravagant measure.

EDUCATIONAL NEWS.

The principal and staff of the Ordinary High School of Shiga Prefecture have taken an extraordinary step: they have tendered their resignations *en masse*. Mr. Imai was nominated Principal of the School, in 1890, when it was in a condition of extreme decadence, the pupils on the register not greatly exceeding 100. He exerted himself to improve this state of affairs, and under his management the attendance gradually rose to over 300. But the Local Assembly failed to second the endeavours of the faculty, and, according to the *Nippon*, seemed to be even displeased at the growing prosperity of the institution. Year after year, when an appropriation for enlarging the school buildings was asked for, the Assembly rejected the demand. Last winter, when the Assembly was summoned to deliberate on the local Budget for the ensuing year, they not only struck out the item for additional buildings, but considerably reduced the vote in other directions also, notably in the salaries of teachers. So soon as the Budget, thus amended, had passed its second reading, the teachers of the School, much concerned about its welfare, forwarded a sealed letter to the Local Governor and also the Chairman of the Assembly. When the letter was read before the Assembly, the latter became considerably excited. For the signatories of the document had been betrayed into a declaration that the members lacked an adequate sense of the importance of education. The Assembly decided that the three teachers whose names the letter bore, had acted in contravention of the discipline that ought to be observed by instructors, and must be regarded as incompetent to discharge their functions. On the other hand, when the Principal of the School was informed of the result of the second stage of the deliberation on the Budget, he called on the Governor, and said that, as he was willing to pay out of his own pocket the sum of about 500 *yen*, by which it was proposed to reduce the salaries of the teachers, he trusted that the Governor would endeavour to have the appropriation for additional buildings carried through. Struck with admiration at this display of disinterestedness and public spirit on the part of the Principal, the Governor promised to exert his influence towards attaining the end so earnestly desired by Mr. Imai. Consequently, when the discussion of the Budget reached its third stage, the Governor attended the Assembly and earnestly urged the necessity of restoring the appropriation for additional buildings. The Assembly, however, declined to be persuaded, and endorsing the decision of the Committee, struck out the item. The Principal, seeing that the case was hopeless, tendered his resignation, and the whole of the staff took the same step, some in advance of the Principal, some subsequently. By the close of the year the School remained without a solitary teacher. Fathers and brothers of the school-boys and also leading men in the Prefecture have been holding conferences since that time to consider the steps that should be taken at this juncture. Possibly some excuse for the action of the Assembly may be found in the fact that Shiga Prefecture suffered severely from inundations last year, and the people's means are probably much straitened. But, even under those circumstances, the idea of cutting down the teachers' salaries must be regarded as singularly unjust, seeing that the average monthly stipend of school instructors throughout the Prefecture was only 10.644 *yen*, according to the latest statistics. It is to be noted that the recently issued Ordinance will have the effect of completely annulling the parsimonious action of the Assembly.

At the Yokohama Police Stations easy times obtain at present owing to the decrease of crime, notwithstanding the existence of some distress and the presence of winter.

Mr. Hara Zensaburo, President of the Yokohama Japanese Chamber of Commerce, proceeded to the Aoyama Palace on Wednesday with a message of condolence.

COUNT OKUMA & HIS OPPONENTS.

IF the *Chuo Shimbun* really represents the views entertained by any considerable section of the National Unionists, we are compelled to say that this country is fortunate in not having its foreign policy controlled by such a party. But, of course, the *Chuo's* utterances suffer from the absence of responsibility that so often vitiates the criticisms of the "outs." It has now fallen back upon that hackneyed device, an anonymous mouthpiece, and to render his dicta more effective, he is introduced as the "Representative of a Great European country." This diplomat's opinion is that, whereas Count OKUMA, when out of office, declared his adhesion to a strong policy, above all in connexion with Korea, his attitude since he assumed the direction of Foreign Affairs can be described only as "*sonro-shugi*," a policy of deference to Russia. By way of illustrating this accusation, it is alleged that Count OKUMA abandoned the negotiations relating to the Söul-Fusan Railway in obedience to the dictates of the Russian Minister; and it is added that further examples could be furnished did not discretion close the accuser's mouth. Discretion is a word that seems decidedly out of place in the vocabulary of such a diplomat. He has gone much too far to retain any claim to discretion, and not nearly far enough to be convincing. The *Chuo Shimbun* seems to think that an empire's foreign policy is a kind of spinning-top to be whipped into violent gyrations at the will of any Minister manipulating the toy. Heaven help the State where such views of international responsibilities are entertained! Japan's present position in Korea is the result of a long series of direct errors and indirect self-effacements. She must lie for a time on the bed that she has made for herself. Ineffectual and premature struggles could have no result except to increase her pains. Her plain course is to await events. If any elements of stability can be discovered in the situation that now exists in Söul, we are unable to discover them. Japan has certainly fallen out of the race, but there are plenty of evidences that the pace has become much too hot to suit Russia's fancy also; Korea can not remain always under the tutelage of one foreign Power, and yet be nominally independent. Japanese statesmen never contemplated that, we presume, nor were ever so chauvinistic as to imagine that their own country could be the Power. Reviewing the history of the past fifteen years, it appears to us that things in Korea have drifted, to some extent, into their ante-bellum channels. The conservatives are steadily attaching themselves to Russia's cause, whether they be welcome or unwelcome, just as they did to China's in the days of the latter's supremacy, and the Liberals are coming into the Japanese camp by an equally spontaneous process. Conserva-

tism, with all the adjuncts attaching to it in Korea, is a heavy load for any influence to support. Russia would not willingly shoulder such a burden; but we doubt whether the power of selection has not passed out of her hands. She seems to be making precisely the mistake that Japan made under similar circumstances—shrinking from a bold exercise of the strength that has come to her. Nearly all the Ministerial changes and Administrative measures in Korea since the KING took refuge in the Russian Legation, appear to have been in the direction of conservatism. We do not say that Russian influence has been exercised in that sense, but we do say that it ought to have been exercised more effectively in the opposite sense. For Russia should withhold the shelter of her flag from the Korean SOVEREIGN, or take care that it does not also shelter acts which can not make for the stability of her own sway. Diplomatic gloves have to be taken off in dealing with Korea, and if Russia was not prepared to approach the work with bared hands, her wisest plan, we venture to think, would have been to stand aloof. But events moved too fast for her, and that she feels uneasy about the rapidity of the pace is very evident, if from nothing else, at any rate from her unprecedented distribution, this winter, of the naval forces at her command in these waters. Japan, on the other hand, is heavily handicapped, first, by the weight of her failure—for she certainly has made an egregious failure in Korea—and secondly, by her exceeding unpopularity in the peninsula. As to the failure, there is no denying that, to use a homely but expressive phrase, she originally bit off more than she could swallow. The very beginning of everything was the financial problem. You cannot start a business without some investment of capital, and few businesses are capable of self-support from the outset. Korea had to be set on her feet before she could stand alone. Ten million *yen* ought to have been provided to tide her over the period of transition, with the condition that her fiscal affairs should be reformed according to a plan approved by the lender. Japan gave three millions only, and gave them in a half-hearted kind of way; attempted to pay them in paper, a paltry and ill-judged reservation; and expended, in haggling about the nature of the accommodation, strength that ought to have been devoted to securing its consequences. It was there that the Tokyo Cabinet lost its grasp upon Korean affairs, for every chapter of modern history begins and ends with the word "money." There were occasions subsequently when the situation might have been partially if not wholly saved; occasions when Japan had only to step forward boldly. But the truth is that just as she had not been financially prepared for the inception of the enterprise, so she was found politically

unready for its prosecution. Columns might be devoted to discussing this phase of the question, but, after all, the gist of the matter is that Japan had not learned to gauge her own potentialities or her rivals' tolerance. Moreover, even supposing her to have now acquired that knowledge, her statesmen will never be able to utilize it until the country's foreign policy ceases to be the tool of party politicians. As to her unpopularity in the peninsula, the seeds of it were sown long before the war commenced; sown by the truculent and over-bearing conduct of Japanese residing in, or visiting, the peninsula. That is an old story. It became matter of public knowledge years ago, and the consequences were foreseen by more than one shrewd observer. Count INOUE, first, and Count OKUMA subsequently, drew the attention of their countrymen to the fact. Diplomacy is powerless to win prestige for a nation whose units behave, when abroad, so as to forfeit respect and popularity. Probably that evil state of affairs will now be mended, if it has not already been mended. But it finds its counterpart in the conduct of Japanese politicians at home. Until these men appreciate the wretched unpatriotism of dragging their country's foreign affairs into the arena of party squabbles, we do not see how Japan can ever expect to be counted great among nations.

THE GERMAN REPRESENTATIVE AND THE SCHOOL BOYS.

IT will be seen from our Summary of the Vernacular Press that the incident of the German Representative and the two students of the *Seijo Gakko* is discussed by certain journals in terms displaying a singular lack of the sense of proportion. Indeed, the excerpts made by us do not convey a complete idea of the factitious and hysterical importance attached to the affair by leading Tokyo dailies. Enough is reproduced, however, to show that a little adroit agitation has again succeeded in betraying several newspapers into an attitude discreditable to their judgment and sanity. The School authorities, we observe with pleasure, have disavowed all idea of endorsing the lads' action. A reporter of the *Fiji Shimpö* was informed by the Principal that the first intelligence received at the School had been subsequent to the boys' appeal to the police, for the thing happened during the winter recess and the lads were not boarders; that he had warned them to keep quiet, and not attempt to seek redress on their own account, especially as they had received no manner of hurt; and that he wished it to be clearly understood that the School was not encouraging or backing the students in any way. To this may be added the fact that the police consider the affair altogether too trivial

to warrant official interference. For our own part, we may say that the story of a swollen face having resulted from the assault is a fiction. There was no assault. The whip was not used as a whip. It was merely laid against the lad's cheek, and no physical hurt could have resulted. It would certainly be more prudent to avoid all such acts, and we can not doubt that the German Minister himself has made the *amende* that no gentleman finds irksome when he has been guilty of technically insulting another. But the whole matter would be dismissed in a Western country as a paltry incident, and to make it a ground of diplomatic representation from Government to Government, as the *Tokyo Shimbun* suggests, would be delirium. A school-boy now labours under the impression that his dignity has suffered. By all means let his feelings be assuaged, but let the Tokyo press remember that it also has some dignity to support, and that its present conduct constitutes a veritable humiliation to Japanese Journalism.

In connection with this incident we take the opportunity of referring to a fact that ought to be brought as much as possible to public notice, namely, the very great difficulty of avoiding carriage accidents in Tokyo. No man uses his whip wantonly when driving through the streets of a city; but if his choice lies between, on the one hand, getting along without accident by the help of his whip, and on the other, maiming or possibly killing, way-farers, the more merciful he is the less he can hesitate. In Tokyo there are no side-walks. Children of all ages and sizes are permitted to wander across the streets without any supervision, and the marvel is that serious accidents are not frequent. They would be perpetual if carriages were driven after the manner of drivers in London, Paris, or Berlin, where every foot-passenger is supposed to look out for himself or to be protected by the police. Here the only factor that saves the situation is the *betto*, who generally runs beside or ahead of a carriage, shouting warnings to the people, and often lifting a child bodily out of the way. But the *betto* can not be always running and shouting, and it may not be regarded as other than a wholesome precaution that the driver should show his whip occasionally for the purpose of educating a little alertness. We dare say that many a child has thus received a lesson to which it owed subsequent immunity from serious accident. Our readers will not, we trust, misconstrue us as desiring to defend or advocate any avoidable recourse to violence. We have seen foreign drivers make a brutal use of their whips in China and Japan, and we have seen Japanese and Chinese drivers do the same. Such questions are outside the discussion. Our point is that the motive of employing a

whip, now and then, to rouse children to the necessity of being on their guard against serious mishaps, is generally merciful. It finds an exact parallel in the behaviour of the Japanese mother who slaps the head of a little tot that has fallen off its pattens, though the small feet are already aching painfully from the mishap. We do most earnestly wish that instead of throwing so much fervour into the ventilation of the pettiest trifles, influential journals like the *Nichi Nichi* and the *Fiji* could be induced to rouse the public to a sense of the cruelties perpetrated daily upon dumb animals in Tokyo and other Japanese cities. Such things used to be a disgrace to Occidental civilization until societies were organized to prosecute offenders against the canons of humanity, but in Japan it seems impossible to enlist active sympathy.

AN APPEAL.

The disastrous conflagration that destroyed the town of Yoshino, in the Tsukui District of Kanagawa Prefecture, has been productive of cruel distress. Many of the inhabitants lost everything they possessed, and are now obliged to rely on charity for the common necessities of life. The Japanese Ladies' Benevolent Society of Yokohama have taken up the matter, and we are asked to say that any assistance rendered by the foreign community will be most gratefully received. Contributions may be sent to the Governor of Kanagawa, or to this office, should the latter course be more convenient. The names of the ladies forming the relief Committee are:—

Mrs. Yasu Hara.
Mrs. Tama Watanabe.
Mrs. Yei Otani.
Mrs. Kei Sonoda.

Mrs. Kimi Nakano.
Mrs. Michi Umeda.
Mrs. Yasu Minoda.

THE SPINNERS' TROUBLE.

The quarrel between the Kanagafuchi Spinning Mill and the 46 mills in the Kei-Han districts does not show any signs of being settled. At the last meeting held in the beginning of the year by the boycotters and those that espouse their cause, it was decided that the attitude of the Mitsui Bank against the boycotters should be resented, and that, as a step in that direction, goods must not be purchased from any of the Mitsui stores. It is reported that the boycotters are determined to appropriate 200,000 yen for the purpose of persecuting the offending mill. The latter also is resolved to stand to its colours. At the general half-yearly meeting of shareholders, held a day or two ago, the shareholders advised the Directors to maintain the dispute vigorously. The boycotters have succeeded in decoying some 170 operatives from the Hyogo Mill by sending agents among them. Most of the girls thus tempted away from Hyogo are at the Nippon Spinning Mill in Osaka, receiving the same wages that they used to have at the Hyogo Mill, without doing any work at all. Those, however, that prefer not to remain idle, have taken their places at the spindles in the Nippon Mill, and, being paid for their work, are getting double wages. The boycotters themselves seem to have been guilty of the very practice that they denounced on the part of the Kanagafuchi Mill, for many of the operatives seduced away from Hyogo by them had served in so many mills previously that it is almost impossible to decide to which mill they originally belonged. The course finally adopted is to send them to the mills where they were last employed before going to Hyogo.

EXHIBITION OF "GENRE" PICTURES IN TOKYO.

The Fine Arts Educational Society (*Bijutsu Shukai-kai*) announces an exhibition of *Ukiyo-e* to be held from the 18th to the 26th instant, in the galleries of the Japan Fine Arts Society, Ueno Park, Tokyo. The term *Ukiyo-e*, as many of our readers doubtless know, is applied to pictures of the popular school, and includes scenes from the everyday life of Japan, as distinguished from the subjects usually chosen by the classical academies. To this school belong the chromoxylographs which have won such a high place of late years in Occidental estimation, and which now command prices altogether extravagant in comparison with their original cost, or with the figures at which they were obtainable a dozen years ago. We do not think that any profusion of either paintings or woodcuts in the *Ukiyo-e* style remain in Japan. The vast majority have found their way into foreign collections. Still the promised exhibition may furnish an opportunity to see some fine specimens. We observe that Mr. Kobayashi Banshichi is the chief exhibitor. Mr. Kobayashi is a dealer who has made a specialty of this particular branch of Japanese art. Many choice examples have passed through his hands, and, it must be confessed, that many examples not choice in any respect except in the excellence of their forgery, have emerged from his atelier. He is probably the chief promoter of the exhibition. Most displays of the kind are disfigured by some such feature in Japan. But, perhaps, the criticism is applicable everywhere.

TERRIBLE ACCIDENT IN SHANGHAI.

We take the following from the *North-China Daily News*:—

On Friday, New Year's Day, a shocking fatality occurred at Club Chambers, just off the Bund. Shortly after tiffin, and whilst a good many members were in the Shanghai Club, piercing screams drew attention to a room in Club Chambers which overlooks the southern side of the Club. The police and a number of neighbours at once went to Room No. 10, where a woman was found terribly burned, and lying on the verandah in a hopeless state. It was ascertained that she was a young married woman, living with her husband, Mr. William Brumfield. There was no one else in the room at the time, and it was presumed that the unfortunate woman, who was wearing a light wrapper, had by some means set her clothing on fire, either while smoking a cigarette, or by the fire in the room. As quickly as possible she was removed to the General Hospital, where she died later in the afternoon. It is alleged that, when admitted, in addition to the burns, she was suffering from a broken arm, which she had sustained some days before, and although the Police reported the case to the British Consular authorities as possibly a fit one for investigation by the Coroner, no inquest was held, and the funeral took place on Saturday afternoon.

An eye-witness who was in an opposite room at the Club at the time, says that he and his friend were first attracted by the policeman's whistle outside. They then saw smoke on the verandah, and what they thought at first was a coolie throwing some burning material over the verandah. Then the wind blew the smoke aside, and they saw that it was a foreign woman on fire. She seemed to be trying to get hold of the rail, as if to climb over it, when suddenly she sank down on the verandah. When they reached her room, they had to burst open the door, which was locked. Dr. Taylor Grant, the Health Officer, was present, and she was carried into the room, and her burning clothes rapidly torn off her. Oil was poured over her, but it was too late, for the poor woman, though still convulsively crying, was already beyond hope. The whole of the upper part of her body and her face were so burnt and black that her features were unrecognisable, and her hands were contracted and blackened. It was, we are told, a simply awful sight; and she was only 29 years old. It is stated that she was by birth an Australian.

It is learnt from a gentleman who saw her two hours before the accident that she told him that she had had morphia injected to ease the pain in her broken arm, and that it had made her so sleepy that she intended to lie down for an hour or

two before entertaining some friends whom she expected to tea. This gentleman is certain that she was at that time perfectly mistress of her actions.

We have been courteously favoured by a gentleman who was present with the following record of what he personally saw of this dreadful tragedy:—

Having had a small private tiffin party in the private dining-room of the Club, we were seated round the fire chatting when, about 3, or a quarter past, some of the Club "boys" ran into the room and called out, "Fire! Fire! Dining-room." We at once rushed into the large dining-room and then saw a fire on the verandah of Club Chambers opposite. Some one was seen in flames on the verandah. Looking up I saw a human being leaning on the verandah rail destitute of all clothing except stockings over whom natives were throwing buckets of water. Immediately a rush was made downstairs, and Dr. Grant, who was with our party, at once gave orders for oil and wool and hurried to the rooms where the accident had taken place. Up to this moment no one knew who it was nor to what nationality or sex the person belonged. Our party reached the room to find that Captain Tisdall had given the alarm of fire, and that boys and coolies had broken into the room and put the fire out, and had then seen the woman on the verandah and at once threw water over her. By the time our party reached the room Mrs. Brumfield had fallen prostrate and almost senseless on the verandah floor. Not more than three or four minutes had elapsed between the fire being seen from the Club, and her being carried in by Messrs. Box, Swan, and Edkins, and placed before the fire, where Dr. Grant at once began treating her with oil and wool. The poor woman was almost if not quite unconscious, and said "Ice! Ice!" gaspingly. Brandy was given her and after a time she was asked if she felt less pain, when she replied "I feel very uncomfortable." Her husband now appeared on the scene. The ambulance was sent for and she was taken to the Hospital and there attended to by Dr. Grant until her own medical attendant, Dr. Lalcaza, who had been sent for, arrived.

Mrs. Brumfield had thrown off her dress and corset and taken an afternoon sleep. She had then got up to dress and thrown on a light wrapper with a long train and this train had evidently caught fire as she passed the fire-place where a large fire was burning. She apparently lost her head when she found herself on fire and rushed to the door screaming, but her left hand being in splints she was unable to open the door with one hand, and then rushed to the window which she broke and got through on to the verandah. Captain Tisdall had heard screams and then smelt fire and had given the alarm to the servants who opened the door. The natives, as far as their knowledge went, showed great presence of mind.

The Club was almost empty at the time, and the Club boys gave the alarm to those in the private dining-room who were those who first got on the scene after the native servants, and by them everything that could be done was done for the victim under the prompt and cool and efficient direction of Dr. Grant.

Our informant adds that there was no sign in the room of anyone having been drinking there, and that when Dr. Grant asked for brandy to give Mrs. Brumfield, her husband, whom his wife had recognised, had to get a fresh bottle and open it. We learn that before her death at the hospital Mrs. Brumfield was conscious, and said to her husband:—"Will, you'll have a vein opened in my arm before you bury me, to make sure that I'm dead, won't you."

It appears that the burial took place within 24 hours, though no apparent reason existed for haste. No inquest was held, but subsequently the Consular officials seem to have recognised that such an omission was improper, for they had the body exhumed and viewed by a coroner's jury on the 5th instant, and the inquest was to proceed at the British Consulate General from the 6th. The failure to order an inquest at once is referred to the facts that the circumstances of the case had not been fully appreciated when sanction was given for the burial, and that the machinery of the Consulate-General was not in thorough gear, owing to the absence of the late Assistant-Judge and Coroner, and the non-arrival of his successor. It appears that there are suspicious features, but as to their nature the local press is silent.

CHINESE NEWS.

We observe, with regret, that there is no truth in the recently circulated rumour of Mr. Kinder's appointment as Engineer-in-chief of the Lukouchai-Hankow Railway, of which Taotai Sheng is director. The statement seems to have had its origin in the fact that Mr. Kinder has been instructed to proceed with a small extension of the Lukouchai line, a work arranged and sanctioned some months ago but temporarily delayed.

As an exceptional evidence of foresight and organization, it is to be noted that no transaction of import or export was interrupted this year by the first fall of snow and the freezing of the river at Tientsin, events which occurred on December 18th. The snow was preluded by a severe storm on the 16th. Chinese carts loaded with hay and straw were blown bodily off the road, and were to be seen overturned on the ice bordering the track, and the ice on the great plain outside the foreign settlement was broken up and thrown into fantastic hummocks.

His Excellency Sir Chih Chen (Lo Feng-luh), the new Chinese Minister to London, published the following address to the community of Tientsin on leaving that place:—

Gentlemen, in taking departure from a community among whom I have resided for the last eighteen years, I find it impossible to conceal my true feelings and to refrain from expressing my highest esteem and appreciation of their best qualities as fellow-residents, colleagues, and friends.

Their broad-mindedness and true Confucianism (if I might be allowed to call it so, for it is the highest honour I can bestow upon my most worthy friends) surpass my power of expression. I felt highly flattered when I was freely elected, without any hint or suggestion on my part, as a Member of the Tientsin Municipal Library and of the Literary and Debating Society, from which institutions I derived a regular supply of mental food, and to which I am indebted for my knowledge of foreign politics and European literature.

As colleagues, in spite of the conflicts of Governments' interests and official duties, I am glad to say that I have always enjoyed perfect harmony with them, in a few exceptional cases we had some slight differences in the commencement, but after thorough examination of truth best understanding arrived at in the end.

When I was strongly but unjustly attacked by the so-called censors, consolatory letters poured into Pekin from Tientsin foreign friends. They had, I need not say, the most soothing and encouraging effects upon my mind. Friends in need are friends indeed! On the return from our World-tour, under my former distinguished Chief, the perusal of several editorials in the *Peking and Tientsin Times* has brought to the rims of my eyes my most grateful tears. I need not mention that the realization of their wishes has doubled my gratitude, which I can only repay by serving my august master most faithfully and loyalty for the benefits of the countries concerned.

Gentlemen, I hope that the Tientsin Community will continue to prosper, and when I return from my mission I trust that I may find myself a more useful member to them than I have hitherto been. Adieu!

MILITARY EXECUTION IN FORMOSA.

We take the following from the *Kobe Chronicle*:—

Haruhara Ko, aged 26, a sergeant-major acting as an Ensign with the 6th company of the 1st Infantry Regiment in Formosa, was executed at 9 a.m. on the 24th ult., on the parade ground outside of the Eastern gate of Taipei, Formosa. He was shot according to the Military Penal Code, for incendiarism and premeditated murder. The *Yushin* gives the following particulars of his crime. While the 6th Company was stationed at Shihko, Taipei prefecture, the prisoner visited the house of an inhabitant of the place, named Den Sei, about 7 p.m. on the 26th June last, and wanted to sleep with the Chinaman's wife offering money, but was prevented by the husband, with the assistance of neighbours. The prisoner determined to murder Den Sei and his neighbours and burn their houses, under the easily-trumped-up pretence that they were rebels. Accordingly, returning to his barracks, the prisoner called out for service a sergeant and fourteen privates under his command, and informed them that a number of suspicious men were hiding in some houses in the village and commanded them to search such houses. The soldiers thereupon surrounded the houses of Den Sei and his neighbours. Den Sei and other occupants of the houses running away, the prisoner commanded his men to shoot every one who ran away. Den Sei and three of his neighbours, who ran out of doors, were immediately either shot down or bayoneted. The prisoner himself cut down two others, killing them on the spot, and severely wounded another. He then caused his men to set fire to the houses of Den Sei and his neighbours, which were totally destroyed. The prisoner was court-martialled and convicted of the charge and condemned to death. It is creditable to the authorities that such a horrible outrage has

been punished; but it would be more reassuring to learn that the powers of subordinates had been limited, for it may easily happen that similar atrocities may be committed without possibility of proof or punishment.

MR. CONSUL-GENERAL JERNIGAN.

The American residents of Shanghai have addressed the following memorial to the President of the United States:—

To H.E. WILLIAM MCKINLEY, Jr.,
President Elect of the United States:
Canton, Ohio.

We, the undersigned citizens of the United States resident in Shanghai and in the neighbouring cities, feeling confident that the interests of Americans in this part of the world, as well as in the Home Land, will always have the first place in your administration of the Government, do hereby respectfully petition the continuance in office of T. R. Jernigan, Esq., as Consul-General of the United States in Shanghai.

We base our petition on the following considerations:—

First.—Mr. Jernigan during the time he has been in the East has, both in Japan and China, more faithfully discharged his duties, and has given most assiduous and patient attention to whatever concerned the welfare of his countrymen, both Merchants and Missionaries.

Secondly.—By his courteous and dignified conduct he has honourably represented his country, and secured for it in the eyes of the Chinese Officials the respect to which it is justly entitled.

Thirdly.—By his painstaking efforts he has thoroughly mastered the details of the onerous position he has occupied, and so peculiar and difficult are the duties of a Consul-General in a country like China, that it would probably take his successor a considerable period of time before he could obtain the knowledge of affairs now possessed by Mr. Jernigan.

Fourthly.—As the signatures to this petition evidence, he has given such satisfaction to this fellow-countrymen that he has won for himself personally their regard and esteem, and without respect to political party, they are glad to join in this recommendation for his continuance in office.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for that sentiments or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

JAPONIZATION OF CHRISTIANITY.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In the remarks of Rev. Yokoi Tokiwo at the meeting of the representatives of various sects held in Shiiba, September 28th, and reported in the *Japan Mail* of December 26th, we find the following statement:—"Christianity, when adapted to our national customs and institutions, will confer immense benefits on us;" and the same idea appears, though less explicitly expressed, in other addresses made on that occasion.

From time to time during several years past, this necessity for the adaptation of Christianity to the national customs and institutions of Japan has been presented, but always with a vagueness most unsatisfactory to the thoughtful observer of the progress of Japan in things moral and spiritual as well as material. Mr. Yokoi, having had unusual opportunities for becoming acquainted with Christianity as it is taught and practised in the West, will, I am confident, confer a favour on many others than myself, if he will give, through the medium of the columns of the *Mail*, something more definite on this subject, keeping, of course, well in mind the particular customs and institutions to which Christianity should be adapted.

Yours truly, INQUIRER.

Tokyo, January 4th, 1897.

A POSTAL GRIEVANCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—As all know, there is no Parcel Post system between Japan and the United States; so that in case any one wishes to exchange gifts with friends in the other country, as is often the case about Xmas time, he is obliged to pay full letter postage in order to secure the privilege, which makes it a rather costly pleasure. But supposing one is willing to go to such expense, and pays full letter postage, is it not proper to expect that such package receive the same careful handling as is accorded to letters? The writer has had the experience more than once (and a recent occurrence has stirred him up) of receiving packages by post from friends in America, upon which full letter postage had been prepaid, and

yet such parcels come almost entirely stripped of their wrappings, plainly torn open by the authorities in order to inspect the contents. Of course one cannot tell at whose hands they have received such treatment, but presumably at the port of entry rather than at the port of exit. Will the Editor of the *Japan Mail* kindly inform us whether the Postal Authorities have the right to take such liberties with mail matter?

Also it would be interesting to many to know who is at fault that there is no Parcel Post system arranged between Japan and United States, just as there is between Japan and Canada or England, and what are the reasons for withholding such a convenience from the citizens of these countries?

Your respectfully,

G.W.F.

By E. J. WINTER-WOOD.

BLACK.

White to play and mate in two moves.

PILLSBURY.

A London paper prints the following concerning Pillsbury's Nuremberg and Budapest tournament play:—"It is drummed into our ears at the end

of every contest for which the brilliant American enters, although he wins big prizes, that he did not play up to his 'Hastings form,' whatever that may mean. Pillsbury at Nuremberg played finer chess on the whole than he did at Hastings, and his play at Budapest was also fully equal to his play at Hastings, only he was not lucky enough to win the first prize in either of the latter tournaments, and had to be content with being third, a very honourable position considering the distinguished players who in both of these tournaments came out below him. It is not given to the very greatest players to be always first."

BUDAPEST.

Tschigorin and Charousek, with 8½ wins each, tied for 1st prize. In playing off a match of four games to decide the winner, Tschigorin won the first two games and Charousek retired from the contest. Tschigorin therefore won 1st prize, and Charousek 2nd. Pillsbury with 7½ wins won 3rd prize; Janowski and Schlechter tied for 4th and 5th with 7 wins each; Winawer and Walbrodt with 6½ tied for 6th and 7th prizes. Dr. Tarrasch secured the prize of 100 kronen for the best score against the prize-winners. In the tournament 78 games have been played, 60 of which were won or lost and 18 drawn. Schlechter, as usual, was the greatest drawer—drawing 6 of his 12 games. The openings adopted were as follows:—

Ruy Lopez.....	20	Four Knights.....	2
Queen's Pawn.....	17	Fianchetto.....	2
French Defence.....	8	Scotch Gambit.....	1
Bishop's Opening.....	6	Evans Declined.....	1

THE LATE MR. JAMES GREENHILL.

Mr. James Greenhill, the oldest member of the Edinburgh Chess Club, died at his residence, 32 Regent Terrace, Edinburgh, on the 25th Nov. He was born near Cupar, Fife, on 10th March, 1817. He came to Edinburgh about 1842 as an official of the Clydesdale Bank, and he held the position of joint manager from 1847 till his death. In early life he was an active member of the Edinburgh Chess Club, and was a member for over 50 years. He acted as treasurer of the club for 10 years—from 1864 to 1874. On 1st December, 1894, on the occasion of a match between the Edinburgh and Glasgow Chess Clubs, the Edinburgh Club entertained Mr. Greenhill and Mr. Meikle (still as active member) to dinner on the occasion of their completing their 50 years' membership. Mr. Greenhill's failing health of late years prevented his attendance at the club. At his best he was a chess player of considerable strength. Very few of his games have been preserved. The only one available is the following and although he does not prove the winner, it may be explained that his opponent was one of the strongest players in Scotland. It was played at Edinburgh on 4th May, 1872 in the second match between the East and West of Scotland:—

40—R to K 4 ch.	40—K to Q 4
41—R to Q sq. ch.	41—K takes Kt
42—B to K 3, mate.	

The third game of the match was played on the 13th, and again resulted in a victory for Lasker, who has now a start of three games. Steinitz once more played his own Giucco Piano variation, as in the first game. When a player has lost a game at an opening, and when he subsequently again adopts the same line of play, it follows as a matter of course that he is of the opinion that he can improve on his former play at some particular stage. The opponent under such circumstances naturally seeks to intercept the intended improvement. This was done by Lasker both wisely and well. With 11—B to K 3 he gave up the piece, but remained with his pawn advantage. After casting K R, he played the very fine move of 16—R to Kt sq., which not only avoided danger from the doubling of White's rook on the king's file, which Steinitz himself ignored in his second game, but also gave Lasker opportunity for a well conceived attack which he carried through to a successful issue. Steinitz once more showed his disregard of his opponent's designs by playing 19—R takes P. But his position was such that if he had allowed the attack to accumulate, instead of presenting this bold front, he might have been just as badly off. Lasker subsequently utilised the position for a very peculiar attack. With his bishop behind the queen, he threatened mate, and after the fine move of 30—P to R 5, White's pieces were absolutely paralysed. The rook and queen were necessary to prevent the mate, and on his last move, in which Lasker threatened R takes B, Steinitz had absolutely no move left. He therefore resigned.

ATKINSON'S THE FINEST ENGLISH MAKE. EAU DE COLOGNE.

More Fragrant; More Lasting; and
very much More Refreshing
than the German kinds.

USE ATKINSON'S ONLY,
AND BEWARE OF IMITATIONS.

Only genuine with Shield-shaped Blue and Yellow Label and usual "WHITE ROSE" Trade Mark. Of all Dealers & of the Manufacturers—
J. & E. ATKINSON, 24, Old Bond St., London.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In short time I had many applicants, to whom I gave out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

A certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and a quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1896.

A. SAVY & CO., ENGINEERS.

162, Rue de Charenton, Paris.

THE OLD G. HERMANN DEBATISTE WORKS.

ESTABLISHED 1830.

The Oldest and Largest Makers in the World of Chocolate, Cocoa, and Confectionery Plants.

Over 2,500 Chocolate Factories fitted up to January 1st, 1896.

GRINDING MACHINERY for all kinds of dry or wet substances, colours, printing inks, toilet soap, perfumery, and chemicals.

MIXING, CRUSHING, AND PULVERISING MACHINES FOR ALL MATERIALS.

Address MESSRS. BOYES & Co., YOKOHAMA.

November 21st, 1896.

37.

DINNEFORDS

The Universal Remedy for Acidity of the Stomach, Headache, Heartburn, Indigestion, Sour Eructations, Bilious Affections.

MAGNESIA

Sold Throughout the World.

N.B.—ASK FOR DINNEFORD'S MAGNESIA.

The Physician's Cure for Gout, Rheumatic Gout and Gravel; the safest and most gentle Medicine for Infants, Children, Delicate Females, and the Sickness of Pregnancy.

February 29th, 1896.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on public affairs be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 23RD, 1897.

DEATHS.

On the 18th January, at Kobe, Mr. CHANDLER P. HALL, of small-pox.

On the 22nd January, at Tokyo, after a long illness, Mr. A. LUBOWSKI. The funeral will leave to Odawara cho, Tsubiji, for the Aoyama Cemetery, on the 24th, at 3 p.m. Friends are invited to attend.

SUMMARY OF NEWS.

THE Chess match at St. Petersburg is finished. Lasker 10, Steinitz 2, drawn 5.

THE revised Treaty between Austria and Japan is expected to be concluded in February next.

THE N.Y.K. *Sakura Maru*, for whose safety fears were entertained, has been reported from Honolulu.

THE plague in Bombay is now on the decrease and the mills have resumed work with short stops.

THE Narita Railway (9 miles), that runs between Narita and Sakura, was opened for traffic on the 19th inst.

THE Volunteers have attacked and defeated the Bechnana rebels with a loss to the enemy of forty killed.

IN consequence of the death of the Empress Dowager, H.I.H. the Emperor issued an order

to the Ministers of the Navy and Army that all the sailors and soldiers now undergoing disciplinary punishment should be released.

THE net profits of the Sangu Railway Company from the 1st inst. up to date amounted to yen 4,915 in round numbers.

THE case for the Crown in the Carew trial closed on Thursday afternoon. The defence opened on Saturday.

THE British cruiser *Thetis* and *Forté*, now at Malta, have been ordered to proceed to the West Coast of Africa forthwith.

THE Yamaguchi Railway, 16 miles in length, to run from Yamaguchi to Mitajiri, was granted a license on the 17th inst.

THE Tokyo Gas Company held a regular general meeting on Friday last. A dividend of sixteen per cent. was declared.

THE 82nd Bank, formerly the 82nd National Bank, held its general meeting on the 16th inst. A dividend of 12 per cent. was declared.

THE regular general meeting of the Shueisha, Tokyo, was held on the 16th inst. A dividend of 15 per cent. per annum was decided upon.

TELEGRAMS of condolence upon the death of the Empress Dowager continue to be received at the Imperial Household Department from foreign countries.

THE Japanese Standing Squadron will assemble in Kobe, whence the officers and men will go up to Kyoto to attend the funeral service of the Empress Dowager.

THE Yokohama Transport Company and its branches, as well as other transport houses, have raised their charges ten per cent. since last Saturday owing to the recent rise in prices.

THE Czar has telegraphed to the President of the Republic confirming the good wishes he had made for the prosperity of France and saying the experiences of his visit were ineffaceable.

THE *Okinawa Maru* is engaged in laying a cable between Fukae and Arikawa in Nagasaki Ken. After completing this work she will proceed to Tsushima to lay down a cable there.

IN deference to the feelings of the Japanese nation, the grand concert to have been given at the Public Hall last week, and the Cantata at the Union Church next week, have been postponed.

THE charter of the Toyama 12th National Bank will expire next June, so a special meeting will take place next month, when yen 500,000 will be added to the present capital, making the yen 1,000,000.

A TELEGRAM from the Japanese Consulate at Bombay, received by the authorities a few days ago, states that the black-death is very rife and that the disease has attacked a foreigner employed in the Japanese Consulate.

COUNT GOLUCHOWSKI, Austrian Minister of Foreign Affairs, is now on a visit to Berlin, where he has been received with marked honour. No doubt is entertained that the visit is being made with a special political object.

Le Temps, speaking of the motion of M. Blanchy relative to the autonomy of Cochin China, says that the nomination of M. Doumer, as Governor-General of Indo-China, proves that the Government is in favour of maintaining the union as at present.

Zowo mountain, in Shibata-gun, Rikuzen Pre-

vince, broke out into eruption on the 14 inst. The phenomenon was accompanied by several severe earthquakes. Many mineral bath-houses stand at the foot of the mountain, and it is feared that they have been destroyed.

PROFESSOR BERGMANN has been summoned to operate on H.M. the Czar to prevent the extension of an osseous growth in the cranium, due to the assault committed upon him whilst visiting Japan. This, added to the excessive amount of work performed by His Majesty, has caused vertigo.

THE general meeting of the shareholders of the Nippon Bakusho Kaisha (Japan Beer Brewery Company) was held on Saturday at the Nihon-banji Club. The net profits during the latter half of last year amounted to yen 70,052 in round numbers, to which yen 560, were added, making a total of yen 70,702; and yen 31,500 were distributed to the shareholders at the rate of 20 per cent.

THE Yokohama Boyeki Ginko (Yokohama Trade Bank), which lost all its Directors and Inspectors—they resigned in a body through some dispute—has replaced all of them except Messrs. Minoda and Oeski. The bank held its general meeting on the 22nd inst. at the Yokohama Kaikan (Assembly Hall) when the business report for the latter half of last year was read and a dividend declared.

STATISTICS of trade at the five ports during the month of last December, as gathered by the authorities, are as follow:—Yokohama:—Exports yen 8,903,580, imports yen 5,769,547; Kobe:—Exports yen 4,125,816, imports yen 6,611,309; Osaka:—Exports yen 193,629, import yen 630,576; Nagasaki:—Exports yen 452,191, imports yen 753,270; Hakodate:—Exports yen 41,116, imports yen 126,107.

AT the reception in the Elysée on the 1st January, M. de Mohrenheim, the Russian Ambassador, in presenting the members of the Corps Diplomatique, stated that the year opened under favourable auspices, France contributing by its attitude to the maintenance of peace. The President, in reply, said that the most ardent desire of France was to march in concert with the European Powers, and that the present unity justified the confidence that this would be maintained in the future. The French and England journals are unanimous in criticising the importance of the telegram addressed by the Czar to the President of the French Republic. M. Faure has thanked the Czar for his message, and expressed his good wishes for the happiness of the Czar and Czarina and the greatness of Russia. He also preserves pleasant memories of the visit of the Czar and Czarina to France.

THERE is no improvement to note in the Import trade, in fact the period of mourning for the death of the Empress Dowager has rather accentuated the previous dull state of the market for Textiles. Yarns and Grey goods are still reported stagnant, and only a few Fancy Cottons have been taken in retail quantities. In the face of a rising market, but little has been done in the Metal trade, though a few sales have been effected. Kerosene is firm, with but little doing. Stocks of Sugar are small, and prices nominal. Holders of Silk have given way, and some business has been done for Europe, but the U.S. trade is at a standstill. The stock is still very large, and buyers are very cautious. Holders of Waste Silk have made a big reduction in prices, but this has not led to business, and the trade is *nil*. There is a little life in the Tea trade, finishing up the season. Exchange has dropped a point, and closes weak.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The death of the Empress Dowager; trouble among political parties; alleged corruption of members of Parliament; and, lastly, the German Representative's incident, were the prominent topics discussed by the vernacular papers during the week.

The Empress-Dowager's decease evoked profound expressions of grief and strong eulogistic notices from journals of all complexions. To this moment their columns continue to contain lengthy paragraphs extolling the virtues of the deceased in the most solemn and respectful terms that the Japanese language furnishes. Several editors have also exercised their ingenuity in suggesting methods of paying homage to the memory of the deceased lady, one idea being that the uniform of the troops should be changed; another that a public institution be established, and so forth. We gather from the metropolitan papers that the Emperor intends to extend a general amnesty to political offenders, and to mitigate the punishments of criminals. To such a step the *Mainichi* is opposed. It argues that though in ages when the judiciary was defective and even innocent people incurred the risk of being imprisoned, an amnesty may have been a beneficial measure on occasions of the kind, recourse to it in these days would be nothing more or less than favouring the disorderly and ruffianly section of the population over and above the law abiding and orderly, and possibly at the expense of the latter. The best plan, our contemporary thinks, would be to give alms to aged persons, orphans, and the destitute in general. This opinion is shared by the *Fiji* also, so far as the question of alms is concerned, but without any protest against the idea of an amnesty to criminals and political offenders. The *Fiji* thinks that no method of commemorating the virtues and benevolence of the late Empress Dowager would be more generally approved and welcomed than the founding of an asylum for sheltering the aged, the destitute, and the fatherless, and its adequate endowment. The *Kokumin* advocates a similar scheme, but, at the same time, approves the notion of a general amnesty. It also makes some essentially Japanese observations in connection with the event. In consequence, it says, of the absence of any recognised usages suitable to the occasion, the Authorities are now busily engaged making researches into the ancient rites and ceremonies of Japan, as well as into those now observed in other countries, with the idea of elaborating a system that will serve as a precedent. The result is that even the Emperor, painful as the incident has already been to him, has to be repeatedly consulted and disturbed by questions. A special committee should be appointed to elaborate the proper ceremonial for various important occasions, as coronations, Imperial weddings, funerals, and so forth.

Two articles have appeared in the *Nippon* suggesting that the present fashion of ceremonial robes be altered in the sense of better adaptation to the general customs of the country. The adoption of the "swallow-tail" coat as a full dress garment is attended with several inconveniences, and sometimes proves an obstacle to loyalty and patriotism. For instance when the Emperor, some years ago, on the occasion of a grand military review in Shimotsuke, graciously intimated his intention of granting audience to the influential people of the district, the majority of those that might have enjoyed the privilege were precluded from appearing in the Imperial presence simply because, as may well be conceived, they had no "swallow-tails." The same difficulty will be experienced on the present occasion, but will cause much more wide-spread regret, for innumerable people will be prevented from assisting at the obsequies of the Empress Dowager. The rule may be enforced in the case of officials, but some different plan should be devised for ordinary folks. The *Nippon* is further of opinion that the fashion

of mourning for civilians should be definitely fixed. It deprecates the choice of black as a mourning colour, seeing that white has always been used for the purpose in Japan.

Rumours are industriously circulated that the split which has taken place between the Liberals and the National Unionists was the result of bribery by the Cabinet. Several Tokyo papers discuss this subject in more or less guarded tones. Even the *Fiji* declares itself entirely at a loss to account for the secession of certain members from the two parties. The alleged cause of discontent is entirely inadequate to convince ordinary observers, and the attitude that the seceders have subsequently taken is also extremely obscure. Viewed from the outside, there seems to be some secret explanation that will not bear exposure. The *Fiji* refrains from attempting to penetrate the mystery, not because it is a personal matter, but because no trustworthy proof can be obtained. At all events, the seceders stand convicted of a remarkable want of fixed principles.

The *Mainichi* is inclined to believe that the old characteristic traits of the ruling class in Japan, integrity and disinterestedness, have been superseded by a sordid, money-worshipping spirit, especially since the inauguration of constitutional politics.

While scoffing at the clamours of the Liberal papers, about alleged bribery on the part of the present Ministry, clamours which it likens to a thief's advocacy of uprightness, or a prostitute's plea for chastity, the *Kokumin* can not pretend to be satisfied with the so-called parliamentary manoeuvres of the present Ministry. It has repeatedly advised the Ministry to be fair and straightforward in such matters, but it discovers no signs of its advice being adopted. Of course our contemporary does not pretend to have found any trustworthy proof that the Cabinet is employing base means to win members of the Diet to its side. On the contrary, it is inclined to believe that the present Ministry would not be guilty of any such practices. But so long as the Cabinet does not adopt a straight forward policy and take the nation frankly into official confidence, there is always room for suspicion that under-hand methods are employed.

The *Osaka Asahi* notes that the Liberals and the National Unionists are reported to have been separated by official contrivance, and adds that, owing to undue anxiety to obtain a majority in the House of Representatives, the Authorities not infrequently take advantage of the weakness of the members, and contrive to make them subservient. The *Asahi* does not hesitate to stigmatize such procedure as not only unconstitutional, but also most impolitic.

The *Nichi Nichi* asks the *Shimpo-to* whether they still retain any sense of their responsibility towards the nation, and if they do, why they keep silence about the "buying" of members by the Cabinet, a proceeding which, according to the *Nichi Nichi*, is already an open secret.

The *Tokyo Shinbun* sneers at the Cabinet for its loud talk about the urgent necessity of enforcing official discipline. Has the enforcement of official discipline nothing to do with the bribery and corruption of members of parliament?

To fall into a state of perturbation and confusion, writes the *Meiji*, because the House of Representatives happens to be noisy, and to try to conciliate its favour by recourse to money is entirely unworthy of the *Genkun* now sitting in the Cabinet, for the House is composed of second-rate barristers, worn out ex-Headmen of districts, and ex-members of Local Assemblies.

We may note here that, during the week, five other Liberals, representing constituencies in Okayama, Hiroshima, and Aichi, seceded from

their Party and have joined the pro-Government Parliamentary Club.

The *Nichi Nichi*, the *Meiji*, and the newly started pro-Ito daily, the *Sekai no Nippon*, still persist in writing angrily about the German Representative's affair. The *Sekai no Nippon*, which is edited by Mr. Takekoshi Yosaburo, argues that the incident being international and not private, an apology by the Minister to the two school-boys would not be enough. If the Minister leaves Japan, he must leave in consequence of Japan's demand to the German Emperor not of the Minister's own choice, and since his term of service will expire shortly, speedy steps must be taken to secure satisfaction before his departure.

In answer to a statement made by a newspaper that the Foreign Office can not take any definite action because no request has been preferred by the Metropolitan Police, the *Nichi Nichi*, which has two more articles on the question, argues that an affair of the kind must be settled by international courtesy, and that no occasion exists for a regular complaint from the sufferers or request from the police. If the Foreign Office can not discharge its functions without receiving a complaint of the kind, it is virtually useless.

The *Chuo* does not consider the affair so grave as to affect the German Representative's tenure of office. Let him write a letter of apology to the two students and they will be perfectly content. Indeed, judging by what His Excellency is said to have stated to the Foreign Office, he acknowledges his fault and has indirectly apologized for it. It would not be difficult, therefore, to make him write such a letter. Why can not Count Okuma settle the trouble in that prompt and simple manner?

The *Nippon* is surprised to see the Liberals opposing a Cabinet that has successfully carried out financial measures which were beyond the strength of the Ito Ministry, but were approved by the Liberals. They ought to thank the Cabinet, instead of showing themselves to be more of a faction than a party.

The *Tokyo Shinbun* replies that the Matsukata Cabinet, while its members were in the position of "outs," loudly maintained the necessity of reducing the scope of the military and naval expansion scheme, and of observing greater financial circumspection. But the public has been completely deceived, for instead of carrying out the policy that Counts Matsukata and Okuma clamorously advocated at the outset, the Cabinet have adopted the very measures marked out by their predecessors and denounced by themselves so loudly. In fact, the Matsukata Cabinet have plagiarized the policy of the Ito Cabinet, in other words, of the Liberals. A Cabinet of the kind is entirely unworthy to remain in office, and a vote in that sense should be passed.

The *Yomiuri* is something of a black sheep among the pro-Government papers, for it does not scruple to deliver, now and then, severe attacks against the Government and its supporters, the *Shimpo-to*. It now reminds the *Shimpo-to* how the present Cabinet have acted since they came into office; how they have dissatisfied their supporters in the matter of amending the Press Law; how they have failed to fulfil their promise of employing able men from the public at large; how they have given posts to persons like Mr. Matsudaira, Vice-Minister of Home Affairs; Mr. Misaki; and Mr. Mizuno, lately appointed Governor of Nara; and how, instead of being respected and considered, the *Shimpo-to* appear to be neglected and insulted. The *Yomiuri* vehemently urges that Party to take decisive action at the present juncture, lest they be reduced to the humiliating position of being generally ridiculed and despised. At the same time, our contemporary, after asking the Cabinet whether they prefer to win over sneaking politicians at the risk of alienating true-hearted

supporters, and whether they have neither courage nor ability to carry out genuine political reforms, warns them that unless they arrest their strange career, and revert to their original programme, they will leave an unenviable record in the history of Japanese politics.

The *Fiji* wonders that the Cabinet should hesitate to employ politicians identified as friends, namely, members of the *Shimpo-to*. Apprehensions lest the introduction of such a custom might disturb the peaceful routine of officialdom at every change of Government must be disregarded. Otherwise, the want of competent aids will prove embarrassing, to say nothing of the danger that fitting statesmen will not be available when the present *Genkun* disappear from the political stage.

The *Mainichi* observes that judging from the decay and demoralization of all the political parties now in existence, a radical change may confidently be expected among them before long.

The *Shogyo* thinks that the business depression prevailing will not be relieved for some time, the Cabinet having failed to effect financial improvement. Our contemporary holds the Cabinet's policy largely responsible for the depression.

EDITORIAL NOTES.

CALIFORNIA AND THE ORIENT.

MR. AUBREY FAIR, who spent something more than a year in the far East travelling through Siberia, China, Japan, Korea, Cochin China, the Straits Settlements, and Java, pushing the flour trade in those quarters, is a firm believer in the expansion of the Pacific Coast trade with trans-Pacific countries, and more especially the trade in California products. In conversation with a representative of the San Francisco *Commercial News*, he stated that the great Russian railroad was completed from Vladivostok to Havarokty, some 400 miles, but a part of the line through a marshy country was under water, and the main line would in all probability be changed to a route less liable to floods. The Government is settling peasants in that section as rapidly as possible, and eventually it will become a great wheat-growing country, but Mr. Fair does not anticipate any keen competition with the Pacific Coast in Oriental markets, for high railroad freights and a steamer route as long nearly as from San Francisco, will be against Siberia. The wheat is dark, small, and strong. Over 600,000 sacks of flour from the Pacific coast went to Siberia last year. With Japan, Mr. Fair is not sanguine that trade will be much increased, but looks for a marked improvement in the China trade and a steady increase in the demand for U.S. products in the far East, particularly in low-grade flour, for which the demand is practically limitless, if it can be sold at moderate prices. The demand for high-grade flour increases, but slowly in comparison. Canned fruits and salmon are found all through the East, and California brands are well known. The merchants of China, are shrewd traders, and not to be trifled with. Once an article fails to come up to sample, the brand is simply boycotted. Strict honesty, great care in selecting quality, and good packing, are necessary to stand climatic changes, but this done, there is an opportunity to largely increase the business. In Mr. Fair's opinion an agent sent out, representing the best lines of California canned goods, would find the trip a profitable one.

NAVAL NEWS.

H.M.S. *Iphigenia* commissioned at Portsmouth on Tuesday, the 19th inst. to relieve the *Æolus* on the China Station, and is expected in Hongkong about the third week of April. The *Iphigenia* is of the same class as the *Æolus*.—The *Bart* has gone into Kowloon dock for overhaul.—At the New Year Sea Sports at Singapore, the men-of-war boat-sailing handi-

cap resolved itself into a match between Captain Tiedall's galley from H.M.S. *Rainbow* and Sub-Lieut. Lauffer's boat from the Austrian cruiser *Saida*. The Austrian led for a considerable distance, but the galley gradually drew up, and came in a winner amid the congratulations of the onlookers—H.M.S. *Alacrity* arrived at Saigon on the 3rd inst. Admiral Beaumont invited Admiral and Mrs. Buller to a banquet, where they met the principal French officials. On the 6th inst., there was a picnic to Mytho, and in the evening Admiral Buller gave a dinner on board the *Alacrity*. *Vive la France! Vive l'Angleterre!*—Admiral and Lady Buller arrived at Hongkong on the *Alacrity* on Jan. 13th.—H.M.S. *Centurion* and *Rattler* are to pay off and recommission at Hongkong on 1st April; and the new crews are expected to be there before that date.

PROPOSED ASSEMBLAGE OF SOVEREIGNS.

THE *Figaro* states that the principal Courts of Europe have been approached on the subject of a plan destined to give the greatest *clat* to the sixtieth anniversary of Queen Victoria's accession to the Throne. The intention is to assemble at Windsor this year all the crowned heads of Europe. The difficulty now occupying the attention of several Continental Cabinets is, it appears, that according to etiquette, the Emperors of Germany and Austria, as well as His Royal Highness the Prince of Wales, have still to return the visit paid them by the Emperor of Russia this year. Then the King and Queen of Italy should also exchange official visits with the Emperor of Russia before coming to London. The Czar decided, in principle, when he was at Vienna, to visit Rome early in 1897, but the date of this journey depends on the health of the Empress. General Ferrero, Italian Ambassador to the Court of St. James, when handing to the Queen a letter from King Humbert thanking Her Majesty for her congratulations on the marriage of the Prince of Naples, was charged, says the *Figaro*, to announce verbally that his Sovereign intended visiting England next year in order to congratulate Her Majesty on her long reign. But nothing was said of the date of the visit.

THE LATE MR. C. P. HALL.

THE late Mr. C. P. Hall, remarks the *Hyogo News*, was born in Shanghai in December, 1851, and later on went to Rhode Island with his parents. He was educated and graduated at Harvard College, returning to Japan in 1872. His father was a partner in the firm of Walsh, Hall & Co. of which Mr. Hall himself was for some time the managing head. He spoke Japanese fluently, and had many Japanese friends. Though somewhat reserved, Mr. Hall was thoroughly respected and popular; he was an interested and friendly observer of the progress of this country; he was unostentatiously kind to many, and his early death is rightly regarded as a general loss in this community.

KOBE CRICKET AVERAGES.

FROM the *Hyogo News* we gather that H. C. K. Lucas heads the batting averages of the K.C.C., for the past season. His record runs:—7 ins., 0 not out, 195 runs, 53 most in an innings, average, 27.85. J. Marshall comes next, 6, 2, 91, 29=22.75; E. W. Tate third, 9, 0, 18, 41, 86=20.44. Then there is a big falling off, G. Braess being fourth with an average of 11.66. In bowling S. Lucas is first with an average of 7.33 runs per wicket; W. D. S. Edwards second, with 7.84; E. W. Townsend third, with 8.20, and Matt Smith fourth, with 9.00.

METALS.

MESSRS. S. W. ROYSE & Co. in their report dated November 28th last, say:—Business in Pig Iron has been very brisk throughout this month, and deliveries are heavy from both Glasgow and Middlesbrough; at the latter port it is said to be a record month of November for amount of business. Prices have advanced some 8d. to 1s. per ton since the beginning of the month, and although just at present there is a somewhat easier tone, this is expected to prove only temporary. Producers have plenty of orders on

their books, and are quite expecting still higher prices before long. The Manufactured Iron trade is good all round, orders plentiful and prices very firm. The higher priced metals have also improved. Copper has advanced some 27s. 6d. per ton, but is easier somewhat. Spelter and Lead have advanced some 7s. 6d. per ton, and are both firm. Tin, however, has given way to the extent of 7s. 6d. per ton but is now steady.

SALE OF A SHIP.

THE British iron barque *West York*, which was dismantled in a gale some months ago, has been sold by auction at Hongkong. She is a vessel of 714 gross and 689 net tonnage, length 179 feet 5 in., beam 29 feet 9 in., and depth of hold 19 feet 1 in. The hull with all fixtures and one anchor and cable down was sold, after a good deal of competition, to Mr. Dunbar for \$5,800. The sails, remaining cables and anchors, ropes, deck and ship's stores and other appurtenances, &c., were purchased by Chinese for about \$2,500.

AN AUTHOR'S SUICIDE.

THE body of Hubert Crackenthorne, one of the authors belonging to the so-called "decadent school," has been found in the river Seine. He disappeared mysteriously in October, soon after receiving news that his wife was suing him for divorce. The London newspapers say that he was latterly much in the company of the wife of a leading London actor. The titles of some of his works, "A Dead Woman," "The Struggle for Life," etc., indicate his morbid turn of mind.

RECORD PETROLEUM FREIGHT.

AT Philadelphia, remarks *Seaboard*, the steamer *Sophie Rickmers* (Ger.) has been chartered to load 100,000 cases of refined petroleum for Japan, at 34 cents per case, the largest sum paid for a number of years. The price paid several months ago was 30 cents per case to Japan, which was then thought to be a rather high rate. The increase in rates is due to the scarcity of vessels, owing to the boom in grain, cotton, etc. It is stated that the rates will be reduced in a month or so, as by that time all contracts for the shipment of cotton, lumber, etc., for this season will have been fulfilled.

THE YOSHINO FIRE.

WE have to acknowledge, on behalf of the distressed inhabitants of Yoshino who suffered so severely through the total demolition of that town recently, the sum of \$10 from the Tonic Sol-fa Juvenile Choral Society of Yokohama.

NEW BRITISH MINISTER TO BANGKOK.

A REUTER'S telegram in the *Bangkok Times*, dated London, Dec. 23, states that Mr. Greville, the British Consul-General at Budapest, has been appointed Minister at Bangkok.

TORPEDO-DESTROYERS.

IT is stated that the British Admiralty intends to introduce a new class of torpedo destroyer of a minimum speed of 33 knots. Twenty vessels of the first-class, it seems, will be ordered immediately.

BANK FAILURES IN THE U.S.

THE National Bank of Illinois, the Bank of Minnesota, the Second National Bank of Grand Forks, the Commercial Bank of Selma, Ala., and the American Banking and Trust Co., of Auburn, Maine, have failed.

THE "ITLIS" SURVIVORS.

THE Emperor William will receive on February 8th, at the New Palace, the 12 survivors of the German warship *Itlis*, which was lost in a hurricane off the coast of China last year.

A NAGASAKI WEDDING.

THE Nagasaki paper understands that the wedding of Mr. W. G. Bennett and Miss H. Glover has been arranged for Tuesday the 26th inst.

THE G.O.M.

THE Rt. Hon. W. E. Gladstone celebrated his 87th birthday at Hawarden on Dec. 29th. He was in good health and spirits.

THE EMPRESS-DOWAGER'S FUNERAL ITEMS.

We understand that the sum to be defrayed by the Treasury on account of the funeral of the late Empress-Dowager has been fixed at 800,000 *yen*, and that the Government has introduced a Supplementary Budget in the House of Representatives. The greater part of the outlay will go towards travelling expenses, for it seems that all the Ministers of State, Privy Councillors, Foreign Ministers, representatives of higher officials, and members of the two Houses of Parliament, are to attend the ceremony. Moreover, two Brigades, one from the Imperial Body-guard and the other from the Tokyo Division, are to be despatched, and a third from the Osaka Division is to form part of the cortège. The Naval Standing Squadron will go to Kobe, whence the marines will be marched to Kyoto. The date of the departure of the cortège from the Aoyama Station, and also the date of interment are not yet fixed, owing to uncertainty as to the time required for constructing a special hearse, which will be drawn by oxen, and for preparing the vault to receive the coffin. The Funeral Committee experienced considerable difficulty in finding experts to construct the hearse, for it had to be made in strict conformity with antique rules. Searches conducted in various museums and elsewhere brought to light several pictures of ox-carriages, but no details of dimensions could be anywhere discovered. It appears that the wheels must emit a groaning sound as they revolve, and several expert builders found that desideratum deterrent. At last it was suggested that the carpenters who made the ox-car on the occasion of the demise of the late Emperor Komei, thirty years ago, might still be living in Kyoto. Inquiries were set on foot in that city, and it was discovered that one carpenter, over 70 years of age, who had assisted in constructing the car, still survived. He was sent for, and he undertook to complete the work in about 15 days. The place of interment is to be Senzan, not far from the grave of the late Empress Dowager's Consort. For receiving the coffin a vault 18 ft. deep must be excavated, according to old usage, so that it is not possible to predict with any certainty when the grave will be ready. White satin brocade (*kinran*) to be used for banners, twenty in number, on the occasion of the ceremony, is now being woven in Kyoto, the weavers working day and night. In ordinary times about two months would be needed to weave the required quantity, but the weavers are under orders to finish it in one week. The coffin will be double, and the outer shell is to be covered with white satin, having an embroidered design of *Kishi* sprays, over which black silk-crape will be laid. Mr. Yamazaki, one of the Funeral Commissioners, has informed a representative of the *Fiji Shimpō*, that careful researches into ancient customs have convinced the commissioners of the propriety of adopting black as the mourning colour, there being no doubt that such was the rule in former ages.

The *Official Gazette* contains notification about the costume and badge to be worn by civilians during the prescribed period of mourning. The costume—that is to say, if in Japanese style—is to be a dark surcoat (*haori*) with the wearer's crest between the shoulders; the hose

knows as (*hakama*), and a piece of black material sewn on the left shoulder. That description refers to full dress. Under ordinary circumstances, the piece of black cloth alone is sufficient. The full dress for ladies is to be a dark *hanteri* (corresponding with the man's *haori*); a white neckerchief (*hanyeri*), and no ornaments of any kind in the hair. A piece of black material is also to be worn on the left shoulder whether in full dress or in ordinary costume. In the case of Foreign garments, the rules of Occidental etiquette are to be observed.

The *Chuo* makes a pertinent suggestion with respect to the prohibition of musical and other performances by professionals during a space of 15 days counted from the day when the death of the Empress-Dowager was announced in the *Official Gazette*. Professionals are evidently suffering greatly from the suspension of their trade, as may be inferred from the fact that Encho, the chief of the Sanyu *Raconteurs* Guild and a famous master of the art, has caused one *to* of rice to be given to each of the 180 of his pupils out of the common fund of the Guild. *Raconteurs* belonging to this Guild are understood to be generally better off than other professionals, and it is easy to infer the distress suffered by singers, dancers, and so forth, living in the poor quarters of Mannencho and Shinami. They hardly manage to keep body and soul together under ordinary circumstances, and they must now be in a state of great destitution. The *Chuo* thinks that if the benevolence of the Court is to be extended even to prisoners, by way of commemorating the virtues of the Empress-Dowager, these indigent but law-abiding people are entitled to some measure of consideration.

It is understood that the civil and military functionaries, members of the *corps diplomatique*, members of Parliament, troops and marines, and so forth, that are to attend the great ceremony in Kyoto, will aggregate 100,000, so that the city will be invaded by a multitude far exceeding its population. A place will be especially set apart both at Aoyama and in Kyoto for representatives of newspapers published in Japan.

The immense demand that sprang up for black crape, immediately after the announcement of the death, may be gathered from the fact that the price of that material in Tokyo went from 1½ *yen* to 6 and 7 *yen* a yard within a week. Every fragment procurable in Yokohama also was bought up, and telegrams had to be sent to Shanghai and Hongkong to procure a supply from those places.

The following Imperial Ordinance appears in the *Official Gazette* of the 15th instant:—

IMPERIAL ORDINANCE.

We hereby authorize a special amnesty from punishment in the case of persons undergoing sentences of hard labour, and order the same to be duly promulgated.

[Imperial Sign Manual.]

[Great Seal.]

[Signatures of the Ministers of State.]

IMPERIAL ORDINANCE No. 5.

In consequence of the death of Her Majesty the Empress Dowager, all persons undergoing sentence of hard labour shall be relieved of hard labour for a period of five days, commencing from the day of this Ordinance's publication, as well as on the day of carrying forth the bier and the day of interment.

In the case of Formosa, this Ordinance shall take effect from the day of its promulgation there.

The *Official Gazette* announces further that a memorandum addressed by the Minister President of State to the Ministers of Justice, on

the Army, and the Navy, and of Colonization, directs that no sentences of capital punishment shall be carried into effect on the days mentioned in the above Ordinance. It may be assumed that capital sentences, the execution of which falls on any of the above days, will be commuted.

CURRENT TOPICS.

Small-pox is still raging with unabated virulence in Tokyo. Last year the cases in the metropolis totalled 2,518 altogether, of which 729 proved fatal. This year, from January 1st to January 19th, 1,405 cases were reported, but the rate of mortality is not stated. At present over 1,500 old and new patients are receiving treatment, out of whom 250 are in the two Epidemic Hospitals in Honjyo and Hiroo, the remainder being cared for at their own homes. The accommodation available in the two hospitals is quite inadequate. Considerable trouble is said to be experienced by the Sanitary Authorities, who are enforcing drastic measures, for they apprehend that if things be left in their present state the epidemic will continue for a long time.

The *Fiji* reported that the Formosan authorities have elaborated an Opium Law, and that it will be issued at an early date. The licences granted to persons judged to be incorrigibly addicted to the practice, will be of three grades, and the fees, at 1.50 *yen*, 0.75 *yen*, and 0.35 *yen*. Transgressions of the Law will be punished by confinement, major or minor, according to the gravity of the offence, or by fines ranging from 2,000 to 5,000 *yen*.

The Toyo Kisen Kaisha contemplates reducing its capital from 7½ million *yen* to 5 million *yen*, and suspending, for the present, the project of a service to Mexico. This reduction is considered necessary owing to the backwardness of the shareholders in paying the installments due on shares—backwardness attributed to the depression now generally prevailing in business circles.

RUSSIA IN KOREA.

We read in the *Nichi Nichi Shimbun* that a Question has been presented to the Government in the House of Representatives with regard to Russia in Korea. Being a matter of foreign policy, secrecy is observed, says our contemporary, but the main points involved in the Question are understood to be, first, the King of Korea's continued residence in the Russian Legation; secondly, the fact that Russian officers have been engaged to drill the Korean troops; thirdly, that Russia proposes to lend Korea money to discharge the latter's debt to Japan; and fourthly, the circumstances of the Japanese residents in the peninsula. The members presenting the Question express the hope that Count Okuma himself will attend in the House and offer a full explanation.

THE "NICHU NICHU" AND THE GERMAN MINISTER.

We are glad to observe that the *Nichi Nichi Shimbun*, referring to the question presented in the House of Representatives with regard to the carriage-whip commotion, speaks of the affair as "*hisai*," a bagatelle. At the same time, our contemporary thinks that, if left unsettled, the incident will impair the friendly feelings entertained by Japanese towards Germans. Yes, indeed, the newspaper press of Tokyo has managed to raise such a whirlwind about this straw that a great many things are in danger of being blown away unless some quieting influence is speedily evoked.

MR. OZAKI YUKIO ON THE GERMAN MINISTER'S AFFAIR.

Interviewed by a representative of the *Mainichi* on the above subject, Mr. Ozaki Yukio, M.P., a prominent member of the *Shimpo-to*, observed that, supposing the two students' allegation to be exactly consistent with the facts, the case was essentially one to be settled by the canons of society and not by the rules of diplomacy, provided that social canons suffice for the purpose. If a Minister guilty of arrogance and discourteous conduct be excluded from social *réunions*, the country where he is stationed will soon be rid of him without recourse to formal diplomatic intervention. However, in a country like Japan, where the influence of society is still comparatively undeveloped, it may be necessary that diplomacy should concern itself about such incidents. What step, then, should be taken with regard to this particular affair? Thus far there is no evidence beyond the written statement of the two students themselves, and therefore the exact facts being uncertain, the Foreign Office should invoke the aid of the Police Authorities to ascertain the truth, after which, the German Representative should be approached, if such a step is necessary, to learn what he has to say about the affair. It would be rash and improper to ask for an explanation from the German Representative on the strength solely of a statement compiled by the two lads. Mr. Ozaki is gratified to learn that the Foreign Minister has ordered his subordinates to conduct strict inquiries into the affair. His Excellency is persuaded of the justice of that step in view of the fact that the complainants being future military officers of the Empire, the dignity of the Japanese Army may be indirectly involved.

The recall of a foreign Representative by his own Government, or a refusal to receive him, or the return of his passports, by the Government to which he is accredited, is not a rare thing, continued Mr. Ozaki. Germany, for example, recently declined to receive the official that China would have sent to Berlin. An instance is furnished by Japan's history also. For when Count Inouye was Minister of Foreign Affairs, the Japanese Government asked Belgium to recall her Representative on the ground that he had improperly divulged diplomatic secrets relating to Treaty Revision. Strange to say, Belgium attempted to reject Japan's demand and even despatched a man-of-war by way of demonstration. Mr. Ozaki feared that a similar humiliation might await Mr. Hoshi Toru when he was accredited to Washington, for he had a bad page in his record, namely, that his name had been struck off the list of the House of Representatives. That this apprehension proved delusive and that the American Government did not refuse to receive him, be attributed chiefly to the special good-will entertained by America towards Japan.

We dare say that our readers are getting pretty tired of this whip-lash hubbub. But Mr. Ozaki Yukio is a very prominent politician and his views on such a subject would derive interest from his individuality even though they were not sufficiently startling in themselves. Mr. Ozaki's history is horribly defective. It would seem that he doesn't know the difference between Holland and Belgium, and that he regards the Chevalier van Stootwegen as the latter's Representative. Where he got his phantasy about a Belgian man-of-war coming to answer Japan's demand for the Chevalier's recall, we can not conceive. Nothing of the kind ever happened. The Chevalier van Stootwegen was the Netherlands' Minister in Japan. In 1880, he communicated to an English local paper in Yokohama the draft of a proposal for Treaty Revision. The act was a very flagrant departure from the rules of diplomatic propriety, though its motive was doubtless excellent, in so far as the interests of the foreign community were concerned. Of course, the Japanese Government and the Foreign Representatives could not conveniently continue to negotiate such a subject as Treaty Revision if one of the Plenipotentiaries, disregarding the

rules of reticence by which all his colleagues held themselves bound, took the newspaper press into his confidence. That view of the case, or some corresponding view, was communicated to the Hague, and the recall of the Chevalier van Stootwegen followed promptly. We must in justice add that he soon received from his Government a superior position elsewhere. The man-of-war demonstration is a pure fiction.

Mr. Ozaki's view of America's attitude towards Mr. Hoshi is a comical interpretation of international friendship. If the British Government sent, as its Representative to France, for example, a politician who had been expelled from the House of Commons, and if France received him, most persons would be inclined to say that France displayed complaisance towards the individual himself, and towards the British Cabinet, rather than towards the British nation, whose chosen representatives had refused to legislate in his company. The fact is, we strongly suspect, that the Government in Washington understood very clearly the nature of the cabal that contrived Mr. Hoshi's deprivation of his seat in the *Sauguin*, and perceived that the disgrace of the episode rested, not with Mr. Hoshi Toru, but with the men that planned and carried out his temporary discomfiture. That episode of Japan's parliamentary history had better be buried in oblivion. And we are inclined to think that a similarly humiliating record may result from this driving-whip business. The agitation it has created is so disproportionate to the event that the laugh will be turned against the Japanese themselves.

NATIONAL ARMAMENT EXPANSION PROGRAMME.

Our attention has been called to some errors that appeared in the figures published by us under the above heading on the 14th instant. The simplest method will be to give the portions concerned in their correct form.

In the programme of Army Expansion, the table of yearly approximate expenditures and exact totals on account of the building and initiatory Equipment of Barracks should read thus:

Fiscal year.	First Period. Yen.	Second Period. Yen.	Totals. Yen.
29th (1896-7)	12,900,000	—	12,900,000
30th (1897-8)	2,700,000	8,300,000	11,000,000
31st (1898-9)	1,400,000	3,800,000	5,200,000
32nd (1899-1900)	240,000	2,200,000	2,440,000
33rd (1900-1)	—	2,100,000	2,100,000
34th (1901-2)	—	1,160,000	1,160,000
35th (1902-3)	—	990,000	990,000
36th (1903-4)	—	570,000	570,000

Totals.....17,334,890 19,363,746 36,698,636
The opening paragraph with respect to Naval Expansion should read as follows:—

Turning now to the Navy, it will be remembered that the appropriations made for the First Period in the last session of the Diet, aggregated 94,776,245 yen. The Budget now before the House of Representatives puts the Second Period Expansion fund at no less than 118,324,718 yen, of which a sum of 5,338,920 yen is on account of changing the designs of two cruisers belonging to the vessels in the First Period scheme, already in course of construction. The Navy Expansion Fund is divided into the three headings of shipbuilding, armament, and erection of buildings. In the programmes for the two periods, the funds are distributed as follows:—

	First-period Programme. Yen.	Second-period Programme. Yen.	Totals. Yen.
Ship-building.....	47,154,576	78,893,399	126,047,975
Armament.....	33,751,162	33,176,339	66,927,501
Erection of buildings	13,870,506	6,254,990	20,125,496
Totals.....	94,776,245	118,324,718	213,100,963

On the occasion of the funeral services of the *Empress Dowager* at Kyoto, representatives of newspapers throughout the country will be admitted to the ceremonies.

SHIPPING NEWS.

The number of steamers recently ordered by Japan from English dock-yards amounts to as many as 23, of which 10 are for the Yusen Kaisha, 7 for the Osaka Shosen Kaisha, 2 for the Mitsui Bussan Kaisha, and 4 for the Toyo Kisen Kaisha. The aggregate displacement of vessels built annually in Great Britain averages a million tons, and Japanese orders now represent a tenth of that total. The Nippon Yusen Kaisha, we read in the *Nichi Nichi*, is suffering considerable loss in connection with its European and American services. A round voyage to Europe requires 182 days, including calls at ports *en route*, as well as docking, and for a voyage to America 88 days are needed. It follows that a steamer can not make more than two European trips annually, and that a service of 12 steamers represents 24 trips per year. According to this estimate, the profit and loss account per voyage stands thus:—

EXPENDITURE.	
Harbour dues, pilotage, coal, light-house dues, Suez Canal charges, anchorage, &c.....	60,661
Tax on ship, equipment, ordinary repairs, dock repairs.....	21,870
Salaries and allowances to crew, and mess expenses.....	28,812
Reserve fund, depreciation of the value of ship, insurance, overhauling-fund reserve.....	59,237
Head and Branch offices expenses ...	6,305
Total	176,885

INCOME.	
Freights, &c., in Japan for outgoing voyage.....	24,800
Freights, &c., in Hongkong, Singapore, Colombo for outgoing voyage	28,703
Freights, &c., in Europe for return voyage	63,294
Total	116,797

Subtracting 20 per cent. on account of cost of handling cargo and accommodating passengers on outgoing and return voyages, the net earnings become 93,438 yen. In other words, the Company incurs a loss of 83,447 yen per voyage. Moreover, 6 per cent. per annum interest on the price of a steamer—868,500 yen—must be added, that is, to say, 26,055 yen, so that the loss incurred per voyage on the European line aggregates 109,502 yen, or 2,628,042 yen for 24 voyages annually.

As one steamer on the American line can undertake four voyages a year, the number of voyages by three steamers totals twelve. The profit and loss account is reckoned thus:—

EXPENDITURES.	
Harbour dues, pilotage, coal, telephone dues, &c.....	23,450
Tax on ship, equipment, &c.....	10,935
Salaries and allowances to crew, and mess expenses.....	14,079
Reserve fund, depreciation of the value of ship, insurance, &c.....	34,687
Head and Branch Offices expenses...	4,393
Total	87,544

INCOME.	
Freights, &c., in Hongkong and Japan for outgoing voyage	17,002
Freights, &c., in America for return voyage.....	31,398
Total	48,400

Subtracting 20 per cent. on account of cost of handling cargo, &c., the net profit for one voyage is reduced to 38,720 yen, from which, again, interest on the price of the ship—1,030,000 yen—or 15,450 yen, must be deducted, so that the loss incurred per voyage to America totals 64,274 yen, or 771,288 yen a year for 12 voyages by three steamers. Hence, according to these calculations, the Company must incur a total loss of no less than 3,399,336 yen per annum on account of the European and American services.

IMPERIAL DIET.

TUESDAY, JANUARY 19TH.

HOUSE OF PEERS.

The House met at 10.15 a.m., the Order of the Day being—

- 1—Leave of Absence to Princes Shimazu, Marquises Asano, Shō, and so forth.
- 2—First Reading of a Government Bill relating to the Preservation of Old Temples and Shrines.

The first item having been disposed of, Mr. Misaki, Chief of the Local Administration Bureau and Government Delegate, ascended the rostrum and explained, with reference to the Temples Preservation Bill, that the Government had simply carried into effect the suggestions contained in a Representation presented by the House in the last session, and that, in accordance with that Representation, the object of the Bill was to provide against the decay and destruction of national treasures. He further explained, in answer to a question by Baron Funakoshi, that the disbursement from the Treasury would not exceed 200,000 yen a year if the proposed measures were put into effect.

Mr. Murata Tamotsu wished to know why the Government did not include, in the conservation scheme, such things as trees, which were not less celebrated than Temples or shrines; for instance, the pine tree of Onoye, and so forth.

Mr. Misaki replied that he was of the same opinion, but the measure suggested by Mr. Murata might be covered by the Forestry Law.

Asked by Mr. Murata whether the Government did not think it necessary to exercise control over the lending of pictures and other articles preserved in Temples and Shrines, Mr. Misaki replied in the negative.

Baron Suyematsu Kencho thought that if the treasures of Temples had to be placed in museums, and if, for instance, the highly venerated Buddhist images kept in the Nara Temples were exhibited like ordinary objects, the reverence now attaching to the Temples in the eyes of the people might be weakened. In fact the measures proposed by the Bill might vulgarize religion and destroy its sanctity.

The Government Delegate replied that the Government intended to carry out the Law only in so far as it did not impair the prestige of Temples and Shrines.

Mr. Namura Taizo wished to know whether the fine mentioned in the Bill would be imposed by civil or criminal process.

The Government Delegate replied that he thought the matter would belong to criminal procedure; but this reply was traversed by the former Chief Judge of the Supreme Court, who said that payments in the nature of compensation for damages, as mentioned in the Bill, could not fall under criminal jurisdiction.

Mr. Namura asked the Government Delegate how a case would be dealt with in which treasures were wilfully destroyed. The Government Delegate replied that it would be dealt with according to ordinary criminal process.

Mr. Namura Taizo—If so, the fine provided in the Bill exceeds the limit of the fine mentioned in the Criminal Code. The latter fixes the maximum at 10 yen, whereas the fine provided in the Bill ranges as high as 500 yen.

The Government Delegate replied that a case relating to custodians belonged to a different category. An act of wilful destruction of property must be punished by criminal process.

Mr. Namura questioned the Delegate as to what course would be pursued in the event of unwitting offences against the proposed regulations. He did not find any provision relating to such cases.

The Government Delegate replied that a case of the kind must be specially dealt with.

Mr. Murata Tamotsu did not think the Government's investigation about the criminal bearing of this Bill had been thorough. For instance, an act of petty larceny, as defined in the criminal code, involved minor punishment, and if so, the stealing of treasures kept in the Great Shrine of Ise must be visited with minor punishment. Acts of larceny con-

nected with custody were alone visited with major punishment, but the Bill under discussion proposed to punish persons who were not custodians in the same way as those who had committed a felony. Moreover, those that sold or purchased, transferred or received, treasures were also to be punished.

The Government Delegate replied that punishments for such acts had been made specially heavy.

Mr. Kubota Yuzuru wanted to know whether the Government contemplated establishing a special museum for showing treasures kept in Temples and so forth, as the House had suggested when the representation about the preservation of Temples, Shrines, and their Treasures had been forwarded to the Government.

The Government Delegate replied that the Government had no such intention. He wished to tell the House, for purposes of reference, that according to researches carried out by the Government, there were only 3,700 articles or so coming under the category of national treasures, and the number would be considerably reduced if the treasures specified by Baron Suyematsu were excluded. Therefore the Government saw no necessity to build a special museum.

The Bill was entrusted to a special committee of 9, nominated by the President.

HOUSE OF REPRESENTATIVES.

The House met at 1.10 p.m., the Order of the Day being—

- 1—First Reading of a Government Bill relating to the Special Accounts of the Governor-General's office in Formosa.
- 2—First Reading of a Government Bill relating to the Tax-collection Period for Oshima District, and various islands in Kawabe District, Kagoshima Prefecture.
- 3—First Reading of a Government Bill relating to an increase of the Working Fund of the Tokyo and Osaka arsenals.
- 4—First Reading of a Government Bill relating to an increase of the Working Fund of the Senju Woolen Factory.
- 5—First Reading of a Private Bill relating to the Amendment of the Law of Publication.
- 6—First Reading of a Private Bill relating to the amendment of the Law of Election of the House of Representatives.
- 7—First Reading of a Representation relating to aid to the Historical society.
- 8—First Reading of a Private Law relating to the Preservation of Forests belonging to Shrines and Temples.
- 9—First Reading of a Private Bill relating to Hereditary Pensions and Pensions by way of Rewards.
- 10—First Reading of a Private Bill relating to a Pension Adjusting Loan.

After a Secretary had reported the titles of Bills introduced by the Government and by members, the President announced that the Premier would address the House. Count Matsukata ascended the rostrum and spoke as follows:—

Gentlemen—The sentiment I express will be fully shared by you when I say with profound respect and grief that the speedy recovery of Her Majesty the Empress Dowager was earnestly prayed for by all, on learning of her sudden illness, and that Her Majesty's decease has caused heartfelt pain.

The great work of the post-bellum measures has not been carried much beyond the inception stage, and its satisfactory consummation is regarded as the most important duty devolving on the Government.

The work of revising the Treaties, one of the long-cherished desires of Japan, has been nearly achieved. Its completion is not far distant. As to putting the new Treaties into operation, the Government is devoting special attention to the question, in order that the benefits properly accruing from them may be fully realized.

National armament being an essential requisite for maintaining peace, the Government, with the view of completing the arrangements connected with it, has laid before the House the Estimates for the Second-Period Programme in continuation of the appropriations for the First Period. I hope, gentlemen, that these estimates will secure your consent.

The development of industry and the expansion of facilities of communication are important means of promoting the prosperity of a country. Recent progress in these directions has been extremely striking. But it is nevertheless true that Japan is not yet competent to march side by side with Foreign Powers in so far as attainment in these matters is concerned. Greater and healthier progress must be achieved in the interests of the growth of national welfare.

Only a brief period has elapsed since Formosa was incorporated into the dominions of this Empire, and satisfactory results could not yet have been attained in its administration. It is gratifying to receive reports, however, that of late the natives seem to have become finally tranquilized, and that the plague has abated much of its violence. Side by side with the pacification of Formosa and the adjustment of its affairs, the Government will take steps to open up and render available the resources of Hokkaido, so that the objects contemplated with respect to the two regions may be simultaneously and successfully pursued.

It being a natural consequence that in proportion to the increase of national affairs in volume and variety greater need should be felt for men of ability, the Government deems it one of its urgent duties to largely expand the system and scope of education, and to bring to a more perfect state the mechanism for obtaining men of ability and talent, who are the fountain spring of national prosperity and greatness.

You are aware, gentlemen, that during last year, calamities in the form of seismic waves, earthquakes, and inundations visited the country in succession to an alarming and unprecedented extent. The losses of life and property were, I regret to say, enormous. The Treasury was consequently obliged to make various disbursements, as a matter of urgency, over and above the items of last year's Budget. It is the intention of the Government to compile and introduce Bills embodying supplementary Budgets for the repair of damages and the relief of distress, and also projects of law in connexion with civil works and other undertakings deemed necessary for providing against the danger of future inundations. Upon these various measures you will be asked to deliberate and decide.

The matters to which I have thus far referred are all connected with finance, and I hope, therefore, that you will devote special and earnest attention to the Budgets placed in your hands. In this context, a few words may be advisable on the subject of the Budget for the 30th fiscal year. The Revenue and Expenditure each amounts to over 239 million yen, and these totals, compared with the corresponding figures for the previous year, show an increase of over 49 million yen in the Revenue, and of over 56 million yen in the Expenditure. In compiling the Budget for the incoming fiscal year, the financial programmes elaborated for the previous fiscal year have, for the most part, been taken as a basis. The aspect of the Ordinary Revenue is extremely promising, and receipts of various sorts show a general tendency to increase. Especially is this conspicuous in the case of income tax, tax on sake, Custom duties, receipts from State Forests, Post and Telegraph receipts, and Railway receipts.

Although, as I have just stated, the Budgetary Expenditure for the next fiscal year shows a large increase over that for the preceding year, it is to be remembered that, not only the Second-Period Fund for National Armaments, but also most of the other items of increase, have been previously discussed and approved. The development of foreign affairs, of the educational system, and of Hokkaido and Formosa business, has also contributed to augment the outlays for the coming fiscal year.

With regard to the finances of Formosa, the Government has decided to adopt the policy of setting them apart as a Special Account from the next fiscal year, and with that object a Bill has already been introduced in your House. The Government contemplates making Formosa self-supporting in due time, but it is unavoidable that during the first few years expenses needed for its development should be defrayed, in part, out of the general income of the Empire. For the next fiscal year the Government proposes that the deficit should be met by an appropriation from the Indemnity, and a measure in that sense will be submitted to you.

With respect to the redemption of the national debt, I desire to direct your attention to the fact that the new foreign seven-per-cent. loan, floated in the 6th year of Meiji (1873), and the seven-and-a-half-per-cent. Insurance Loan, floated in 1877, will be entirely paid off during the incoming fiscal year.

Let me say a word in conclusion on the subject of the foreign commerce of the country. During last year, the exports totalled more than 117 million yen and the imports more than 171 million yen. These figures, compared with those for the previous year, show a decrease of over 18 million yen in exports and an increase of over 42 million yen in imports. The chief reason for the decrease of exports was dullness of the markets for silk and tea, while the country's large purchases of raw cotton and cotton yarns, as well as cotton shirtings, sugar, Italian cloth, and so forth, were responsible for the en-

larged volume of imports. The development of, and the profits accruing from, foreign commerce, exercise a direct influence on the welfare of the State. So long as commodities necessary and useful for the purposes of manufacturing industries are imported in growing quantities, the productive power of the country must be developing, and means must be taken to expand the sale of its products, so that Japan may not be distanced in the economic competition of the world.

It is a matter of regret to me that very soon after succeeding to my present post, I was obliged to compile the Budget for next year mainly on the basis of measures elaborated during the previous year, and to content myself with such changes as the circumstances of the time rendered unavoidable.

The Government has introduced other important Bills as well as supplementary Budgets, and I am exceedingly desirous, in the best interests of the State, that you should give your consent to them.

When the Premier left the rostrum, several members asked permission to speak, and leave having been given to Mr. Komuro Shigehiro (Liberal), that gentleman expressed a hope that the Premier and other Ministers of State would condescend to remain in the Chamber for a while, so as to give satisfactory oral replies to questions put by him and his fellow-members. But before Mr. Komuro could conclude his remarks, the Premier, Count Okuma, Marquis Saigo, and others left the Chamber one after another, so that Mr. Komuro had nothing for it save to resume his seat, grumbling.

Mr. Kusakari Shimmei (Liberal), wished to know, at the outset, whether the questions he was about to propound could be answered by the Ministers still remaining in the Chamber. He then proceeded to inquire whether the Government did not recognize the existence of the German Representative's affair. The Premier seemed to have intimated to the House that diplomatic relations were very peaceful. Secondly, the Premier had observed that industry should be promoted. Why then did the Government propose to considerably cut down the expenditures of the Communications Department, which, to use the language of the pro-Government papers, was under the control of one of the *Banshoku Daijin*? And why did the Government curtail the fund for developing facilities of communication? Thirdly, why was the Formosa Budget treated as a special account? Fourthly and lastly, why had not the Premier touched upon the personal rights problem, one of the most important topics of the day?

These questions of Mr. Kusakari fell flat, for while he was eagerly dilating upon them, one after another of the remaining Ministers left the Chamber, and his speech was ultimately addressed to empty Ministerial benches.

Mr. Komuro Shigehiro (Liberal), wished to know whether the Cabinet would continue to hold office even if a vote of want of confidence was passed; an entirely irrelevant question, which the President ruled to be out of order.

Mr. Komuro then preferred the following Question to the Government:—

An urgency Imperial Ordinance must be treated in conformity with the provisions of Art. VIII. of the Constitution, which directs that all Ordinances of the kind shall be laid before the Imperial Diet in its next session. Therefore the Government ought to have laid the Urgency Ordinance in question before the Diet in its 10th session, and ought to have sought the latter's *post facto* approval. But the Government did not follow this normal course; it suddenly repealed the Ordinance. Can such a step be regarded as conforming with the provisions of the Constitution? An urgency Imperial Ordinance is an order issued under stress of circumstance when the Diet is not in session, and the Constitution provides the safeguard that the *post facto* approval of the Diet must be sought. The 21st of December, 1896, when an Urgency Imperial Ordinance was issued abrogating another Urgency Ordinance that restricted the free passage of Japanese to Korea, was a day immediately prior to the opening of the 10th session of the Diet. Hence it can not properly be called a time when the Imperial Diet was closed, but should rather be regarded as a time when the Diet was on the eve of being opened. The issue of an Urgency Imperial Ordinance at such a juncture with the view of rescinding another Ordinance of the same kind, thus depriving the Diet of its right to pass judgment on the latter Ordinance, must

be considered an unconstitutional act. Did any extraordinary circumstance exist to render the sudden repeal necessary or unavoidable?

If a such proceeding on the part of the Administration be justifiable, does it not follow that the Government is in a position to issue Urgency Ordinances of an unreasonable or superfluous character when the Diet is not in session, and then to avoid the Diet's scrutiny by rescinding the Ordinances before the Diet's session begins? Does not the Government's recent action constitute a mischievous precedent of that nature?

Presented by Mr. Komuro Shigehiro.
Supported by Mr. Kusakari Shimmei and others.

Mr. Komuro briefly explained that what he wished to ascertain was whether the sudden repeal of an Urgency Ordinance by another Urgency Ordinance, on the very eve of the Diet's session, was not unconstitutional.

Mr. Suzuki Jyubi (Liberal), next ascended the rostrum and explained two Questions that he and his fellow-Liberals wished to put to the Government. The first question referred to a supposed Convention between Japan and Russia with respect to Korea. It ran as follows:—

When the Government despatched Marshal Marquis Yamagata last May as Representative of Japan to attend the Coronation of the Czar, it was repeatedly reported both by Japanese and foreign papers that a Convention about the future of Korea had been concluded between Japan and Russia. The Government has not ordered the withdrawal of those newspaper reports, and if the Convention really exists, the Government ought to inform the public of its provisions, excepting, of course, those of a secret nature, for such knowledge is required in order that the two contracting nations may conform with the terms of the Convention. Does the Convention really exist?

2.—According to reliable information, the Russian Government has sent a number of military officers to Korea, and they are now engaged in the training of Korean soldiers. Supposing that the Convention exists, does it contain any provision relating to such procedure?

3.—The Korean Government, through the good offices of the Russian Representative in Seoul, has borrowed, it is said, a sum of 3 million yen from the Russo-Chinese Bank. Is nothing provided about it in the Convention?

4.—Supposing the above acts of the Russian Government to be covered by the Convention, did that Government open preliminary negotiations with Japan about them, and, if so, what steps did Japan take?

5.—Supposing that no such Convention exists between the two Powers, do the Japanese Government and people enjoy freedom of independent action in respect of Korean affairs, without any obligation whatever towards other Powers?

Mr. Suzuki explained these queries at considerable length. He observed that the despatch of Marshal Yamagata to Russia in addition to Prince Fushimi on the occasion of the Coronation ceremony, was an exceptional courtesy on the part of Japan. It was thought both at home and abroad that some special reason must exist to induce Japan to take such an extraordinary step. Indeed, it was reported by Japanese and foreign papers subsequently that a definite understanding had been reached by the two Powers in connexion with Korea, and the news seemed to be well founded, seeing that the Government had not ordered its contradiction. If so, the Government ought to inform the people about the stipulations, so far as circumstances admitted, for the conclusion of such a Convention imposed upon both nations the obligation of observing it, to say nothing of umbrage caused to other Powers so long as the thing remained shrouded in mystery. The Government ought to make the provisions public, so as to dispel any unnecessary alarm felt by other States, for it might be confidently assumed that the Convention had not been concluded with the object of partitioning Korea between the two contracting parties. It was now universally known that Russia had sent officers to Korea, and that the latter's soldiers were being trained by these officers, and also that a sum of 3 million yen had been borrowed from the Russo-Chinese Bank through the good offices of the Russian Representative in Seoul. These were very important facts, and Mr. Suzuki wanted to know whether they were definitely contemplated by the Convention,

supposing it to exist. Even if not contemplated, they ought to have duly attracted the attention of Japan and she ought to have taken steps to anticipate Russia in such matters. The speaker's sojourn in Korea enabled him to know what an effect such things as the training of soldiers and the furnishing of money exercise on Korea and the Koreans. Count Okuma, the Minister of Foreign Affairs, did not seem to act up to the strong foreign policy with which he was identified, for, since his nomination, already several months ago, he had not taken any particular steps, especially in the case of Korea. He had even neglected to send a Japanese Representative to that country. The Foreign Minister ought to reply to the above Questions in person, and not by writing.

Mr. Suzuki next explained his second Question about the German Representative's affair.

It appears to be an indisputable fact that, on December 30th, 1896, as Mayeda Masakichi and Arikado Shuji, two students of the Seijo Gakko, were walking on the slope in front of No. 20, Kami-in-bancho, in the Kojimachi District of Tokyo, the Representative of Germany in Japan who was driving in a carriage, struck at Mayeda Masakichi with a whip, but, failing to reach him, struck Arikado Shuji. If that be so, the action of the German Minister amounted to a criminal offence. A Foreign Representative being beyond the reach of Japanese law, the case ought to be duly dealt with according to international law. What steps have been taken by the Government? The German Representative's act, supposing that he really behaved as represented by the two students, belonged to the category of criminal offences, according to Japanese law. But a foreign Minister could not be dealt with under Japanese law. Recourse must be had to diplomatic procedure. Had the Foreign Office investigated the affair? He wanted a clear explanation of the matter, for it concerned the dignity of the country, and the public were excited about it.

Mr. Tanaka Shozo (*Shimpo-to*) cried out in a loud voice that he heard that one of the two students had free access to the house of Baron Suyematsu Kencho, and that the latter was backing up the two students. Such conduct was highly improper, and if the Government was to investigate the affair, this report about Suyematsu must also be investigated.

The first Bill on the Order was then taken. Mr. Kusakari Shimmei (Liberal) wanted to have a clear explanation of the reason why the system of ordinary accounts could not be adopted in the case of Formosa, and what special circumstances differentiated Formosa from the rest of the Empire, so far as to make it necessary to treat the Formosan Budget independently.

The three Government Delegates, Mr. Nomura, Chief of the Formosan Bureau in the Department of Colonization; Baron Kitagaki, Vice-Minister of the same Department; and Mr. Matsuo, Chief of the Accounts Bureau of the Treasury, appeared in succession and answered questions about the Bill by several other members in more or less similar terms to those of Mr. Kusakari. But there members and also some others, declared themselves dissatisfied with the explanations given by the Government Delegates. Finally it was decided that the Bill should be handed over to a Committee of 9 to be nominated by the President.

The 2nd, 3rd, and 4th Bills on the Order were entrusted to the same Committee.

As to the 5th Bill, Mr. Minoura Katsunodo briefly proposed that it be entrusted to the Committee already appointed to consider and report on the drafts of Amended Press Law introduced by the Government and by members of the House. This proposal was adopted.

The 6th Bill was withdrawn by the introducers.

The Representation standing 7th on the Order was as follows:—

REPRESENTATION RELATING TO STATE AIDS TO THE HISTORY COMPILATION SOCIETY.

The gist of the Representation was to the effect that, in view of the materials for compiling modern Japanese History being in danger of disappearing unless proper steps were taken at once to collect them, the House, in its 8th session, had

represented the necessity of giving a State aid of 30,000 yen annually for the space of seven years to the Historical Society. A representation to the same effect had been passed in the 9th session. But as no item on this account was included in the Government's Budget for the 30th fiscal year, the House desired to repeat its representation and trusted that it would be adopted by the Government, and that an appropriation in aid would be provided by means of a Supplementary Budget.

The Representation was adopted without division.

The principal introducers of the 8th Bill being absent, one of his supporters moved that the discussion upon it should be deferred, especially as the Government was believed to contemplate introducing a Forestry Bill. This suggestion was adopted.

Mr. Takahashi Takuya (Government Delegate for the Department of Agriculture and Commerce) wished to inform the House that though the Government was ready to give consent to the Bill, so far as it related to the preservation of forests belonging to Temples and Shrines, it could not endorse the last clause proposing to retrocede the forests to the Temples and Shrines originally owning them.

The 9th and 10th Bills on the Order ran as follows:—

PROJECT OF LAW DEALING WITH FAMILY PENSIONS AND PENSIONS IN REWARD.

Those possessing family pensions or pensions given by way of reward, on the occasion of the issue of the Han System, on September 10th, 1870, or their heirs, who have not received any allowance in lieu of their pensions, or have not received the full amount to which their pensions entitled them, shall be entitled to have arrears made good with Pension Bonds specially issued for adjusting Pensions.

PROJECT OF LAW RELATING TO A PENSION ADJUSTING LAW.

For the purpose of adjusting Pensions a Special Loan shall be floated, to the extent of 10,000,000 yen, to be let run for 5 years, and to be redeemed in 50 years after the lapse of the first 5 years.

The two Bills were noteworthy in the fact that the list of introducers and supporters included considerably more than one half the total number of the members.

Mr. Fukayama Takatsura (Liberal) explained the Bills, and observed that, though some objected to the measures because of the considerable disbursement involved, it ought to be remembered that the money was not to be paid in cash, but in Bonds, to be redeemed in 50 years. Therefore the projects would not cost much to the Treasury. Estimates based on petitions forwarded with reference to pensions showed that the whole would amount to something over 7,300,000 yen, but the introducers put the loan at 10 millions.

The Bills were entrusted to a special Committee of 9.

The House rose at 3.30 p.m.

THE AMNESTY.

It is stated that the amnesty in connexion with the death of the Empress-Dowager will probably be a measure of some magnitude. No distinction is to be made between political offenders and ordinary offenders; to both alike diminution or remission of sentence will be granted. Thus, persons lying under sentence of death will have their punishment changed to life imprisonment; life-prisoners will become term-prisoners; and term-prisoners will have their periods shortened by one-fourth or one-fifth. It follows that prisoners who have already served three-fourths, or four-fifths of their sentences will be immediately released. More than ten thousand convicts are expected to emerge from jail in the last category. The measure is to extend to Hokkaido, to Formosa, and to the Army and Navy.

DEATH.

We regret to learn that His Excellency Count Orini yesterday received telegraphic news of the death of his mother.

GOVERNMENT AIDS.

The Government contemplate paying out the following sums in aid from the Treasury during the next fiscal year:—

	30th Year.	29th Year.	Increase or decrease.
Aid to Navigation to Sakijima, Okinawa ...	5,000	5,000	—
Aid to Navigation to Ogasawara-jima	6,000	6,000	—
Aid to Navigation to Oshima; Kagoshima ...	6,000	6,000	—
Aid to Navigation to Rikuu Islands	3,000	3,000	—
Aid to Epidemic Diseases Laboratory	25,000	25,000	—
Aid to Tokyo Water-works	250,000	250,000	—
Aid to Osaka Water-works	50,000	50,000	—
Aid to Kobe Water-works	60,000	60,000	—
Aid to Osaka Harbour Dredging	13,534	13,534	—
Aid to Road-making in Kumamoto Ken	12,000	12,000	—
Aid to Reconstruction of Nagasaki Harbour	50,000	—	50,000
Totals	370,534	320,534	50,000

	30th Year.	29th Year.	Increase or decrease.
DEPARTMENT OF FINANCE.			
To Nippon Railway Co.	509,300,538	528,128,550	18,828,012
To Kyushu Railway Co.	100,775,000	88,000,000	12,775,000
To Sanyo Railway Co.	170,933,000	—	170,933,000
To Nippon Industrial Bank	66,500,000	—	66,500,000
To Agric. - Industrial Banks	1,997,500,000	—	1,997,500,000
Totals	2,344,630,538	556,128,550	1,788,501,988

	30th Year.	29th Year.	Increase or decrease.
DEPARTMENT OF EDUCATION.			
Aid to Technical Education	135,000,000	135,000,000	—
Aid to Technical Teachers Training	15,000,000	15,000,000	—
Aid to Common Education	345,000,000	367,430	344,632,570
Totals	495,000,000	367,430	494,632,570

COUNT ITAGAKI'S SPEECH.

Count Itagaki made the following speech at the extraordinary general meeting of the Liberal Party on the 10th instant:—

GENTLEMEN,—You have come together to-day from distant parts of the country for the purpose of holding an extraordinary general meeting of the Liberal Party, and you have intimated to me, through Mr. Kaetsu Arifusa, that you choose me to be your President. I am here, therefore, in obedience to your mandate. As you are well aware, I had resigned the presidency, whether in a public or a private capacity, but of course it would have given me unendurable pain to sever my relations with a party which I had served with all my heart for over twenty years, finding them as one to-day. I ask you to believe that I had ample reasons for resigning, though I do not purpose to offer any statement of them now. To-day, before I accept the office of President, let me tell you my conception of the duties it involves, for, if you agree with me, I look to you to aid me in discharging them, and, relying on your assistance, will be glad to accept the trust you repose in me. The prime object of our Party, as I believe, is to bring the system of representative government to a state of completion. In that kind of government affairs are directed by the voice of the people as well as by the supreme power of the Sovereign. The members of the Diet are re-

quired to give distinct expression to the popular voice, for they are elected by the nation on account of the confidence it has in their principles. The President of a party organized to elect members of the Diet, has to pay attention, firstly, to the principles, secondly, to the policy, and, thirdly, to the harmony, of the party. Here, then, is my programme. As party mechanism we have already a business committee and councillors, and it shall be my duty to give due weight to the decisions of the committee and the councillors so far as they do not conflict with the above three points. As to the scope and relations of the three, I shall consult, to the utmost possible extent, with the committee-men and councillors, recognising that the former stand to the latter in the relation of the legislature to the administration, and that the president is the pivot of the mechanism. Thus my purpose is to elevate and give weight to the position of the councillors. With respect to bills, it is necessary to set limits to the scope of the Party's views. The Government's functions may be broadly divided into three, namely, those relating to finance, to foreign affairs, and to domestic affairs. Of these three, finance demands the most definite schemes, for the movement of the administrative machine depends upon economical management. In the event of new bills being introduced involving large expenditures without due attention to available resources, it must be the Party's duty to prevent the passage of such bills, and to avoid their introduction by members of the Party. Bills involving only small outlays may be left to the judgment of individual members, always provided that the harmony of the Party is not disturbed. Such is the general method that I purpose pursuing as president. Folks say that Itagaki has a propensity for scolding others, and I have often been warned against indulging in the habit. I intend to be as careful about it as I can, but inasmuch as my austere visage is an inheritance for which I am not responsible and which I can not mend, I must bespeak your indulgence to that extent.

QUALIFICATIONS FOR OFFICIALDOM.

The alumni of the five Private Law Schools under the special control of the Department of Education are now agitating against the rumoured new system, which provides that graduates of the College of Law of the Imperial University may be admitted to the ranks of officialdom without examination. At present, graduates of the College of Law are qualified to be at once appointed probationer judges or procurators, whereas all aspirants from other sources are required to pass a special examination. This privilege enjoyed by the Law graduates of the Imperial University is considered unfair, inasmuch as the final examination passed by them at the college, is entirely distinct in character from the examination that aspiring barristers have to undergo. As a proof that the Law graduates of the University do not always deserve such differentiation at the hands of the Examination Committee, the agitators aver that only two probationers have thus far failed to pass with success the second, or practical, examination, and that these two were graduates of the College of Law. Moreover, at civil service examinations about a third of the University graduates that presented themselves have hitherto been unsuccessful. These facts indicate that their scholarship can not be alleged to excel that of the graduates of private law institutions, and that they do not deserve any special favour. Hence the rumour that the Government proposes to dispense with examination in the case of graduates of the college of Law aspiring to become administrative officials, has accentuated the objections of the agitators. They have memorialized the Minister of Justice to the foregoing effect, and have also held a demonstrative meeting. It ought to be remembered that the Law graduates of the University were formerly entitled to be made judges and administrative officials without undergoing any special examination: that arrangement was subsequently changed to the present competitive system, so far as concerns administrative officials, and it does not appear that the change has been attended with any inconvenience or disadvantage.

Tea sold at Yokohama on Wednesday was as follows:—11,000 cattie to Cornes & Co., 13,000 cattie to Middleton and Smith; and 6,800 cattie to Berndt & Co.

FOREIGNERS AND THE LATE EMPRESS DOWAGER.

THE *Nippon* has the following paragraph:—

DISRESPECT SHOWN BY FOREIGNERS.

In consequence of the death of the Empress Dowager, all musical, theatrical, and dancing performances are suspended throughout the empire. But foreigners in Yokohama are so inconsiderate as to advertise a musical performance at the Public Hall on the evening of the 20th instant. This is not the first occasion on which foreigners have shown their want of any sense of shame by taking advantage of their extraterritorial privileges to commit lawless acts. How is it that Ministers and Consuls suffer such things to go on with impunity? There is nothing for it but to publish the fact of this disrespect on the part of foreigners, and to appeal to the opinion of the world.

It is not easy to treat with perfect equanimity protests on such a subject coming from a journal so essentially chauvinistic as the *Nippon*. Still, we must with all frankness admit that, in this particular instance, our contemporary has a good case. Deferring to a custom hallowed by centuries of observance, the Emperor of JAPAN has ordered that all professional performances of music, dancing, or theatricals shall cease through the whole country for a period of fifteen days. The period commenced on the 12th instant and ends on the 27th. Hence the "grand concert" advertised to take place in the Public Hall of Yokohama on the 20th instant, is a very flagrant contravention of the Imperial proclamation. It is not illegal. Foreigners residing in Japan are not required to observe any Japanese law or ordinance except in so far as it has, or obtains, the endorsement of their own laws; or, to put the matter in a more practical light, in so far as their own Courts of Law in Japan have competence to enforce it. Besides, there is here question of a custom only: a custom to which the force of law has been given by the Sovereign of JAPAN, but which has no concern whatever with the prime purpose of law, namely, the preservation of public peace and order. It is the Japanese habit—a very beautiful habit, we think, in many respects—to pay to the memory of the dead a degree of reverence unknown in the Occident. Western peoples, after they have committed to the grave the corpses of their relatives and friends, and after they have erected monuments to mark the spot, dismiss the bereavement from the outward observances of their every-day life. They may sorrow in secret, and wear mourning for a season, but otherwise the dead claim no ceremonial at the hands of the living. It is not so in Japan. Here the departed units of a family are restored to their old places at set intervals of days, weeks, and years, until many generations have paid tribute to their memory. As between the ultimate advantages of the two systems, we make no choice at present. But we faithfully interpret the sentiment of all educated foreigners in Japan when we say that their wish and impulse would be

to respect Japanese custom in such matters. Some have declared in our hearing that the mourning rites for the deceased Empress Dowager are extravagant. So they are, doubtless, from an Occidental standpoint, and there are always many Occidentals incapable of seeing anything except from their own standpoint. But these revered old usages have nothing extravagant in Japanese eyes, and we are living in Japan. It has come to our knowledge that a Japanese policeman, hearing the sounds of a violin in a foreign house on the Yokohama Bluff a few days ago, knocked at the door and asked that the playing should cease. He had no competence to take such a step. The inmates of the house might have sent him about his business, might even have procured for him a reprimand. But they did not. They treated the constable himself with civility and his request with respect. That is an example of the spirit by which foreigners are really animated. We dare say that the person playing on the violin had not taken the smallest practical note of the veto against music: it had seemed to concern the Japanese people only. But so soon as a suggestion came that the neglect of the veto by a foreigner might be painful to the Japanese, prompt sympathy was shown. M. HENRI MERCK and the amateurs assisting him at his advertised concert err by inadvertence, most assuredly not of deliberate intent. If they have given the subject any thought, their conclusion has probably been that the life of the foreigner, in the forced seclusion of his settlements, is a thing apart, and that segregated communities of strangers have never come so close to the Japanese as to weep when the latter mourn or dance when they pipe. It is a matter of individual feeling. Ministers and Consuls are powerless to interfere. For our own part, we are distinctly of opinion that the wall of partition between foreigners and Japanese is such matters should be broken down. Occidentals living in Japan can no longer afford to ignore the sentiments of the nation, or to do violence to its most hallowed traditions. When the Imperial Family are concerned, it must be remembered that the national heart of Japan is touched at a singularly sensitive spot. Of course, there is much to be said about M. HENRI MERCK being a professional who lives by his violincello, and who can not afford to loiter in Japan doing nothing. But thousands of Japanese professionals who get their living in a similar manner are subjected to similar inconvenience. Things must be taken as they are, not as we would have them be. Sentiment demands some sacrifice, and it will be found that the greater loss is ultimately involved in neglecting that principle.

Just before going to press we received a notice of the postponement of M. MERCK'S concert, also of the organ recital at Union Church. The latter, it may be mentioned, was announced before the death of the Empress Dowager occurred.

POST OFFICE IRREGULARITIES.

IT is necessary once more to revert to the hackneyed topic of Post Office irregularities. In our own case, this thing is rapidly becoming an emphatic obstacle to our business. Formerly, copies of the *Japan Daily Mail* posted in Yokohama on the forenoon of the day of issue, invariably reached Kobe and were delivered to our subscribers there on the following morning. Now, on the contrary, delays of one, two, and even four, days are common. We have before us a letter from a subscriber in that port, dated the 13th instant. He says that the last copy of the *Mail* received by him was that of the 8th instant. Thus four copies that ought to have reached him by the morning of the 13th and that were all duly posted in Yokohama, still remained in the hands of the Post Office authorities. It is further complained by correspondents that two or three copies of the paper sometimes reach them by the same delivery. In short, nothing could exceed the untrustworthiness and want of punctuality that disfigure the Japanese postal service at present. Even within the limits of the metropolis the most glaring irregularities are of frequent occurrence. By way of illustration, we take two post-cards, handed to us on the same day by the persons to whom they were originally addressed. One was posted from the Hotel Métropole in Tsukiji on the 7th instant, the address written in the plainest English, and the destination, which was only a few hundred yards distant, designated by number. This card was delivered at 17 minutes past noon on the 12th instant, with six tags on the back; the first three irrelevant and bewildering; the fourth, a romanised transcript of the address, evidently written by a person surprised either at his own ingenuity, or at the stupidity of the previous tag-fixers; the fifth chaotic, and the sixth a wholly useless identification of the addressee. The second card, posted in the Hongo district of Tokyo on the 13th instant, and directed with perfect distinctness to a certain number in Tsukiji, was delivered at 9.30 a.m. on the 15th, with three tags attached, indicating a career of wonderful wanderings. As a last instance, we give the case of a letter posted in Tokyo on the 5th of January with a copper-plate superscription, indicating the name and number of the addressee in Tsukiji. This, burdened with three tags, reached its destination at 10 a.m. on the 14th instant, having spent nine days journeying across the city. Such a record is farcical. Were there in any one of these cases the slightest faultiness of caligraphy in the address, we should be ready to make every allowance, for it would, of course, be extravagant to expect that every Japanese post office should be equipped with a facile decipherer of foreign writing. But the names and localities in the addresses

in every case were almost as distinct as though they had been printed. We can discover no excuse for such extraordinary irregularities. The Japanese Post Office is rapidly losing whatever reputation it once possessed for good organisation, and it is worth the Japanese Authorities' while to observe that these particular *laches* fall under the notice of a wide circle of foreigners. In fact, every victim of an irregularity becomes an accuser of the Post Office, and from the defects of the latter draws inferences that extend to Japanese management in general. If the Japanese had deliberately set themselves to find a means of undermining foreign faith in their competence, they could not have hit upon anything more effective than these post-office failures. So far as we ourselves are concerned, it is plain that if the delivery of the *Japan Mail* in Kobe, Osaka, Kyoto, and other towns throughout Japan cannot be achieved with something like regularity, it ceases to be worth people's while to subscribe for the paper. In fact, the prosperity of our business is effectually checked by the carelessness of the Post Office or by the defects of the service, and as the thing has been going on now month after month without improvement, nay, rather, with aggravation, we feel that something more than a mere protest will soon be necessary for self-protection.

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

The *Tōyoteisugaku* and the *Teikoku-bungaku* both refer to the opening meeting of the Tō-a gakkai (Eastern Asia Society) on December 21st at which addresses were delivered by Messrs. Shigeno, Shimada and Inouye Tetsujirō. Hopes are expressed by these organs that the new Society will effect more than such bodies as the 新文學會 Shibungakkai and the Tō-a gakuin. These societies show no signs of life. The chief reason for reviving the study of Chinese literature at the present time is the desirability of possessing classified material for comparison with the literature of other countries. Studies that are prompted by mere reverence for antiquity, by the conservatism that has no sympathy with modern movements are next to useless. It is necessary, says the *Teikoku-bungaku*, that Chinese scholars should arrange and classify poems and facts. Fragmentary knowledge is of little use to anybody. If the new Society confines itself to the employment of Chinese classics as text-books for teaching morality or as models of polished writing, it will achieve nothing worth achieving. Chinese scholars as a class have in the past been too much addicted to sectarianism and narrow-mindedness. If this Society is the means of uniting them, and if they show a readiness to sink minor differences for the sake of a great object, they will accomplish a work which needs to be done and for the completion of which they have much better qualifications than any modern students of Chinese and Japanese literature.

The *Teikoku Bungaku* writes on the subject of "Literature and Home Life," deploring the absence in the Japanese home of anything corresponding to the feelings of the members of a Western household when gathered around the family hearth. Men in Japan, says this organ, finding nothing to attract them in the home life, seek their pleasures abroad. In Europe literature has worked wonders in almost every home.

In Germany, on mountain and plain, on the train and on board ship, as well as in the school and the home, one hears people singing Heine's lyrics, and few are the houses in England where the "Vicar of Wakefield" is unknown. But, turning to Japan, we find the present race of novelists and verse writers to be young men who have no families of their own, who are quite satisfied if they can produce a work portraying beauty in one form or another. With the lives of prostitutes and *geisha* they are familiar, but of family and social life, of religion and education they are profoundly ignorant, and, what is still worse, are entirely unconscious of their defects. One exception is worthy of mention. We refer to Gensai, who, though as a novelist he occupies the third rank and hence produces nothing very superior, never writes anything that would bring a blush to a modest girl's face. What is to be regretted is the scarcity of such works.

The organ we have just quoted condemns the practice, which has lately become so fashionable, of criticising authors in groups. According to the *Teikoku-bungaku*, Mr. Ogai, writing in the *Mesamashigusa*, was the first to introduce this practice, and he was followed by Mr. Tsubouchi Shōyō, who started the *Chikamatsu Kenkyukai*, the transactions of which are published in the *Waseda Bungaku*. The *Kokumin Shinbun* followed suit with its 七人合評 *Shichinin Gappō* (combined criticism of seven authors), and even the sedate *Nihon*, for once in its history, succumbed to the prevailing spirit of levity and came out with a 三人合評 *Sanmin Gappō* among its articles; and, to crown all, Rōhan, not satisfied with the combination of six or seven authors, asked, half in joke, no doubt, in the pages of the 新小説 *Shinshōsetsu* for a criticism combining all authors (*Tenka no Gappō*). With the exception of Mr. Tsubouchi's work, which consists of the criticism of a class of literature that stands by itself, the efforts of the new order of critics seem to the *Teikoku-bungaku* to be labour lost. It is plain, says this organ, that this grouping is all done for the sake of effect, and that the process involves the obliteration of many of the best qualities of the literature handled: neither the praise nor the condemnation of critics whose one object is to present a taking picture, to produce a striking antithesis, is of real value. This practice has never been followed to any extent in the West. The collection of the masterpieces of a number of authors into one volume is quite another thing. It is said that Lessing elevated criticism to the region of poetry and imparted to it a touch of the divine. The movement to which we refer seems calculated to make the chief object of Japanese criticism the amusement of the readers of critiques. Instead of ascending to the sublime our criticism is descending to the ridiculous.

On criticism in general, the same organ is of opinion that the periodicals of the day attach too much importance to the modern novel. Among contemporary literature, the new-style verses have a special claim to more attention from reviewers than they have as yet received from any body with the exception of a writer in *Taiyō* and one other scribe. The development of this class of literature would, the *Teikoku-bungaku* thinks, be greatly aided by impartial criticism.

The *Seikai no Nihon* draws attention to the fact that the newspapers, the magazines, and by far the larger number of the books of the present day, are written or edited by young men, and proceeds to inquire into the circumstances that have caused this phenomenon. The *Nihonjin*, says the magazine we are quoting, holds that the action of the Government in forbidding students of State schools to engage in political discussions is responsible for the zeal shown in literature. The Japanese youth, says the *Nihonjin*, is full of irrepressible energy. The fire that burns within him must find vent some-

where. Shut off from politics, he turns to literature, with the object of figuring in the political world later in life. This partially accounts for the phenomenon, observes the *Seikai-no-Nihon*, but not altogether. One great reason why politics and literature attract the youth of Japan rather than agriculture, engineering or commerce, lies in the fact that in the case of the former it is possible for men to gain a reputation without money and in a more rapid fashion than in other spheres of action. The majority of Japanese students are ambitious; and ambition is, according to their notions, likely to be sooner satisfied in the political world than in other walks of life. Then the activity of politics has a charm for those through whose veins there courses the energy of youth. The restlessness and love of excitement which characterise men passing through this stage of life's journey find, in the ever changing attitude of political parties, much that is fascinating. The fact that even in this *Meiji* era young men have risen to the highest position in the State, with nothing to aid them but their own talents, has led many a young man to map out for himself an equally ambitious career. All this is an unavoidable concomitant of youth, and need cause us no concern in so far as it is confined to the political world. But it is another matter when literature becomes the field in which a number of hot-blooded young scribes endeavour to display their prowess. In this field there are few restrictions. For the most part men may say what they please, and a large number of young men are actuated by no sense of responsibility when they write. They regard the world of literature as a world that exists for their pleasure. They enjoy the love stories of a questionable type that are poured forth from the press. The writers of these stories are young men who write on sexual subjects without any feeling of shame and in a manner calculated to inflame the passions of their readers. We agree with the *Nihon-jin*, concludes the *Seikai-no-Nihon*, in considering that the tendency of a large part of modern literature is to produce most undesirable results in society as a whole. In former days students found vent for their energy in discussing politics; now they are making use of literature as a substitute. Is the country benefited by the change?

The *Seikai-no-Nihon* has a good deal to say on the mixed character of the customs and fashions now in vogue. For the past thirty years there has been, says this organ, a contest between the new and the old, the like of which has never been known elsewhere. In some cases the old have been replaced by the new. In others, after trying the new for a while, people have returned to the old; while instances of amalgamation, frequently with a most grotesque effect, are very numerous. Our ceremonies, being fixed by the Government, preserve their uniformity, but in costume, food, architecture, ornamentation, there is the greatest variety. Is there any country in the world where head gear is more varied than in Japan? Is there any country where such funny combinations of native and foreign dress are to be seen? Though the frock coat combined with hair arranged in the old style is a sight no longer to be seen, scarcely less laughable mixtures are of frequent occurrence.† Is there any country where such a variety of food is taken as in Japan? Or any country where houses are built in so many different styles? It is interesting to watch the struggle between the new and the old in the various restaurants and refreshment places of the capital. What are known as *unagiya* (eel restaurants) and the smaller eating houses are conservative and keep to the old methods of cooking and serving up meals, but the larger restaurants are more or less foreign in style.

In the matter of dress, women are much more conservative than men. What modifications of female costume have taken place are trifling compared to the changes in male attire. The shawl is used in various quarters, and,

* A society whose object is the investigation and explanation of the *Jōruri* of Chikamatsu Monzaemon, the most noted of Japanese composers of musical drama.

1897.

as a result of borrowed notions, the use of *hakama* by school girls and young ladies generally is greatly in vogue at the present time, and foreign foot-gear has been adopted by the attendants at various female schools.

A new magazine called the 江湖文學 *Kôhobungaku* has been started, which, according to the *Tôkyô Tetsugaku*, may be regarded as closely related to the *Tetsugaku* Department of the University. But it aims at covering more ground, as the name *Kôhobungaku* (Literature of the World) implies. Messrs. Koyanagi, Taoka, Fujita, and others are to be regular contributors to the new organ. In the opening number, published on November 20th, Mr. Fujii Oto-o writing on the present state of literature in Japan, says, that it has become the fashion to clamour for the appearance of a great poet or a great writer of prose, but with literary knowledge and taste in its present stage the writings of a really great man would not be appreciated. We venture to think that there are not more than a few score of literary men that are good judges of literature. Taking existing authors as an indication of literary taste, how many are there that appreciate the works of Rohan and Ogai? The comprehensiveness of modern education render it next to impossible that students should cultivate a refined taste in literary matters. There is great room for improvement in the class of text books used in our schools. In Western lands Readers contain extracts from the best authors and thus gradually the student cultivates a taste for high class literature. But this is not the case with our text books. We see no reason why the writings of a man like Bakin should not be utilised by school teachers. If the pupils were from early years made acquainted with writers of high tone and moral purpose, they would learn to despise much of the literature that now attracts them. Instead, then, of calmly waiting for the appearance of some master-hand in literature, we should do well to endeavour to educate literary taste and raise it to a higher standard.

In the pages of the magazine we have just quoted Mr. Fujita discourses on "The Distinctive characteristics of Chinese Literature," arguing that all the great political changes which have taken place are clearly traceable in the literature of the various periods. Mr. Uyeda Bin writes on modern English poetry and its exponents in Japan, observing that the latter do not sufficiently bring out the meaning of the original. They expound the surface meaning only and confine their explanations to generalities, instead of going into particulars. The teachers who attempt this class of work are, as a rule, not sufficiently equipped with knowledge of history and language to be able to make clear to their pupils the ideas suggested by the allusions of the poets they are expounding. The great desideratum of the day, according to Mr. Uyeda, is more minuteness of study.

Commenting on the *hundred essays* of Mr. Fukuzawa and Dr. Katô, the *Kôhobungaku* says that the spectacle of two old men expounding with such earnestness what they conceive to be the true principles of life is certainly very striking. Our advice to young men is that they pay great attention to the words of these aged seers. Though differing in their style of address, Mr. Fukuzawa's being that of a kind-hearted aged parent and Dr. Katô's that of an aged College lecturer, they agree in both being materialists. Mr. Fukuzawa's materialism is based on the importance he attaches to money. Dr. Katô's on his theory of the inherent evil of man's nature and of the corollary—the survival of the strongest.† In their view of human life and its many relationships the two scholars differ little. It is their experience as practical men of

† Dr. Katô contends that the whole course of modern events shows that the survival of the fittest means nothing but a survival of the strongest, and that thus in the modern world might becomes right, and is regarded as the equivalent of right.

the world that is of such value to the rising generation.

Mr. Ariga Nagao has just published a work in French on the Rules of Diplomacy as exemplified in the China-Japan war. The book has been highly praised by the French Academy, which alleges that no book of equal interest on the subject of diplomatic relations has appeared for 50 years. Other learned bodies in Europe have spoken in equally high terms of the work. Mr. Ariga, since his return to Japan, has translated it into Japanese under the title of 日清戦役國際法論 *Nissei-senryeki-hokusaishûron*. The work is highly valued by military officers and others. The Japanese edition sells at 1 yen, the *Tetsugakushoin*, No. 5, Hongô, Rokuchôme, Tôkyô, being the publishers.

According to the *Shigaku Zasshi*, Historical Societies are flourishing in various parts, thanks to the interest taken in the collection of historical material by the teachers of the various Higher Schools. Supported by the Sendai Second Higher School is the O-u Shigakkai, and aided by the Fourth Higher School, the Hoku-riku Shidan-kai is carrying on interesting work, and now we are informed that the Kumamoto Fifth Higher School has started the Kyûshû Shidan-kai.

From the *Kokumin-no-Tomo* we learn that the total number of books published in Japan last year was 26,065. Of these 20,000 were either translations or compilations. Classified according to subjects, the following figures are given:—Law, 4,830; Religion, 1,183; Astronomy, 1,371; Music, 1,022; Agriculture, 615; Industry, 667; Painting and Sculpture, 3,000; Geography, 813; Medicine, 416; Calendars of various kinds, 1,381; Japanese Poetry, 982; Books written in Chinese Style 166; Literary Works, 556; Novels and Stories, 462. The rest were on Mathematics, Philosophy, Economy, Military Tactics, Education, History, Divination, &c. Has not Japan become a great reading country, asks the *Kokumin-no-Tomo*.

Writing on the subject of provincial newspapers, the *Meiji-hyôron* says that the functions of a newspaper are to record all events that concern society as a whole, or, at any rate, large sections of the community; to comment on those events; to advocate reform; in a word, to act as a reliable guide to the reading world. But few newspapers in Japan fulfil these functions. Most of them are little more than organs of political parties. Though the metropolitan papers, in addition to serving the purposes of the wire pullers at their back, publish a certain amount of original matter; the provincial daily sheets are miserable affairs, containing little but re-cooked food derived from the Tôkyô dailies, with a little idle gossip or local slander added. To the publication of information on the 101 interesting local subjects—information that is inaccessible to persons residing elsewhere—the editors of these papers do not devote themselves. The *Meiji-hyôron* is of opinion, however, that provincial newspapers have a greater influence on their readers than their metropolitan contemporaries.

The organ we have just quoted, while condemning tattooing as a barbaric custom, expresses surprise that the practice should find such favour with foreigners. The *Meiji-hyôron* does not deny that the puncturing is very cleverly done or that and in ancient times the tattooer held an equally high place in public estimation with the sculptor. In modern times Yokohama is considered to be the paradise of tattooers. The number of distinguished foreigners who have left Japan with marks that they will carry to their graves is, says the magazine we are quoting, very considerable. Among these are to be included the two English princes (the late Duke of Clarence and the Duke of York) who visited this country many years ago. They carry about with them representations of clouds, dragons, and birds. Lord Clifford bore away the representation of one thousand tiny storks.

Mr. Longfellow, son of the poet, chose the battle of *Sabigahara*, with Ieyasu's army drawn up in battle array, as a device that would remind him of Japan's feudal days, and an American lady had on her left arm, on a space said to be about the size of a postage stamp, punctured no less than seven portraits. The *Meiji-hyôron* further informs us that both in England and America tattooing is becoming very popular, and that a Mr. Bander, hailing from the latter country, has engaged the services of Hori Chiyo, the well-known Yokohama tattooer, at an annual salary of yen 12,000, on a contract extending over three years. Hori Chiyo alleges that he has to thank the police for this good luck, for had not the proceedings they took against him involved a law suit, which resulted in his being fined for breaking the Law, and thus furnishing material for comments in foreign newspapers, Mr. Bander would never have heard of his existence. It is said that Hori Chiyo is a perfect master of his art and can tattoo in no less than seven different colours.

The following items are taken from the pages of the *Meiji-hyôron*. There are few institutions of so great interest as the *Ashikaga Gakkô* in Gumma Prefecture. This school was founded by Ono-no-takamura, in the ninth century, and, several hundred years later, under the management of Uyesuki Norizane attained a very high state of efficiency. The building, which covers the site of the old school, is now in a sad state of ruin, but the godown attached to it contains some very valuable books. They are said to be on 12 different branches of learning and to be over fifteen thousand in number. There are no less than 100 specimens of rare ancient works and some books from China that are over 2,000 years old. Hitherto, persons desirous of seeing these books have been conducted to the godown by a decrepit old man and allowed only to spend a few minutes in the examination of the catalogue, but the Gumma Prefectural Assembly have now taken steps to provide a suitable building to serve as a library; and are determined to do what is possible to preserve all relics of the ancient institution.

The popularity of *Nô* performances is very great at the present time, as is shown by the patronage the Nôgakkai has received. The Society has been ordered to arrange for two performances a year before His Majesty the Emperor, and within a few months of its establishment was placed in command of a fund exceeding 10,000 yen. These *Nô* performances are decidedly elevating and are an immense improvement on the foreign style of dancing in vogue a few years ago.

Since the reforms introduced into the Meiji Bijutsu Gakkô, great earnestness has been shown by the students generally. Many of them have not been content with the instruction received in school hours, but have attended the private classes held by Mr. Asai Chû. Mr. Koyama Shôtarô (Foreign Style Artist) is engaged on a portrait of the Emperor Kônei (the father of the present Emperor), which, it is predicted, will be a striking likeness. Mr. Murata Tanyô (Foreign Style Artist) has finished his third painting for an Imperial screen, which represents a scene in the late war, when the *Matsushima-kan* attacked the *Ting-yuen*. On the left of the *Matsushima* are the *Yoshino*, *Naniwa*, *Akutsushima*, *Takachiho*, and, enveloped in smoke, are seen the *Ting-yuen*, *Chin-yuen*, *Kwang-kiah*, *Ladyuen*, and *King-yuen*. The work of the artist is said to be very minute and in every way worthy of his reputation. The Bijutsu Gakkô, which hitherto has been exclusively devoted to teaching the Japanese style of painting, has now secured the services of Messrs. Kuroda and Kume, two well-known foreign-style artists. The year 1896 was marked by great activity in the world of art. The interest shown throughout the country in the future of Japanese art is very keen. The tide is strongly setting in favour of foreign styles.

In some quarters great things are expected from Miss Kôta Nobuko, who recently returned to Japan from Vienna, where she had been engaged

§ Japanese law forbids tattooing.

in the study of music. The advocates of progress in music, headed by Miss Kōda, have established a society called the 同聲會 *Dōsei Kai* (Harmonic Society). The *Meiji-hyōron* is of opinion that no extensive appreciation of foreign music is possible. Those to whom Western music affords pleasure are for the most part students that have no knowledge of Japanese music. This organ is in favour of foreign musical theories and ideas being utilised in the improvement of Japanese music, but thinks that for Japanese to become ardent admirers of foreign music pure and simple would involve a most undesirable denationalization.

Commenting on the backward condition of Japanese music, the same magazine says that the unwritten law of musicians in Japan is strictly observed by the whole fraternity, and there is no such thing as free inquiry in the rank of first class artists. One or two of the principles of the professional code may be mentioned. The teaching of music by acquainting the pupils with certain airs is not practised. Even the composing of airs is discouraged. Every artist prides himself on being able to perform pieces which are known to nobody but himself, and which he objects to others knowing.

Education, observes the 教育時論 *Kyōtoku-jiron*, is for the most part in the hands of four classes of teachers, namely (1) graduates of the Tōkyō Higher Normal School. (2) Graduates of the Imperial University, (3) Graduates of the Sapporo Agricultural College, (4) Teachers who have passed the Mombushō examination. The graduates of the Keiō gijuku, the Waseda Semmon Gakkō, the Kokugaku-in and the Tetsugaku-kan have not as yet, according to this authority, made their influence felt in educational circles. The magazine we are quoting says that the men turned out by the Sapporo College are doing good as directors of Ordinary Middle Schools and Industrial Schools.

Mr. Tsubouchi Shōyō's pen is ever busy and yet his works bear no marks of hasty compilation. It is only a few months since the appearance of his *Bungaku Son ori ori*, which was noticed in these columns, and we now have to announce the publication of a book dealing with the Japanese and the Western stage, and containing a large amount of most useful information relating to Japanese drama. The title of this work is 楽園の葉落 *Riyen no Ochiba*, a very poetical title, signifying the collection of the leaves that fall in the stage garden, the term *riyen* being the poetical equivalent of theatre. Mr. Tsubouchi's work is pronounced by competent authorities to be that of a specialist; the observations on Shakespeare are said to display an appreciation of the genius of the great dramatist which is extremely rare among Japanese. Mr. Tsubouchi has as yet published no dramas of his own, but it is confidently asserted that the assiduity with which he has for many years studied the world's great play-writers and the history of stage-acting, has been prompted by the desire to inaugurate a new era in Japanese drama by the preparation of plays that shall blend some of the chief elements of Western drama with the leading characteristics of Japanese histrionic art.

INTEREST ON BANK DEPOSITS.

We read in the *Shogyo Shimpō* that the Mitsui Bishi Goshi Kaisha—which, for the information of some readers, must be explained to be the Iwasaki Bank—has increased its rate of interest on fixed deposits to 6 per cent. for yearly deposits, 5½ per cent. for six-monthly, and 5 per cent. for three-monthly. No change appears to have been made in the rate on special deposits. These continue to receive something like 5.5 per cent. The special deposit is a particularly convenient institution, for the depositor can withdraw the whole or part of the money at any moment without forfeiting a *sen* of interest.

THE GOVERNMENT & THE DIET.

The Government's position in the Diet seems to be now well assured. At first, the question of victory or defeat seemed to depend on the relations between the National Unionists and the Liberals. If these two became united under the same banner, the Cabinet would have a large majority against it. But the effort to effect a coalition proved fatal to the cohesion of the National Unionists. Seven of their members fell away. Among the Liberals, also, a disruptive influence, not very clearly defined, made itself felt. First, six members seceded; then five more; the whole eleven joining the Parliamentary Club, which had declared itself favourable to the Cabinet. That reduces the strength of the Liberals from 103, their effective number at the beginning of the session (Mr. Hoshi Toru being absent) to 93. The National Unionists are also reduced from 34 to 27. Hence the combined strength of the two is 119. The *Yiji Shimpō* now alleges that the political complexion of all the other members has been definitely determined, and that the total strength of the anti-Government sections, including absentees, is only 124, that of the pro-Government sections being 174. If that estimate be correct, no Cabinet hitherto has met the Diet with such a plurality.

MARINE NEWS.

Shipping enterprise in the Far East is very active. At the close of last year, the list kept in the Maritime Bureau of the Department of Communications, showed 528 steamers and 173 sailing vessels belonging to Japanese subjects. There can be no doubt, too, that the list was not exhaustive, for it is known that at the end of June, 1896, there were 306 steamers and 530 sailing ships not duly registered at the Bureau. The demands of the coastwise carrying trade not being sufficient to give employment to so many ships, attention has naturally been directed towards ocean service, with the further result that new steamers suitable for that purpose have had to be procured. The Nippon Yusen Kaisha has ordered 18 new vessels, the Shosen Kaisha 13, the Toyo Kisen Kaisha 3, to be followed by others. The Mitsui Bussan Kaisha has also given orders for the building of a number of steamers, with the view of inaugurating a regular service to Germany, and Mr. Oya contemplates employing his three steamers on the Vladivostok and Korsakovsk line. Similar activity is shown by foreigners in the matter of steam-ship communication with the Far East. The German Lloyds Company is to receive 1½ millions additional subsidy, and has decided to build seven more steamers, so as to increase the service to two vessels a month instead of one, as at present. It is also said that a wealthy merchant of Chicago, in combination with others, intends to build a number of large fast steamers for the purpose of opening a mail service between San Francisco and the opposite coast of Asia. If this Company be really started, and if it undertakes the transportation of the United States mails, it will receive a subsidy of over 28,000 gold dollars for each through service between San Francisco and Hongkong. Further, Russia has already opened a service to Ninsen, Fusan, Gensan, Nagasaki, Chefoo, Newchwang, Shanghai, and Vladivostok and two steamers of over 1,000 displacement are running on this line.

With the development of shipping enterprise in Japan, the business of marine insurance has also attained marked progress. The risks covered by Japanese insurance companies now amount to a large figure. The *Nanyo Maru*, for example, destroyed by fire at Bakan, was insured to the extent of 360,000 *yen*, hull and cargo. Originally the various companies used to compete, but they soon discovered the disadvantage of such methods, and the majority of them, above all the three largest, the Tokyo, Nippon, and Teikoku, preserve intimate relations, and an insurance undertaken by one is generally divided among the others so as to

equalize risks and profits. In order to still further cement this relationship, to save trouble, and also to increase their credit, they have decided that every risk undertaken by one of the three shall be borne equally by all, and that this arrangement shall go into force from the 1st of next month. The aggregate capital of those three companies is over 7 million *yen*, so that this step should greatly strengthen their credit and thus promote their prosperity.

Such figures as the above are full of encouragement for the Japanese, but, after all, how petty they seem by the side of the corresponding figures of Occidental companies. Take the South British, for example. It can scarcely be classed among the greatest of British companies, yet its subscribed capital is £1,900,000, a sum two and a half times as big as the aggregate nominal capital of the three leading Japanese companies. Everything must have a beginning, and it is by no means our intention to depreciate the enterprise shown by the Japanese in this matter of insurance. But it is wholesome to look at the relative side of things.

A GOLD MINE.

It has long been known, says the *Tokyo Asahi*, that gold dust was procurable in the neighbourhood of Umatate-mura, in Iyo, at the source of the Yoshino River, but the general idea was that the gold had been thrown up by volcanic agency and that nothing in the shape of a mine existed. It appears, however, that a certain Mr. Mayeda of Kagoshima entertained a different opinion, and after various investigations he has demonstrated the correctness of his views by discovering outcroppings of auriferous quartz at ten places in Awa and Iyo provinces. The area of the gold-bearing district is said to 5,700,000 *tsubo* (4,750 acres), and it is stated that 60 *kwamme* (500 lbs.) of rock gives 20 *me* (½ lb.) of pure gold, which would be at the rate of 13 ounces a ton—extraordinarily rich ore. No wonder that the mine's qualities are described as exceptional. Mr. Mayeda is reported to be procuring machinery to work the mine on a large scale, but our readers must have observed that of all the gold and silver mines reported by the vernacular press, from time to time, as having been discovered here and there throughout Japan, not one seems to reach the stage of actually yielding precious metal.

THE EARTHQUAKE ON SUNDAY MORNING.

At 12.50 a.m. on Sunday the 17th, a very severe shock of earthquake was felt in Tokyo. No damage of any consequence resulted, but the disturbance nearly attained serious dimensions. It is a curious fact that violent earthquakes seem to occur frequently in the immediate sequel of a heavy snow-fall. To throw open the earthquake shutter and look out, or run out, into gardens or streets where half-melted snow lies in patches, must be quite a familiar experience to folks in Tokyo. Whether the melting snow breaks down some subterranean scarp of gigantic size, or whether it is converted into great volumes of impatient steam by the fires of hidden volcanoes—who shall say?

THE JAPAN SOCIETY.

According to an announcement from the Hon. Secretary of the Japan Society, a paper on the fall of the Tokugawa Dynasty was read at the Society's second ordinary meeting of the sixth session, Wednesday, December 9th, 1896. The Society is fortunate in being able to obtain Japanese contributors to its proceedings. The fact that virtually nothing of the kind has been compassed by the Asiatic Society in Japan, has often surprised us.

THE THREE CLUBS.

It is alleged that the Members' Club, the Business Men's Club, and the Reform Club, have either amalgamated, or are about to amalgamate. If the statement be correct, it means that the Government may count on these three bodies voting solidly in its favour. The fact is important, for the Members' Club, having been lately reinforced by another batch of 5 seceders from the Liberals, now numbers 29; the Reform Club, 5, and the Business Men's Club, 12. Here, then, we have 46 votes. These alone, added to the 96 Progressionists, total 142, without considering the Unionists Club (7), the members of which are certainly not likely to vote with the party from which they have seceded; and the Unaffiliated (23), of whom a good many are sure to support the Government. The situation has undoubtedly changed materially during the past month.

KOREAN NEWS.

Some Korean provincials are perturbed at the notion of a *capang* being taken. They think that the thing is a device for imposing an increased poll tax. An ancient experience, in truth!

The performances of Korean officials are sometimes very entertaining. They indicate a kind of double-barrelled dishonesty without example elsewhere. The latest instance is a tax-collector who went to one of the provinces, collected taxes to the amount of \$8,000, bought gold dust with the money, came back to Seoul and tried to buy a magistracy with the dust. His last purchase seems to have been a failure.

The discipline of the Korean soldiers in Seoul is indifferent. We read of a non-commissioned officer who, having won a suit in one of the law courts, set to work abusing the court officials in a most vehement fashion, though for what conceivable reason we do not discover. Finally he charged the judge with being drunk. This procured him admission to jail, but a few hours afterwards a score of his comrades rushed in, smashed the jail and carried him off by force. The next day thirty more of these braves came and wrecked the court itself, thrashing two policemen, *par parenthèse*, within an inch of their lives.

Here is a story so curious as to fact and so quaint as to the fashion of telling that we reproduce it *verbatim* from *The Independent*:—

Kim Inkie of Changtan was infatuated with the wife of his neighbour, Pak Sukkin. Kim invited Pak to take a row in his boat, and when they were out on the river Kim threw Pak overboard. The murderer calmly came back and lived with Pak's wife. However, the deed was known to the people there who reported the facts to the Magistrate. Kim was tried and found guilty. The Law Department sentenced Kim and Pak's wife to be hanged on December 26th.

The charmingly indiscriminate justice that sent the poor woman also to the gallows is not incongruous.

We read in the *Independent* that the King of Korea intended to move to the Kyen-gun Palace in the first week of January, but that he will remain some time longer in the Russian Legation because the troops now under training by Russian officers are not yet sufficiently skilled to discharge the function of royal guards. Truly the King's safety would not be worth much, it would seem, unless Russia's protecting hand were extended over his head.

Four women have opened a gambling house in the southern part of Seoul. Thither they entice young men, and get the better of them at dominoes. Being concubines of high officials, the fair players can defy police interference. Two of their victims have been appealing to the public through the press. Would they have made any noise if they had won the women's money?

After due consideration a specially appointed Board has decided that the "spirit" of the late Queen of Korea shall be called *mensung*, which means that "her character was as high as the heavens and as firm as the earth, and that

her deeds were full of ceremony and music." It is a great deal for two syllables to mean.

We described in our last issue, the disorderly conduct of a non-commissioned officer who charged a judge on the bench with being intoxicated, and the still more disorderly conduct of the man's comrades, who subsequently released him from custody and wrecked the court of law. The result of the incident is that the King has reprimanded the Minister and Vice-Minister of War, that a captain has been cashiered, two lieutenants placed on the retired list, one private condemned to be shot, and three to be exiled for life. The severity of the punishments is far more criminal than the crime punished.

The *Independent* classes Buddhist priests and sorceresses together. It says that there are a thousand of them in Seoul, and that they make an average of \$15 each per month. In other words, the 300,000 inhabitants of the city pay \$180,000 yearly to be fooled.

In consequence of the great cold in Seoul the King has ordered that all prisoners, except thieves, murderers, criminals of immoral character, and political offenders, be allowed to leave their cells, and that children below fifteen years of age and persons above seventy be released. The classification of political offenders with murderers and thieves is suggestive.

Seoul has had its first ball. There were six ladies and ten gentlemen present.

Memorials have been addressed to the King of Korea urging that everybody who had any connection with the death of the Queen, or with the military demonstration at the palace in 1884, including the families and relatives of the offenders, should be slaughtered. The King has replied that the statements of the memorialists are "quite reasonable."

CHINESE NEWS.

The four-masted ship *Alice A. Leigh*, from New York, took the ground inside the Woosung Spit buoy on the 9th of January, and had not been floated off at the latest advices (11th inst.).

The Imperial Bank of China is an accomplished fact. It is to begin business, with a capital of 7 million taels, in the premises formerly occupied by Messrs. Russell & Company on the Bund in Shanghai.

It is stated that an English coasting steamer, carrying goods from Manchester for transhipment at London *en route* for Shanghai, has been wrecked, but the name of the vessel does not appear to be publicly known in Shanghai. An erroneous statement has been published in Nagasaki and Yokohama, to the effect that the steamer was outward bound.

There is news of another anti-foreign demonstration in China. It took place at the recently opened port of Shasi. Particulars are not yet to hand, but the story is that Mr. Neumann, acting Commissioner of Customs, and a member of the Lyons Commission, were attacked and roughly handled by a mob of some 200 Chinese.

In deference to a suggestion made by Mr. Oliver, chief foreign instructor in the Tungwen College, Peking, the Ministers in charge of the College have decided that prizes shall henceforth be given to students of arts and science, and that youths distinguishing themselves in these branches of learning shall be attached to legations abroad for the purpose of pursuing their technical studies. Hitherto the successful study of languages alone brought substantial reward, but Mr. Oliver points out that, however useful interpreters may be, the need of men acquainted with chemistry, physics, mining, and so forth must soon be keenly felt.

Mr. R. J. Fearon, head partner in the firm of Fearon, Daniel and Company, of Shanghai and New York, died suddenly of apoplexy in the latter city on the 8th instant. The *North China Daily News* says of him:—

A thorough, cultured, English gentleman, a first-rate business man, and a warm and genial friend, Mr. Robert Fearon was most heartily liked and respected by all who knew him, and in the many years he spent in Shanghai he was one of its leading citizens. He came out to China some forty

years ago to join the American firm of Augustine Heard & Co., in which he had been for some years a partner at the time of its dissolution, subsequently settling at New York in charge of the interests of the firm of Fearon, Low & Co., the predecessors of the present firm. He took a great interest in public affairs of all kinds at Shanghai, and was a shining light in amateur theatricals here, both he himself and his clever and amiable wife, who was one of the leading ornaments of our society in the old days, contributing markedly to the success of the amateur stage was an even more important factor in our social life than it is now. He was only sixty-one years old at the time of his death, and the truest sympathy is felt with his widow and children, and with those whom his premature death most intimately affects. There are few old residents here who do not feel that in Robert Fearon they have lost a friend whose place can never be entirely filled, and whose memory will remain green with them till their own time comes to follow him. Clever, lovable, unassuming, and unselfish, Robert Fearon was one of the men who, if Shanghai had a Walhalla, would most worthily fill a niche in its walls.

A correspondent of the *N.-C. Daily News* writes as follows about the *Illis* monument on the South-East Promontory of Weihaiwei:—

Adjoining the lighthouse the German naval authorities have brought two mow of land. This plot of ground has been enclosed with a substantial stone wall, standing about five feet high. The graves of the Captain and several of the officers are marked: but most of the bodies, when recovered, were unrecognisable and lie in unknown though not in unnamed graves.

About the middle of the ground a monument has been erected. The shaft is of white marble and ends in a point. It stands on a marble base; and this again on a base made up of blocks of stone cemented over and white-washed. The whole is twenty feet in height; and looks well. On three sides of the marble base the names of those drowned are carved, commencing with the captain, a sadly monotonous roll-call of seventy-one names not including the five Chinese who were serving on board and also lost their lives. Carved on the other aspect is the last verse of the patriotic song which the brave men, in spite of howling winds, raging sea, and imminent death, joined hands and sang. As was pointed out in your paper at the time, it serves to show that the age of heroism is not quite past. All honour to the memory of those brave men who thus for Kaiser and Fatherland met an untimely end. I understand that for the future this will form the cemetery for men of the German navy who may die while on duty in N-China waters. One word of criticism. The two posts on which the German colours are painted are rather ugly. They more resemble barber's poles than anything else one can think of. But probably there are few to whom they will prove an eyesore.

From statistics furnished during the Week of Prayer in Shanghai we learn that there are nine Protestant Missions established in Shanghai and engaged in school-work. They have 60 day schools, with a total of 31 male and 29 female teachers, and an average of 25 pupils each. Some 1,500 scholars annually pass through these schools. There are also 11 boarding schools, 5 for boys and 6 for girls.

The *Peking Gazette* of October 24th contains the celebrated decree with reference to Li Hung-chang's trespass. It will be seen that the Emperor adopts a somewhat deprecatory tone in ordering the punishment of the great Viceroy:—

On the 22nd of this month, we are informed, the Grand Secretary Li Hung-chang trespassed into the forbidden precincts of our Palace of Yuen Ming Yuen for the purpose of taking a look around the place. This unauthorised excursion into the Imperial enclosure is a decided breach of Court etiquette and we are therefore compelled to hand the said trespasser over to the Board of Civil Appointments for the determination of a suitable penalty.

The leading Shanghai journal publishes a strong indictment against the Chinese Authorities in connection with the opening of Hangchow and Soochow. We read that every possible obstacle was placed in the path of the Japanese when they attempted to secure the enforcement of the Shimonoeki Treaty with regard to these two places. At Soochow, the site first offered for a settlement was a badly field six miles from the city, and when, at length, after weary

negotiations, the present site was reached, it was found that all the best land there had been already secured by Chinese officials at almost nominal prices to be re-sold to foreigners under the Land Regulations at prices varying from 150 to 250 dollars a *mow*. There is nothing surprising in this, nor indeed in any of the charges preferred by our contemporary, for they refer to nothing more than an attempt to evade the spirit of a treaty, with which kind of evasion on the part of Chinese officials, repeated experiences of Chinese methods have made the world familiar.

The French Consul, M. Haas, is said to have at last succeeded in purchasing an exceptionally fine site in Chungking for the erection of a consulate, and it is added that the price paid for it was very moderate. Rumour says, however, that the bargain is too good, and that the local officials are doing their best to upset it, in which case the previous proprietor is not unlikely to find his way to prison. Such, at any rate, was the fate of the natives at Hangchow who first sold land to British subjects. They are still in prison, and there does not appear to be any probability of their getting out. Strong contrasts are drawn between the new French site and the gloomy and dirty street in which the British Consulate stands. The American Consul has not yet succeeded in finding permanent quarters.

The following information about the new rapids near Wanhsien on the Yangtze is interesting:—

It would appear that a large mass of rock on the north bank, loosened by the late heavy rains, fell into the river at a spot where hitherto there had been only smooth and easily negotiable water. A fierce rapid has in consequence been formed which is said to be quite a *li* in length. As the water falls the rush becomes more intense, and the difficulties correspondingly greater. Down and up-river junks are alike placed in jeopardy by the terrific back wash which is strong enough to make a plaything of even the largest and best-manned vessels. Many have already been wrecked, and wrecks were likely to become increasingly common unless the danger is removed. A fortnight ago there were not less than 500 boats moored above and below the rapid, while, with the speed of mushrooms two thriving towns have grown up in close proximity to the place. Last week the merchants of Chungking met in conclave to decide upon a common basis of action in view of this new and altogether unforeseen impediment to the riverine traffic. With the permission of the local officials they, the merchants, agreed to order general transhipment of the goods and to levy a tax upon all cargo of 20 cash per package, for coolie hire. Up to date the charge made is said to have been only 5 cash per package, but with the object of obtaining sufficient funds to keep the necessary coolie path in order, and of gradually doing something towards removing the fallen rock, it was unanimously decided to raise the charge. This important arrangement will, if carried out, react upon all shippers, and upon all travellers to and from this part of the country. On the other hand, it is alleged to-day that the Viceroy has vetoed the merchants' proposal, and has himself determined to appropriate Tls. 20,000 from the provincial exchequer to the work of permanently clearing away the obstruction. This would certainly be the wisest plan of operation, although one cannot quite divest oneself of a suspicion that the high officials of the province together with the lesser dignitaries are, in secret, rejoicing over a circumstance which will add material strength to their arguments against the introduction of steamers on this western part of the river. In other words, the west, equally with the east, has now its "Heaven-sent barrier," and if this should prove to be the view taken of an otherwise melancholy incident by the Powers that be, it is hardly likely that the provincial funds will be drawn upon in the way the rumour of to-day asserts. It may be well to advise all travellers to the west to make an agreement with their boatmen to deliver themselves and their belongings at Chungking.

H.E. Tê, Governor of Kiangsi, has issued the following noteworthy proclamation:—

Since the opening of this Empire to international intercourse, the Protestant and Roman Catholic Missionaries have taken advantage of Treaty privileges to enter the interior districts to propagate the tenets of their religions and large numbers of

people have, in consequence, embraced the foreign faith with the primary object of directing their lives and thoughts towards righteousness and charitable deeds. But, although these religions are of foreign origin, those who have embraced them are yet subjects of our Great Emperor, and their lives and property are still under the protection of the local authorities, who continue to have jurisdiction over converts and non-converts alike. For be it known that the aim of these Missions is to lead people to do right, and they have nothing whatever to do with suits at court, nor can they interfere with the justiciary prerogatives of the officers of the Throne; while, on the other hand, converts having embraced the faith should persevere in perfecting themselves to be good and righteous citizens of Empire, nor should they presume upon their new status to commit acts of insubordination in defiance of the peace of their several districts.

"We (the Governor) however, have lately been informed that these converts abound in the greatest number in the districts of Kueich'i, etc., of this province, and it is because we fear that these people, not clearly understanding upon the fact of their having embraced the foreign religions, should behave improperly, and browbeat the peaceable amongst the population, thereby creating serious disturbance, that we now issue this proclamation to the people with special instructions to the local magistrates, etc., to be careful in preventing such acts against the peace of the province. And you, my people, who have embraced the Protestant or Roman Catholic religions which aim at encouraging good deeds, should by this very act persevere in acting up to the faith and tenets of the religion of your adoption. You should not presume upon your conversion to commit acts against your fellow-townsmen, while, on the other hand, you who have not embraced the foreign religions should not consider the conversion of your fellow townsmen to be an excuse for you to create popular tumult against them. If anyone should after issue of this proclamation dare to act contrary thereto, we promise to punish such most severely according to the law. We earnestly hope that our subjects will take our words to heart and refrain from being influenced by the acts and words of rowdies and rumour-mongers who have an interest (to the benefit of themselves) in creating disturbances against the peace of the country."

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for that sentments or opinion of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

STRANGE CUSTOM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Among the people of Nakatsu, province of Buzen, in Kinsu, there is a strange custom which I have never heard of any where else. If the custom prevails elsewhere in Japan or in any other country, I would like to know of it.

Whenever a new tomb-stone is set up in a cemetery, some one soon mutilates it in some way, usually by breaking off a corner. The piece broken off may be very small, but in many cases it is so large as to disfigure the tomb. It is very seldom that more than one corner is broken. It is sometimes done by boys for pure love of mischief, sometimes by older people who keep the piece broken off as a charm or relic. If a new tomb is to be preserved in perfect condition a high fence must be put around it for at least one year, or else it must be made of such hard stone that the corners cannot be easily broken.

Around the homes of some priests near one of the largest cemeteries is a wall built of old fallen down tomb-stones. The characters on them are still legible, and so the Japanese passing along can read the names of their ancestors in this weird old wall of grave-stones.

These facts are interesting in view of the supposed great reverence the Japanese have for departed spirits, and the worship of ancestors. To the Western mind there seems to be a strange contradiction of customs and ideas here as in many other practices of the Japanese. It is interesting to know these things any way.

Yours truly,

W. P. TURNER.

Nakatsu, Buzen

FEMALE EDUCATION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I venture to send you the enclosed letter from the Rt. Rev. Dr. Barker, Bishop of Olympia, with the hope that you will print it in an early

issue of the *Mail*. It will be of interest to many parents in the East who are trying to solve the problem of the education of their daughters.

It will afford me pleasure to give such information as I possess to those desiring it.

Sincerely yours,
JOHN MCKIM.

Tokyo, Tsukiji, 35, Jan. 8th, 1896.

Tacoma, Washington, December 3rd, 1896.
My dear Bishop McKim,—I have been told lately that a large number of girls is sent to England from China and Japan for education. I thought I would write you on the subject and ask you if you thought there was any reasonable opening for us to exploit the Annie Wright Seminary amongst the English residents of the principal cities of Japan and China. I mail you several catalogues and circulars, which will give you a complete understanding of the situation here.

We have consolidated our two institutions for education and the Annie Wright Seminary for girls has absorbed the property and endowment of Washington College for boys, which has gone out of existence. The Seminary now has an endowment of \$100,000 and in order to be useful to the community, has reduced its charges, as you will see by the catalogue rate, to \$200 a year. We furnish a better education, more teachers, a better table, and a more comfortable home for those 200 a year than we were able to provide for \$400 a year five years ago. In other words, we furnish an education which costs the trustees over \$300 a year for each girl, at the rate of \$200.

The Northern Pacific Steamship Company runs direct from Japan and China to Tacoma. The new "Japanese Steamship Company" runs direct to Seattle via Honolulu. And the Canadian Pacific steamer stop at Victoria, which is only eight hours from Tacoma. If we could have a party of girls, properly chaperoned, to Tacoma, we could provide a splendid education at a much lower figure than could be secured elsewhere.

If we could secure enough girls, we could arrange for their care and guardianship during the summer by establishing a summer home on the waters of Puget Sound and conducting, if necessary, a summer school.

Will you not write me as fully and as promptly as you can about this? I am writing to Bishop Graves by this mail and shall hope to be guided by your advice.

We are the stewards of an endowment for the benefit of young womanhood and are constantly striving to administer the trust in as generous a way as possible.

Always with very best wishes, my dear Bishop,
Faithfully yours, WILLIAM M. BARKER.

A QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I would thank you for an opinion or for information as to whether the prohibition of music now being enforced includes organ music in Christian Church worship. If it can be obtained, an authoritative statement from the proper officials would relieve more or less embarrassment on the part of many of your readers.

Thanking you in advance for any trouble you may be at in this matter, I remain, with great respect,

Your truly,
Nagoya, January 16th.
A. R. MORGAN.

(Our own opinion is that Church music is not included in the prohibition. We do not perceive how religious music could be referred to in such a category as "Ka-bu-on-gaku." Besides, the object is to suspend amusements not acts of worship. At the funeral itself there will be music. We shall make further inquiries, however.—Ed. J.M.)

RELIGIONS AND BENEVOLENCE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A meeting of representatives of various religions such as the one held in Shiba, Tokyo, on Sept. 26th last, can display about as much cant as one wants to read in a year. Take for instance the speech of Mr. Shaku Soyen, where he says:—"An investigation of Buddhism, Christianity, Mohammedanism, and Confucianism tends to show that, though different in form, in many important particulars they agree. There are certain truths which are common to all, such, for instance, as the power and need of benevolence in the world."

I don't care anything about Mr. Shaku Soyen's theories; I care very little about them on general principles, but am a great stickler for facts, and am going to ask him to give me some facts in verification of the above assertion of his. I would like to have, for instance, the statistics in four parallel columns showing the number of free hospitals, orphan asylums, leper hospitals, and free night or day schools for the poor; how many humanitarian societies, such as the Red Cross Society, the Society for the prevention of cruelty to children or brute animals, or organized committees for giving relief to the poor in times of famine and disaster, have been established in the world by the four religions above named. Or if he cannot give them all, give as many as he can of such institutions in Japan and China. Such facts would prove interesting reading to many of us. It would show just how much practical "benevolence," not theoretical, there is in these religions. Unless doctrines and theories manifest themselves in some way that is beneficial to the people, they are as useless and silly as ghost stories.

Another point. A few years ago a distinguished Buddhist priest in Japan was returning from the Congress of Religions in Chicago. He was a cabin passenger on the steamer *Empress of India*. Down in the steerage was a poor humble Japanese Buddhist believer dying. The surgeon of the ship asked this distinguished Buddhist priest to go to the hospital and see his dying countryman, but he refused to go. The next day, as the dead body was given up to the deep in the kindest and most solemn way that Christian hands could do it, this high priest did not even lend his august presence to the solemn scene. I wonder if Mr. Shaku Soyen knows who this Buddhist priest was.

There are times and occasions when soft speeches about "benevolence," philanthropy, and the brotherhood of man become blatant hypocrisy.

Yours truly,
WILL PATILLO.
January, 14th, 1897.

DRAMATIC MARRIAGE OF DR. RIZAL.

The marriage of Dr. Rizal an hour and a half before he was publicly shot at Manila is one of the most dramatic events yet recorded in the history of the Philippine rebellion, says the *Hongkong Daily Press*. According to the Spanish papers Dr. Rizal contracted matrimony with Miss Josefina Bracken at five o'clock in the morning in the presence of the chaplain of the forces and of the officers of the guard, and at half-past six he was led to the place of execution. The heroine of this extraordinary drama, which reads more like fiction than truth, is the daughter of an English soldier, and was born in this colony. We have gleaned one or two particulars about the career of this interesting lady, who will, it is expected, shortly arrive in Hongkong. When she was quite young her father either died or went to England, and an engineer named Tauber, who was for many years in charge of the Hongkong Fire Insurance Company's fire engines on the Praya, adopted her as his daughter. Tauber was well known in the colony, and during the disastrous typhoon of 1874, he and his brother, who was also connected with the Insurance Company, rescued many people from drowning, for which meritorious services each was awarded the Humane Society's medal. Tauber, although not holding a very high position, amassed a considerable sum of money, and some years ago bought several houses in Mosque Junction, but within the last few years he disposed of them. Towards 1892 his eyesight began to fail, and fearing blindness he went to Manila to consult Dr. Rizal, taking with him his adopted daughter, Miss Josefina Bracken. By this time Dr. Rizal had been deported to Dapitan, but Tauber was determined to see the doctor and he and Miss Bracken journeyed to the place of exile and had an opportunity of consulting the doctor in the fortress. Tauber and his adopted daughter remained at Dapitan for two years, and then, as Tauber's eyesight had been strengthened under the skilful treatment of Dr. Rizal, he returned with Miss Bracken to Manila. Miss Bracken, who had during her two years' stay in Dapitan become greatly attached to Dr. Rizal, subsequently went back to the fortress and rented a house. She paid frequent visits to Dr. Rizal, and it is supposed that they were just about to get married when the doctor was taken to Manila, then to Spain, and then back to Manila again. Whether Miss Bracken followed her betrothed backwards and forwards is not known, but her subsequent marriage under such strikingly tragic circumstances affords a strong foundation for a powerful story.

(FROM TONGKING PAPERS.)

Paris, December 28.
The majority of the journals of all parties approve of the nomination of M. Doumer as Governor-General of Indo-China.

Paris, Dec. 30.
Le Temps, speaking of the motion of M. Blanchy relative to the autonomy of Cochin China, says that the nomination of Mr. Doumer, as Governor-General of Indo-China, proves that the Government is in favour of maintaining the union as at present.

Paris, Jan. 1.
The Czar has telegraphed to the President of the Republic confirming the good wishes he had made for the prosperity of France and saying the experiences of his visit were ineffaceable.

Paris, Jan. 3.
At the reception in the Elysée on the 1st January, M. de Mohrenheim, the Russian Ambassador, in presenting the members of the Corps Diplomatique, stated that the year opened under favourable auspices, France contributing by its attitude to the maintenance of peace. The President, in reply, said that the most ardent desire of France was to march in concert with the European Powers, and that the present unity justified the confidence that this would be maintained in the future.

The French and England journals are unanimous in criticising the importance of the telegram addressed by the Czar to the President of the French Republic.

Paris, January 3.
M. Faure has thanked the Czar for his message, and expressed his good wishes for the happiness of the Czar and Czarina and the greatness of Russia. He also preserves pleasant memories of the visit of the Czar and Czarina to France.

Paris, January 4.
The senatorial elections are taking place. The following results have come to hand:—Republicans, 69; Radicals, 16; Conservatives, 12. The Republicans have won eight seats. It is confidently expected that the whole of the available Spanish forces under General Polavieja will attack Cavite before the end of the month of January.

The rebels are evidently dispirited at the wholesale executions of their leaders by the Spanish authorities and at the firmness displayed by General Polavieja.

The Spanish troops defeated the insurgents near Manila, killing 1,100 men!

(FROM THE "CHINA MAIL.")

Singapore, Saturday, January 9.
In consequence of the Government proposal to have all the jinrikishas in the Colony registered, there is a lock-out here of fifteen thousand Chinese rikisha-pullers.

The owners of the vehicles object to the proposed registration regulations, alleging that they are too strict.

There were slight disturbances on Friday, but the Government are determined to enforce the regulations. All is quiet to-day.

Manila, Saturday, Jan. 9.
Since the engagement between the Spanish troops and the rebels at Santa Maria there has been no engagement of a decisive character. Desultory fighting is conducted around the headwaters of the River Pasig, between La Laguna and the Bay of Manila. The Spanish forces invariably prove victorious in these encounters, but one small force was isolated near the Pasig and suffered severely until reinforcements came up and drove off the rebels.

Aguinaldo, commanding some six thousand rebels from Cavite, is lying in this region, endeavouring to enlist recruits and vainly attempting to form a junction with the rebel forces in Bulacan.

Suspects within the Spanish lines are said to be contemplating reprisals if Roxas is executed, but these threats will not deter General Polavieja from carrying out the law should it be decided to execute this rebel.

The bulk of the Spanish troops are operating in small mobile columns in Bulacan and to the north-east of Manila. A body of troops was despatched yesterday to Iba, the capital of Zambales, and to Bolinao, to protect the cable. Bulacan is now reported to be peaceful.

Manila, Jan. 11.
Roxas and other twelve rebels were shot here to-day. The prisoners included a lieutenant of infantry. There have been twenty-six executions here during the past week, inclusive of three priests alleged to have been implicated in the rising.

Seven soldiers [presumably natives?] have been shot for conspiracy at Mindanao.

It is reported here that about half of the rebels exiled to Yap, in the Caroline Islands, have been shot for attempting to escape. Over one hundred men were thus executed.

(FROM THE "N.C. DAILY NEWS.")

London, January 11.
Owing to the friendly remarks of Baron de Courcel, French Ambassador in London, at an interview granted to the Paris correspondent of *The Times*, the Paris papers warmly advocate an Anglo-French entente.

It is persistently reported that Count Muraviev, Russian Minister at Copenhagen, succeeds Prince Lobanoff as Russian Minister for Foreign Affairs.

In the Football Match between Wales and England, Wales secured a goal and two tries to England's nothing.

London, January 13.
The British-American Arbitration Treaty has been signed.

Reuter's Agent at Bonny states that the natives have massacred a British expedition to the city of Benin, including Consul-General Philips, Major Crawford, Captains Boisragon, Commandant of the Niger Protectorate troops, and Malang (?), Surgeon Elliot, two Consular officers, two civilians, and a number of native carriers.

Major H. E. McCallum, R.E., C.M.G., Colonial Engineer in the Straits Settlements, has been appointed Governor of Lagos.

Hongkong, Jan. 13, 3.45 p.m.
The Indo-China Co.'s steamer *Fausang*, bound to Kobe with a cargo of cotton and sugar, is on fire in Hongkong harbour.

[The Indo-China S.N. Co.'s steamer *Fausang* is a steamer of 1,410 tons net register, built last year by Messrs. Wigham, Richardson and Co. on the Tyne. She is a steel vessel, 290 feet long, and of 40 feet beam and 15 feet depth of hold. On her trial trip she attained a mean speed of 14 knots. She arrived from home on the 31st of May last.—N.C.D.N.]

London, 14th Jan.
Lord George Hamilton, Secretary of State for India, has sent to the Lord Mayor of London a powerful statement, showing the immense extent of the famine in India, and estimating that the cost to the Indian Treasury will amount to from four to six millions sterling.

PROBLEM No. 282.

By H. F. L. MEYER, Sydenham.

White to play and mate in two moves.

GUNSBURG ON THE MOSCOW CONTEST.
The fourth game played at Moscow resulted in a victory for Lasker. It will be remember-

ed that in the first portion of the match between Steinitz and Zukertort at New York some ten years ago, Zukertort also won four games from Steinitz, but ultimately lost the match. We, however, have a distinct recollection of the feeling of chess players at the time, which was that Steinitz would prevail in the end. In the present match between Steinitz and Lasker there is an equally strong opinion abroad—which we might say existed in the public mind before even the first game was played—and that impression was that Lasker would prevail. The fourth game, printed below, was an end game from beginning to end. All Lasker did was to double one of his opponent's pawns and then plant his knight on Q B 5, and the whole game was occupied with the carrying through of the task of utilising the minute advantage which Lasker had obtained. Perhaps, if Steinitz had not advanced the pawns on the K Kt side, he might have steered into a draw; but he had the worst of the game anyway, and even if the game had been drawn, in spite of Lasker's efforts, it would not have detracted a whit from his mastery play.

The fifth game of the match is now to hand. It is curious to note that no sooner does Steinitz part company with his theoretical fancies than he does well—better than in any previous game in the match. Steinitz adopted the P to Q 4 opening, pinning the Q Kt early in the game. Steinitz further proceeded with Q to Kt 3, endeavouring to exercise pressure on both wings. Lasker suf-

fered from the disadvantage of having his Q B shut in, the result of the defence which he adopted. Steinitz by very clever play obtained an attack on the king's side, which at one time looked very promising, but events proved that there was a defence, or rather, more correctly speaking, that Lasker found one. The champion instituted a counter attack, which, however, was short-lived. Steinitz, by the sacrifice of the exchange, made another bold bid for victory, but it met with equally excellent defence, and the result was that Lasker was enabled to draw. The chess world will welcome this game as a proof of the fact that the veteran is by no means hopelessly beaten as yet.

Drawn.

Steinitz could not appear at the appointed time to finish the sixth game through indisposition. It is a violation of Nature for a player sixty years old to play a match at Moscow in the winter beginning at seven in the evening and continuing till 2 a.m. against an opponent under thirty years of age. The chess-board shows up the faultiness of such action to a nicety. The weak point is want of physique—want of stamina. In life one may continue a wrong course of conduct for a very long time; but only transfer this action on to the chess-board, and no amount of subtlety, ingenuity, or obstinacy will succeed in preventing this wonderful board showing up all the weak spots and punishing all the errors. Yet if one looks back in chess history for over thirty years, one cannot help feeling that though the Napoleon of chess will come back from Moscow a thoroughly beaten man, yet his greatness cannot be taken away from him; and the chess world, which includes so many generous and enthusiastic patrons of the game, ought to consult together and see whether they could not do something for the veteran which would tend to take off the bitterness of defeat and help him on to a more peaceful chess career in the future—more fit for the eventide of life than match playing.

SIXTH GAME.

Not much can be said as regards the sixth game of the match. The opening was a very commonplace one, Lasker showing that, like all great players, he trusts to his own efforts in the middle and end game more than to opening strategy. Steinitz exchanged bishops early on his opponent's K 3, which we think is the proper thing to do. But his subsequent move of Kt to Kt 5 seems to us premature, and the tenth move of P to K B 3 did not seem to improve matters. Generally speaking, Kt to Kt 5 in similar positions where the king's pawn has been doubled may only be played after Black has castled, and when he is in a position to play Q to Q Kt 3, followed by P to K B 4. The subsequent play of Steinitz was also somewhat reserved. If there is anything at all in

this opening, Black should have seized the opportunity of a rapid queen's side advance against Lasker's castled king. In the middle game Lasker simply did nothing on the strength of his score. To the credit of the veteran he said that at doing nothing he is not a good man. He advanced on the king's side, giving Lasker some opportunities which he desired, yet it does seem strange that after Lasker played 30—P to Kt 3 and 31—K to Q Kt 2, Steinitz did not see Lasker's change of front, but proceeded heedlessly with his original intention of doubling his rooks off the K R file, a futile manoeuvre which gave Lasker ample time in transferring the game to the queen's wing, as clearly indicated by the two moves given. When Steinitz recognised the situation he could only withdraw his pieces from the king's side with much loss of time. Lasker, having this favourable chance given to him, was of course not slow in availing himself of them.

15—Kt to Kt 5	15—B to B 4 ch.

16—B to K 3
17—Kt (Kt 5) takes B P
18—R takes B
19—Kt takes B
20—P to B 4
21—R to Q R 3 (4)
22—R to Kt sq.
23—P to Q Kt 4
24—Q to Q 4
25—R takes P ch.
26—R takes P ch.
27—Q to Kt 6 ch., and White mates next move.

(a) The conclusion of this game with its magnificent double sacrifice is exceptionally brilliant.

LASKER-STEINITZ.

Our final telegram arrived on the evening of the 19th and was printed in the daily issue of this journal on the 20th:—"Lasker 10, Steinitz 2, Drawn 5." So the prediction of Gunsberg (given above) has been verified, and Steinitz must retire on his laurels. He was Chess Champion of the World before Lasker was born, and it is safe to assert that no one will equal that record. Blackburne's dictum recurs with added force:—"When we pass the age of 50, we must be prepared to make way for younger men."

Koreets (7), Russian gunboat, Captain Lindstrom, 2nd January.—Nagasaki 30th December.

LATEST COMMERCIAL.

IMPORTS.

Still the same forlorn tale. The position is further demoralized by the Court and national mourning for the late Empress Dowager. Yarns and Grey Cottons absolutely stagnant. A few sales of Turkey Reds; beyond that—nothing.

COTTON PICK GOODS.

	PER PICK.
Grey Shirtings—8 1/2 yds, 38 1/2 yds, 39 inches	—
Grey Shirtings—9 yds, 38 1/2 yds, 45 inches	—

Pin Plates, per box	5.50 to 6.00
Pig Iron, No. 3	1.80 to 1.85

KEROSENE.

Market said to be firmer, but prices are unchanged, and sales are by no means large.

	PER PICK.
American	\$2.10 to 2.20
Russian	2.10 to 2.25
Langkat	2.30 to 2.35

SUGAR.

Brown—Stocks of old sugar reduced to small compass; and prices nominally firm. White—Steady at late rates.

	PER PICK.
Brown Takao	\$4.00 to 4.10
Brown Manila	4.50 to 5.10
Brown Daitong	3.80 to 3.85
Brown Canton	3.60 to 4.70
White Java and Penang	6.50 to 6.70
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

Sellers have given way in price, but buyers are wary. There is some trade doing for Europe, but advices from New York are very disheartening, in spite of the Republican victory all is not well yet, commercially, in the States. Total stock here is fully 18,000 piculs.

BISSET & URE'S SHARE REPORT.

Yokohama, January 21st, 1897.

Hongkong Lands have been sold to Hongkong to day at \$76, and Grand Hotels have changed hands at \$202.50.

Raub Mines.—The crushings for December produced 1,800 ounces of smelted gold.

Mail reports from Hongkong dated the 13th instant, advise the following changes in the share market since the 9th instant:—Union Insurance from \$222.50 to \$225, Douglasses \$60 to \$61, Luzon Sugars \$46.50; Hongkong Lands \$76 to \$76.50; West Points \$18.75 to \$19, Green Islands \$19.50 to \$20; Hongkong Rupes \$145 to \$146, Geo. Fenwicks \$30 to \$31.50; Hongkong Ice \$108 to \$110 and Bell's Asbestos \$7.50 to \$8. The following have suffered a slight decline, viz:—Strains from \$26 to \$25.50; China Sugars \$134 to \$133; Jebeu Mines \$2.25 to \$2.20, and Campbell's Moore's from \$6 to \$5.

Iron Works are enquired for at \$105; whilst Club Hotels are offering at \$70, Club Hotel Debentures at \$110; Langfeldts at \$190, and a few Y. U. Club Debentures at quotations.

Yokohama, January 22nd.

Business has been done to-day in Club Hotels at \$70, at which rate a few more shares are obtainable. Langfeldts have changed ownership to-day at \$155 ex the dividend due for the half year ending 31st December last, and Yokohama United Club Debentures have been placed at par (\$100) ex accrued interest of 5.50 per cent to date. Club Hotel Debentures continue on offer at \$110, whilst Yokohama Engine & Iron Works are in demand at \$105.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, in whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

An certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courtes, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas; and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

May 2nd, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1896.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, JAN. 30TH, 1897.

MARRIAGE.

At Kobe on the 22nd inst., by the Rev. E. Champneys Irvine, M.A., incumbent of Christ Church, Yokohama, WILLIAM ROSS to FLORENCE EVA, widow of the late Henry Steele.

DEATH.

On the 25th inst., at the Infectious Diseases Hospital, Aizawa, Yokohama, of small-pox, DAVID BOUCHER, late Chief Engineer steamer *Toyohashi Maru*.

SUMMARY OF NEWS.

ACCORDING to Reuter, trouble has arisen in Griqualand.

FLYING from the plague, 325,000 inhabitants of Bombay have left the city.

POPE LEO XIII. is suffering from an attack of influenza. His condition causes anxiety.

A CONFERENCE of the Powers on the plague has been summoned to meet in Venice.

THE Meiji Seimei Hoken Kaisha (Meiji Life Assurance Company) held its general meeting

on the 23rd inst. and a dividend of twelve per cent. per annum was decided upon.

THE *Kanagawa Maru*, of the N.Y.K., built at Glasgow, left Southampton on the 22nd inst. for Japan.

THE Osaka Electric Light Company will raise its tariff in February on account of the general rise in prices.

THE Niger Company's forces have defeated the natives, after a sharp fight at Shonga, and have destroyed the town.

THE Liberal Peers have elected the Earl of Kimberley to the Leadership of the Liberal party in the House of Lords.

H.I.H. THE CROWN PRINCE will remain at Numadzu and will not attend the funeral services of the Empress Dowager.

THE Japanese Fine Art Society of Ueno will open a Fine Art Exhibition in the spring for fifty days, commencing from 1st of April.

THE Carew case approaches a termination. The speeches of Counsel will probably close to-day, and the Judge sum up on Monday.

A TELEGRAM from Glasgow received by the Nippon Yusen Kaisha, states that their steamer *Kawachi Maru* was launched on the 20th inst.

Two hundred marines have been ordered to proceed to Benin, and H.M.S. *St. George*, the flagship at the Cape, has sailed for Benin.

H.I.H. PRINCE ARISUGAWA TAKEHITO, Commander of the Japanese Standing Squadron, hoisted his flag on the *Matsushima* on the 20th inst.

H.I.H. PRINCE ARISUGAWA TAKEHITO and Count Matsukata proceeded to the Imperial Palace on Friday morning and were received in audience.

THE Suwa Suihoku Denki Kabushiki Kaisha (Suwa Water-power Electric Light Company), of Shinshu, promoted in Shinano, obtained a license on the 22nd inst.

THE Tokyo Kazai Hoken Kaisha (Tokyo Fire Insurance Company) held its ordinary meeting on the 24th inst., when a dividend of 8½ per cent. per annum was declared.

THE general meeting of the Tokyo Machine Factory Company at Mitaka, Tokyo, was held on the 23rd inst., when a dividend of sixteen per cent. per annum was decided upon.

THE regular general meeting of the Sobu Railway Company took place on Monday at the Bank Assembly Hall, Nihonbashi, at which a dividend of fifteen per cent. per annum was declared.

THE Akamagasaki Commercial School, in Yamaguchi Ken, will receive a grant of yen 2,000 per annum for five years from the Government in accordance with the Education Subsidiary Law.

THE Japanese Legation at Madrid has addressed an official note to the Spanish Government stating that Japan will never afford support to those compromised in the rebellion in the Philippines.

THE thirtieth anniversary of the late Emperor Komei took place on the 30th inst. at Kyoto. T.I.H. Prince and Princess Komatsu attended the special services as representatives of the Emperor and Empress.

THE Yokohama Boyeki Ginko (Yokohama Trading Bank), held its regular general meet-

ing on the 22nd inst. at which a dividend of six per cent. per annum was decided upon. The meeting also discussed the necessity of purchasing other buildings for the bank.

SOME capitalists of Tokyo and Yokohama, who propose to establish the Nippon Kokoku-to Kabushiki Kaisha (Japanese Advertising Company) with a capital of yen 200,000, have made an application for a licence.

A MARINE EXHIBITION will be opened at Kobe next September. If the Budget for the 30th fiscal year be passed, officials in connection with the Exhibition will be dispatched to Kobe in April to make arrangements.

THE First Bank, formerly First National Bank, held its regular general meeting on Sunday. The net profits during the latter half of last year amounted to yen 301,712, to which yen 50,438 was added, making a total of yen 352,150; yen 180,000 was distributed as a dividend at the rate of eight per cent. per annum.

THE Tokyo Bay Steamship Company held its general meeting on the 24th inst. at the Bank Assembly Hall, at Sakamoto-cho, Nihonbashi, Mr. Mogami Goro in the chair. The report for the latter half of last year was read and a dividend of thirteen per cent. per annum declared. It was also decided to increase the capital to yen 500,000, the present capital being yen 100,000.

REAR-ADMIRAL HARRY H. RAWSON, C.B., Commander-in-Chief, Cape of Good Hope and West Coast of Africa, has been given the command of the Benin expedition. The Benin party was unarmed and was bearing presents for the King. They marched in two parties, each of which fell into an ambush and was massacred. Only one native carrier out of two hundred and fifty escaped.

THE hitch which has occurred in the reduction of telegraph rates to Japan is said to have been caused by the Japanese authorities refusing to sanction the collection of payment by the Great Northern Telegram Company in effective francs. The Chinese, on the other hand, have agreed to the collection. One of the rules of the Telegraph Convention is that rates for telegrams from either side shall be equal in value, and the difficulty which the Japanese have raised is very unfortunate. Their decision is likely to raise grumbling in China.

THERE is a slight improvement in the Import trade, a good demand for Yarns having at length sprung up—chiefly fine counts (doubles) and "gassed"—a considerable quantity of which has been taken, and hopes are entertained that the demand will continue. There is nothing much doing in Shirtings and Grey Cloth, and Fancy Cottons do not command much attention generally, though Turkey Reds have been taken in fair quantities. Woollens are quiet, but there is a small amount of business in these. The Metal trade is still dull, dealers declining to come to the mark though there are wants to be filled. The Kerosene market is steady, the stock on hand being small, and prices consequently are fairly firm. The Sugar trade is healthy, with fair sales at full figures for China and Manila kinds. The stock of Formosa is nearly exhausted, and no new crop has yet come to hand. When it does, say dealers, quotations will be decidedly high. White sorts quiet and steady. A good business for Europe has been done in Silk, but from the States there is no demand whatever. Waste Silk nothing doing. Small sales have taken place in the Tea trade, but there is nothing left now but a few hundred piculs of the commonest leaf. Exchange has been very steady, no change in rates having been made during the week.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

No topic of special importance occurred during the past week. Questions incidental to the decease of the Empress Dowager continued to evoke more or less journalistic discussion, especially from the *Nippon*, which published no less than five leading articles on that subject.

In one article it expressed keen satisfaction that the original Japanese dress of ceremony is included among the mourning costumes to be worn by the people. In another, it inculcated the duty on the Diet's part to be very circumspect in its utterances during the period of mourning. In another, it preached the same sermon to the press. And in two others it talked generally about State funerals and national mourning. Much sententiousness and more vapidly.

Two articles in the *Fiji* dealing with the same subject are worthy of more consideration. One urges the necessity of extending some special aid to *raconteurs* of the lowest class, who, owing to the veto imposed upon public performances of all kinds during the space of 15 days, are understood to be suffering great distress. The *Fiji* reminds the Authorities of the Imperial Court's benevolent custom of granting assistance to sufferers from calamities, and thinks that a similar measure ought to be adopted now, especially since the Government are understood to be about to decree amnesty to malefactors, who must be regarded as enemies of public peace, and who, when in prison are at least safe from cold and starvation. The question of a general amnesty is discussed in another article. The *Fiji* is inclined to endorse the opinion held by the *Mainichi* on this subject, as given in our last weekly summary. So long as Japan aspires to belong to the comity of civilized nations, this question must be determined according to the accepted usages of those nations. The contention that Japan need not concern herself about the customs of other countries but may follow her own precedents, is calculated to bring upon her the ridicule and contempt of the world. We note here that the Authorities do not seem to have yet come to any definite conclusion about the amnesty. Some papers report that amnesty if granted, will be confined to Formosa, and that prisoners in home jails will receive scantier consideration.

The *Chuo's* idea about commemorating the death of the Empress Dowager is to construct a Buddhist image as large as that standing at Kamakura, and to inscribe upon it the names of those that fell during the Japan-China war.

The Premier's speech in the House of Representatives elicits non-appreciative comments from the *Kokumin* and the *Shogyo*. The former avers that as a Prime Minister's speech it was entirely worthless, since it did not touch at all upon the burning problems of the day, the problem of personal rights, the admission of men of ability from the public at large to the ranks of officialdom, the question of official discipline, and so forth. The speech is a good reflection of the fact that, in consequence of the overshadowing influence of the "foreign element" in the Cabinet, and owing to various private considerations and previous connexions, the original spirit of reform has been completely numbed. The *Kokumin* pities the miserable condition of the Cabinet.

Though various circumstances must have interfered with the free exercise of Count Matsukata's ability as a financier in elaborating next year's Budget, the *Shogyo Shimpo* can not bring itself to endorse the Count's statement, made in his speech before the House of Representatives, that the Budget is based mainly on the previous year's programme. Our contemporary considers that the Budget goes a step beyond that of the current year, and concludes that great difficulty will be experienced hereafter in

adjusting the national finances. However, the *Shogyo* has no intention of laying the blame at the door of Count Matsukata.

The *Nichi Nichi*, in three articles devoted to discussing the Budget, wishes to know what special reasons obliged the Premier and the Minister of Finance to frame the Budget, "with regret," mainly on the basis of the preceding Budget. Want of sufficient time is an entirely untenable explanation, for Count Matsukata became Minister of Finance in September last, and specially postponed, to the end of December, the date of convening the Diet. Further, the chief items of Revenue all had their origin in the financial plans of the Count himself. Perhaps the Cabinet intends to shuffle out of responsibility connected with the Budget and to saddle it on its predecessors. Some go so far as to conjecture that since the Matsukata Cabinet has no idea, or hope, of continuing in office until the time of putting the Budget into effect, it was content to elaborate such a perfunctory financial programme.

The *Tokyo Shinbun* has commenced its criticism of the Budget, but the article is still unfinished.

The *Fiji* advises the Authorities to increase the allowance to Members of the Lower House, with the view of enabling them to live in a manner worthy of their position, and of strengthening them against pecuniary temptation. Eight hundred *yen*, though apparently a sufficient emolument when compared with the short duration of a session, amounts really to very little, when it is remembered that to duly discharge the duties devolving upon them, members of Parliament must remain at least half a year in the capital, where they have to investigate political business, consult with fellow members or partisans, and so forth. It is not surprising, therefore, that the members are notorious for impecuniosity, and are known to have frequent transactions with money-lenders. Indeed, more than a third of the whole 300 are said to be in the habit of obtaining advances from usurers on the security of their annual allowances. The case of the members of the Lower House is pitiable—even the most fortunate among them are understood to have incurred electioneering expenses that aggregate two years' pay. The allowance ought to be increased to 1,500 or 2,000 *yen* at least. The opinion that such emoluments should be abolished altogether and only men of independent means should represent the people, is entirely inapplicable to Japan's present state, for the rich and well-to-do are notoriously lacking in knowledge and ability. This principle of increasing the amount of the allowance need not be applied to the members of the Upper House. In their case emoluments might be abolished, for the fact of a salary's being paid is responsible, to some degree, for the comparative worthlessness of the House of Peers, impecunious nobles being often elected on the tacit understanding that they will blindly obey the order of their patrons.

The *Sekai-no-tomo* suggests that the Law of Election of the House of Peers be amended. It argues that the hereditary privilege of sitting in the House should be confined to Princes of the Blood. Further, the election should not be conducted by each order of nobility independently, but by all the peers collectively. The system of having representatives of highest tax-payers in the House is useful, but at present, the election being conducted by a privileged few, namely, three or four large land-owners in each locality, is often regarded as a mere farce. The American system should be adopted, each Local Assembly nominating a member to be sent to the Upper House. Finally, the nomination of members in consequence of distinguished services or erudition is a bad system, for it tends to make the Upper House a species of asylum for worn-out officials. The choice should be limited to persons who have occupied posts demanding high general ability, as the Chief Judge

of the Supreme Court, Vice-Ministers of State, and so forth.

The *Kokumin* offers advice to leading members of Parliament that are prone to pay too much attention to affairs outside the Diet, and to leave the discussions within the chamber to ready-tongued orators of secondary importance. So taciturn are these leading members that they either keep silence throughout a whole session, or only condescend to utter a few words when topics of the gravest importance are on the tapis. Their conduct evinces lack of earnestness in the interests of the State. Let them discontinue the bad habit of wire-pulling outside the walls of the Diet, and take a due share in debates whenever grave questions invite discussion, so that the Chamber may not degenerate into an arena for the performances of long-tongued and scurrilous members only.

The *Tokyo Shinbun* compares the canvassing of the present Cabinet among the members of the House of Representatives to the miracle of the loaves and fishes, when multitudes of people were fed with the scantiest of victuals. The Matsukata Ministry had only a small number of supporters originally in the House, but with those few members it has succeeded in creating a large number of followers, so that, according to the information of pro-Government papers, a plurality of the House is now under official control. What explanation the Liberal organ gives of this successful manoeuvring on the part of the Cabinet may easily be inferred. The *Tokyo* concludes its article by declaring that the power of money can not, at best, do more than effect a temporary success.

The *Shogyo* fears that the doings of the Government and the Nippon Ginko will accelerate the rise in the market prices of commodities, and the excess of imports over exports. This apprehension is based on the increase of the volume of convertible notes in circulation. According to the weekly report issued by the Nippon Ginko, the volume of convertible notes in circulation during the last week of December exceeded that during the first week of the same month by over 13 million *yen*. The increase is still greater if comparison be made between the last week of December and the last week of May preceding, when the arrangement for "mutual depositing" was concluded between the Government and the Bank. The difference in the volume of notes at those two periods amounted to 34 million *yen*, and the specie reserve also showed an increase of over 24 million *yen*. The *Shogyo* is of opinion that this additional specie reserve of 24 million *yen*, now lying in the vaults of the Nippon Ginko, must consist of specie and bullion brought by the Treasury from London, and that it was handed to the Bank, not with the view of reducing the "mutual deposits," but in order that the Bank might issue additional notes on the guarantee of the specie. For the volume of notes in circulation shows an increase, whereas it ought to have been diminished by 24 million *yen*, if the specie had been devoted to settling the mutual deposit account. At present the convertible notes in the market total 195 million *yen*, beside over 27½ millions of Government and bank notes, and over 76 million *yen* in the shape of subsidiary coins, the total volume of currency in circulation thus being 300 million *yen*. The *Shogyo* considers that sum excessive.

The *Fiji* does not see any necessity for enacting a factory law: it even deems that the result would be mischievous. Its contention is that the relations between employers and employed are very cordial in Japan, and that the enforcement of a law for regulating the working hours or ages of operatives would simply be the means of subjecting them to considerable distress. At present, operatives work 10 to 12 hours a day, but they do so cheerfully and of their own accord, superintended by employers and overseers who treat them with the utmost kindness, and are vigilant

lest their health be impaired by over-work. Suppose the working hours be reduced by law to only 8; the result would be that an operative who used to earn 24 *sen* a day, could not get more than 16, which means for him hunger and general discomfort. Moreover, any restriction as to the age of operatives would be out of place in Japan, for in such a business as the match industry children are competent to do a considerable part of the work, and earn good wages. To interdict them from doing so would be to drive them to mendicancy. The *Yiji* declares that all the talk about a Factory Law in Japan is simply the irresponsible chatter of academicians without any practical knowledge.

EDITORIAL NOTES.

PROFESSOR MERCK'S CONCERT.

THERE was not a very large attendance, the house being half full, and the chairs in the aisles wholly unnecessary. Probably the Court mourning kept away many of our Concert *habitués* although we noticed at least one Japanese lady among the audience. The programme was not a specially attractive one to the general public; but it served to display the Professor's ripe technique, which was ample for all the calls made upon it. He plays his instrument as though he loved it; and his two most successful numbers were a truly artistic rendering of Bach's Aria in D, and a most genial version of Casella's old Neapolitan song. This latter procured an encore, with which the Professor graciously complied. Miss Poole made her first public appearance before a Yokohama audience as a pianist, joining Professor Merck in a performance of some portions of Grieg's Duo-sonata. It would be invidious to criticise the young lady's first attempt too closely; but we are assured that from such sweet blossom, we may expect a magnificent harvest in due time. Mrs. Mollison was in excellent voice, and delighted her many admirers with her fine singing of the numbers put down to her. Mrs. Doering played all the accompaniments with taste; and gave a pleasing rendering of two pieces by Schumann and Chopin. The ladies were recalled amid applause and flowers galore.

CLERIC AND PUGILIST.

A SINGAPORE clergyman has been writing a series of interesting letters of his experiences on his trip home. The following extract is taken from a letter sent by him from Chicago:—"I have travelled with many distinguished men, but never (to judge from the reverent awe with which his fellows spoke of and behaved towards him) with a person so illustrious and as justly honoured throughout the wide world as on this occasion. It was no less than James Corbett, the champion pugilist, who, trailing clouds of glory from his recent victory over Sharkey at San Francisco, was making a triumphal progress to Denver, or Kansas, or some such centre of enlightenment and culture where he would be received by the *élite* of local society and treated as a lion. He is a tall, well-made fellow; tastefully dressed, and not the least like the pugilist of the comic papers. I had an interview with the great man, the memory of which I shall cherish while I live. It was the proudest moment of my life. Sticking his head through the smoking-car door, he said to me:—

"Kin you play euchre?"

"No."

"D'y care for a hand at poker?"

"No."

That was all. And yet how much it was. Observe the touching faith in the universality of the latter game, by which the average American makes his living out of the simple stranger. He asked me if I could play euchre; he assumed that I could play poker. A thrill of pardonable pride shot through me as I realised how great a compliment this was."

THE U.S. SQUADRON.

ADMIRAL McNAIR's Asiatic squadron, says a Washington dispatch, is to be increased by the addition of the cruiser *Petrel*, now repairing at

the Navy-yard, Mare Island, Cal. Orders have been issued to place that vessel in commission with Lieutenant-Commander Edward P. Wood in command. This officer is at present attached to Admiral Ramsay's staff in the Bureau of Navigation, having been for the past two years in charge of the enlisted men of the navy. The crew of the *Petrel*, will be obtained largely from the *Adams*, which returned from Honolulu in December. The *Petrel* on account of her small size, is especially adapted for ascending the Chinese rivers, and her last duty was on the Asiatic station where she spent the winter before last at Newchwang.

MONTHLY CUSTOMS RETURNS.

THE following is a summary of the Customs Returns for December, showing the foreign trade of the Empire for the month:—

	1895.	1896.
Exports	12,082,297.770	14,772,107.000
Imports	12,960,905.230	14,120,521.790
Total exports and imports	28,892,628.790	
Excess of imports	651,585.210	
CUSTOMS DUTIES.		
Exports	240,953.378	
Imports	388,215.967	
Miscellaneous	20,274.378	
Total	658,443.723	

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

CHRISTMAS IN OLD ENGLAND.

FROM a London telegram appearing in an American exchange, we learn that Christmas day was bright and sunshiny in the huge metropolis. Many of the old customs were followed out in the true spirit of the English Christmas. At Queen's College, Oxford, the ancient ceremony of bringing in the boar's head was solemnly gone through in the presence of the University dons. At Rochester six poor travellers enjoyed the Watts charity, in the shape of a good old-fashioned dinner and a present of four-pence. In Liverpool 20,000 hot-pots were given to the poor, and the impoverished people of London were well cared for through thousands of free breakfasts, dinners, etc., in many parts of the metropolis. In the London workhouses 104,553 paupers enjoyed the Christmas celebration, particularly the beer and tobacco features, and 4,662 hospital patients were made as comfortable as possible under the circumstances. The Queen's Christmas was celebrated very quietly at Osborne, the death of Prince Henry of Battenberg having made all of its usual festivities unseemly. Only the old traditional customs of the table were not interfered with, and the usual presents were given. The royal baron of beef, which is the principal dish on the Queen's sideboard, was cut from a Devon ox fattened on her Majesty's Flemish farm in Windsor Great Park. The joint was roasted at Windsor, and was sent to Osborne on Christmas eve, along with a boar's head and a woodcock pie. Her Majesty received from her grandson, Emperor William of Germany, as usual, a genuine wild boar's head from the famous royal preserves at Spring, Hanover, and from the Duke of Coburg a quantity of German cakes and sweetmeats. The Pantomime at Drury Lane this year dealt with the story of "Aladdin."

DEATH OF CAPTAIN PIKE.

CAPTAIN JOHN PIKE, the well known Shanghai pilot, who has resided at Kumamoto since his marriage some three years ago, expired at the latter place on Sunday night, says our Nagasaki contemporary. He was expected to arrive at Nagasaki to meet the next Austrian Lloyd's steamship on Tuesday, and the announcement of his death was entirely unexpected. Captain Pike was over sixty years of age. He had a large circle of friends and acquaintances in the East, and leaves a son and daughter in Shanghai.

A BRITISH CONSUL-GENERAL IN YOKOHAMA.

If the *London and China Express* has not made a mistake when "lifting" the following paragraph, Mr. James Troup, H.B.M. Consul at Yokohama, has been promoted in rank. The paragraph reads:—"It is notified in the *Gazette* that the Queen has been graciously pleased to appoint James Troup, Esq., to be Her Majesty's Consul-General for the district of Kanagawa, to reside at Yokohama."

THE INTERPORT FOOTBALL MATCH.

A KOBÉ paper has been informed that an invitation has been received from the Y.C. and A.C. to send up a team to play the annual Football Match some time during February. No date is fixed, but Saturday, 13th Feb., is a likely day.

APPOINTMENTS.

THE following appointments have been made by the Admiralty:—Commander Arthur H. Smith Dorrien, to the *Alacrity*, to date January 1. Chaplain, the Rev. Samuel S. A. Bayle, to the *Alexandra*, to date December 11.

THE H. AND S. BANK.

SUBJECT to audit, the Directors of the Hongkong and Shanghai Bank intend to declare a Dividend of £1 5/- per share, to place 5 lacs to the Reserve Fund, and to carry forward about 3 lacs.

PROPULSION OF VESSELS.

MR. PARSON'S turbine, a new contrivance for driving vessels, has been applied to a vessel at Newcastle-on Tyne, with the result that a speed of 29 knots an hour was easily attained.

THE PEEL FAMILY HEIRLOOMS.

SIR ROBERT PEEL has been ordered to restore family plate and heirlooms of the value of £3,000 to the Peel family.

HAWAIIAN CONSULATE IN KOBE.

DR. MOORE-GRAHAM has been appointed Acting Consul for the Hawaiian Republic in Kobe.

THE OBSEQUIES OF THE EMPRESS DOWAGER.

According to the latest intelligence, the ceremonial in connection with the removal of the late Empress Dowager's remains from Tokyo will take place on the 2nd proximo. The cortège will emerge from the Aoyama Detached Palace by the front gate; will then turn to the right along the Aoyama road, and passing along the Second Ward of Kitamachi and Shinmichi, will proceed to the temporary military railway station of Aoyama, where the bier will be placed in the train. From the Kyoto station to the Omiya Palace, the route taken will be by Karasumaru-dori, Sanjo-dori, Sakaimachi-dori, and the Sakaimachi Gate.

The funeral ceremony in Kyoto will be on the 7th proximo, according to present intention. The bier will be carried out of the Palace in the evening, at either 6 or 8 o'clock, and will be carried to the tomb of the late Emperor Komei, by the following route:—Through the Sakaimachi Gate, along Sakaimachi, Sanjo-dori, Teramachi-dori, the Gojo Bridge, and the Fushimi-kaido. The procession will be lit *en route* by a thousand *Zasshiki*, dressed in light brown garments and carrying pine torches six feet long. On the following morning, the 8th, at half-past seven, the burial ceremony will be performed.

THE EMPRESS-DOWAGER'S FUNERAL ITEMS.

Three oxen of the orthodox kind, to be harnessed, one after the other, to the car carrying the coffin of the late Empress Dowager, have at last been found. The one between the shafts must have black and white spots on the body, a white star on the forehead, and white stockings on the four legs. The one immediately in front of the shafts must have a dun skin (*chahatsu*) with black flecks, and the leader must be pure black. Much search was required to find the first of these three, but at last he was discovered at Fushimi, a town some five miles from Kyoto. Specific rules have to be followed with regard to the animals themselves. These rules extended to the breast-plate, the collar, the traces, and the sash round the trunk. Every detail is to be in strict conformity with ancient usage.

From the Aoyama Detached Palace, where the remains now lie in state, the bier is to be carried to the Aoyama station by a large number of workmen specially summoned from Ohara, a suburban village near Kyoto. On the occasion of the burial of a member of the Imperial Family, this particular function devolved hereditarily upon the inhabitants of that village, and in consideration of discharging it they were formerly exempted from paying taxes. There is another class of privileged villagers in another suburb of Kyoto, to whom also duties at Imperial interments have been entrusted for the past eleven centuries, and they will contribute a number of men to assist at the obsequies of the Empress Dowager.

Mr. Yoshida Annei has been appointed to drive the hearse; an office performed by a member of his family during more than six centuries. It was by one of his ancestors that the ox-carriage was driven when the Emperor Goyōzei visited the residence of Hideyoshi (the *Taiko*).

The Kyoto citizens have decided to

stretch black curtains on both sides of the streets along which the cortège is to march. The distance from the temporary resting place of the remains to the cemetery being estimated at about 6 *ri*, that is to say, 15 English miles, the quantity of drapery required for the purpose will be enormous. The stuff is to be cotton shirting. We follow vernacular journals in this statement of distance, but it seems that their intention is to indicate the total length of the drapery, for certainly the distance from the Omiya Palace to the Fushimi mausoleum can not be anything like 15 miles.

It must be confessed that some hysterical extravagance is beginning to mark the demeanour of the people. In Sendai the *amma*, or blind shampooers, are forbidden to blow their usual whistles, a most inconvenient and senseless restriction. In Sanuki, again, it has been decided to abstain from pounding *mochi* because of the noise involved in the performance. A local newspaper takes much credit for having suggested this mark of respect!

An announcement has been issued, over the signature of the Minister of the Imperial Household, that, at noon on the 2nd prox., the cortège will leave the Aoyama Palace; that the train conveying the remains of the deceased will start from Aoyama at 2 p.m. on that day; that at 6 p.m. on the 7th prox., the bier will leave the Omiya Palace, reaching Tsuki-no-wa-yama at 11 p.m. the same night; that the "ceremony of purgation" will be carried out at the latter place; and, lastly, that the remains will be removed to the cemetery at 4 a.m. on the 8th. The *Official Gazette* announces that Their Majesties the Emperor and Empress are suffering from colds, and will be unable to proceed to Kyoto for the purpose of attending the funeral. This announcement had been expected for some days, the Emperor's cold being understood to have developed into influenza.

The following personages are to receive orders to attend the ceremony:—Ministers of State, civil and military officials of *Shinnin* and *Chokunin* rank; Peers; delegates of officials of *Sonin* rank; and members of the two Houses of Parliament. They are to receive lodging allowances at the rate of 2.40 *yen* to 6 *yen* per diem; and travelling allowances, at the rate of 3 *sen* per mile of railway, and 40 *sen* per *ri* of road. The lodging allowance will be given for only two days. Ministers of State, members of Parliament, and so forth are expected to start for Kyoto on the 5th prox.; therefore for about 5 days from that date the session of the Diet will be suspended.

The distance between the Kyoto Palace to the cemetery will have to be walked by ordinary persons assisting at the obsequies. Only Princes and Princesses of the Blood will be allowed to proceed by carriage. Such, at any rate, is the statement made by the press, but it seems open to doubt.

Presumably the Foreign Representatives will not proceed to Kyoto, since the Emperor and Empress are not to attend the obsequies.

Twenty-two members from the Business Men's Association and the Neutral Members have recently formed the Doshi Club (Co-operative Club?) and opened an office in the Imperial Hotel, their object being to investigate the various drafts to be laid before the Diet.

CURRENT POLITICS.

A rumour gathers strength that the Matsukata Cabinet, or rather the Ministers collectively termed *Satsuma Daijin*, contemplate organizing a special party to come under their immediate control, and that, the organization effected, the Cabinet will not concern itself to court good relation with the *Shimpo-to*, as it has hitherto been obliged to do. The new party would form the centre of the combined pro-Government allies, and would have for its nucleus the Parliamentary Club and the so-called "Business-men's Section" in the Houses of Representatives. The roll of the Club now contains 24 names, according to information obtained by a representative of the *Yorodsu Choho* from Mr. Gamo Sen, an influential member of the Club, and as 3 Liberal seceders and 3 others whose provenance is not indicated are to join the Club immediately, its member will aggregate 30. The "Business-men's Section," headed by Messrs. Matsumoto Jyutaro and Hara Ryozauro, is now reckoned at 19, though it used to be only 12, and as all these rally round the Matsukata Cabinet and will move in unison with the Parliamentary Club, the result is a combination of 49 members.

The internal condition of the *Shimpo-to* is no better than that of the Liberals and the National Unionists. The Party is said to be in imminent danger of losing some 20 of its members, representing the north-eastern constituencies and other districts, among them being Messrs. Kudo Kokan, Kikuchi Kuro, Suzuki Shigeto, and so forth. These members appear to be discontented with the Government on several accounts. They allege, for instance, that the procedure of the Cabinet is not consistent with its announced platform, and they condemn the adoption of the expansion of the financial programme as well as the alleged corruption of members of Parliament. They urge the Standing General Commissioners of the Party to seek a clear explanation of those points from "the five Ministers" of the Cabinet, that is to say, excluding the four nicknamed the "*Banshoku Daijin*," and they say that the explanation should be obtained, not from the Ministers individually, but from the whole five collectively. The General Commissioners have been obliged to undertake the Mission, but have not yet found an opportunity to discharge the onerous task. It appears, further, that the refusal of the Government to give effect to the request that official positions should be found for some of the party leaders, so as to cement the relations between the Government and its supporters, has provoked a sentiment of umbrage among a section of the Party. Another section are dissatisfied with the present state of things, though they have not yet given expression to their discontent. They are the section led by Mr. Shimada, Vice-President of the House of Representatives, who, it must be noted, was opposed to the entry of Count Okuma into the Cabinet. Though occupying a distinguished position in the House, he is not much taken into the confidence of the other leaders of the Party, and is not even included among the General Commissioners. These malcontents, also, are understood to demand a satisfactory explanation from the Cabinet, and, in the event of such an explanation's not being given, they will secede from the *Shimpo-to* and set up an independent party of their own.

It thus appears that the tendency among Japanese parties at present is entirely towards disintegration. That danger always menaced the *Shimpo-to*: the great difficulty originally experienced in welding together the various coteries of which it is composed was an indication that their subsequent cohesion could not be very firm. As supporters of a Cabinet, they seem to us to be a failure. Their leaders have shown themselves singularly wanting in tact. Instead of announcing in unqualified terms their adhesion to the new Ministry, or, at any rate, refraining from all declarations of possible hostility, they adopted the extraordinary course of publicly proclaiming that while they had confidence in the Cabinet, they intended to watch it closely, and attack it vigorously if it committed errors. A quaint kind of confidence, foolishness! The fact is that until Japanese political platforms are built on principles, not on persons, the lines of demarcation between parties can never be distinct, nor can anything like real cohesion exist. The trouble is that no important principles offer themselves to be advocated. The overthrow of clan government was an intelligible object, for the consummation of which men could combine; but clan governments having disappeared, there is no chimera left to fight against. The broad distinctions of conservatism and liberalism can not be adopted, because there are no conservatives. What is to come out of it all, we can not clearly perceive. The indications now are that two great parties will spring up about the Satsuma and Choshu statesmen respectively; but even though that should take place, it will still be an affair of persons not principles. By and by, reasons for conservatism will doubtless present themselves, but, for the present, things are decidedly "mixed."

A NEW POLITICAL PARTY.

We spoke in a recent issue of a new political party likely to be organized with the Members' Club and the Business Men's Club for nucleus. The *Fiji Shimpo* now says that the Business Men and other independent members—exclusive of the Members' club—have decided to form a union under the name of the *Doshi* Club. The word *Doshi* means fellow-thinkers, a convenient neutral term. The leader of this new organization appears to be Mr. Matsumoto Jutarō, and the number of members is 22. Should a combination be effected with the Members' Club, the party would aggregate 49, and would hold the balance of power in the Lower House. We wonder how long must elapse before Japanese politicians divide finally into two great camps. Until they do, party cabinets are out of the question.

THE CZAR.

Tokyo papers allege that the telegram forwarded by Reuter as to the illness of the Emperor of Russia is not believed in foreign diplomatic circles, especially at the Russian Legation, where the story is said to be regarded as a mere canard, fabricated for political purposes. The Foreign Office has telegraphed for information, and the truth must soon be known. Reuter, we notice, has since contradicted the story.

THEIR MAJESTIES' VISIT TO KYOTO.

It would appear that His Majesty the Emperor has abandoned his intention of being present in Kyoto at the ceremony in commemoration of the thirtieth anniversary of the death of the late Sovereign, Komei. The *Fiji Shimpo* attributes this change of purpose, first, to the death of the Empress Dowager, and secondly to the severe cold from which His Majesty has been suffering of late. There is no question, so far as we know, of His Majesty's not going to Kyoto at a later date to take part in the obsequies of the Empress Dowager. That part of the programme will doubtless be carried out.

It appears that the Emperor's consent to abandon the original intention of proceeding to Kyoto in order to attend the funeral of the Empress Dowager, was given with difficulty, at the suggestion of the Ministers of State. His Majesty has decided, however, that he and the Empress will visit Kyoto on the 20th of April which will be the hundredth day from the decease of the Empress Dowager, and, as our readers are probably aware, the hundredth day after a death in always observed with great solemnity by the family of the deceased.

THE FOREIGN BANKS & JAPANESE HOLIDAYS.

We read in the *Hochi Shimbun* that the Hongkong and Shanghai Bank, the Chartered, and the other foreign banks in Yokohama, having considered the propriety of observing the principal national holidays of Japan, have communicated with their Boards of Directors in Great Britain, and have obtained the latter's approval. Hitherto the custom has been to take no notice of any Japanese festival except the Emperor's Birthday, on the 3rd of November, though the birthdays of Occidental Potentates have been duly observed. The idea now is, if the *Hochi* be rightly informed, to observe the great national festivals of Japan, and neglect those of the West. Our contemporary adds that on the day when the Empress Dowager's coffin leaves Tokyo, and on the day of the interment in Kyoto, the Banks will do no business.

CRIMINAL TOPICS.

We read in the *Sekai-no-Nippon* that there are 14 foreigners now in the Japanese jail in Yokohama, 9 of them being convicted felons and 5 awaiting trial. Among the latter, 3 are held on a charge of assault and battery; 1 on a charge of smoking opium, and 1 for misappropriation of funds. These are all Chinese. Among the convicted felons, 1 is an Afghan, undergoing 6 years' imprisonment for rape; 3 are Chinese, undergoing a year's imprisonment each for opium smoking; 2 are Chinese undergoing 6 years' imprisonment for the same offence; 1 is a Chinese sentenced to 3 years for the same offence; 1 is a Chinese, sentenced to 1 year for purchasing stolen goods, and 1, a Chinese, sentenced to 3 months for assault.

The number of prisoners in the Tokyo jails is said to have diminished greatly of late. In Ichigaya Prison, for example, where there are generally 2,000 inmates, the number at present is only 1,000.

FOREIGNERS AND THE MOURNING FOR THE EMPRESS DOWAGER.

The *Hochi Shimbun* attacks the German residents of Yokohama. It says that, while other foreigners are showing sympathy with the Japanese nation by observing the regulations with respect to public mourning, the Germans constitute an unfortunate exception. In support of this sweeping charge our contemporary alleges that somebody living at No. 63, in the Settlement of Yokohama, has been playing the piano and singing in a loud voice, an act classed by the *Hochi* with the celebrated whiplash affair. The mood of the moment is evidently very sensitive.

In connection with this subject we can not but regret that the foreign residents of Yokohama have not carried out the good intentions originally displayed by them. They put off the Organ Recital and concert, in aid of the Union Church, until February 12th, yet they now announce another performance of "Cinderella" for January 30th, and a "Tea and Coffee Concert" at the Public Hall on February 6th. What was the use of postponing the Organ Recital if the gracefulness of that act is to be marred by having these other two affairs on days falling within the prescribed period of mourning? We strongly suspect that a mistake has been made through inadvertence. It is properly understood that all musical or theatrical performances by amateurs are interdicted to the Japanese people during a space of 30 days, commencing on January 12th and ending on the 10th of February, inclusive. The interdict holds for 15 days only in the case of professionals. Consequently, Mr. Henri Merck is perfectly justified in giving his concert on January 28th, since the vetoed period for professionals ends on the 26th. The case of the amateurs that have promised to assist him is open to question, though perhaps they may fairly claim to be regarded as professionals for that one occasion. But the actors and actresses in "Cinderella" and the performers at the Tea and Coffee Concert are unquestionably amateurs, and as such, if they cared to observe the mourning prescribed for the Japanese nation, they ought to put off their performances until the 11th proximo, at the earliest. Of course they are not obliged to do so. It is purely optional. But as a matter of tact and right feeling we can not think that they are well advised. A slight postponement can not involve any serious inconvenience, but can make an immense difference in the sentiment of the Japanese nation towards the foreign residents. It is unnecessary to elaborate the point. Those that fail to appreciate it without long explanations, will not be convinced by anything that a newspaper can say.

Perhaps we ought to allude here to the plea advanced by one or two of our local contemporaries, that the Japanese Authorities should have communicated the mourning regulations to the Foreign Consuls, in order that the latter might make them known to their nationals, and that, in the absence of knowledge thus officially conveyed, the foreign residents can not be blamed for neglecting to observe the regulations. Writers advancing such a contention appear to forget altogether that the regulations have no binding force upon foreigners. The Japanese Authorities do not make communications to the Foreign Consuls except in

cases where the latter can give effect to such communications. Had they communicated these particular regulations, the Consuls would have been quite powerless to do more than acknowledge the communication as an item of interesting news. All these things are so plain that any complaint against either the Japanese or the Consuls in this matter must be ascribed to pure thoughtlessness. For the rest, the foreign residents have been fully informed by their own journals about every detail of the mourning. If they care to know, they can easily know. Again, we repeat that the foreign residents are in a position to choose for themselves, but it is difficult to imagine that the choice of any sensible man could be opposed to the views we have here expressed.

THE MOURNING QUESTION.

We trust that it is not necessary to explain the spirit in which we wrote yesterday on the subject of national mourning and the projected theatrical and musical performances in this Settlement. Our opportunities of ascertaining the feelings entertained by the Japanese in such matters are better, perhaps, than the opportunities of the majority of Yokohama residents, and we should certainly be most remiss in the discharge of our journalistic duties if we failed to communicate to our readers the estimate we have formed of those feelings. From a Western stand-point the methods of mourning prescribed for the nation must appear exaggerated, but that is an affair of custom, and it may be taken for granted that every foreign resident of Yokohama would be glad to respect the customs of the Japanese people where no question of right or wrong present itself. Our suggestion was not by any means intended as an endorsement of this particular custom. We see ample room to criticise it, if criticism were tolerable at such a time. But it is our plain business to share with our readers any knowledge we possess of the mood of the Japanese, and that is what we have sought to do.

THE SMALL-POX.

The epidemic of small-pox has certainly assumed serious dimensions. From the 1st of this month until the 22nd, the number of cases reported from all parts of the empire totalled 5,711, and the number of deaths was 1,600. The *Nichi Nichi*, from which we take these figures, says that no signs of the disease's abating are yet apparent. In Tokyo, from the 24th instant to the 26th, there were 204 new cases. The following list shows the various cities and prefectures in which more than a hundred seizures took place between the 1st and the 22nd instant, as well as the total deaths in each instance:—

NUMBER OF CASES BETWEEN JANUARY 1ST AND JANUARY 22ND.

Place.	No. of Cases.	Deaths.
Tokyo	1,967	500
Osaka	1,121	429
Hyogo	411	177
Saitama	285	49
Chiba	280	48
Fukuoka	183	55
Okinawa	160	79
Tokushima	149	26
Wakayama	130	29

Cases are also reported from Ibaraki, Kyoto, Kanagawa, and so forth, but as they do not aggregate too in any instance, they are excluded from the above table.

THE BUDGET COMMITTEE & THE FOREIGN OFFICE.

It was generally understood that the Liberals and National Unionists, who constitute a plurality of the Budget Committee, would attack the Foreign Office appropriations with the view of embarrassing Count Okuma and his followers. We give below an abridged report of the Committee deliberations, on the 22nd instant, with reference the Foreign Office expenditures. The chief spokesman on the part of the Committee was Mr. Inouye Kakugoro, and the questions put by him were answered by Count Okuma. Asked by Mr. Inouye about the scheme of laying a railway between Seoul and Fusan by Japanese capitalists, in virtue of an agreement concluded between Japan and Korea, the Count replied that, though the projectors had asked the Korean Court to grant them a charter, and though the Japanese Legation in Korea had also opened negotiations on behalf of the projectors, the matter could not yet be brought to any satisfactory issue, owing to constant changes in the Korean Cabinet. Mr. Inouye expressed the belief that no change had occurred in the holder of the portfolio of Foreign Affairs in Korea since the resignation of the Ito Cabinet, and that Mr. Hara, Japanese Minister in Korea, and the Representatives of other Powers, had equally failed to obtain a favourable answer from the Korean Court in connexion with that special route. He further expressed his private conviction that the Foreign Office in Tokyo was contemplating the adoption of special measures to bring the Seoul-Fusan Railway scheme to a successful issue.

Count Okuma failed to understand what Mr. Inouye meant about the adoption of special measures, but that subject was not pursued any further. The Count also observed that though the same Minister continued to hold the portfolio of Foreign Affairs in Korea, he (Count) Okuma was under the impression that the Minister no longer wielded any influence in the Cabinet. Beyond that statement the Count declined to go. Mr. Inouye wished to know whether the steps now taken by the Count in connection with the railway affair could be considered appropriate, in view of the fact that, Japan's demand having been repeatedly rejected by the Korean Court, the Count had acknowledged himself to be at a loss what course to pursue. Mr. Inouye really failed to discover any necessity for maintaining a Legation in Seoul, if it proved of so little service. Count Okuma emphasised the advisability of establishing new Legations and Consulates in various parts of the world, and pointed out how, considered from the stand-point of either international courtesy or commercial relations, it was essential to have Legations in Spain, Belgium, and Mexico, which Powers send Ministers to represent them in Japan; and how, when the Treaty is concluded between Japan and Turkey, the same step must be taken with regard to the latter. The establishment of new consulates is equally necessary; at Muk-pho and the mouth of the Tadong, in Korea; at various Chinese ports; in India; Australia; Germany; on the coast of the Black Sea, and in Alexandria. Of course Japan did not aspire at present to become a Power of the first rank, which generally sends Ambassadors

to the Courts of treaty Powers of the same status. Such an aspiration would be too costly for Japan to entertain at present.

Mr. Shiba Sankuro (Liberal) wished to know whether the Foreign Minister did not deem it necessary to have Japan represented in Korea by a Minister, and why he did not promptly appoint one, instead of leaving affairs there under the control of a *Chargé d'Affaires*, as at present.

Count Okuma replied that the *Chargé d'Affaires* was conducting business in an efficient manner, but that he proposed to despatch a duly accredited Minister to Korea sooner or later.

THE SPINNERS' TROUBLE ARBITRATED BY BARON IWASAKI.

The Union Spinners' boycotting affair, or rather, the affair of the Mitsui *versus* the Osaka business men, has been practically settled through the arbitration of Baron Iwasaki. On the 23rd inst., the Baron invited to his residence the two Delegates of the boycotters and Messrs. Mitsui Takayasu and Asabuki Yeizo, of the Kanagafuchi Mill, and announced the following judgment in arbitration:—

The trouble that arose between the Union spinners, on the one hand, and the Kanagafuchi Mill and the Mitsui Bank, on the other, caused me much concern, inasmuch as it was calculated to disturb the country's economy to no small extent. The parties concerned recognizing that, and being desirous of having the dispute settled in a satisfactory manner, frankly entrusted the question to my arbitration, agreeing to settle it in accordance with my judgment. I therefore consented to undertake the task of arbitration, and this is the opinion that I have to give:—

It is a matter of extreme regret that the Union Spinners did not take amicable measures from the outset to settle the affair satisfactorily by opening negotiations with the Kanagafuchi Mill in connection with the transfer of operatives, and that, relying upon the strength of their combination, they hastily resorted to boycotting tactics against the Kanagafuchi Mill and the merchants that transacted business with it. It is equally a matter of regret that the Mitsui Bank, while occupying an important position in the national economy, did not pay due respect to its function of facilitating the circulation of money, but upheld the cause of the Kanagafuchi Mill and adopted retaliatory measures against the boycotters of the mill. As to the problem of the control of operatives, a difficult point of dispute between the Union Spinners and the Kanagafuchi Mill, it involves a great industrial question, and is so complicated that its solution should be entrusted to a Committee specially nominated. But for the purpose of settling the immediate trouble, my award is that the Union Spinners must withdraw the boycott organized by them against the Kanagafuchi Mill and the merchants transacting business with it, and that the Mitsui Bank must discontinue its boycott against the spinner's Union and those connected with it.

With regard to the framing of rules for the control of operatives, which is the root of the present trouble, the work should be entrusted to a Committee, specially nominated, and the parties involved in this affair should abide by the decision of the Committee.

Of course the Delegates of the Union Spinners and of the Kanagafuchi Mill signified their assent to the above finding. The Baron then told them that the Committee should be composed of two Delegates each from the Union and the Kanagafuchi Mill, and of Messrs. Shibuzawa Eiichi; Kaneko Kentaro, vice-Minister of Agriculture and Commerce; Mayeda Masana, and Uyemura Shimpei, Barrister-at-law and Assistant Manager of the Nippon Ginko. The Kanagafuchi Mill will be represented by Messrs. Asabuchi Eizo and Nakagamigawa Hikojiro, and the Union by Mr. Sunagaki Toshio and Mr. Kanazawa or Namba. On Monday, the eight Commissioners were to be invited to Baron Iwasaki's residence, when the Baron was to state his own views in connexion with the control of operatives.

Meteorological Observatories in Formosa were opened at Taipeh in August last, and at Taichu in December. The Observatory at Tainan was opened this month, while those at Keelung and at the Pescadores have been in operation since November last.

THE MITSUI VERSUS THE OSAKA BUSINESS MEN.

The trouble between the Kanagafuchi Spinning Mill and 47 Union factories has now, as our readers are already aware, developed into a collision between the Mitsui Bank and the Osaka business men. The hostility between the two is said to be carried to an extreme sometimes highly comical. The Mitsui Bank has instructed the Kanagafuchi Mill to improve the quality of its yarns as much as possible and to sell them cheap; the boycotters, on the other hand, are trying to obstruct the sale of the Kanagafuchi's goods, and have solicited more than 50 merchants in Osaka and Kobe not to purchase the produce of the offending mill. They have also appointed about 20 agents to embarrass the Mitsui Bank and the Mitsui dry-goods store as much as possible. Then, when the latter distributed new year's presents and almanacks to its customers in Osaka, the agents called on each of the customers and tried to induce them to return the presents and books. The mutual decoying of operatives is carried on in a very ingenious manner. The Union boycotters tried to disguise the Kanagafuchi's girls by dressing them up as ladies, in rich robes such as they never previously had the delight of wearing. But the Kanagafuchi folks got wind of this device, and sent clerks to the Kobe station to identify and lead back the finely tricked-out girls. These proceedings often caused much annoyance to real ladies, for the Kanagafuchi's clerks could not be always accurate in their recognitions, and in some cases they seized real ladies, to the great scandal and indignation of the latter and their families. Again, according to the Osaka correspondent of the *Nippon*, on receiving news that the Kanagafuchi men had decoyed girls from the Owari Spinning Mill and were accompanying them to Hyogo, the Union boycotters sent employes to lie in wait along the route and intercept the girls. But they ultimately discovered, to their intense disappointment and vexation that the girls were operatives honestly enlisted by the Kanagafuchi folks, and that they had not been decoyed from any mill in the Union. Such stories are numerous. They show that both parties to the dispute are behaving with very little dignity. The Osaka business men are said to be excited to fever heat over the affair, for so active is the spinning industry in that city that almost every citizen of importance is directly connected with the enterprise. Fortunately, Mr. Toyama Shuzo, one of the few leading residents of Osaka not interested in spinning, determined to take steps to terminate a quarrel that reflected no credit on any one concerned. With that object in view, he came to Tokyo and asked Baron Iwasaki, Count Inouye, and others to lend their good offices for the purpose of settling the difficulty. The Baron readily gave his consent, and, through the medium of Mr. Fujita Denzaburo, notified the Osaka men that if they would leave the matter in his hands, he would undertake the task of finding a solution. Several of the Union boycotters declared that the quarrel should be prosecuted to the bitter end, not only to teach a lesson to the Mitsui, but also to warn foreign capitalists that if they seek at any time to compete with the Kei-Han spinners, they must expect to encounter formidable opposition.

However, it was finally decided to open negotiations with Baron Iwasaki, and the Union has despatched two representatives to Tokyo for the purpose.

PATENTS AND TRADE MARKS.

We read in the Tokyo *Asahi* that no less than three hundred German subjects have applied for registration of patents, and that thirty of the applications have thus far been successful. Two hundred and seventy British subjects have also applied, but our contemporary does not give any information as to the result of their applications. We wonder what the applicants have had to pay for legal assistance in this matter. A strange story reached us lately from a trustworthy quarter. It was to the effect that an American citizen, having sought the aid of a barrister to procure a patent, was asked to put up a sum of fifteen hundred dollars in gold. At that rate foreigners are not likely to be in a hurry about soliciting registration in Japan. The fact is that legal assistance is not wanted at all. The regulations translated recently in these columns supply clear indications as to the requisite procedure. Any one can apply direct.

CURRENT TOPICS.

We have more than once noted in these columns the great prevalence of small-pox in Japan, more especially in Tokyo, since the beginning of the year. In order to show that no age is safe, we quote the following table, which the *Nippon* obtained from the Sanitary Department of the Metropolitan Police:—

SMALL-POX PATIENTS IN TOKYO CLASSIFIED BY AGE.		1896.	From 1st to 16th Jan. 1897.
Under 5 years	735	257
Under 10 years	154	66
Under 15 years	159	79
Under 25 years	852	426
Under 40 years	560	300
Under 60 years	43	38
Over 60 years	2	—
		2,505	1,166

Since last year, the Metropolitan Police Board and City Office have been urging on citizens the importance of vaccination, and already over 400,000 persons have adopted this precautionary measure, or above a third of the population in the urban and rural districts of Tokyo.

On the 22nd instant, the Central Sanitary Board convoked an extraordinary meeting to discuss measures for preventing the spread of the epidemic. Dr. Hasegawa represented that an Extraordinary Quarantine Board must be established, that the scope of the Epidemic Hospitals must be enlarged, and that vaccination must be enforced with vigour. The representation was adopted unanimously, and Dr. Hasegawa at once called on Count Kabayama, the Minister of Home Affairs, and, on behalf of the Board, laid the matter before His Excellency, with the result that the Home Office decided, on the following morning, to follow the course recommended by the Board.

The epidemic is not less virulent in Yokohama than in Tokyo. Up to the 17th inst., only one or two cases were reported daily, but on the 18th no less than 18 cases were reported, and since then about 10 cases

appear daily. At present, Todamachi, Nakamura, and Kanagawa are the worst quarters. Since the close of last year, extraordinary Vaccination Offices were established in Yokohama and Kanagawa, and last Saturday (23rd) five additional offices were organized. Coolies, factory workmen, and other persons of the lower orders are compelled to undergo vaccination at the hands of doctors engaged by the Kanagawa Police. Care is also taken so to disinfect bedding hired out by dealers in such commodities.

The *Kokumin* avers that, on the 22nd inst., the German Representative forwarded a document in the following sense to the Metropolitan Police Board, in connection with the carriage-whip affair:—"No intention whatever of striking the students of the Seigyo Gakko was entertained, but it was nevertheless a fault on the part of the Minister that the whip he raised should have accidentally hit the students. Therefore he expresses regret for his carelessness."

The losses that inundations inflict on Japan are something enormous, as the following table quoted from the *Statistical Journal*, shows:—

	Number of Inundations.	Amount of Damage, Yen.
1885	318	27,336,804
1886	167	6,814,737
1887	320	3,080,438
1888	236	6,073,157
1889	421	33,293,510
1890	534	22,431,471
1891	345	12,728,971
1892	486	20,750,838
1893	475	44,156,899
1894	351	17,726,112
Totals	3,653	194,392,937

Averages. 365 19,439,294
The following localities suffered conspicuously during the last decade:—

LOSS IN TEN-YEAR PERIOD (1885-94.)		Yen.
Okayama	1,970,756	Wakayama 920,898
Tottori	1,436,293	Fukuoka 912,247
Hyogo	1,008,670	Fukushima 861,596
Gifu	947,639	Saitama 854,910

THE OPPOSITION PRESS AND THE CABINET.

The new Opposition organ, the *Meiji Shimbun*, throws much energy into its attacks upon the Cabinet. Counts Okuma and Matsukata are, of course, the chief targets for its shafts. Against Count Matsukata it has a plausible case. Before the Count came into office, he severely criticised the financial policy of the last Cabinet, declaring it calculated to impair the material progress of the country. But having himself assumed the direction of the State's finances, he has not made any change in the programme of his predecessors. Hence it follows that he is following a course already condemned by himself. Of course, that is a picturesque attack, but there is a difficulty about being really angry with a person that does nothing worse than follow one's own example. The charge against Count Okuma amounts to this, that he has not yet made any fireworks in foreign politics. He has not shot the German Minister out of Japan or the Russians out of Korea. Naturally there is nothing serious in assaults of that nature.

THE REVISED TREATY WITH BELGIUM.

In presenting to the Chamber of Representatives the Revised Belgian Treaty with Japan, on November 25th, 1896, M. de Favereau, Minister of Foreign Affairs, made some remarks of considerable interest. We translate:—

I shall not here enter into the history of the negotiations on this subject in which European diplomacy was engaged for long years. I desire, however, to establish that by advancing resolutely along the path of progress under the influence of a wise and enlightened Government, Japan, whose overtures did not originally meet with a very warm welcome, was able in the end to obtain a more and more conciliatory disposition on the part of European States. * * * It has seemed to His Majesty's Government, gentlemen, as well as to the Governments of the other Treaty Powers, that the abandonment of the privileges of extraterritoriality could be justified by the reforms realized, in its domestic organization, by the empire of the Rising Sun; reforms which have caused it to traverse, in these recent years, a road so rapid in the direction of progress. * * * The Treaty, or rather the annexed Protocol, contains another proof of Japan's desire to secure the protection of all orders of interests. I allude to the provision in the said Protocol by which the Japanese Government engages to adhere, before the abolition of Consular Jurisdiction, to the international conventions for the protection of industrial and literary property.

Article XV. of the Treaty recognizes the right of both the Contracting Parties to nominate consular agencies of all grades, and secures to these agents the enjoyment of the privileges, exemptions and immunities accorded to the consular agents of the most favoured nation. It has appeared to the Government of the King that useful ends would be served if a special convention determined, in a positive manner, the reciprocal rights, privileges, and immunities of the respective consular agents, as well as the obligations devolving on them in the two countries. Proposals have accordingly been made to the Cabinet in Tokyo for the conclusion of a convention of that nature, and have been favourably received, and a convention will doubtless be soon concluded to regulate the matter.

There is another point, gentlemen, which I wish to indicate. We should have desired to see figure in the new Treaty of Commerce a stipulation which has already found a place in numerous analogous documents signed by Belgium. I refer to the clause prescribing recourse to arbitration in the matter of disputes which may arise out of the execution of the Treaties. The Government of His Imperial Majesty has preferred not to make any departure in this respect from the treaties signed previous to ours, which do not contain a clause in that sense. I desire, gentlemen, to show here that the Government of the King did not lose sight, in the course of the recent negotiations, of a stipulation towards which the Belgian Chambers have shown themselves specially sympathetic.

I am confident, gentlemen, that you will give a favourable reception to the treaty of June 22nd, 1896, and thus indicate your desire for the development of the relations that exist between the two States. I would recall, in this context, that, at the time when the international deed now under consideration was signed, a fact was consummated which, though foreign to the Treaty itself, deserves to be noticed here for the sake of the happy influence that it ought to exercise upon those relations. On June 18th, 1896, there was inaugurated at Antwerp a maritime service which the Nippon Yusen Kaisha of Tokyo—the most powerful of the navigation companies in Japan—has organized between our great port of commerce and the Empire of the Rising Sun. It can not be doubted that the establishment of this service—the first regular service conducted in Europe under the Japanese flag—will contribute to make the name of Belgium known in Japanese markets.

THE NEW BELGIAN CHARGE D'AFFAIRES.

We learn that Monsieur Emile de Cartier de Marchienne has been appointed Secretary of the Belgian Legation in Tokyo, and that his arrival in that city may be expected next month. M. de Cartier will act as Chargé d'Affaires during the absence of His Excellency M. Le Baron d'Anethan, who goes home on leave of absence in March.

IMPERIAL DIET.

SATURDAY, JANUARY 23RD.

HOUSE OF PEERS.

The House did not sit.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—First Reading of a Government Bill relating to Forest Law.
- 2.—First Reading of a private Bill relating to the Amendment of the Law of the City and Prefecture System.
- 3.—First Reading of a Private Bill relating to the Law for readjusting Pensions.

After a report had been read enumerating various Bills submitted to the House, Count Matsukata ascended the rostrum and, in his capacity of Minister of Finance, explained an Urgency Bill in the form of a supplementary Budget for the current fiscal year, providing an appropriation of 700,000 yen, to defray the funeral expenses of the late Empress Dowager. An appendix to the Bill stated that the money was to be taken from the surplus of the 28th fiscal year. The Minister of Finance briefly commented on the profound national grief caused by the death of the Empress Dowager, and said that, as the original estimate of 800,000 yen had been reduced to 700,000 by the gracious order of the Emperor, he trusted that the House, by giving immediate consent to the Bill, would reflect the loyalty of the people.

Mr. Motoda Hajime, Chairman of the Budget Committee, asked permission on behalf of himself and his fellow committee-men to leave the chamber for the purpose of considering and reporting on the Bill. Permission was given.

The Bill standing first on the Order was read. Its gist was as follows:—In the first section, forests are variously classified, as Forests belonging to the Imperial Estates, State Forests, Public Forests, Private Forests, and so forth. The second section deals with the mode of superintending the maintenance of forests, and provides that, in the event of a forest being considered unworthy of preservation, the Minister of State for Agriculture and Commerce shall be competent to determine the manner of dealing with it. The same Minister will also have power to suspend the felling of trees in a forest, and to order their planting in places that have been denuded in contravention of prescribed rules. Moreover, a forest that has suffered from neglect may be taken in hand by the Authorities. The third section deals with Forests necessary for the preservation of good order. It defines the nature of the forests to be included in this category, and the process of determining which shall be included, and which excluded, as well as the mode of conserving forests of this description, and so on. A good-order-preservation forest is to be exempted from taxes and public charges, and in consideration of such privileges the felling of trees in a forest of the kind may be totally prohibited. The fourth section relates to the policing of forests, and provides that entry into a forest owned by another is forbidden; that saws and axes used in a forest must bear the mark of the owner of the forest; fires in a forest or its vicinity must not be ignited without permission; that before dawn or after sunset no tree shall be cut or timber carried out of a forest without the sanction of the competent officials, and so forth. The fifth section relates to penalties, which range, when a fine is imposed, from 2 yen to twice the value of the thing stolen from a forest, according to the gravity of the offence; and when imprisonment, from 2 months to 2 years. The last section contains miscellaneous provisions, supplementing or explaining the foregoing sections.

Viscount Enomoto, Minister of State for Agriculture and Commerce, explained that as the subject had been exhaustively discussed during the last session of the Diet, and as the Bill now before the House had been drafted with due consideration for the suggestions made by the members in the course of the discussion, he hoped that the measure would be received with favour. The enactment of a Law of the kind was a matter of urgent importance in view of

the fact that the preservation of forests bore a vital relation to meteorological conditions, and in consideration of the heavy losses incurred by the nation, during recent years, from inundations.

Several members put questions about the Bill and were answered by Mr. Takahashi Takuye, Chief of the Dendrological Bureau and one of the Government Delegates for the Department of Agriculture and Commerce. The Bill was entrusted to a Committee of 9.

Mr. Motoda Hajime (National Unionist), presented a report on the Supplementary Budget just handed to the Budget Committee. He explained from the rostrum that the Bill had been unanimously approved by the Committee, and proceeded to dilate at length on the virtues of the late Empress Dowager. During the momentous period preceding the Restoration, she had exhibited admirable fortitude and mental resources, contributing materially to console the grief and alleviate the anxiety of her Consort, the Emperor Komei, who was not only angered but also perturbed at the arrogance of the Tokugawa Regents and the demands preferred by foreign countries. She had also deserved well of the nation on account of her wise care in rearing the present Emperor, and educating the kingly qualities and virtues so conspicuously shown during his illustrious reign. Mr. Motoda referred, also, in the most respectful terms, to the filial affection shown by the Emperor and Empress towards the deceased lady, and to the profound grief that her death had caused to Their Majesties. All these points had influenced the Committee to unanimously recommend the passing of the Budget, and he trusted that the House would accept the report with equal unanimity.

The House passed the Bill without comment or dissent.

The next Bill on the Order consisted of no less than 130 articles, and presented no features of general interest. It was entrusted to a Special Committee of 18, without discussion, as was also the last Bill on the Order.

The House rose at a few minutes past 2 p.m.

HOUSE OF PEERS.

The House met at 10 a.m. on Sunday, the 24th inst., to discuss the Funeral Expenses Supplementary Budget sent up from the Lower House. The Premier explained the Bill in virtually the same terms as he had employed when introducing it in the House of Representatives, and it was at once brought up for discussion, the committee stage being dispensed with. At the instance of Viscount Tani, chairman of the Budget Committee, the measure was passed unanimously.

WEDNESDAY, JANUARY 27TH.

HOUSE OF PEERS.

The House was occupied with Committee work alone.

HOUSE OF REPRESENTATIVES.

The House met at 1.15 p.m., the Order of the Day being:—

- 1.—Supplementary Budget No. 1 for the 29th fiscal year.
- 2.—Supplementary Budget No. 2 for the 29th fiscal year.
- 3.—Supplementary Budget No. 3 for the 29th fiscal year.
- 4.—Special Account Supplementary Budget No. 1 for the 29th fiscal year.
- 5.—Contract involving an outlay from the Treasury over and above the Budgetary Appropriations for the Department of Education.
- 6.—Special Account Supplementary Budget No. 2 for the 29th fiscal year.
- 7.—Contract involving an outlay from the Treasury over and above the Budgetary Appropriations for the Department of Communications.
- 8.—First Reading of a Government Bill relating to a change in the period for defraying interest on the Railway and Public Undertakings Loan.
- 9.—First Reading of a Government Bill relating to amending a portion of Law No. 92, issued in 1896.
- 10.—First Reading of a private Bill relating to the Conservation and Registration of Forests attached to Temples and Shrines.

After the usual report had been read by one of the secretaries, relating to Bills, official and private, placed in the hands of the President, and other matters of routine, the President called on Mr. Inouye Kakugoro (Independent) to explain a Question submitted by him to the Government. The Question read as follows:—

As explicitly stated in a Treaty concluded between Japan and Korea with reference to railway construction in the interior of the Korean Peninsula, the Japanese Government possesses the right of building such railways. Nevertheless, the Government of Korea, while giving concessions to foreigners, has refused a similar concession to Japan for the construction of the Seoul-Fusan Railway. This is not a matter that the Authorities can regard with indifference. Count Okuma, Minister of State for Foreign Affairs, explained this affair on the occasion of the Budget Committee's meeting held on the 22nd inst., his statement being as follows: "Whatever policy the Japanese Government may adopt, a thing of the kind can not be done by Japan alone. It involves the two countries, or may even involve three. No hasty action can be taken, for if Japan refused to adopt a magnanimous and conciliatory attitude, grave issues might come, affecting millions of Japanese." It seems from this statement that even though a Treaty be violated, or even though its obligations be evaded, the Minister of Foreign Affairs is determined to regard such doings in a magnanimous and conciliatory spirit, out of deference to Korea and other Powers. The introducers of this Question can not understand such a line of conduct, and have consequently been impelled to ask the Foreign Minister what is meant by "Three Powers" and what is meant by the grave issues that might ensue, affecting the Japanese.

Speaking from his seat, Mr. Inouye observed that, since the Foreign Minister intended, as was to be inferred from what His Excellency had said on the occasion of the Budget Committee's meeting, to explain his foreign policy in person before the House at a suitable time, and since the Minister was believed to be a statesman not likely to shrink from taking such a course, therefore the introducers of the Question wished to receive a reply on that occasion, or at another suitable opportunity.

Mr. Motoda Hajime (National Unionist) wished to report, on behalf of the Budget Committee, that the Bills from 1 to 7 on the Order of the Day had been discussed by the Special and General Budget Committees, and had been approved without any amendment.

The Bills were passed without division. They will be given when the General Budget is printed in these columns.

The Bill Standing eighth on the Order of the Day was to the effect that the period for paying interest on Bonds floated in virtue of the Railway Construction Law, issued as Law No. 4 of the 25th year of Meiji, and in virtue of the Public Undertaking Loan Law, issued as Law No. 59 of the 29th year, and in virtue of the Hokkaido Railway Construction Law, issued as Law No. 93 of the 29th year, should be paid every year on the 9th of March.

The Bill was entrusted to a special committee without explanation or comment.

The next Bill was to the effect that the following officials should be appointed for the present in the Board of Audit, to deal with business enumerated in Art. I. of Law, No. 92, 1896, that is to say, the finances of the Governor-General's Office of Formosa:—1 chief, 2 auditors and assistant auditors, respectively, and several clerks.

Mr. Komuchi Chijyo, Chief of the Legislative Bureau and Government Delegate, briefly explained that, as the circumstances of the time and the state of affairs in Formosa did not warrant the auditing of Formosan accounts in the island, the Government had decided to entrust the work to the Board of Audit, and to organize a special mechanism for the purpose in the Board itself. It was expected that by the 31st fiscal year (1898-1899) the arrangement of the new dominion's affairs would be completed, and a special Auditing Office would be established in the island.

The Bill was entrusted to a special committee of 9.

Mr. Komuro Shigehiro (Liberal) wished to introduce an urgency motion, in the sense of having the Order of the Day changed, so that a Representation placed by him and his supporters in the hands of the President concerning amnesty to, and rehabilitation of, political offenders might be given at once. Permission having been given by the House, the Representation was read by a secretary, as follows:—

More than a decade ago, when the Constitution was not yet issued and the Diet had not yet been opened, and when various obstacles lay in the way of augmenting the dignity and prosperity of the Court, on the one hand, and of furthering the improvement of politics and the freedom of the people, on the other; in short, when any attempt to facilitate the progress and prosperity of the nation was liable to encounter various impediments, not a few persons, harassed by these difficulties and impelled by sanguine ideas, acted in such a manner as to incur legal penalties. But when it is remembered that those implicated in the Nagoya and Shizuoka affairs were thrown into prison and have been undergoing penal servitude since about 1884, in the Kabato, Sorachi, and Kushiro penitentiaries in Hokkaido, though they can not be regarded in the same light as ordinary malefactors who violate the law merely for selfish or passionate motives, their real intention deserving sympathy; and when it is further remembered that these prisoners in Hokkaido sincerely repent of their misdeeds, and are faithfully performing their hard service, their condition is seen to be very pitiable, especially as they are now worn out by the hardship and various miseries of confinement, and are declining in age and health. Therefore this House has more than once forwarded representations on the subject, and urged the Government to give effect to the suggestions therein contained. But no result has been attained. This House trusts that the Government will speedily advise the Emperor to order the liberation and rehabilitation of the above prisoners, as a special measure, so that they may be enabled to profit by the gracious benevolence and virtue of His Majesty.

Mr. Komuro briefly explained, from the rostrum, that his idea was to have amnesty extended to the offenders implicated in the Nagoya and Shizuoka affairs, and rehabilitation to those implicated in the Kabatan and Uraga affairs. Those coming under the former category had been denied the favour of amnesty on the occasion of the promulgation of the Imperial Constitution, on the ground that, whatever might have been their real motives, they had committed murder or murderous assaults. Undoubtedly such actions deserved heavy chastisement. They were not perpetrated, however, from any idea of gratifying selfish passions or furthering selfish ends, but under the impulse of an enthusiastic desire to promote what the offenders believed to be the weal of the State, and their perpetrators had now sufficiently atoned for their fault by long confinement. Therefore they ought to receive special favour at the hand of the Government.

Mr. Moriya Konosuke (*Shimpo-to*) opposed the measure. The power of granting amnesty was among the Prerogatives of the Crown, and must not be lightly exercised, for in the event of the slightest error or want of impartiality, in the event of even one person's being unfairly dealt with, the result might possibly be to make the Court an object of umbrage. It must be remembered that the Cabinet had to advise the Crown with regard to the persons on whose account pardon or rehabilitation might be granted, and as the Cabinet Ministers were not infallible, there was serious danger that this particular project would be mischievous in effect, for though the prisoners for whose sake the Representation was presented might have had another end in view, they actually perpetrated murder or murderous assaults, and if they were to be pardoned on the grounds adduced, the public safety might be endangered. The Judges that tried the Nagoya and Shizuoka cases had decided that the prisoners deserved the punishment they were now undergoing, and if the Executive, and still more the Legislature, were to meddle with a decision duly and fairly arrived at by the Judiciary, would not a bad precedent be established? The Executive and the Legislature would be acting in a manner unworthy of themselves did they follow the advice tendered by the introducers of the Representation.

Mr. Minamino Doshin (pro-Liberal Independent) spoke in support of the Representation, and observed that, as it was not uncommon for a prisoner to be liberated when he has served three-fourths of his term, by special consideration on the part of the Premier and the Minister of Justice, and as the fault of

the prisoners on whose account the Representation was submitted had been one of misguided patriotism, no valid reason existed for refusing to extend amnesty to them, especially as they had quietly and faithfully undergone their sentence for so long a period.

Mr. Komatsu Sansho (Liberal) spoke in support of the Representation. The advent of Constitutional politics involved many sacrifices. He himself was one of those that had been ready to be sacrificed on the altar of constitutional politics, and the Shizuoka offenders belonged to the same category. Members of the Diet ought to take into consideration the fact that through such sacrifices the present constitutional system, from which such immense national benefits were derived, had been evolved. He was no lawyer, as Mr. Moriya was, and did not know well whether the liberation of the prisoners would be legally warrantable. If he supported the Bill, it was from a feeling of pity. He could not think it wrong that, by way of commemorating the benevolence of the late Empress Dowager, special grace should be extended to the poor misguided patriots now undergoing long servitude amid snow and ice in the dreary penitentiary of Hokkaido.

Mr. Horikoshi Kwanosuke (*Shimpo-to*) moved that, since the matter had grave bearings, involving, as it did, an exercise of the Emperor's prerogative, and moreover, since the Representation had been placed in the hands of the members only a few hours previously, therefore to enable them to exercise due deliberation, the House's decision should be deferred, and the measure should be entrusted to a special committee for examination and report.

This motion was put to the House, and an objection having been raised against the ruling of the President, as to whether "noes" or "ayes" were in the majority, an open ballot was taken, with the result that 87 voted in the affirmative and 84 in the negative. The Representation was therefore handed to a special committee.

The last Bill on the Order was entrusted to the Committee appointed for the purpose of reporting on the Forestry Law Bill introduced by the Government.

The House rose at 15 minutes to 3 p.m.

OFFICERS FOR THE ARMY.

The number of commissioned officers serving with the Colours in the Japanese Army at present, is four thousand, in round figures, and when the Army is doubled, as it will be in the 35th year of Meiji (1902)—according to the present programme of expansion—the number will be over eight thousand. It would appear, therefore, that in the course of seven years, commencing from 1896, four thousand cadets will have to be passed out of the Officers' College; that is to say, some 550 annually. Moreover, the records show that 5 per cent. of the officers with the Colours either die or become unserviceable from other causes, every year. On that account, then, 200 more cadets will be required, or a total of 750 annually. We recently explained that, according to the new system of selecting cadets, graduates of the Lower Middle Schools become admissible without examination, and any vacancies still remaining are to be filled by competitive examination. The *Yomiuri Shimbun* states that the Authorities expect about 300 students to enter the Lower Middle Schools from the Common Schools, yearly, with the intention of becoming candidates for commissions in the Army. Statistics indicate, however, that only five in every six of the lads entering the Lower Middle Schools graduate there. Thus 250 cadets will be supplied by the Schools direct, and 500 must be obtained by competitive examination. After 1902, the number of cadets annually required will be 400, of whom 250 will enter from the Schools and 150 by competitive examination.

BUSINESS ASSOCIATIONS.

THE business associations of various descriptions organized by the advice of Mr. MAYEDA MASANA, held a general meeting from the 18th instant in Tokyo. The associations are of eleven kinds, viz., Five-two Staple, Agricultural, Tea, Silk, Vegetable Wax, Matches, Kyushiu Colliery, Live Stock, Union Saké Brewing, Commercial, and Industrio-Commercial. All these bodies, we read in the *Yōmei*, have Central Offices in Tokyo or elsewhere, and Branch Offices in most of the localities, the latter aggregating over 125 in the case of the Five-two Staples Association alone. Consequently the Central Branch Office of all the Associations superintended by "Five-two Staples MAYEDA," as Mr. MAYEDA is popularly called, must aggregate several hundreds. Stated briefly, the object of organizing these Associations is to perfect the arrangement and mechanism of Japan's business in accordance with the progress of the times. As a good illustration of the necessity of the undertaking, the case of the porcelain industry of Tajimi, Gifu, is instanced. The Tajimi potters easily obtained, until five or six years ago, an annual return of at least a million *yen* by exporting wares to the number of some 300,000, but in 1895 and 1896 they did not receive more than 400,000 *yen* though exporting twice as large a quantity; and that despite the fact that their methods of manufacture had been considerably improved and the expenditure largely increased. With the view of correcting the defects that now hamper Japanese manufactures and commerce, a Commercial Bank was lately started in Kobe with a capital of one and a half million *yen*. Union is power, and the influence of the Business Associations is now widely felt in both official and private circles. Last fall, the Associations held a general meeting continuing for three days, and decided that a law for regulating business guilds, for the inspection of silkworm's eggs, for Agricultural Associations, and so forth must be enacted. When this decision and the reasons on which it was based were laid before the Cabinet Ministers controlling such matters, all the Ministers endorsed the views of the Union, and it is extremely likely that laws embodying the views of the Associations will be drafted and submitted by the Government for the approval of the Diet. Further, of the Paris Exhibition Commissioners appointed last winter, two-fifths are members of the respective business Associations, and the Associations are also nominated referees for the purpose of determining the qualification of exhibitors and of selecting articles for exhibition.

Among the various associations the Five-two staples is the pioneer and enjoys the largest influence. Originally, as our readers may remember, this Association dealt in five staples, namely, dry goods,

porcelains, copper ware, lacquer ware, and paper, to which fancy wares and carpets were subsequently added. The members are said to be strongly imbued with the spirit that has resulted in the creation of this great union of manufacturers and producers, and in many localities a special mechanism, subordinate to the Association, has been organized for the purpose of improving special industries. For instance, the Kishiu members of the Association have started the Five-two Staples Cotton-Flannel Company, with the view of improving this particular industry; and dealers in ornamental matting in Kobe have established an office in that city for the inspection of mats intended for foreign shipment. Again, the Association encourages the opening of competitive exhibitions of local products in various districts, with most satisfactory results in each of the undertakings thus far carried out. The Four Localities Union Competitive Exhibition, held last year, for the space of about 70 days, in the 4th Domestic Exhibition Buildings in Kyoto, was also a remarkable success, surpassing even that attained by the Fourth Exhibition itself. For, while receiving no official aid whatever either from Central or Local Offices, no less than 410,000 kinds of articles were exhibited. Moreover, in every enterprise of the kind, the Association rigidly enforces its bye-law prohibiting the exhibition of any article made merely as a curiosity and not suited for the purposes of every-day commerce. The Business Associations also keep in view the marshalling of manufacturers and merchants into regularly organized bodies. In fact, lack of union among these traders, especially merchants, is considered a grave drawback at present, as may be illustrated by the case of a toy extensively exported from Yokohama. The toy is a tortoise made of tortoise-shell, its head, tail, and limbs fitted with brass springs so as to be easily movable. Placed in a tiny and tasteful glass box, it attracted the fancy of foreign exporters in Yokohama to such an extent that a brisk demand sprang up. At first a dozen were sold for 9 *sen*, and the prospects of the industry, petty though it was, seemed exceptionally good, for in no country except Japan could such an article be made at such a price. Competition on the part of foreign artisans was virtually out of the question. But the dealers were so entirely devoid of any idea of combining to protect their common interests, that they began to undersell each other, with the result that a dozen of the article are now purchasable for only 2.7 *sen*. Trifling as the commodity is, that a toy needing a certain quantity of tortoise-shell, 12 brass springs, and a glass case, should be sold at a little over $\frac{1}{10}$ of a *sen*, is evidently preposterous. The wholesale dealers—there are only five of them in Tokyo—are now reaping the fruits of their own sowing, for even the poorest

folks that used formerly to undertake the making of brass springs, have declined the job, owing to the paltry remuneration, and the prisoners in the Saitama jail, who at first consented to do the work, have now refused. The supply is barely kept up by means of the labour of boy-prisoners in the Chiba Correction House. So conspicuous being the absence of combination even in the case of a commodity virtually monopolized by five merchants, it is easy to conceive how staples in the handling of which a large number of merchants are concerned, are sacrificed by ruinous competition.

The Union Business Associations' general meeting held from the 18th instant, is chiefly for the purpose of discussing the arrangements that have to be made in connexion with the Paris Exposition. It is most essential that the articles sent to the Exposition should be selected with care and properly classified, and that every idea of empty display should be eschewed. The meeting is expected to last a week.

The meaning of all these things, as we apprehend, is that the system of "trusts" has taken root in Japan. Mr. MAYEDA MASANA may claim the credit of having sown the seed. Yet, it must be confessed, the soil had been well prepared, if, indeed, it had not been already productive. The circumstances of the foreign trading communities in Japan are eminently favourable to the action of trusts, above all in the import business. In the case of any particular commodity, the Japanese dealers who act as primary channels of communication between, say, Yokohama importers and consumers in the interior, may generally be counted on the fingers of one hand. What can be easier than that these middle-men should combine to dictate terms to the foreign importer? They have him literally at their mercy. On his side there is keen competition; every importer is eager to undersell a rival. There is also inability to reach the consumer directly. On theirs, there need not be the slightest approach to competition. They are in a situation to govern the market. One or two representatives of a particular class of middle-men may be deputed to transact business with the foreigner on behalf of the whole class, the *confrères* of these deputies lying quietly *perdu* until the time comes for them to take their share in the consummated transaction. We do not pretend to know how greatly the foreign communities have been obliged to suffer by that kind of thing, but, as a mere theoretical inference, we are constrained to think that if the evil has not been acutely felt its apparent absence has been due chiefly to adroit manipulation on the part of the Japanese. At all events, there is no mistaking the final outcome of Mr. MAYEDA'S union of merchants and manufacturers. At present numerous trades are associated under one banner, but they are none the

less a congeries of trusts whose prime function is to defend the interests of capital by keeping prices at a remunerative level. Trusts seem to find particularly invigorating qualities in this *fin-du-siècle* atmosphere. Not more than twenty years have elapsed since the first trust was organized in the United States, but it is computed that no less than six hundred of such combinations have been called into existence in that interval. Mr. MAYEDA has now sown the dragon's teeth in Japan, and neither he nor any one else will be able to throw the stone of destruction among them. It does not follow by any means that trusts are essentially maleficent. Their abuse is ruinous, indeed, but their use may be distinctly advantageous. One of the essential conditions of their successful existence is that the articles in which they deal should be of good quality. The public may tolerate exactions where the excellence of a commodity atones for its high price, but trusts that resort to the licence of monopolies in the two directions of extortion as well as of careless manufacture, invite their own disintegration. What concerns us in Japan's case, however, is not the problem of trusts generally, but the particular aspect that the problem assumes here. In the United States, where thousands of able publicists have long been revolving means to tear down these tremendous buttresses of the throne of capital, there seems to be a general consensus as to the impotence of legislative interference. It would be over-sanguine, therefore, to look for the discovery of a solution in Japan. But a trust, to be commonly fair, ought to include all the parties whose interests are directly involved: all the distributors as well as all the producers. It is not so in Japan. The foreign exporter, the chief of all the sellers, stands outside the ranks of the trusts. For him they mean simply that his margin of gain is to be reduced to a vanishing quantity. He, who takes all the risks of distribution; who pays ready money to the Japanese trader and accepts the whole responsibility of finding a market abroad for Japanese commodities—he alone is to have no voice in the engrossing process. This prospect has long been in sight. A dozen years ago we wrote of it in these columns, expressing our opinion that it was one of the embarrassments destined to grow out of the perpetuation of the Settlement system. There are few difficulties with which the European or American merchant is not competent to cope. He will not be beaten by Mr. MAYEDA's unions, but certainly they will not smoothe his already arduous path in Japan.

CHINESE NEWS.

An "old China resident" has paid a visit to Changsha, the capital of Hunan and the residence of the notorious Chou Han, whose anti-foreign publications have formed several nine-day wonders. The officials of the city asked the Governor for instructions as to how the visitor should be treated, and received in reply the pithy direction "provoke not the people." Accordingly when the visitor's boat came up stream, it was received with volleys of stones from a yelling mob of some fifty youngsters. A hundred soldiers has been told off to protect the foreigner, but acting under the behest not to provoke the people, they made no attempt to stop the stoning. Naturally the traveller failed to get ashore. Being, however, a singularly courageous man, he did manage to get, under cover of darkness, to the residence of the redoubtable Chou Han. His idea was to beard the foreigner's enemy in his very den, and discover whether a gentler mood had really come upon him, as rumour recently asserted. Chou was away from home, but the intrepid visitor succeeded in ascertaining that he nursed all his old enmities and abated nothing of his anti-foreign prejudices. It is naturally commented that the security supposed to be guaranteed by treaty to foreigners travelling in China is a very mythical affair.

One of the two great leaders of conservatism in Peking, Assistant Grand Secretary Li Hung-tso, is so ill that his final retirement from public life is confidently expected. The other prominent conservative is the President of the Board of Revenue, Weng Tung-ho.

A correspondent of the *North-China Daily News*, writing from Newchwang, reports the capture in that city of a man named Kang, who, though only 27 years of age, is accused of having killed 40 people in quarrels in Peking. Naturally he had to fly from the capital, and in his flight he was accompanied by a girl of 18, the daughter of a high official. Two hundred Mahomedans, Kang's co-religionists, were disguised as cake-vendors and sent out to track him, but he eluded them all. Betrayed, ultimately, by his most intimate friend, he was seized, and to prevent his escape his captors fixed iron rings in each of his shoulders. Thus secured, the unfortunate man had to make a six days' journey in a springless cart over execrable roads in mid-winter. Yet such was his pluck, that he sang a comic sang to the crowd as he was about to leave Newchwang. His lady-love followed him "in a swagger vehicle," much to her credit.

Mr. Happer, the Commissioner of Customs at Newchwang, has been bitten on the left hand by a sick dog, and the wound having festered, he has set out for the Pasteur Institute in Saigon.

We often hear complaints about the ten per cent. impost levied upon the salaries of Japanese officials for purposes of naval expansion. But China took thirty per cent. from her officials during the war, and continues to take it, though henceforth exemption is to be granted to civil officials from sub-prefect downwards, and to military and naval officials from captain and commander respectively.

The *Foochow Echo* contains the following news from Hokchiang:—

A Christian village in that district, about two days' journey from Foochow, was attacked by a neighbouring village about five months ago, some

cattle were carried off and the children minding them beaten. They appealed repeatedly to the Magistrate who sent them away, branding them as liars, and this emboldened their persecutors to steal more of their cattle, and burn the watchmen's huts in their fields. Another appeal to the Magistrate resulted in a threat to punish them if they troubled him with complaint; and they then went to Archdeacon Wolfe, who preached the Sermon on the Mount to them. This decided their persecutors to make a regular raid, and having been blessed by a Taoist priest on the 28th of October, they attacked the Christian village, some 2,000 to 3,000 men under the leadership of En Cheang hua, on the 29th and 30th, burning down all the houses and stealing the contents, and digging up and carrying off the crops of potatoes—all the village has to live on. The magistrate was appealed to again, and when Archdeacon Wolfe reported the matter to H.M.'s Consul at Foochow, the magistrate represented that it was an ordinary village row, and that the Christians had burned down their own houses, subsequently adding that it was really an attack by American Christians and Roman Catholics on English Christians.

A Deputy was sent to Hokchiang from Foochow, and he promptly said to the magistrate:—"You have told me a lie about this matter; the Christians never did this to their houses." At last eight men were arrested for maltreating the Christians, four of whom did not belong to the attacking village at all, and of the other four, one was blind, one had only one leg, one only one useful hand, and the fourth was too old to walk. These eight men were all examined and released without a stain on their characters, and that was all the reparation the Christians got. It is now understood that H.M.'s Consul has sent the matter up to Peking; and the *Foochow Echo* demands compensation for the outraged Christians and the dismissal of the Hokchiang magistrate.

Mr. Schnell, a German military instructor at Wuchang, died suddenly on the 8th instant. After a hearty dinner, he complained of severe pain in the chest and falling down in a faint, never regained consciousness. Mr. Schnell had lived for many years in the north of China as a drill instructor. He was a good speaker of Chinese.

THE GERMAN MINISTER'S AFFAIR.

In the *Yiji Shimpo* we read that the affair of the German Minister has been at length amicably arranged. It is stated that the Police Authorities, after careful investigation, forwarded a report to the Foreign Office, from which document it appeared that the complainant had actually received a blow in face. The German Minister, on his side, affirmed that he had not had the slightest intention of striking the lad, that he accepted the presence of a mark as proof of the justice of the complaint, and was willing to make any reparation in his power. We should think that even the most exacting of the patriotic agitators who have been making a clamour about this affair, should now be satisfied.

LAST YEAR'S RICE HARVEST.

We read in the *Hochi Shimbun* that, according to investigations conducted by the Department of Agriculture and Commerce, the yield of rice throughout Japan last year was 35,652,568 *koku*, which is 10.7 per cent. less than the yield for 1895. Again, taking the period of 7 years, from 1889 to 1895, inclusive, and omitting two exceptionally bad years during that time, the average is found to be 39,697,254 *koku*, which, also, is 10.7 per cent. greater than last year's yield. Of course, the failure is attributable to the storms and inundations that visited the country, especially Mino, Owari, and Hokkaido.

THE INDIAN FAMINE.

We need scarcely say much about the appeal made in our advertising columns on behalf of the famine-stricken people of India. The telegram on which the appeal is based speaks more eloquently than we could hope to do. It runs thus:—

The Central Committee of the Indian Famine Relief Fund in Calcutta earnestly solicit your cordial co-operation. There is the highest possible scope for private benevolence outside the State relief system. The area and the numbers affected are enormous, and the distress is rapidly increasing. The Committee feel sure that the unavoidable privations suffered by millions of industrious poor will arouse the profound sympathy of all nations. The Committee make an earnest appeal to you to organize a relief fund. They will be deeply grateful for contributions, which will be publicly acknowledged.

Sir FRANCIS MACLEAN, Chief Justice,
Bengal, Chairman of Committee.

The need must be very urgent that has led to the despatch of such a telegram.

INCREASE OF MAIL MATTER AND THE COST OF TRANSMITTING IT.

According to the Budget for the 30th fiscal year, the rate of increase of ordinary mail matter, since the 25th year (1892) was as follows:—

Year.	Number of letters, &c.	Increase.	Rate of Increase.
25th	279,773,000		
26th	323,067,000	43,293,000	.1547
27th	395,799,000	72,732,000	.2251
28th	450,734,000	54,935,000	.1388
29th	408,046,000	57,311,000	.1272
30th	573,795,000	65,749,000	.1294

From the above it appears that the number of letters and other matter passed through the post in the 30th year is expected to be twice as great as that in the 25th year. On the other hand, the cost of transmission has decreased in the following proportion:—

Year.	Number of letters, &c.	Cost of Transmission, Yen.	Average cost per letter, Yen.
19th	126,497,000	1,688,000	.01335
20th	144,379,000	1,741,000	.01206
21st	165,797,000	1,716,000	.01035
22nd	194,220,000	1,993,000	.01026
23rd	225,726,000	2,030,000	.00899
24th	250,743,000	2,257,000	.00900
25th	279,773,000	2,487,000	.00889
26th	323,067,000	2,784,000	.00862
27th	395,799,000	2,867,000	.00829
28th	450,734,000	3,215,000	.00713
29th	528,046,000	3,614,000	.00711
30th	573,795,000	4,076,000	.00710

It is here seen that the cost of transmission was nearly 30 per cent. less in 1896 than in 1886, and that its continued diminution is expected. With such figures before us we can not but repeat the often preferred complaint against irregularities in the transmission of mail matter. What is noteworthy is that Japanese correspondence seems to be transmitted with perfect regularity. Since the question of post-office failings came upon the *tapis* some two years ago, we have made numerous enquiries in various quarters with reference to the service, so far as the Japanese themselves are concerned, and have invariably received the reply that irregularities of any kind are virtually unknown. The plain inference would be that the difficulty lies primarily with the foreign superscription of the letters, were we not confronted with the fact that cause of complaint has frequently arisen in the case of letters hearing both Japanese and foreign addresses. At all events, if the Japanese post-office authorities undertake to handle foreign correspondence, they are bound to make provision for its transmission with just as much regularity as they attain in forwarding matters entrusted to them by their own people. Their success with Japanese letters shows that their failure in the case of foreign is due not to lack of ability but to defects of organization.

MR. YAMAMOTO TATSUO INTERVIEWED.

Mr. Yamamoto Tatsu, Chief of the Business Affairs Bureau of the *Nippon Ginko*, returned in Tokyo on the 12th inst. from his mission through America and Europe in connexion with the Indemnity. He left Japan on May 30th of last year, in company with Mr. Sonoda Kokichi, President of the Specie Bank, and Mr. Hayakawa, a Director of the *Nippon Ginko* and Secretary of the Department of Finance, but he was obliged to come home before his fellow-travellers, owing to the death of Baron Kawada and because the Bank wanted to have him back as quickly as possible. The *Osaka Asahi* and the *Kokumin* publish accounts of interviews which their representatives had with Mr. Yamamoto. England, we read, has had the illusion dispelled under which she signally laboured when the war with China broke out, as to Japan's military and financial strength. The result of the war and the methods adopted in financing it, rudely awakened England from her dream, and the removal of her error, supplemented by the efforts of pro-Japanese publicists, who have striven to introduce Japan and her people fairly to the English public, has resulted in promoting Japan's credit in Great Britain, so that, whereas, at the beginning of the war, it was difficult to find purchasers for Japanese bills of exchange even to the extent of one million *yen*, at present bills amounting to tens of millions can be negotiated easily. The Specie Bank now enjoys considerable credit in England, and banks previously having no regular connexion with it, are seeking to open correspondence. The regular quoting of Japanese Consols on the London Exchange is not due to Japan's initiative, but was brought about by the suggestion of English bankers. However, that these Consols have come to be appreciated so much in England, is partly attributable to the efforts of the *Nippon Ginko* and the Specie Bank. With the view of inducing English capitalists to place confidence in Japanese finance and Japanese Bonds, the Authorities have been uniformly regular in paying interest on bonds held by foreigners. Money needed for that purpose was not infrequently kept idle in the London Branch of the Specie Bank for several days in advance, so that the payment might be made punctually. The amount of foreign capital invested in Japanese Consols is still small, and the transactions on the London Exchange do not aggregate more than from ten to twenty thousand *yen* a day, chiefly by speculators who seek to profit by the daily fluctuations in the gold price of silver. The Bonds enjoy much credit, and all the leading banks in London are ready to advance money on them, up to 90 per cent. of their quoted price. Capitalists are deterred from investing their money in Japanese Bonds because they are silver securities, and silver is counted too unstable a basis for large financial operations. But this hesitation to buy Japanese Bonds must not be hastily construed in the sense that the much desired introduction of foreign capital into Japan is hopeless. For though the amount of the transactions is still small, the credit enjoyed by Japanese finance and bonds is considerable, and means are now open to raise money on the security of the bonds. Mr. Yamamoto is of opinion that the difficulty of transferring the Indemnity to Japan consists rather in process than in amount, and that if the matter be undertaken at a proper juncture, a sum of as much as 50 million *yen* can be transferred without in any perceptible degree disturbing the money markets of the world. In fact, of about 120 millions originally lodged in England, the whole sum, with the exception of some 30 millions, required to pay for ships and so forth, has been transferred to Japan either in specie, or by means of bills of exchange, yet there has not been any perceptible disturbance of the silver market.

In this context, the *Mainichi* observes that the amount of the Indemnity remaining in London under the control of the Government may not exceed 10 million *yen*. Our contemporary's idea is based on the following calculation:—

According to the business report of the Bank of Japan, published on the 12th inst., the Government's deposits in the Bank amounted to 147 million *yen* approximately, which sum the Government had transferred from England either in cash or by means of bills of exchange. If to that amount another sum of 50 million *yen*—representing the "mutual deposits" made between the Government and the Bank—be added, and if the total be subtracted from over 204 million *yen*—the aggregate of the instalments thus far received from China—the remainder is only 7 millions, and the *Mainichi* thinks that the Government does not hold much more than that remainder at its actual disposal.

INTERVIEWS.

Interviewed by a representative of the *Yomiuri Shimbun*, Mr. Furusho Kamon, Chief of the Domestic Affairs Bureau of the Governor-General's Office in Formosa, spoke as follows about Formosan Administration:—"One of the most urgent necessities for Formosa is the perfecting of its Administrative system. To restore order temporarily, whether by force or persuasion, is easy, but no permanent result can be attained so long as the Administrative system is defective, as it is at present, and so long as the inefficiency of the police force is such as almost to warrant the term anarchy. Under the circumstances, repeated outbreaks of insurrection are not to be deterred. Were I myself placed in the situation of the natives, I should be tempted, seeing the complete disorder that reigns in the Administration, to have recourse to brigandage and crime. Everybody knows that the Hakka of Formosa do not break into insurrection because they are dissatisfied with their new rulers, but that they lapse into a state of lawlessness merely with the idea of robbing and pillaging. Therefore, unless the Administrative mechanism be perfected, and unless the police force be sufficiently increased, it is quite hopeless to think of maintaining peace and order in the island. The Formosan Budget for next year has been compiled with the view of attaining those ends. Instead of the three principal and 16 subordinate local offices now established, it is intended to organize 7 principal and 67 subordinate offices, in other words, prefectural and district offices. Under the district offices more than 1,000 village Headmen will be appointed, and, in this way, though far from being complete, the Administrative system will be made much more efficient than it is to-day. The Police force in Formosa totals about 1,300 men at present. They are to be increased to 3,000. All these expansions are absolutely necessary, for the jurisdiction of the three prefectural offices now existing is too wide for effective control to be exercised, the area supervised by each of the 16 subordinate offices placed under them being as great as Yamanashi Prefecture. It would be better to elevate the 16 subordinate offices into prefectural offices, but the expense has hitherto proved deterrent. The Police force should be increased to 4,000, were it not for the same financial difficulty.

The opium problem has been virtually solved. The use of this drug is to be permitted by licence to those only that are judged, by competent experts, to be incorrigibly addicted to the habit of smoking. Raw materials are to be imported by the Government, and by the Government also the manufacture is to be undertaken. The sale of the drug will be by licence, subject to a certain degree of control.

The population of the island is estimated at from 2 to 2½ millions, but the census investigations cannot claim to be exact. The aborigines do not number fifty thousand. The taxes and duties to be collected during next year are expected to aggregate 8 million *yen*. The rates are the same as when the island belonged to China, but the mode of collection is slightly modified. The tax on land being very small, the rate will be increased gradually.

A representative of the *Yiji Shimpō* called on Mr. Nakamura Yarku, M.P., who lately returned from a business trip to Siam. Mr. Naka-

mura told his interviewer that more than 60 Japanese are in Siam, and that about one-half are women leading a life of shame. Only five or six are merchants keeping small shops: all the rest are men of *soshi* type, dreaming in the garrets of boarding houses over the exploits of Yamada Nagamasa, who, a little after the time of Hideyoshi, became, in the sequel of a chequered career, the son-in-law of the King of Siam. These would-be heroes are content to lead a humble life, subsisting on 1 to 3 *yen* per *mensum*. Mr. Nakamura is sorry to find Japan represented in Siam by persons of such a low class, and to observe that the great and rich in that country avoid social intercourse with such Japanese. He could not obtain any trustworthy information about Siam and its people from his own countrymen, and was obliged to seek access to influential Siamese through the medium of the Foreign Representatives stationed in Bangkok. The Siamese, however, are very favourably disposed towards Japan as a whole, especially since the late war, and have a strong desire that Japanese should settle among them. Mr. Nakamura's trip was chiefly connected with transactions in teak wood, but he declined to give any minute information on this subject to the *Yiji's* representative. He simply told him that the Meikong carries down about 30,000 logs of teak every year, and that if this valuable timber be imported into Japan by Japanese instead of by the Chinese who now undertake the business, considerable economies can be effected in the naval expansion scheme. Supposing roughly that logs of teak, needed for constructing the deck of a war-vessel, now cost about 90,000 *yen*, the same quantity might be supplied by a Japanese at 70,000 *yen*. A few years ago, Mr. Nakamura, being a dendrological expert, inaugurated the import of Oregon pine, and the enterprise having attracted several competitors, the market price of one ton of the timber has fallen by about 15 *yen*.

NAVAL EXPANSION.

It appears to be pretty certain that France is going to spend eight millions sterling on the development of her Navy. There is an unpleasant suggestion in the fact that Russia has simultaneously embarked upon the same career of extravagant activity. Eight hundred million roubles was the sum named by Reuter as Russia's proposed expenditure, but, of course, that was a mistake. Eighty million roubles is probably the truth. Eighty million roubles is the equivalent of some ten millions sterling; a fine round figure. The disquieting feature of the situation is that England seems disposed to rest on her oars. She has devoted immense amounts of late years to naval expansion, and the statesmen now in power appear to think that she may pause for breath. The nation will not permit any halting, we suspect. Russia and France having started off at strong speed, England will have to join the race once more. What will be the end?

HAWS, WINTER-BIRDS, AND COLD.

The old English fancy has been exploded that a severe winter is portended by a plentiful crop of hawthorn-berries and a large immigration of northern birds. As to the latter, their advent in large numbers is due to the fact that their supply of food in the lands of their permanent habitation has been cut off by heavy snow or severe frost. It is within the range of possibilities that the weather from which they have fled may follow them, but experience does not suggest any certainty of that conjuncture. A plenitude of hawthorn-berries seems to suggest that the autumn has been favourable, the winter mild, and the spring genial. In fact, when the berries grow well, they indicate clement weather in the past, not inclement in the future. It was a pretty notion that, on the verge of a severe winter, providence prepared an exceptional store of these dainties to save the birds from starving, but science rejects the fancy.

TOBACCO.

When the Tobacco Monopoly is put into practice, it is expected that the effect will be to quadruple the tax on the leaf. In other words, the present rate of 20 per cent. will be raised to 80 per cent. and the price of tobacco will jump up correspondingly. In view of that change, the question of foreign tobacco is said to be perplexing the Authorities, for it is evident that should the import duty remain unaltered, the quantity coming from abroad will have the effect of materially diminishing the income expected to accrue from the monopoly. We read in the *Hochi* that the Authorities are taking steps to amend the import tax before the monopoly system goes into force, that is to say, before the beginning of 1898. The prices of tobacco in the days of the monopoly are expected to stand thus:—

5 <i>sen</i> tobacco of to-day will cost	Sen. 8
8 <i>sen</i> tobacco of to-day will cost	12.8
20 <i>sen</i> tobacco of to-day will cost	32.0
30 <i>sen</i> tobacco of to-day will cost	48
50 <i>sen</i> tobacco of to-day will cost	80

These figures are given by the *Hochi Shimbum*, but by what process of arithmetic they are calculated, we fail to understand. It is evident that if tobacco costs 20 *sen* per catty when the tax is 20 per cent., it ought to cost, not 32 *sen*, but 30 *sen*, when the tax is raised to 80 per cent.; and tobacco costing 30 *sen* when the tax is 20 per cent., should cost 45 *sen*, not 48 *sen*, when the tax is raised to 80 per cent. We shall disregard the *Hochi's* figures, therefore, and take figures consistent with the ordinary rules of arithmetic. Of course our contemporary may include in the calculation some additional charge imposed by the seller in consideration of the larger capital that he will have to invest under the system of increased taxation, but we can not insert that factor, being ignorant of it. Ordinary Japanese smokers, that is to say, labourers, servants, &c., consume one catty of tobacco monthly, and pay 30 *sen* for it. The prime cost of such tobacco, assuming the tax to be 20 per cent., is 25 *sen*, and when the monopoly is introduced, the tax will be 80 *sen*, supposing it to be quadrupled, as the *Hochi* alleges. Now there are 23 millions—approximately—of men and women over 20 years of age in Japan. How many of them are smokers? Our readers will probably be disposed to say one in every two, or fifty per cent., seeing that, according to every-day observation, the non-smoking Japanese is exceptional. Let us assume, however, that only one in every four smokes, or twenty-five per cent. Certainly that hypothesis ought not to be much over the mark. Very well then. We have six million persons, each consuming twelve catties of tobacco annually; or, let us say, a total consumption of seventy-two million catties. The tax collected upon that total should be over 14 million *yen* annually, yet the Government's estimate is only 10 millions. It would be very interesting to know upon what basis the official calculations are made, for at present the financial part of the monopoly project is extremely perplexing.

SMALL-POX IN TOKYO.

In consequence of the spread of small pox in Tokyo, the Chief of the Metropolitan Police has issued an order that all persons under 50 years of age, who fall within the undermentioned categories, must be vaccinated within a period of two weeks, commencing from the 25th inst., and must provide themselves with a certificate to that effect, to be shown to the principal Local Officials of their district, or to their employers, if required. The categories are:—

- 1.—Persons that have not been vaccinated since January, 1896.
- 2.—Persons who, though vaccinated since that date, do not possess certificates of vaccination.
- 3.—Persons vaccinated between January and October, 1896, whose vaccination did not take well.

EXCESSES OF REVENUE OVER EXPENDITURE.

Persons interested in Japanese finance have doubtless observed that, during recent years, the public revenue actually collected has exceeded, and the expenditure incurred has fallen short of, the sums set down in the estimates. The fact proved highly convenient in connexion with the war, for the Government found in the Treasury a sum of 23½ million *yen* available for military and naval expenditures. That was at the end of the twenty-sixth fiscal year, namely, March 31st, 1894. Since then the same experience has been repeated. If we may accept figures published by the *Yiji Shimpo*, the surplus for the twenty-eighth fiscal year was no less than 33,001,114 *yen*. Our contemporary arrives at that result thus:—

Revenue actually collected in the	Yen.
28th fiscal year (April 1st, 1895,	
to March 31st 1896).....	118,242,548
Revenue estimated.....	92,103,264

Excesses of Revenue.....	26,139,284
Estimated Expenditure.....	91,642,003
Actual Expenditure	85,241,432

Excess of estimated Expenditure	6,400,571
---------------------------------------	-----------

Total Surplus.....	33,001,114
--------------------	------------

Out of this total the Government obtained the Diet's consent, last session, for the expenditure of 17,477,332 *yen*, so that the surplus actually remaining was 15,523,783 *yen*. The *Yiji* adds the surpluses that were found to exist in each year from the 25th fiscal year onwards. They are as follow:—

	Yen.
Surplus in 25th fiscal year (1892-3)	5,051,574
Surplus in 26th fiscal year (1893-4)	4,400,338
Surplus in 27th fiscal year (1894-5)	14,271,040
Surplus in 28th fiscal year (1895-6)	33,001,114

It will be noted that some discrepancy exists in the figures given by our contemporary. The excesses of actual over-estimated revenue and of estimated over actual expenditure, do not, when added together, make 33,001,114 *yen*; they make, 32,530,885 *yen*. But as the actual expenditure subtracted from the actual revenue gives the remainder, 33,001,114 *yen*, we presume that the *Yiji's* results are correct, though the details may be erroneous.

AMENDED NAVAL SALUTING REGULATIONS.

The Naval Authorities issued Amended Saluting Regulations, over the signature of Marquis Saigo, Minister of the Navy, on the 21st inst. The Regulations are divided into six chapters, namely, General Provisions, Royal Salutes, Salutes to military and civil functionaries of other Powers, Return Salutes, and the method of displaying flags when firing salutes, excepting Imperial or Royal Salutes.

The most noteworthy point in the Amended Regulations, according to an explanation given by the *Nippon*, is that the custom of replying to an Imperial salute fired by any vessel of a foreign Power is to be abandoned; a custom that our chauvinist contemporary considers open to the charge of servility. The number of guns in saluting a Japanese Ambassador is 19; a Minister Plenipotentiary, 15; a *Chargé d'Affaires*, 13; a diplomatic official of other classes, 11; and a Consul General and Consul, 9 and 7 respectively.

The spirit that pervades the Amended Regulations is that Japan places herself, in these matters, on the same plane as that occupied by Western States, which, of course, is vastly pleasing to the *Nippon*. We never knew that she stood on any other plane.

A SHOCKING CRIME.

The vernacular papers report the perpetration of a horrible crime by a carpenter named Nakamura Zentaro, and his wife, who lived in Tanimachi, in the Yotsuya District of Tokyo. The man had lost his wife about two years previously, and married a second wife, who for a long while had led a life of shame. The couple were drunkards, and did not give the slightest care to Zentaro's mother, who was blind and deaf from age. The old woman was constantly the victim of physical violence at the hands of her son and his wife. This ill-treatment prostrated her from about the summer of last year, and she nearly lost the use of her limbs. On the 16th inst., which was a "Servants' Holiday" according to Japanese custom, Zentaro invited 7 or 8 of his fellow artisans and treated them to *sake*. After the departure of the guests, the carpenter and his wife continued their debauch. The old woman suggested that it would be better for them to stop drinking for that evening, and to reserve some of the *sake* for the next day. This enraged Zentaro. He struck his mother on the forehead with his pipe, and his wife coming to his assistance, forced the old woman down, and beat her till she became unconscious. This process of beating is said to have been renewed throughout two days whenever the old woman asked for a cup of water, until finally a shower of blows on the head from Zentaro's pipe killed her. A doctor was induced, somehow, to certify that she had died a natural death, and her body was unceremoniously buried two or three days afterwards. The Yotsuya Police, however, entertained suspicions, and Zentaro and his wife being arrested, were examined at the Police Office on the 25th inst. They finally confessed their crime, and were at once handed over to a Public Prosecutor of the Tokyo Local Court.

THE "HANSEI ZASSHI."

Another magazine in English has made its appearance in Japan—the *Hansei Zasshi*. It is published by the *Hansei Kwai*, a society formed twelve years ago in Kyoto, with the object of promoting moral improvement on Buddhist lines. The society has now 21,000 members. For some time it has been in the habit of issuing a magazine in the vernacular, and the new publication now before us is an English version. Its purpose, we read, "is to make known the true condition of the moral world here in Japan, and to describe the characteristics of Japanese art, customs, and manners." The latter part of the programme falls justly within the scope of Buddhism topics, for it is to the influence of Buddhism that Japan owes much of the spirit of her art and the refinement of her civilization. The discussion of this part of the subject is commenced by Mr. Ouchi Seiran, whose essay stands first in the magazine. His remarks, thus far, are purely historical, but since he includes in his category of real personages Jimmu, Jingou, Chuai, Ojin, and so forth, and accepts the dates assigned to them by Japanese annalists, his contributions to our knowledge are not above criticism, in so far, at any rate, as those early periods are concerned. Mr. Hirota Ichiro follows with an essay partly historical and partly statistical. He relates, once more, the old and beautiful story of Sakayamuni's life; his renunciation of all the luxury and pomp to which he was born, his six years of suffering, and his discovery of the light under a Bodhisaviksha tree, twenty-five centuries ago. "Of the whole population of the World," writes Mr. Hirota, "more than one-fifth are bathing themselves, at the present time, in the 'blessed rain' of Buddha." His explanation of the sects that have sprung up within the faith is that Buddha himself purposely framed his doctrines so that their interpretation might afford scope for conclusions suitable to the varying mental and physical conditions of men in all eras. Japan has had 14 principal sects; six belonging to the earliest period; three to the mediæval, and five to the

modern. There have also been sub-divisions, bringing the total number up to 45. Three of the earliest, or Nara, sects have, however, been amalgamated into one, so that the main sects now number only 13. Here is an interesting list:—

Name of Sects.	Number of Temples.	Number of Abbots.
Tendai	4,194	2,847
Shingon	12,759	7,323
Tōdō	8,311	6,148
Rinzai	6,130	4,184
Sōtō	1,463	11,284
Obaku	605	361
Shin	19,155	16,849
Nichiren	560	3,680
Ji	621	357
Yūjū nembutsu	358	199
Hessō	45	14
Kegon	21	13

Total

71,821

53,259

It will be observed that the total number of temples here set down greatly exceeds the sum of the separate numbers in the table. We can not account for the discrepancy, but as we know the figure 71,821 to be approximately correct, we record it. Mr. Hirota adds that, including the vice abbots, priests, novices, and others belonging to the religious organization, the total is 114,000. Hence there is a Buddhist temple to every 110 houses in Japan, and a priest to every 375 persons. Moreover, there are 36,300 small shrines.

Baron Kuki contributes to the magazine a paper that promises to be very interesting, on the source of Japanese art. His conclusion is that Grecian influence is plainly discernible, and he alleges that it reached Japan from Gandara, on the river Kabul, *via* China and Korea. That Alexander the Great invaded Gandara, and that it was afterwards governed by the Greeks in Bactria, are historical facts. Remains of ancient temples and pagodas discovered there, and dating from about the fourth century, show an unquestionably Grecian style. Buddhist missions brought Gandara and China into contact, and from China to Japan was a comparatively short step. Baron Kuki has found traces of Grecian style in the idols of Buddha at Nara and Koya.

The *Hansei Zasshi* is very prettily illustrated with collotypes; the type is clear, and the English good, especially that of Baron Kuki's essay.

FIRE INSURANCE.

The rate of premium for fire insurance on buildings varies in Japan for reasons practically the same as those operative in the West. In a locality like Hokkaido, or the north-eastern portion of the main island of Japan, where roofs are mostly thatched with straw and buildings are large, the rate is as high as 6 per cent., while in Kyushu, where tiled roofs and comparatively small houses are the rule, only 1 per cent. is charged.

In the districts collectively known as Tokaido the rate is as high as 3 per cent., insurance companies being of opinion that the dangers of fire must be greater there than elsewhere, owing to the constant influx of travellers. In Tokyo the rate in quarters like Ogawamachi, Jinbocho, and so forth, is the same as in Tokaido, while in Ginza, where the houses fronting the main street are of brick, the rate is about 1½ per cent. Competition among different insurance companies sometimes lowers the rate in exceptional cases to ½ per cent., but, on the average, insurers in Tokyo have to pay 1 per cent. The premium charged by the Osaka Fire Insurance Company are as low as 0.2 per cent. for ordinary houses in the Hokuriku districts, 0.7 per cent. for houses in other places, with the exception of buildings situated in social-evil quarters, where 7 per cent. is levied; the Company has, however, decided to discontinue accepting risks in Hokkaido. The Meiji Fire Insurance Company, being the oldest in Japan, enjoys the greatest credit. The risks carried by it total as much as 154 million *yen*. It is said the average risk from fire during the last 10 years has been about ½ per cent. throughout Japan.

GRAND HOTEL, LIMITED.

The 15th half-yearly general meeting of shareholders in the Grand Hotel Company, Limited, was held in the small reading-room of the Hotel, No. 20, Bund, on Monday afternoon. There were present, Mr. Jas. Walter (in the chair), Dr. C. H. H. Hall, Messrs. R. Howie, C. K. Marshall, Martin, B. C. Howard, and J. Torrie (Secretary).

The CHAIRMAN said that as under the Articles of Association, it was only necessary for three shareholders to be present to form a quorum, he would call the meeting to order. Their Chairman, Mr. J. F. Lowder, as they all no doubt were aware, was at that moment busily engaged in Court, so he (Mr. Walter) would preside.

The SECRETARY read the notice calling the meeting.

The CHAIRMAN then read the following report and accounts as presented by the Board of Directors:—

REPORT.

The Profit and Loss Account and Statement of Assets and Liabilities for the half year ended the 31st December, 1896, accompany this Report. The net profit for the half-year, including balance brought forward from the 30th June, 1896, and after providing for general expenses, Directors' and Auditor's fees, interest and depreciation, and after writing off debts, amounts to—\$25,800.78

which it is proposed to apply as follows:—
In payment of a dividend of 10 per cent. for the half-year

\$15,000.00
Balance to be carried to new account

\$10,800.78

The Directors are pleased to be able to report that the business of the Company continues in a prosperous condition, and that there is every indication of a continuance of the prosperity that has hitherto attended their efforts.

Report have been taken over and paid for, the cost being about \$8,000.

The Mortgage of \$25,000 having been called in, the Directors, in lieu of giving a new Mortgage, decided to issue debentures, bearing interest at 4½ per cent. per annum, and applications for nearly double the amount required, viz \$5,000, were received.

It has again been considered desirable to write off a liberal sum for depreciation, rather than carry forward a large balance of Assets not represented by cash, and to this end, over 2½% has been written off Buildings, over 2½% off Electric light plant, and nearly 10% off Furniture Account.

It is proposed that the dividend shall be payable on the 16th day of January, when the warrants will be issued.

JAMES WALTER, }
C. K. M. MARTIN, } Directors.

Yokohama, 11th January, 1897.

STATEMENT OF ASSETS AND LIABILITIES ON DECEMBER 31ST, 1896.

By Balance	\$ 800.78
	\$ 800.78

Yokohama, December 31st, 1896.

JAMES WALTER, }
C. K. M. MARTIN, } Directors.

I have examined the foregoing accounts and compared them with the vouchers of the Company, and certify them to be correct.
G. KELL, Auditor.

Yokohama, January 11th, 1897.

The CHAIRMAN said that there was little for him to add. The report and accounts had been in their hands for a week, and had doubtless been perused with care. He pointed out that last year the cash in hand at the bank had been \$33,904.37; this year it was \$31,020.69; but the gross profits then were \$46,248.62 against \$54,341.03 this half-year. Last half year they had not written anything off for depreciation, but this year they had decided to write off largely instead of carrying forward a large balance of what they had in hand. The directors had thus written off the surplus gross profits of \$28,540, as against \$15,000 written off in the corresponding period last year. The Company had always made every endeavour to maintain a really first-class hotel, in furniture, appointments, and service; and this had been done; and they spared no expense in furthering that end. The issue of debentures to take up the first and only mortgage on the hotel, was then referred to by the Chair. The mortgage—\$25,000—was called up in consequence of the death of the mortgagee and the winding up of the estate. The mortgage was given at rate of 6 per cent.; the new debentures were issued at 5½ per cent. and were redeemable at the option of the Directors on giving six months' notice. They had been applied for twice over.

Mr. HOWIS proposed and Dr. HALL seconded the adoption of the report and accounts.—Carried. The meeting then dispersed.

REVIEW.

Karma. By PAUL CARUS.

"KARMA" has reached its second edition. We have not seen a copy of the first, but we learn from the cover of the volume now before us that the book originally appeared as No. 366 of the "Open Court" series. Presumably it was not then invested with the attractions that it now derives from crape paper, coloured illustrations, and prettily designed covers. Mr. T. Hasegawa, of Tokyo, is the artist and designer, and very well he has done his work, though, curiously enough, he follows the rules of scientific perspective in the drawing of the design for the front cover—the judgment hall of Pluto—but lapses, for that on the back, into the bizarre methods of the old Chinese masters, whose vanishing point lay between themselves and the object depicted. Has any one succeeded in explaining, has any one even attempted to explain, the mystery of Chinese perspective? Why did centuries upon centuries of experience teach Chinese artists to imagine that distance developed rather than diminished dimensions; that the portion of an object farthest from the eye looked ampler than the portion under close observation? So completely were they mastered by the delusion that they emphasized it in all the petty details of a picture, as though the propinquity of the vanishing point were a grand moral precept whose inculcation the artist's sense of duty compelled him to undertake, in season and out of season. Hasegawa's lecture, for example, which, with a Buddhist world-duster and a scroll, he has chosen to adorn the back of this little volume, measures actually three-eighths of an inch more along the back edge than along the front, which means, taking the other dimensions into account, that to a man placed directly in front of, and at a distance of less than two feet from the lectern, its top, a true rectangle, would appear to be the trunk of a triangle having its apex in the body of the spectator! Did a lecturer ever look like that to a Chinaman? Mr. Hasegawa has not exaggerated one little bit: we have seen innumerable Chinese pictures in which an object intended to be square seemed to have difficulty in placing any distance whatever between itself and its vanishing point. For many a century the Japanese, too, remained slaves to this mannerism of their masters, though in aerial perspective they hit the truth so exactly, and though, in other matters their faithfulness to nature was so unerring. It is incredible that such a delusion could have survived a single glance along a straight and level road, or a single look down a long stretch of canal. Yet it did survive for two thousand years, as all the pictures of former Chinese artists prove, and that it does survive to this day every modern Chinese drawing shows. To physiologists who hold that the objective realities of nature are never visible to human eyes, but only her subjective appearances, the problem of Chinese perspective should be interesting. Let us pass, however, from the cover to the contents of this attractive book. We do not find any indication of the source from which Mr. Carus derived the materials for the work. Is it a legend evolved out of his own intelligence to illustrate the central doctrine of esoteric

Buddhism, or is it a free rendering of a tale told by some Indian disciple of the great creed? When Sir Edwin Arnold first visited Japan, a deputation of prominent Japanese scholars asked him whether "The Light of Asia" might be accepted as a faithful exposition of the beliefs and traditions current in India, or whether large allowances must be made for the personal equation of the author. Sir Edwin's answer was that a hundred "Lights of Asia" would still be insufficient to do justice to Buddhism, and his interviewers were too polite to insist on lifting that veil of diplomatic evasion. We, too, have often wondered whether esoteric Buddhism, as presented to the West by Sinnett and his successors, does not owe many of its beautiful colours to passage through the prism of Occidental intellect. It is, in truth, a noble faith. We are not speaking of its excrecence, the miraculous supplement, which might be lopped off without drawing a single drop of life blood from the parent creed. We are speaking only of the doctrine that represents individual existence, in each of the spheres, as the resultant of all that has been done or left undone, inflicted or suffered in the previous round of life; the doctrine of evolution extended to worlds beyond the grave. How many doubts are dispelled, how many perplexities resolved, how many inconsistencies reconciled by this doctrine, without disturbing the great central idea of an over-ruling providence! "Karma" tells the story of Pandu, a jeweller, Mahādatta his servant, and Dōvala, a Buddhist monk. The language is absolutely simple; the incidents are such as can easily be attributed to the early days when Buddhism began to win disciples in India. One essential truth is inculcated from first to last—the necessity of self-abnegation. Pandu, who has learned that truth by bitter experiences (narrated in "Karma") says to his children as he lies dying:—"My dear children, do not blame others for your lack of success. Seek the cause of your ills in yourselves. Unless you are blinded by vanity you will find it, and having found it, you will see the way out of it. The remedy of your ills, too, lies in yourselves. Let never your mental eyes be covered by the veil of Māyā, and remember the words which have proved a talisman in my life:—He who hurts others injures himself. He who helps others, advances his own interests. Let the illusions of self disappear, and you will naturally walk in the path of truth." This is but an expansion of the Nazarene's behest, "do unto others as you would they should do unto you." And Christ, like Shākyamuni, taught that in that same precept were comprised "the law and the prophets." Circumstances have not been propitious to the prevalence of the noblest of doctrines among Western nations. The stress of life is too severe; the struggle for survival too intense; the reward of success too dazzling, and the punishment of failure too painful. Only in the East, where Buddha's tenets have been preached among favourable surroundings, can the altruism that the creed inculcates be sometimes found permeating the existence of a nation. There have been many Buddhist priest like Dōvala; not, indeed, possessing the gift of supernatural insight attributed to him, but like him adapting their teaching to the events of every-day existence, and like him teaching that by the death of the ego alone can the life of the perfect man be attained. We quote one beautiful legend from "Karma" to illustrate the character of the book:—

While the charitable samana washed the wounds, the robber chief said: "I have done much evil and no good. How can I extricate myself from the net of sorrow which I have woven out of the evil desires of my own heart? My Karma will send me to hell and I shall never be able to walk in the path of salvation." Said the samana: "Indeed your Karma will in its future incarnations reap the seeds of evil that you have sown. There is no escape for an evil doer from the consequences of his own actions. But there is no cause for despair. The man who is converted and has rooted out the illusion of self, with all its lusts and sinful desires, will be a source of blessing to himself and others.

"As an illustration, I will tell you the story of the great robber Kandata, who died without repentance and was reborn as a demon in hell, where he suffered for his evil deeds the most terrible agonies and pains. He had been in hell several kalpas* and was unable to rise out of his wretched condition, when Buddha appeared upon earth and attained to the blessed state of enlightenment. At that memorable moment a ray of light fell down into hell quickening all the demons with life and hope, and the robber Kandata cried aloud: 'O blessed Buddha, have mercy upon me! I suffer greatly, and although I have done evil, I am anxious to walk in the noble path of righteousness. But I cannot extricate myself from the net of sorrow. Help me, O Lord; have mercy on me!' Now, it is the law of Karma that evil deeds lead to destruction,

* Kalpa is a long period of time, an aeon.

for absolute evil is so bad that it cannot exist. Absolute evil involves impossibility of existence. But good deeds lead to life. Thus there is a final end to the development of good deeds. The least act of goodness bears fruit containing new seeds of goodness, and they continue to grow, they nourish the soul in its weary transmigrations until it reaches the final deliverance from all evil in Nirvāṇa. When Buddha, the Lord, heard the prayer of the demon suffering in hell, he said: 'Kandata, did you ever perform an act of kindness? It will now return to you and help you to rise again. But you cannot be rescued unless the intense sufferings which you endure as consequences of your evil deeds have dispelled all conceit of self, and purified your soul of vanity, lust, and envy.'

"Kanda remained silent, for he had been a cruel man, but the Tathagata in his omniscience saw all the deeds done by the poor wretch, and he perceived that once in his life when walking through the woods he had seen a spider crawling on the ground, and he thought to himself, 'I will not step upon the spider, for he is a harmless creature and hurts nobody.'

"Buddha looked with compassion upon the tortures of Kandata, and sent down a spider on a cobweb, and the spider said: 'Take hold of the web and climb up.' When the spider had disappeared, Kandata made great efforts to climb up, and he succeeded. The web was so strong that it held, and he ascended higher and higher. Suddenly he felt the thread trembling and shaking, for behind him other fellow sufferers of his were beginning to climb up. Kandata became frightened. He saw the thinness of the web, and observed that it was elastic, for under the increased weight it stretched out; yet it seemed strong enough to carry him. Kandata had heretofore only looked up; he now looked down, and saw following close upon his heels, also climbing up on the cobweb, a numberless mob of the denizens of hell. How can this thin thread bear the weight of all, he thought to himself, and seized with fear he shouted loudly: 'Let go the cobweb. It is mine!' At once the cobweb broke, and Kandata fell back into hell.

"The illusion of self was still upon Kandata. He did not know the miraculous power of a sincere longing to rise upwards and enter the noble path of righteousness. It is thin like a cobweb, but it will carry millions of people, and the more there are that climb it, the easier will be the efforts of every one of them. But as soon as in a man's heart the idea arises: 'This is mine; let the bliss of righteousness be mine alone, and let no one else partake of it,' the thread breaks, and you fall back into your old condition of self-hood, for self-hood is damnation, and truth is bliss. What is hell? It is nothing but egotism, and Nirvāṇa is a life of righteousness.

"Let me take hold of a spider-web," said the dying robber chief, when the samana had finished the story, and I will pull myself up out of the depth of hell."

LATEST TELEGRAMS.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, January 21st.

The reported illness of H.M. the Czar is denied.

The House of Lords has voted the address in reply to the Queen's Speech. During the debate Lord Salisbury stated he was convinced that unless essential reforms are adopted the doom of Turkey cannot be delayed for long. Referring to the Arbitration Treaty with America, the Premier said it would not prevent war, but would diminish the risks thereof.

London, January 23.

Reuter's Agency learns that the garrisons at Debbbeh, Korti, and Merawi will advance early in the summer to take Abu Ahmed and Berber preparatory to a subsequent movement on Khartoum.

London, January 25.

The Niger Company's forces have defeated the natives, after a sharp fight at Shonga, and have destroyed the town.

A conference of the Powers on the plague has been summoned to meet at Venice.

London, January 27.

In reply to a question in the House of Commons yesterday, Mr. Balfour, First Lord of the Treasury, stated there was no probability of the Government initiating a Bimetallite Conference. Russia has declared the whole of India infected with the plague.

(FROM THE "N.C. DAILY NEWS.")

London, January 21.

Trouble has arisen in Griqualand. Rear-Admiral Harry H. Rawson, C.B., Commander-in-Chief, Cape of Good Hope and West

Coast of Africa, has been given the command of the Benin expedition.

London, January 22.

The Benin expedition was unarmed and was bearing presents for the King. They marched in two parties, each of which fell into an ambush and was massacred. Only one native carrier out of two hundred and fifty escaped.

Reuter learns that the garrisons at Debbah, Koati, and Merani (? Merawi) will advance early in the summer with the view of taking Abu Hamed and Berber, preparatory to a subsequent movement on Khartoum.

London, January 20.

The Liberal Peers have elected the Earl of Kimberley to the Leadership of the Liberal party in the House of Lords.

Two hundred marines have been ordered to proceed to Benin, and H.M.S. *St. George*, the flagship at the Cape, has sailed for Benin.

The tenders for India Bills amount to twelve and a half millions sterling. Tenders at £97 10/6 receive eight per cent., and above that amount in full. All tenders were for twelve months.

(FROM BANGKOK PAPERS.)

London, January 3.

M. de Nelidoff, Russian Ambassador, has taken up a markedly resolute attitude towards the Sultan, and has insisted upon the publication of an official denial of the report that he was present at Selamluk.

(FROM THE "COMMERCIO.")

Madrid, January 7th.

Pope Leo XIII. is suffering from an attack of influenza. His condition causes anxiety.

Madrid, January 13th.

The steamer *Nubia* has arrived at Portsmouth from Egypt with several cases of cholera on board.

The Japanese Legation at Madrid has addressed an official note to the Spanish Government stating that Japan will never afford support to those compromised in the rebellion in the Philippines.

(FROM THE "COURIER D'HAIPHONG.")

Paris, January 6.

The Spaniards hope to pacify the west of Cuba before February.

Flying from the plague, 325,000 inhabitants of Bombay have left the city.

January 8.

At a Charity Fête given at Tunis, reciprocal manifestations of sympathy were exchanged between the French and the Italians.

There is little doubt that the leaders of the Cuban insurgents are disposed to make overtures for peace.

January 9.

The regiments, the schools, and the associations of France and Russia have exchanged numerous good wishes for the New Year.

A vessel arrived at Liverpool from Calcutta, has reported five deaths from cholera on the voyage.

(FROM THE TONKIN PAPERS.)

Paris, January 4.

The senatorial elections have taken place, with the following result:—Republicans 69, Radical 16, Conservatives 12. The Republicans gained eight seats. M.M. Constans and Hebrard were defeated at Toulouse.

(FROM THE CAYMAN PAPERS.)

Bombay, December 23.

The hitch which has occurred in the reduction of telegraph rates to Japan appears to have been caused by the Japanese authorities refusing to sanction the collection of payment by the Great Northern Telegram Company in effective francs. The Chinese on the other hand have agreed to the collection. One of the rules of the Telegraph Convention is that rates for telegrams from either side shall be equal in value, and the difficulty which the Japanese have raised is very unfortunate. Their decision is likely to raise grumbling in China.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at the Club Hotel, No. 5, Bund, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

24—K to Kt 3
25—K to B 2
26—B to Q sq. (d)
27—K to B sq.
28—B takes Kt
Resigns.

(a) So far correct. Lasker played similarly against Steinitz; but he did not venture upon such a risky move as the one in the text. If—P to B 4, followed by Kt to B 3, would have been sound play.

(b) An excellent move that speaks highly of Charousek's sound judgment. If White advances P to Kt 5, then 23..... Kt to K sq, and White's threatened attack on the king's side is gone, and his king's position compromised.

(c) Very good again. He breaks open the queen's side in case White should try to escape with the king on that side.

(d) If 26—B takes Kt, then Q to R 4 ch. wins. The game was lost a long time ago. We only give it to show how decisively Charousek took advantage of a move that might have escaped a good many players. It must be noted that if Winawer could have played with impunity P to Kt 4, he would have had the better game.

One of the best games played; but it is chiefly interesting from the fact that Tschigorin allowed Janowski to get his Kt out to K B 5, which seemed a winning move, but turned out quite the reverse, so that Janowski was hoist on his own petard.

GAME No. 645.

43—R takes R	43—R takes R ch.

NOTES FROM "THE WESTMINSTER GAZETTE."

(a) Tschigorin defends with his own variation 3—P to B 3, which is not considered the best for any body else, but Tschigorin sticks to it. Doctor's differ.

(b) The interesting part of the game now commences, 20—Q to K 2 being the sequel to Tschigorin's plan, for the obvious move would be 10—Q to B 2, unpinning the K Kt and guarding the K P.

(c) B to Kt 5 is inferior to 12—B to Q 3, as it enables White to get his Kt even early to K B 5.

(d) Inferior to B to Q 3, the latter move being more in consonance with his plan of attack. It is very remarkable how beautifully Black's moves are, and so he gradually drives back White's pieces.

(e) Black unmasks his Rooks previous to the final attack, commencing with the sacrifice of 38—Kt takes P, after which the game is over. The remainder is all forced. White resigning after 43—R takes R ch, for if 44—K to K 5, then 45—Q to R 4 ch and win.

"THE BRITISH CHESS MAGAZINE."

The December number of this magazine completes the 16th volume. Prominent among the contents is an article by Mr. Andrew Burns, Melbourne (a native of Glasgow), the veteran chess editor of the *Melbourne Leader*, on the subject of the several problem tournaments that have been held to date in the Colony of Victoria. A selection

tion of the best problems is given. The number also contains a selection of the late W. H. K. Pollock's brilliancies in actual play. The following game was played some years ago in America, Mr. Pollock's opponent being the then champion of the St. Louis Chess Club. The notes are by the Rev. C. E. Ranken.

GAME No. 646.
VIENNA OPENING.

WHITE. W. Haller.	BLACK. W. Pollock.
1—P to K 4	1—P to K 4
2—Kt to Q B 3	2—Kt to K B 3
3—B to B 4	3—Kt takes P
4—Kt takes Kt (a)	4—P to Q 4
5—Q to R 5 (b)	5—P takes B
6—Q takes K P ch.	6—B to K 3
7—Kt to K B 3 (c)	7—Kt to B 3
8—Q to K B 4 (d)	8—Kt to Kt 5
9—R to Q sq.	9—Q to Q 2 (e)
10—R to R sq.	10—Castles
11—P to Q Kt 3 (f)	11—P takes P
12—R P takes P	12—K to Kt sq.
13—R takes P (g)	13—K to Kt sq.
14—Kt to K 5	14—Q to Kt 4
15—Kt to Q B 3	15—B takes P (h)
16—B to Kt 2	16—Kt to Kt 5 dis. ch.
17—K to B sq.	17—Q takes Kt (i)
18—Q takes Q	18—Kt to Q 6 ch.
19—K to Kt sq.	19—Kt takes Q
20—R to R 5	20—Kt to B 5
21—R to Q Kt 5	21—Kt takes P ch.

and Black wins in a few moves.

(a) White can recover the Pawn here by Q to R 5, or Q to K 2, but it is not good to play B takes P ch, and then take the Kt.

(b) Another alternative is B to Q 3.

(c) If 7—Kt to Kt 3, then Kt to B 3; 8—Kt takes B (if Q to K 3, Kt to Q 5), Kt takes Q; 9—Kt takes Q, R takes Kt; with the better game.

(d) He should have retired the Q to B 3, for now Black obtains a marked advantage.

(e) Mr. Pollock afterwards preferred P to K R 3 as a sounder continuation.

(f) This gives occasion to one of Mr. Pollock's brilliant coups; the Kt should have been driven away by P to Q R 3.

(g) Of course, if K takes Kt, he is mated in two moves.

(h) Prettily played again, though Q takes P would equally force the game.

(i) A concluding and conclusive brilliancy, winning a clear piece and the game.

A LITTLE BEAUTY.

"Dr. Hamilton gives Mrs. W. J. Baird (the Chess Queen) the odds of K Kt, and she gives him a filip that he will not soon forget."—*Leeds Mercury*.

GAME No. 647.

WHITE. Mrs. B.	BLACK. Mrs. B.
1—P to K 4	1—P to K 4
2—B to B 4	2—Kt to K B 3
3—P to Q 3	3—B to K 2
4—P to R R 3	4—Castles
5—Castles	5—P to Q B 3
6—P to B 4	6—P takes P
7—B takes P	7—P to Q 4 1
8—P takes P	8—Kt takes P
9—B to Q 2	9—B to K 3
10—Q to K 2	10—Q to Q 2
11—B to Kt 3	11—B to B 4 ch.
12—K to R sq.	12—B takes P
13—P takes B	

And Black mates in three moves.

ENGLAND VERSUS AMERICA.

REPORTS.

The British steamer *Bramar*, Captain Porter, reports:—Left Tacoma, Wash., the 1st January; crossed the meridian the 14th; experienced strong winds and southerly gales with very heavy sea the entire journey.

The British steamer *Doric*, Captain H. Smith, reports:—Left Hongkong the 16th January, Shanghai the 20th, Nagasaki the 22nd, and Kobe the 24th. Arrived at Yokohama the 25th January at 5.20 p.m. Passage from Kobe, 23 hours and 5 minutes.

LATEST COMMERCIAL.

IMPORTS.

A cheering ray at last appears and there is a good demand for Grey Yarn chiefly fine counts (doubles) and Gassed. Importers have moved considerable stock and are feeling better. Shirtings and Grey Cloth generally stagnant. Fancies out of favour, with the single exception of Turkey Reds which continue to move fairly well. Woollens quiet with small trade.

BISSET & URE'S SHARE REPORT.

Yokohama, January 23rd, 1897.

Business has been done to day in Langfeldt & Co. Shares at \$160 ex the dividend due for the half year ending 31st December last, and Y. U. Club Debentures at \$100 (par) ex accrued interest of 5.50 per cent. to date.

Yokohama, 26th January, 1897.

Telegraphic advices from Hongkong report the following changes in the share market:—H. & S. Banks have risen to 184 per cent. with strong buyers at that rate; Hongkong Lands have further improved and are quoted at \$78 ex dividend, but shares are offering at that rate; China Fires have appreciated to \$105 buyers; H. & W. Ducks are up to 222 per cent. premium with strong buyers; H. & K. Wharfs unchanged with sales at \$59; Douglasses, Steamboats and Pinnings unchanged at \$61 Buyers, \$33 Buyers, and \$11 Sales respectively; also Balmorals at \$1.50 Sellers, National Banks \$26.50 Sales. Rubi Mines have gone up to \$11.50, at which rate there are buyers locally; Indo-Chinas to \$43 Sales; Union Insurance to \$237.50 Sales, China Traders to \$76 Buyers, and Straits Insurance to \$26 Buyers.

Business has been done to-day in North China from Shanghai at Tls. 195, Langfeldts again at \$160 ex-dividend due for the half-year to 31st December last. Breweries are still enquired for at quotations, and Y. U. Club Debentures at par, also Brett & Co. Debentures at 4 per cent premium. Club Hotel Shares are offering at \$70,

buyers offering \$67.50. Grand Hotels can be had at \$95 ex the dividend paid to-day. Engine & Iron Works Shares are wanted at \$110 or even better.

December 5, 1896.

ITCHING SKIN DISEASES Instantly Relieved
By
Cuticura

A warm bath with CUTICURA SOAP, and a single application of CUTICURA ointment, the great skin cure, followed by mild doses of CUTICURA RESOLVENT, the new blood purifier, will afford instant relief, permit rest and sleep, and point to a speedy, permanent, and economical cure of the most distressing forms of Eczema, and every species of itching, burning, bleeding, scaly and crusted skin, scalp, and blood humors, when physicians and all other remedies fail.

Sold throughout the world. British depot: F. NEWBENT & SONS, 1, King Edward-st., London, E.C. POTTER DRUG AND CHEMICAL CORPORATION, Sole Proprietors, Boston, U.S.A.

It's a Far Cry

FROM FOREIGN
LANDS TO

Chicago, U. S. A.

But no matter where you live, we are anxious to do business with you in Clothing, Shoes, Dry Goods, Watches, Jewelry, Sewing Machines, Harness, Saddles, Hardware, Tools, Guns, Revolvers, Ammunition, Bicycles, Agricultural Implements, Vehicles of all kinds, Furniture, Books on every subject. We handle only dependable goods—no trash.

We believe we can send to any clime, goods of any kind, perfect in quality, at lower prices, laid down, than the residents thereof can obtain them anywhere else. Our belief is founded on a quarter century's experience. To acquaint you with our facilities we will send you, or any other foreign resident, free of all charges, our "BUYERS' GUIDE," a 2½ pound book, 700 pages, 13,000 illustrations, 40,000 descriptions—it is unique, valuable—and also our "HAND BOOK FOR FOREIGN BUYERS," which contains all necessary information to put you in close touch with our marvelous methods. WILL YOU ASK US TO DO SO?

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of the limbs. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude and, in consequence, milk, fowl, butter, and horae feed poured in upon us, until the last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World.
May 21st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1896.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEB. 6TH, 1897.

BIRTH.

On the 30th January, 1897, the wife of JOHN H. JEWETT of a daughter.

SUMMARY OF NEWS.

An Anglo-American treaty to define the boundary of Alaska has been signed.

The charge of murder against Miss Jacob was formally withdrawn by Mr. Lowder on Friday.

The Metropolitan Police Board has opened a Vaccination Bureau in every district of the capital.

The Kyoto Railway Company held its general meeting on the 28th ult. The net profits during

the latter half-season were yen 30,000, which were carried forward to the next account.

The Niger Company forces have defeated the natives after a sharp fight at Shonga, and destroyed the town.

The Railway Council will resume its sittings about the 15th inst., when the committee returns from Kyoto.

Two games of football have taken place during the week, one between Naval teams, the other between mixed sides.

THROUGH the dismissal of 10,000 prisoners throughout the country the Government will save some yen 600,000.

SMALL-POX is not quite so virulent in Yokohama. Patients now undergoing treatment in the epidemic hospitals total 40.

TUESDAY was observed as a general holiday, upon the occasion of the removal of the remains of the Empress Dowager to Kyoto.

A QUANTITY of iron pipes for the use of the Yokohama Water Works recently arrived, being the last batch to complete the work.

T.I.M. THE EMPEROR and EMPRESS are still indisposed through cold. The Emperor is said to be more convalescent than the Empress.

JAPANESE silver yen to the value of yen 350,000 were exported to Singapore by the Hongkong and Shanghai Bank, Yokohama, on Friday week.

M. MURAVIEFF, the newly-appointed Russian Minister for Foreign Affairs, has been banqueted by President Faure at the Elysée with effusive honours.

MR. S. D. HEPBURN, Consular Agent of the United States at Nagasaki, having resigned, Mr. William Henry Devine has been appointed to the post.

THE new treaty between Brazil and Japan, which was completed in November last, will be exchanged at Paris during the course of this month.

WORK on the Railway between Takasaki and Shimonida via Tomioka, being nearly completed, the line will be opened for traffic in March next.

MR. RIKAZI, Korean Ambassador, who left for Kyoto to attend the funeral services of the Empress Dowager, will return home after fulfilling this duty.

H.I.H. THE EMPRESS has graciously contributed 225 *tan* of cloth and 225 *tan* of linen, together with yen 78.75, to the Hospital attached to the Imperial University.

THE number of secretaries in Japanese Legations and Consulates in foreign countries, hitherto fixed at 67, has been increased to 85, by Imperial Ordinance, No. 88.

BANKER GAGE has been appointed Secretary of the United States Treasury in Mr. McKinley's administration. It is understood that Mr. Gage favours currency reforms.

THE returns of profits on the Kiushin Railway Company from the 11th ult., to the 20th ult. were:—Passenger receipts yen 20,833; freight receipts, yen 16,232; yen 19 per mile per day.

THE India Office has ordered all officers of the Medical Department absent on leave to return to India immediately, and has called for volunteers from the Army Medical Department for plague services.

RUSSIA'S correspondent at Brass states that the Niger Company's land column has reached

Kabba, and found that Toulah's Army south of the Niger had dispersed panic stricken. The column is advancing on Bida. A flotilla has reached Egwa, which cuts off the retreat of fugitives to Bida.

MR. YOSHINO GOSABURO, silk merchant of Yokohama, and others are contemplating establishing a large silk exporting company. They will be supported by a combination of local silk dealers, backed by a capital of yen 5,000,000.

THE Tokyo Marine Court has suspended the certificate of Captain Tippet for four months, holding him to blame for the stranding of the *Himeji Maru* on Bombay Reef, Paracel Islands, on November 1st last.

LEGAL proceedings have been instituted by Mr. Futami Tomosaburo, attorney for Mr. N. Morgan, of No. 238, Settlement, Yokohama, against Mr. Otake Senjiro, for the recovery of yen 1,000, money lent.

LIEUT.-GENERAL KAWAKAMI, Vice-President of the General Staff Office, and *suite*, who left Japan in November last and have been touring in Hanoi, Tongking, Bangkok, and Singapore, are reported to have left Hongkong for home on the 26th ult.

THE general meeting of the Tokyo Kaijo Hoken Kaisha (Tokyo Marine Insurance Company) took place on the 29th ult., and a loss of yen 82,711 was announced. Mr. Masuda, the manager, having resigned, Mr. Sasaki was appointed in his place.

MRS. CAREW was, on Monday, found guilty of the murder of her husband, by the jury empanelled to try the charge, and Judge Mowat passed sentence of death. Sir Ernest Satow commuted the sentence on Wednesday night, in virtue of his prerogative as British Minister.

AT the Osaka Marine Office, on the 19th ult., an inquiry was held into the circumstances attending the collision between the British steamer *Tennyson* and the *Fukuoka Maru* belonging to the Admiralty. After hearing evidence, the Court found that Captain Idzumi, of the *Fukuoka Maru*, was to blame for having anchored so near the British steamer in a strong current, and his certificate was suspended for one month.

THE improvement noted in the Import trade last week has continued, and Yarns have been further dealt in to a fair extent. Grey goods also begin to move, and dealers are making enquiries with a view to contracts for "arrival." Fancy Coltons are not generally in much request, though Turkey Reds continue to be taken freely and Velvets are in some demand. Woollens are still quiet, the only thing reported being the sale of a few Blankets. Metals are all dull, and prices nominal. The Kerosene trade is fairly brisk, "spot" Oil being sold for full figures, but offers at a reduction for March delivery have been accepted. The Sugar trade is healthy, fair sales of China and Manila sorts having been made at late rates. Offers for new Formosa "to arrive" are not accepted, importers—as reported last week—wanting a high price. In White sorts a moderate business continues at late rates. For the principal Export a good demand is maintained from Europe, and Raw Silk has been taken freely for that destination, but there is still nothing doing for the States. Waste Silk is dull, and prices are on the downward line. The Tea trade may be said to be finished, as no transactions are reported for the past week. Exchange rates have been practically unaltered during the interval.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

Affairs of State are now suspended owing to the decease of the Empress Dowager. The Diet is to prorogue its sessions until the 13th instant, and newspaper columns are well-nigh monopolized by miscellaneous items relating to the funeral, to reminiscences of the deceased, and even to annals of her consort, the late Emperor Komei. The rumour of an amnesty to criminals has proved to be based on fact, an Imperial Ordinance on the subject having been issued. Out of over 70,000 convicts now serving various terms of imprisonment in Japan, about one-seventh are to be liberated. We presume that the Authorities will exhibit a similarly magnanimous spirit towards wardens, and will be careful not to dismiss men whose services become temporarily superfluous on account of a diminution in the number of prison inmates. Something like maudlin loyalty seems to have overtaken the people as well as the local authorities, for we are told that not a few of the latter have enjoined those under their jurisdiction to respect the veto against musical performances, even though the prescribed period of interdict has passed. A resolution in that sense seems to have been arrived at even in Tokyo by a section of the citizens, for not a sound of music is reported to be heard as yet in thousands of restaurants at different places throughout the city.

The commemoration of the decease of the Empress Dowager will evidently not be limited to the amnesty of criminals. We read in the *Yiji* that the Court contemplates disbursing a sum of 400,000 yen out of the private purse of the Emperor for the purpose of giving alms to the destitute and endowing charitable institutions.

The *Yiji* offers some advice in connexion with the liberation of convicts. Our contemporary expects that the persons set free will feel deeply grateful for the gracious magnanimity and benevolence of the Court, and will endeavour to become respectable folks. But no great reliance can be placed upon the impulses of such ignorant people, nor can any one predict that at least a portion of them will not relapse into evil courses and become sources of danger to the property of law-abiding citizens. Hence the amnesty imposes a grave responsibility upon the Authorities. They ought to be on their guard, so that the act of mercy may not eventuate in the disturbance of public order.

The *Sekai-no-Nippon* hopes that the Authorities will not be too intent in merely adopting ancient rites and ceremonies for the funeral, lest they invite the ridicule of the world, and even imperil the progress of the ceremonial. The yoking of oxen to the hearse is instanced. Though not objectionable in itself, the usage may involve danger, for unless the animals are accustomed to the sound of cannon, they may become unmanageable when the salute is fired. In another article the same paper declares that the suspension of the Diet's sessions, and the attendance of the members of the two Houses at the ceremony are very singular measures. It does not at all follow that such things will be acceptable to the spirit of the deceased, who abhorred parade and vanity. Better that the Houses should send their respective Presidents alone to represent them at the obsequies. Further, that the movements of the members of the Houses during the period of session should be controlled by order of the Government, is capable of being construed into administrative interference with the freedom of the Legislature. At all events, the matter being an affair of sentiment, if the members consider themselves under an obligation to attend the ceremony they ought to do so at their own expense, not receiving any allowance from the Court.

The condescension of the Court displayed in the permission given to the nation to pay the funeral expenses, must be considered an act of special magnanimity, and also construed in

the sense of conferring a great honour on the people. Not only in this particular affair, but in everything pertaining to the Court the people are eager to be allowed to perform some service. The *Yiji*, from which we take these comments, finds in the fact a confirmation of its often asserted theory, that the Imperial Family has no need of a special estate.

The *Nippon* is a trifle hysterical. It is alarmed lest the officials ordered to assist at the funeral may, while staying in Kyoto, conduct themselves in a manner not becoming to the occasion, and may give grounds for scandalous gossip.

The alleged corruption of members of Parliament and the threatened disintegration of political parties continue to evoke much criticism from the metropolitan papers. Mr. Ooka Ikuzo, an influential member of the National Unionists, and an advocate of the theory that an *entente* should be established between his Party and the Liberals, writes in an impassioned tone in the columns of the *Chuo* about the state of politics. He dwells at great length on the unmounted employment of base means by the Cabinet to win over members of Parliament, not a few of whom have proved themselves only too easy a prey. He bitterly laments the danger of disintegration that now menaces various parties, and concludes by avowing that the time has come for the creation of a genuine independent party, organized by politicians of any origin provided that they are equally solicitous for the real welfare of the country.

This opinion is also shared by the *Kokumin*, which argues that so long as a plurality in the Diet can be commanded by offers of money, official position, or other private considerations, it is out of the question to hope that the people's representatives in Parliament will really promote the nation's honour and interests. The urgent need of the day is to unite in one body all members that are governed by conscience and motives of strict integrity only. Ten or fifteen members are enough to form a nucleus. A greater number would involve complications and danger of corruption. A party possessing only 10 or 15 members in the Lower House would not wield great influence, but would be strong enough to hold the balance of power between the pro Satsuma and pro Choshu sections.

The Government, writes the *Nippon*, are now understood to command over 170 votes in the House of Representatives, but they must recollect that a parliamentary plurality should not be regarded merely as an instrument for passing the Budget, the duty of a pro Government party not being merely to prolong the life of the Cabinet. Moreover, there are proper means for obtaining a plurality of supporters. A plurality exacted by improper means will serve no lasting purpose.

In another article the same journal argues that a plurality composed of a rabble collected by corruption can never be relied upon. Unless the Government effect a radical reform in official and non-official affairs, trouble is sure to arise from within. All temporizing measures should be resolutely abandoned.

The *Nichi Nichi* discovers two grave blots in the politics of the country, and lays them at the door of the Matsukata Cabinet. The first is falsehood, and the second, the bribery of Parliamentary members. Our contemporary's sermon on such a text may be conceived without any translation of ours.

The *Kokumin* advises Baron Ito to give up petty machinations, and try to rouse Marquis Ito to openly embrace the cause of the Liberals for the purpose of working in conjunction with Count Itagaki for the restoration of the Party's declining influence.

The last speech of the Premier, remarks the *Yiji*, delivered in the House of Representatives,

formed no exception to his previous utterances in respect of vapidity and absence of point. It savoured of a homily that food and drink are necessary to the existence of human beings, and that great care should be paid to hygiene. The comment worthy of it is that it was wonderful. The *Yiji* attributes this to want of self-reliance on the part of the Cabinet, which entertains too much deference for the views of outsiders and is over-anxious about public opinion. This want of dignity is considered by the *Yiji* to be an excessive reaction from disregard of popular feeling displayed by the Government for so long a time in the past.

While maintaining the absolute necessity of expanding Japan's diplomatic and consular mechanism, and the consequent advisability of establishing additional Legations and Consulates, the *Nippon* cannot pretend to be satisfied with the colourless character of Japan's Korean policy since the country's foreign affairs came under the control of Count Okuma. It urges His Excellency to speedily despatch duly accredited Ministers to Russia, China, and Korea, whose relations with Japan are of vital importance.

The *Nichi Nichi* indites a sweeping criticism of the Government's Formosan policy, condemning it from every conceivable standpoint, whether communications, finance, police, or sanitation. It specially charges Viscount Takashima, the Minister of Colonization, and also Count Kabayama, with having failed to achieve anything worthy of mention, and further lays at the door of the Home Minister the blame of indiscriminately appointing officials in Formosa. Count Matsukata's Formosan finance is denounced as mere temporizing measures, and His Excellency is urged to evolve some scheme for making Formosa self-supporting.

The same problem is discussed in a more specific way by the *Nippon*, namely, in connection with the necessity of erecting military barracks in Formosa. The troops are now quartered, for the most part, in shrines dedicated to Kwan-on, the military deity, and to Confucius, the civil deity, of the Formosan natives, so that for about three years the latter have been prevented from performing their usual religious ceremonies. Nevertheless, the Government have not included in the Budget any appropriation for building barracks in the new dominion. Their religious faith outraged, their spiritual places disturbed, their weapons of defence taken away, and the security of their prosperity impaired, the condition of the natives is deserving of all pity. Such things go far to prove how badly the Administration of Formosa is conducted. The *Nippon* advises the Diet to submit a representation to the Government about the erection of military barracks in Formosa.

The *Sekai-no-Nippon* criticizes the financial programme of the Matsukata Cabinet as calculated to produce great disturbance in the money market. The Budget shows a deficit of about 60 million yen in the Extraordinary Revenue Section, and this sum the Cabinet proposes to make good, if no better means are available, by floating a loan, which will ultimately be delayed out of the Indemnity. As an item of about 60 million yen is entered in the Budget in the form of a domestic loan, and another item of over 44 million yen is found in the Expenditure section in the form of appropriation from the Indemnity, people may be led to believe that the Government intends to disburse the latter amount so that it will come into the market during the course of the next year, and may be planning their business on the basis of that hypothesis. But in reality the Treasury contemplates using that sum for defraying the loan, and intends to pay interest at the rate of over 2½ million yen for money borrowed out of its own pocket. The uses to which the Indemnity is to be applied are already fixed, however, and since the Treasury can not leave Bonds amounting to about 60 million yen deposited for an indefinite time in the Nippon Ginko, the

Bonds will have to be sold out whenever a favourable opportunity presents itself. This potent factor will always tend to keep the stock market down to a comparatively low level. Hence the *Seikai-no-Nippon* condemns the financial policy as entirely deceptive.

The *Kokumin* suggests the advisability of increasing the allowances given to families of volunteer blue jackets. At present the allowance is only 2.7 *sen* per diem, or about 80 *sen* a month. It is impossible to look for good volunteers so long as the allowance is so paltry.

The *Yiji* is of opinion that the standard for calculating the bounty on account of ocean navigation, as provided in the Navigation Encouragement Law, is somewhat erroneous, for the result is to make the subsidies too large. According to the standard specified in the Law the rate of bounty is increased in proportion to the gross tonnage of steamers. The *Yiji* thinks that the rate should be increased rather in proportion to the speed. According to the Government standard, the rate of bounty per 1,000 nautical miles for a steamer of 6,000 tons, capable of making 12 knots an hour, is 60 *sen* a mile, whereas it would be reduced to 35 *sen* were the *Yiji's* standard adopted. For one service to Europe with a steamer of the kind, the Government rate amounts to 180,000 *yen*, and the rate proposed by the *Yiji* is only 105,000 *yen*. Such a system tends to unduly augment the amount of subsidy, and obliges the Government to enforce most rigid inspection whenever a bounty is applied for.

EDITORIAL NOTES.

KOBE R. AND A. C.

At the annual meeting of the members of the Kobe Rowing and Athletic Club, Mr. Abell was re-elected President and Mr. J. K. Hutton elected Captain; with Messrs. Richardson, Bethell, Sorhagen, Franklin, Lightfoot, Crowther, Thwaites, and Kerr, as Committee. The retiring Captain, Mr. Whittall, received a hearty vote of thanks. The following remarks were made during the meeting:—The Chairman, in presenting the annual report, said the Committee regretted to find that they had omitted to mention in the report the record high jump of 5ft. 5½ inches which was made by Mr. John Scrymgeour at the athletic meeting—a splendid leap for a man residing in this climate.—Mr. Wilkinson asked whether this jump was the record for the East or only for Japan.—Mr. Whittall said the question had been referred West of Singapore, and as no satisfactory replies had been received they took it for granted that the jump could not be beaten.

SEAMEN'S MISSION.

The following statistics for the month of Jan. have been sent to us for publication:—No. of visit to ships, 302; to hospitals, 6; to Consular gaols, 12. No. of services held in the Mission-rooms, 11; on ship, 2; in consular gaols, 6; in hospitals, 2. Number of social meetings and lantern entertainments, 13. Number of seamen present at the services, 444; at the social meetings and entertainments, 467. Number of seamen using the mission launch to attend the services, entertainments, etc., 731. Number of seamen's visits to the Seamen's Free Reading Room, 1,005. Number of bags of reading given on board ships, 22. Amount of donations received from ships, *Buccleugh*, per Captain Tedford, \$23; *Prince Robert*, per Captain Hansen, \$14 50; *Herman v. Farlsburg*, per Captain Reimers, \$25.

TUESDAY IN YOKOHAMA.

A GENERAL holiday prevailed in Yokohama on Tuesday—the day when the remains of the late Empress Dowager left Tokyo—stores, banks, offices, and all foreign places of business being closed. Everywhere flags hung at half-mast, or, when a Japanese flag was suspended from a house, a long mourning streamer was attached. The vessels in harbour also flew their flags at half-mast and work was entirely

suspended. The Russian warships in port cock-billed her yards, and at noon a salute of minute guns was fired. A very large crowd assembled in the vicinity of the railway station to view the special funeral car in which the remains were placed for transmission to Kyoto, and when the train drew near every head uncovered and remained so till it left again on its journey southward.

NEW BRITISH CRUISERS.

A SERVICE journal remarks that orders have now been placed for the construction of the three second-class cruisers of the *Talbot* type which complete the new shipbuilding programme of 1896-97. Two of these vessels will be built by the Fairfield Company, of Glasgow, and the remaining one by the London and Glasgow Shipbuilding and Engineering Company. In accordance with the system recently adhered to by the Admiralty, the new ships will receive names connected with the old navy, and will be called the *Highflyer*, *Hyacinth*, and *Hermes*. The name *Highflyer* dates back to the last century, and ships bearing the name were in several engagements in the war with the United States (1812-14), also during the Russian war (1854-55) at Sevastopol and other actions, and in China (1857-60). The boats of the *Hyacinth* were present at Faishan Creek, the bombardment and capture of Canton, and the attack on the Peiho Forts. A *Hyacinth* was in several small actions in the great war, and another did good service during the first China war (1839-42). A *Hermes* took part in the war with the United States (1812-14), and the name occurs in connection with the Kaffir war (1850-53) and the second Burmese war (1852-53).

NEW PACIFIC CABLE.

FROM telegrams appearing in the American press we learn that the rumoured new cable under the Pacific will shortly be an accomplished fact. It is understood that a Commission report just presented to the British Government favours laying a cable at the earliest possible moment between Vancouver and Australia, under joint subsidies by England and Canada, certain of the Australian colonies, and New Zealand. It must touch none but British territory, leaving Hawaii to be tapped by a branch line. The cable will cost about £10,000,000 (gold) to be put down and be ready within two years. The project is now awaiting the approval of the Imperial Legislature. The *London Chronicle* definitely announces that the Pacific cable commission has finally signed its report. It says that the lowest tender for a Fanning island cable ranges from £1,517,000 to £1,880,000, according to whether a twelve, fifteen, or eighteen word per minute cable is laid.

COLLISION IN CHENMULEO HARBOUR.

In regard to the recent collision of the N.Y.K. steamer *Echigo Maru* with a British man-of-war in Chenmuleo Harbour, the *Nagasaki* journal learns that, when entering the harbour, the *Echigo Maru* managed to get athwart the ram of the *Narcissus*—the only British man-of-war in port—and tore a hole in her hull below the water-line amidships, 13 feet by 10 feet in extent. The vessel was rushed ashore and beached near-by to save her from sinking. Her engine-room was full of water and fires out when she was beached. A salvage party was to be despatched from Nagasaki, by the *Higo Maru*, as there are practically no facilities for executing such work at present existing in Korea.

MARRIAGE OF MISS GLOVER.

THE *Nagasaki Shipping List* says that owing to the sad death of Mr. James Baird (of Messrs. Holme, Ringer & Co.) two days before the date set for the marriage of Miss Glover and Mr. W. E. G. Bennett, which was solemnized in the British Church on Tuesday week by the Rt. Rev. Bishop Evington, D.D., the intended reception to the many friends of the bride and groom in Nagasaki, was considerably given up, and the wedding was of the quietest description.

KOBE FIRES.

ON Friday evening a fire broke out in a godown rented by Mr. Reich, of Kobe, and some 1,700

rolls of matting were either burned on damaged by smoke and water. The loss is covered by insurance.—On the 26th a fire broke out in the forebatch of the O.S.K. steamer *Shirakawa Maru*, while in the Inland Sea, and some damage was done to the cargo.

SIR RICHARD RENNIE.

SIR R. T. RENNIE has been temporarily appointed Supreme Judge of H.M.'s Supreme Court at Constantinople.

JAPANESE ILLUSTRATION.

We have received from Messrs Maruya & Co. specimen pages of Mr. E. F. Strange's forthcoming work on "Japanese Illustration." Mr. Strange says that his aim is to place within reach of the public a full account of chromoxylography and the art of book-illustration in Japan. He rightly explains that with the exception of Dr. Anderson's brochure, there has been no attempt to treat the subject thoroughly. Indeed the materials are not available. We are not aware that Mr. Strange has ever visited Japan. But that is not a serious impediment to his successful discussion of the Japanese printer's art, except in one respect, namely, that to fully understand the processes about which he writes, he ought to have seen them actually carried on, and we doubt whether he can have had an opportunity of doing so. From the pages before us, we gather, however, that Mr. Strange's purpose is not to initiate the general public into the practical methods of Japanese chromoxylography, but rather to make known its products, their history, their schools, and their chronology. He has had access to the best collections in England and presumably in France. We do not find, it is true, that he makes any mention of France, but it is impossible to suppose that any one undertaking to discuss any branch of Japanese art, above all, Japanese painting and its reproductions, would fail to have recourse to a country where there is more genuine and discriminating appreciation of the subject, and where there are finer collections, than in all the other countries of the world put together. Mr. Strange's work is to be of convenient size; the type is luxurious, the paper fine, and the illustrations appear to be excellent; though as to this last point the verdict must be qualified, since the specimen pages do not contain one of the eight colour prints that we are promised, but only two of the black-and-white pictures. In one respect the appearance of this work is a disappointment to folks in Japan. We had hoped that Mr. S. Tuke's monograph would soon occupy the field to the exclusion of all competitors. Mr. Tuke has spent years collecting information, materials, and specimens. We are fully persuaded that his knowledge of Japanese chromoxylography and book illustration far exceeds that of any one else, and that had he been able to embody, in a form accessible to the general public, the results of his long and intelligent researches, the work would have been an exhaustive monograph. But there is not much room in such a field, and with Mr. Strange's work immediately before him, Mr. Tuke will probably find difficulty in procuring a publisher.

THE CHARGE AGAINST MISS JACOB.

We are given to understand that the following was placed in the hands of Miss Jacob on Friday afternoon:—

A charge, by a private prosecutor, was laid in H.B.M.'s Court here on the 10th January, 1897, against Mary Esther Jacob, of having murdered one Walter Hallowell Carew, at this place.

A Preliminary Examination in the case was held before me as Assistant Judge of the Court, on various subsequent dates; and on this 5th day of February, application was made by the Prosecutor for permission to withdraw the charge. This permission was granted by the Court, and no imputation whatsoever in connection with this matter rests on Mary Esther Jacob.

[Consular Seal]

JAMES TROUP.
H.B.M.'s Consul.

British Consulate,
Yokohama, February 5th, 1897.

DEPARTURE OF THE REMAINS OF
THE LATE EMPRESS DOWAGER
FROM TOKYO.

On Tuesday the remains of Her Imperial Majesty the late Empress Dowager were carried from the Aoyama Palace and placed in the train for transfer to Kyoto, where the obsequies are to take place. This ceremony is called by the Japanese *Shitsu-kwan*, or the "exodus of the coffin." There has been no previous example of it during the *Meiji* era, and rumour says that long consultations and minute researches were required for the purpose of elaborating the various details. The observances commenced with a *salut d'adieu* in the Aoyama Detached Palace at 9 o'clock in the forenoon. The coffin stood in a recess so obscure that no objects could be distinctly recognised by persons entering suddenly from the sun-light. In front of it were placed a frame to receive memorial boughs of *shikimi*, and a box to contain votive offerings of viands, the whole divided by curtains of silk from the adjoining chamber, in which were assembled the Chief Mourner, H.I.H. Prince Arisugawa, Delegates from Their Majesties the Emperor and Empress, Princes and Princesses of the Blood, the Court Musicians, the Maids of Honour, the Ministers of State, several high officials of the Imperial Household, the principal *Shinto* functionaries and the Foreign *Chefs de Mission*. The Chief Mourner, the Imperial Delegates, the Princes and Princesses, the Court Musicians, the Maids of Honour and the *Shinto* functionaries all wore the ancient ceremonial robes of Japan. At about half past nine the curtain was raised, and the leading *Shinto* functionary, advancing to the side of the coffin, intoned a short prayer. The Court Musicians then struck up the peculiarly weird, wailing strains to which their instruments lend themselves so successfully, and to the accompaniment of these melancholy sounds a profusion of votive offerings of viands to support the spirit of the dead in its travels to the other world, were brought in, and laid with much solemnity in the box and on the stands before the coffin. Commencing with the Chief Mourner, the Delegates of the Emperor and Empress, and the Princes and Princess of the Blood, all the occupants of the outer chamber advanced, one by one, to the bier, and bowed before it, each depositing a branch of *shikimi* on the frame flanking the coffin. This part of the ceremony was slightly modified for the Foreign Representatives. They were each accompanied by a Minister of State, or, in the case of the ladies, by a Maid of Honour, and they dispensed with the offering of evergreen boughs. In the absence of Baron Gutschmid, Mr. Edwin Dun, United States Representative, acted as *Doyen*, and Count Okuma, Minister of State for Foreign Affairs, advanced with him to the coffin. The ceremony within the Palace did not extend beyond the above simple acts. Outside, at a later hour, troops were drawn up on either side of the road all the way from the gate of the Palace to the military station of Aoyama. They stood with fixed bayonets and arms at the present as the cortège passed between their ranks, a formation that looked much less impressive than the resting on reversed arms practised in the West. At precisely noon the coffin was

borne out of the Palace, the Guards' Band playing Chopin's Funeral March, its beautiful strains not a little marred by the music of the old-time performers on *fute* and *shichi-riki*. The procession was formed in the following order:—

1. Twenty Mounted Constables.
Mounted Inspector of Police. Twenty Mounted Constables.
2. A company of Cavalry of the Guards.
3. Two *Masakaki* stands, one on either side of the road, composed of five coloured silk streamers with mirrors pendant from the branches; each carried by *Shinto* officials dressed in light gray and white.
4. Forty white-brocade banners, twenty on either side of the road, borne aloft by men dressed as above.
5. Chief and officials of the Bureaux of Imperial Sepulchres, dressed in black; on foot.
6. Box containing votive viands, flanked on either side by *Shinto* functionaries, and followed by its trestles and rain covering.
7. Twenty-four *Shinto* functionaries, in three lines of eight each; the chief functionary at the rear of the centre line; all robed in gray and white.
8. Eight Court Musicians, in two lines of nine each; dressed in black.
9. Six massive sword-bladed halberds, borne aloft by men in gray and white.
10. Six stands of *sabaki* trees each carried by two men.
11. Assistant Master of Services, and four chamberlains to the late Empress Dowager on foot in full uniform, walking two on either side of the Assistant-Master.
12. Master of Services, on foot.
13. THE BIER
roofed with a black-lacquered canopy; draped with gray curtains and light-green blinds; supported on a massive black frame, and borne by seventy *shinto* functionaries, robed in black.
On either side Nobles in Waiting and Staff Officers of the Guards, alternately; followed by trestles and rain coverings.
14. The Chief Mourner.
15. Naval Officers, in full uniform.
Court Officials, in black.
Princes of the Blood, in ancient mourning robes (on foot).
16. Six Staff Officers of the Army riding abreast.
17. Assistant Mourner,
followed by four Commissioners of Funerals.
18. Ministers of State; Holders of the Grand Cordon of Honour; Officials of *shinin* rank; Privy Councillors, &c., in full uniform.
19. A Police Inspector, and four mounted constables, on horseback.

During the progress of the cortège to the Aoyama station, minute guns were fired.

On the whole, the ceremonial was not very impressive—nothing to what it will be in Kyoto. No carriages accompanied the cortège, and its dimensions consequently seemed comparatively small.

CURRENT POLITICS.

As more than once noted in these columns, anarchy has overtaken the various Political Parties, and rumours of a split in the ranks of this or that association appear constantly in the columns of Tokyo journals. In this respect the Liberals seem to present the worst aspect. The secession of one member after another proceeds with striking rapidity. One Parliamentary member representing an Ishikawa constituency and two others returned from the three Tama districts of Tokyo *Fu*, have now sent in their resignations to the Party's Office, and other Liberals representing constituencies in Kwanto and Kwansei are likely to follow suit. The three Tama districts are com-

monly regarded as an important stronghold of Liberalism in the Kwanto districts. Hence the disaffection of their representatives is expected to serve as a precedent to the members for Kanagawa Prefecture, and ultimately to the Liberals in the whole Kwanto districts. According to information given by the *Fiji Shimpō*, the seceders desire to organise an independent Liberal Party, and, for that purpose, are canvassing the north-eastern Liberals led by Mr. Kono Hironaka. These latter will not easily sever connection with the Party whose vicissitudes they have long shared under such varying circumstances. The four members from Kanagawa, however, are not so firmly attached: they are expected to send in their resignations soon. A point that has to be considered in this context is the attitude adopted by the constituencies that have returned Liberals, for if the constituencies remain constant, their deputies in the House of Representatives will be deterred from deserting their colours. The *Tokyo Shimbun* avers that the local Liberal electors in the Tama districts have decided to remain faithful, and that the recent secessions will tend to add to the stability of the Party by purging it of dubious friends and treacherous followers. Several of the constituencies whose representatives have broken away from the Party have sent deputies to Tokyo to demand an explanation from those seceders. Meantime, Mr. Ishida Kwannosuke, a member from one of the Hyogo constituencies, is also expected to sever his connection with the Party, and so are certain members sent up by Kyoto constituencies. In short, according to the estimate of the *Yoroku*, the Liberals will lose 15 members at least, in addition to the 10 that have already resigned. If so, the Party will be reduced to comparatively small dimensions: its numerical strength in the House of Representatives will not exceed 80 at most.

The *Shimpō-to*, for reasons variously stated, seem to possess greater stability than the Liberals. No split has yet occurred in their ranks. Nevertheless, there is said to be a strong feeling of discontent among a section of the Party, on account of the Cabinet's hesitation to follow its declared programme, and because of the alleged dropping out of some planks. Practically the Party is divided into two camps, one maintaining that the Cabinet must be supported even at the risk of being called blind partisans; the other taking the opposite view. The contagion of this internal trouble had spread to local politicians, and from Echigo and Fukushima deputies have already been sent up to advise their Parliamentary representatives to make a stand against the blind-adherence policy. These deputies have called on the General Commissioners and other leading members of the Party and have also waited on two or three Ministers of State. The General Commissioners and others have explained the peculiarly difficult situation in which the Cabinet is now placed, and declared their belief that the Ministers will ultimately act up to their platform; a declaration which has been confirmed by the Ministers themselves. They are said to have assured the provincial politicians that there shall be no deviation from the Cabinet's declared policy. These explanations and assurances, seconded by dexterous tactics on the part of influential *Shimpō-to* members, are expected to avert the danger of

a split. The *Jiji* adds that, speaking accurately, the Party may be considered to be subdivided into three different sections, namely, advocates of blind support, advocates of conditional adherence, and men that take their relations with the Cabinet and the Party in a rather less serious light, and are resolved to secede should they be convinced of the impossibility of carrying out their original views by moving in line with the Party. The second section is led by Mr. Suzuki Shigeto, the Nestor of the Party. He and his associates are of opinion that to blindly support the Cabinet would stultify the Party, which, consequently, must discriminate what is to be supported from what should be opposed. The third section, in view of the fact that they are inclined to keep silence and calmly observe the progress of affairs, are considered more dangerous and less likely to refrain from secession. But it is surmised that the advocates of conditional support will succeed in propitiating the so called "silent malcontents," and peace be restored among the Party.

Nothing particular is heard about the National Unionists since the split that involved 7 members. The Party's office and the seceders are playing battle-dore and shuttle-cock with the notices of resignation, sent in by the latter, the office wanting to treat the seceders as though they had been dismissed from the Party, whereas the seceders insist that they have resigned of their own accord.

We may note here that Messrs. Ishisaka and Sakura, Liberals, appointed a short time ago as Governors of Gumma and Yamanaishi Prefectures, respectively, are now believed to be faithfully obeying the instructions of the Central Office of the *Shimpo-to*, and are even trying to bring about a split among the Liberals.

THE REVISED TREATY BETWEEN JAPAN AND GERMANY.

Mr. Hatoyama, President of the House of Representatives, has contributed an essay to the last number of the *Taiyo*, discussing what he considers to be defects in the new Treaty concluded between Germany and Japan. The points raised by him are these:—

The privilege of a perpetual lease provided in the Treaty conflicts with the Civil Code, in which the maximum duration of a lease is fixed at 50 years.

The acquisition of the right of mortgage by foreigners conflicts with a Notification issued in 1873.

The acquisition of the right of owning land by a mercantile corporation established in accordance with Japanese laws, even though German subjects be employed as officers of the corporation, also conflicts with the law forbidding foreign subjects to own land within the dominion of Japan.

In these three respects Mr. Hatoyama considers that the new Treaty is in conflict with existing laws, and he then proceeds to enumerate faults of another description:

1. The permission to engage in the coasting trade.
2. The recognition of the validity of the perpetual leases now held by foreigners, without any condition other than those specified in the lease.
3. The failure to provide that infractions of the Law of Patents and Trade Marks should come under Japanese Jurisdiction immediately after the ratification of the Treaty.
4. The insertion of a provision amounting in practice to mixed residence.
5. The granting of permission to hold a mortgage on immovable property.

Commenting on the above, the *Keisai* observes that the objection against the participation of foreign steamers in the coasting trade does not differ much from the prejudice formerly entertained against the system of mixed residence; for, even granting, for the sake of argument, that the coasting trade be monopolized by foreign vessels, the interests of Japan would not suffer, seeing that the benefits accruing from the trade would be shared equally by foreigners and Japanese.

The recognition of the perpetual leases now held by foreigners not only conflicts with the laws of the realm, says the *Keisai*, but must also be condemned as highly injurious to the true interests of Japan. The Government must have been obliged to make that concession in view of the fact that a right acquired by prescription cannot be annulled, even though the Treaty originally creating the privilege be revised. But the *Keisai* argues that such an injurious and improper privilege ought to have been revoked at any price. The judicial question with reference to Patents and Trade Marks was also erroneously settled, as pointed out by Mr. Hatoyama, but the *Keisai* declines to endorse the other objections raised by that publicist.

THE POST OFFICE.

Our recent comments on the irregularities of the postal service attracted the attention of the General Post Office Authorities in Tokyo, and they have placed themselves in communication with us. It appears very difficult to ascertain the source of the irregularities. When a letter arrives three or four days late, with a number of tags attached to the envelope, its wanderings can be traced, as a general rule, and the cause of delay approximately fixed. But sometimes no such clues are available. For example, a letter, addressed in the clearest manner to the private residence of the editor of this journal in Tokyo, was posted at Shimbashi on the 18th instant, and reached its destination on the 22nd. It had taken five days to travel from Shimbashi to Nagatacho, places in the same city about one mile distant. The envelope bore no trace whatever of these wanderings. We conceived that the letter might possibly have lain at the bottom of the distributor's satchel, thus escaping his observation for several days; but it appears that the post office authorities are careful to examine every satchel before the distributor sets out with it and after he returns. In fact, there seems to be the greatest possible desire on the part of the directing officials to organize a mechanism that shall be virtually secure against all chances of error. Our own experience goes to show that the service in Kobe is particularly defective. Within the past two days we have received 5 letters complaining that the *Japan Daily Mail* of January 9th was not delivered in Kobe until the 25th instant. Our correspondents have sent us the wrappers. They all bear the Yokohama post mark of January 9th and the Kobe post mark of January 25th. There is nothing more: nothing whatever to indicate where the papers lay during the interval of 16 days. We have placed the matter in the hands of the Department of State for Communications, and trust that it may prove the means of leading to a strict investigation. Meanwhile, we have to thank our correspondents

for conveying the information to us, and especially for sending us the wrappers of the papers, for without such evidence a complaint addressed to the postal authorities can have little weight. The officials of the General Post Office in Tokyo are very desirous that all irregularities should be brought to their notice, and have asked us to inform our readers that complaints addressed direct to the Office will not only receive the fullest attention, but also be gratefully acknowledged as an evidence of the foreign public's desire to assist the Authorities in correcting abuses. Of course, the handling of letters and newspapers bearing superscriptions in English, German, or French only must always present difficulties to Japanese postal officials, and there are strong reasons for thinking that if the Government could afford to offer such emoluments as would draw into the postal service men possessing a fair knowledge of some European language, many of the irregularities now complained of would disappear. Indeed, our own opinion is that, in view of the great importance of securing efficiency in the transmission of letters, the Treasury's appropriations for the service are not nearly sufficient. Our inquiries have revealed the fact that many postal employes have to remain at the office from the morning of one day until the evening of the next, thus sleeping at home every second night only; and that they rest only one day in every ten. Over-work means bad work, the world over, above all when it is accompanied by insufficient pay. Until the postal service is organized in such a manner as to be above all reasonable complaint, no profit ought to be derived from it by the State. That is an axiom in all enlightened countries. There appears to be no lack of zeal and industry on the part of the postal officials and employes. Better remuneration and a larger staff are the desiderata. The House of Representatives, by its blind anxiety to cut down administrative expenses in all directions, has interfered most mischievously with the progress of the nation.

REPRIEVE OF MRS. CAREW.

HER MAJESTY'S CONSUL has received a despatch from HER MAJESTY'S MINISTER, Tokyo, to the effect that he has had under consideration the subject of the sentence of death passed in H.M. Court, Yokohama, on the 1st inst., on EDITH MAY HALLOWELL CAREW, for the murder of her husband, and that, in view of the Imperial Proclamation of H.M. the EMPEROR, dated the 31st ult., granting to all Japanese subjects under sentence on that day a remission of punishment, it appears proper that a similar measure of grace should be extended to the criminal in this case, whose trial in a Court sitting in HIS MAJESTY'S dominions had been proceeding for some days before and was about to be brought to a conclusion at the time of HIS MAJESTY'S Proclamation. HER MAJESTY'S MINISTER has accordingly decided not to direct that the sentence of death be carried into execution, and in virtue of the powers conferred upon him by the Order in Council, 1865, and otherwise, has directed that, in lieu of suffering capital punishment, Mrs. CAREW shall be imprisoned, with hard labour, for life.

INDUSTRIAL ENTERPRISE SINCE THE WAR.

We find in the *Tokyo Asahi* some interesting statistics with reference to the development of various industrial and commercial enterprises since the war. It is supposed that the fever of speculation caused by the war has now begun to calm down, for during last month (December) the capital invested was comparatively small, as the following figures show:—

ENTERPRISES STARTED DURING DECEMBER, 1896.	
	Capital.—Yen.
Railways	27,090,000
Banks	2,065,000
Companies	3,705,000

Total 32,860,000

Taking, now, the period from January 1st, 1895, to December 31st, 1896, it appears that the enterprises newly started, or those that increased their capital, were as follow:—

	Yen.
Railways	783,010,290
Banks	161,625,000
Companies	334,854,000

Total 1,279,489,290

Of the above total, the year 1895 is credited with the following:—

	Yen.
Railways	229,780,290
Banks	39,220,000
Companies	70,840,000

Total 339,840,290

The record of 1896 is:—

	Yen.
Railways	553,230,000
Banks	122,405,000
Companies	264,014,500

Total 939,649,500

During 1896, the month of greatest activity was January, when enterprises representing 148,000,000 *yen* were started, and the month of least activity was December, when, as stated above, the capital involved was only 32,000,000 *yen*. Considered with reference to the various kinds of enterprises, it appears that railway speculation was most active in August, when 93,000,000 *yen* was invested; and least active in March, when the investments aggregated 17,000,000 *yen* only. In the case of Banks, the largest figure was recorded in January, namely, 35,000,000 *yen*; and the smallest in May, namely, 900,000 *yen*. Company enterprise showed its maximum development in January, when 65,000,000 *yen* was involved; and its minimum in December, when the figure was only 3,700,000 *yen*. Our contemporary adds that many of these enterprises were started without any hope of consummating them, but it is, of course, scarcely possible to differentiate the *bond fide* from the bogus.

RAILWAYS IN JAPAN.

The *Tokyo Asahi* gives the following figures as exhibiting the state of railway enterprise in Japan at the close of December last:—

Mileage of lines opened	4,690 miles
Capital	266,669,460 <i>yen</i>
Mileage of lines for which temporary charters have been granted	1,543 miles
Capital of the above	69,870,500 <i>yen</i>
Mileage of lines for the construction of which charters have been sought by private companies	12,351 miles
Capital of the above	606,908,274 <i>yen</i>

THE AMNESTY & IMPERIAL GIFT.

Convicts whose term of service was commuted, in accordance with the special Imperial Ordinance issued on the 31st ult., aggregated 63,485 throughout the whole of Japan; and of these 13,289 were liberated, exclusive of prisoners in Hokkaido, where 2,495 have been set free, the total number liberated being thus 15,782. Taken by localities, the statistics of liberated convicts are as follow:—

Tokyo	763	Wakayama	223
Niigata	322	Kumamoto	247
Aichi	576	Chiba	229
Iwate	115	Shiga	197
Shimane	224	Akita	166
Kochi	292	Yamaguchi	112
Nagasaki	203	Saga	150
Miyagi	315	Hyogo	585
Fukushima	319	Nara	226
Tottori	134	Miyagi	220
Ehime	253	Yamaguchi	104
Okina	33	Kagawa	245
Osaka	680	Kanagawa	221
Gumma	343	Tochigi	290
Yamaguchi	207	Nagano	339
Yamanashi	132	Ishikawa	118
Hiroshima	357	Tokushima	261
Oita	196	Miyagi	134
Saitama	294	Tykyo Peniten-	
Shizuoka	250	tary	334

Fukushima	8,800	Iwate	6,100
Akita	6,800	Fukui	5,400
Tottori	3,600	Shimane	6,100
Yamaguchi	8,200	Wakayama	5,600
Ehime	8,300	Kochi	5,200
Saga	5,100	Kumamoto	9,500
Okinawa	3,800	Formosa	15,000

OPERATION OF THE AMNESTY.

According to statistics published by the *Fiji Shimpō*, the prisoners now undergoing sentences in Tokyo jails, who will benefit by the amnesty, are as follow:—

PRISONERS WHOSE SENTENCE WILL BE REDUCED BY ONE DEGREE.

Life Convicts	9 Females.
Term Convicts	11 Females.
Penal Servitude Convicts	464 Males.
	54 Females.
Major Confinement Convicts	3,101 Males.
	1,090 Females.
Minor Confinement Convicts	51 Males.
	2 Females.

Total 4,782

THE EXPANSION OF THE NAVY.

According to the *Mainichi Shimbun*, the Naval Expansion programme of the last Cabinet has been modified by the present Ministry, in so far as the first-class cruisers are concerned. The Ito Cabinet's idea was to have two first-class cruisers built in the first period and two in the second period, the ships to be of 7,500 tons displacement, and protected only slightly below the water line. It has now been determined to increase the number of these vessels to six and their size to 9,000 tons, and to have them protected below the water line as well as above. Such is the *Mainichi's* assertion. If these plans be carried out, the Japanese Navy will include six first-class cruisers of 9,000 tons each, four line-of-battle ships, of 14,000 tons each, approximately, besides the *Fuji* and the *Yashima*. There has been some talk lately of the number of armour-clads for the two periods being reduced from four to three, but we can find no confirmation of the report. The Cabinet's tendency is evidently in the other direction. The *Mainichi* ascribes the change in the number and design of the cruisers to the fact that affairs in the East do not look as tranquil as could be desired, especially in the direction of Korea and China, and that, consequently, the strength of the Navy, as contemplated by the Ito Cabinet, does not appear sufficient. The additional protection to be given to the cruisers is ascribed by our contemporary to the use of shells containing high explosives, which have now come into vogue, and are likely to be terribly destructive.

No official declaration having been published as to the details of the Naval Expansion Scheme, there has always been some uncertainty about it. Accepting the *Mainichi Shimbun's* assertion, as quoted above—though we must frankly say that we do not believe in six cruisers—the facts about Japan's Navy would be these. When the war was over, she possessed 43 serviceable vessels—torpedo boats, of which she had 26, not being included—their aggregate displacement being 78,774 tons. Out of that total, 10, with an aggregate displacement of 15,055 tons, had been captured from China: namely, an armour-clad turret ship (the *Chen-yuen*, now the *Chen-yen*), of 7,335 tons, 2 steel cruisers, 6 steel gun-boats, and 1 wooden vessel. Prior to the capture of the *Chen-yuen* she had never owned a line-of-battle ship. Her fleet consisted of comparatively small vessels—4 cruisers of over four thousand tons each; 4 of over three thousand tons; 4 of over two thousand; 6 of over fifteen hundred, and the rest gun-boats, sloops, &c. Two first-class battle-ships were, however, in course of construction to her order; the *Fuji* (12,649 tons) and the *Yashima* (12,517 tons), which will soon arrive in the East. These two big ships were entirely independent of the expansion programme elaborated after the War: they had been ordered long before any prospect of hostilities presented itself. There were also on the stocks, two steel cruisers (2,700 tons and 2,800 tons, respectively), and a steel despatch vessel (1,800 tons). Thus, before the expansion scheme was formed, Japan's Navy may be reckoned as consisting of 48 ships, with an aggregate displacement of 111,240 tons, and 26 torpedo boats. The expansion programme, accepting the *Mainichi's* very

doubtful correction, seems to stand as follows:—

	Tons.
4 line-of-battle ships of 15,140 tons each	59,560
6 first class cruisers of 9,000 tons each	54,000
3 second class cruisers of 4,800 tons each	14,400
3 third-class cruisers of 3,200 tons each	9,600
3 torpedo gun-boats of 1,200 tons each	3,600
1 torpedo depot-ship	6,750

We have here 19 ships with an aggregate displacement of 145,860 tons. The programme further included 11 torpedo-destroyers and 89 torpedo boats. Hence, finally, it appears that the Japanese Navy, in 1906, will consist of 67 ships, having an aggregate displacement of 257,100 tons, 11 torpedo-catchers, and 115 torpedo boats. Classified according to the nature of the principal ships, the result is:—

6 first class line-of-battle ships, ranging from 12,517 tons to 15,140 tons.
1 second class battle-ship of 7,535 tons.
6 first-class armoured cruisers of 9,000 tons each.
7 second-class cruisers of over 4,000 tons each.
6 third-class cruisers of over 3,000 tons each.
12 fourth-class cruisers of over 1,500 tons each.

If, however, the *Mainichi* be wrong as to the number of first-class cruisers, then the Navy will consist of 65 ships with a total displacement of 239,100 tons, besides torpedo craft.

It is evident, at all events, that before nine years have passed, Japan will possess a very formidable Navy.

THE AMNESTY.

The news that their sentences might be commuted, and in some cases remitted altogether, seems to have been quite unexpected by the prisoners in the jails of Tokyo and its vicinity, and, indeed, throughout the country at large. With what delight and gratitude the announcement was received may be gathered from the reports given in the vernacular papers. It is true that some slight hope of a measure of mercy was entertained by a few of the prisoners who had knowledge of the ancient customs followed in pre-Restoration days, but the knowledge was limited to a very small number, and as communication is strictly forbidden among the inmates of prisons, the great majority remained entirely ignorant of the welcome possibility.

On the evening of the 30th ult., the lecture hall of the Sugamo Prison was duly prepared, and at 8 o'clock on the following morning, more than 2,200 prisoners, then confined in the jail, were summoned to the Hall. The prisoners are said to have supposed that they were about to receive some instructions about their behaviour during the period of mourning. Presently, M. Yamada, Chief of the Metropolitan Police, followed by Mr. Yamashita, Chief Warden of the Police Board, and Dr. Nanjyo, a well-known Buddhist priest, entered the Hall. The announcement of the amnesty and the exact nature of its effects were made known to the prisoners by the Chief of Police and the Chief Warden, who spoke at some length about the graciousness of the Imperial act of clemency, and the obligation that devolved upon the recipients of the favour to become law abiding and loyal subjects of the Emperor. Dr. Nanjyo then preached a sermon, much in the same sense, its purport being that, in return for the grace extended to them, the convicts must spare no pains to become honest and industrious members of the community. The names of those to be liberated and of those whose terms of punishment would be reduced, were then read aloud. It is said that the joy shown

by the prisoners was most affecting, and that, for some twelve minutes, the hall was filled with murmurs of delight mingled with sobbing. The prisoners were then led to another room, where those to be liberated underwent medical examination, and were required to replace their red prison garb for a blue costume. Divided into parties of 20, they were next conducted elsewhere to receive the effects that had been in their possession at the time of entering the prison. The accounts from which we take these details say that the doffing of the prison costume and the donning of their own old clothes did not contribute to either the comfort or the appearance of the prisoners, for some found themselves in their summer garments, and others in the shabbiest, if not the raggedest of suits. A number of constables and inspectors of the Koishikawa Police Office were waiting at the gates of the prison to escort the prisoners coming under the jurisdiction of that office, to whom "surveillance tickets" were given; while to those that had to be sent to other Police Offices, tickets of leave were handed, which they were to carry to the respective offices for exchange with "surveillance labels." Relatives and intimate friends of the liberated convicts were also waiting at the gates, and some touching scenes are alleged to have been witnessed. By about 3 p.m. the process was concluded at the Sugamo Jail. Intelligence as to what took place at the Ichigaya, Kosuge, and Hachioji prisons does not differ materially from the above, with this exception that the inmates of the Ichigaya prison being women, their excitement was shown in a more marked manner. One elderly female, known by the unenviable sobriquet of "Robber Katsu," who had been sentenced in 1895, to three years' penal servitude, was thrown into such a delirium of delight at the unexpected news of recovered freedom, that she fainted away, and had to be carried on a shutter to the Kanda Prison. The notorious Hanai Ume who, some ten years ago, passed from the gay life of a *geisha* to the horrors of penal servitude for life, and whose story found a place in Mr. Norman's "Real Japan," had her sentence commuted to 15 years, 5 of which she has still to serve. The record of her prison life is not good, and she consequently benefited less by the amnesty than would otherwise have been the case. The villain of the Soma tragedy, Nishigori Gosei, had his term reduced by a fourth, and will therefore be liberated on May 3rd of this year. In the prisons under the control of the Metropolitan Police 694 men and women were liberated, and there yet remain 2,902 prisoners in all. The number of persons lying under sentence of capital punishment within the jurisdiction of Tokyo city, on the 31st ult., was 15, but of these 14 had appealed against the sentence, and in the case of one only was the judgment final. That one has had his sentence commuted to imprisonment for life.

It would appear that not a few of these liberated convicts are incorrigibly addicted to evil ways, and not at all disposed to be turned into virtuous paths by the magnanimity of the Court. Among some sixty who, having been set free, are under surveillance by the Fukagawa Police, 14 hid themselves on the very evening of their liberation, and of these one, who was undergoing his tenth sentence for larceny at the time of the amnesty repeated his old offence at Asakusa on the evening of

the 1st inst. It is still unknown whither he and the others have fled.

Another convict set free from the Yokohama Prison, perpetrated a theft at Hodogaya, while on his way to his home in Shizuoka Prefecture. Early on the morning of the 3rd inst., two constables, going their rounds in Nigiwai-cho, Yokohama, observed a suspicious-looking man carrying a bundle. They stopped him, and found that he was wearing several suits of clothes. Questioned minutely, he confessed to having broken into a house in Hodogaya, and carried away the clothes with the intention of selling them in Yokohama. His last sojourn in Yokohama prison was under sentence for his third offence of larceny. Another instance has been telegraphed to the *Fiji* from Okayama. One of the liberated convicts there escaped while being escorted to the place of his registration. It is to be feared that many more cases of the kind will occur later on.

NAVIGATION ENCOURAGEMENT LAW AND SHIPOWNERS.

Apprehensive lest the bounties to be granted under the laws for encouraging ship-building and navigation might assume undue proportions unless some limitations were imposed, the Government, we read in the *Fiji*, issued special regulations with reference to the nature of ships qualified to receive a bounty. These regulations being so stringent as virtually to cancel the privileges offered by the new law, ship-owners naturally expressed great dissatisfaction. The Government estimate that the number of steamers likely to claim bounties under the Encouragement Law will be 35 during the next fiscal year, and have inserted in the Budget an item of a little over 1,700,000 *yen* on that account. But it is said that no steamer now in Japan is qualified for a bounty, according to the Construction Regulations, and that, therefore, the sum set aside on this account will not be expended during the year. In this context what the Yusen Kaisha and the Toyo Kisen Kaisha—both of which companies are vitally interested in the bounty question—have to say on the subject is worthy of all consideration. It is true, the Directors of the Yusen Kaisha are represented as saying, that the Company had already resolved to extend its sphere of operations, sooner or later, to Europe and America, even though no legislation for encouraging navigation took place. But it is not less true that the enactment of the Encouragement Law acted as a powerful stimulus to the shareholders of the Company, when, at a general meeting held last year, they decided to carry out at once their long cherished idea and to open regular services to Europe and America, in pursuance of which resolution the Company placed orders in England for the construction of 10 new steamers. Since then, to the consternation of the Company and of all other ship-owners, stringent regulations about the style of construction of steamers have been issued, with the result that the Company has been obliged to alter the design of the 10 steamers under construction in England, a step involving no small additional expenditure. For instance, one of the new steamers expected to start from England this month for Japan has been considerably delayed owing to the necessity of modifying the build. That in it-

self was a hardship, but the case of the steamers already in the possession of the Company is far worse. Not one steamer now on the Company's list seems qualified for a bounty, according to the provisions of the Regulations. When, with the view of obtaining a bounty for steamers used on the European line, the *Yamaguchi Maru* was submitted for inspection by the Authorities, she was subjected to such a rigid process as to injure her hull considerably. A whole month was needed to restore her to her original condition. Yet she obtained only 97 points out of a 100, and was rejected because of being 3 points short. She might have passed this difficult inspection if various repairs had been undertaken, but that would have involved considerable delay and expense. Such being the case with the *Yamaguchi*, which stands at the head of all the steamers in the Company's possession in point of build, durability, and so forth, the result of an inspection in the case of other steamers may be easily inferred. The Company has no idea whatever of consulting its own interests alone in the matter, but simply wishes to have things conducted in a fair manner. The Construction Regulations are universally considered to be too rigorous, but the Encouragement Law is equally admitted to be defective. What the Company desires is to see the Law withdrawn in favour of Subsidy Regulations awarding special subsidies to steamers running on such important lines as the European, the American, and so forth. But if that be not permissible, the Law should be amended and the Construction Regulations should be made more lenient, the rate of bounty being, at the same time, reduced. If neither of these courses can be adopted, if the existing Regulations must stand unaltered, then the Company will have no choice but give up the European and American services for the present.

The case of the Oriental Steamship Company is not so hard as that of the Yusen Kaisha, for it does not yet possess steamers of its own, but has to build or purchase. Hence the enforcement of the strict Construction Regulations affects the interests of the Company only to the extent of calling for a larger investment of capital. The Company has already ordered the construction of three steamers of 5,000 tons each, with a speed of 16 to 17 knots, for the purposes of its American line. As the designs of the steamers have passed the examination of the Inspection Authorities, they may be expected to be found fully qualified for a bounty. The building is to be completed by the fall of the year. The purchase of three tank steamers is not yet consummated, though statements to that effect have appeared in certain papers.

We may supplement the above by saying that the action of the Authorities in this matter seems to be another case of doing violence to the spirit of a law for the sake of adhering to its letter. It is certainly right that the public money should not be spent indiscriminately for the purpose of encouraging ship-building. Regulations determining the structure of a vessel in order that she shall be qualified for the receipt of a bounty are essential, and no Company could justly object to their enactment. As for the Regulations now in question, we believe them to be virtually a transcript of the regulations followed at Lloyds, and if English ship-builders and ship-owners are

content to abide by their provisions, we see no reason why Japanese should complain. But a very great deal, everything in some cases, depends upon the manner of applying regulations. There must be some exercise of intelligent latitude. To stick slavishly to the exact text of a law where ship-building is concerned, would be essentially mischievous, for the science of ship-building is progressive, and the requirements of a law enacted last year might be found quite obsolete a year or two hence. Lloyd's surveyors have never shown any unreasoning conservatism of that kind. They read the regulations by the light of the time, and do not pretend to be so foolish as to imagine that because the measurements of a ship just built in a first-class yard, do not tally exactly with the measurements prescribed by regulations framed some time ago, therefore the ship must suffer in classification. The changes of design that the Directors of the Yusen Kaisha have had to make in their ships now building in England are probably the reverse of improvements. If the regulations are unalterable, so too must be the manner of constructing ships designed to comply with their provisions—an obviously mischievous necessity. On the other hand, a ship like the *Yamaguchi Maru*, built eight years ago, may not conform with all the stipulations of regulations enacted yesterday, though she was of the highest class at the time of her launch. Why should such a ship be disqualified for a bounty? There is some excuse for rigidly applying regulations to vessels about to be constructed, but to debar a steamer because her qualifications, which were the highest possible eight years ago, are not the highest possible now, is quite unreasonable. According to the present system the so-called "Law for the Encouragement of Navigation and Ship-building" is likely to prove, in practice, a law for the discouragement of either.

CURRENT TOPICS.

According to a Government Delegate's explanation at one of the Budget Committee's meetings, the amount of the Indemnity brought to Japan up to the 11th of December was as follows:—

Amount of Indemnity received	£22,496,045	6s. 6d.
Amount brought over in gold specie	2,091,103	8s. 6d.
Amount brought over in silver specie	2,912,579	8s. 6d.
Amount transferred by process of exchange	5,07,000	0s. 0d.
Amount devoted to Government payments	738,761	16s.

Total

Remaining in England and Germany.....

£21,685,001 23s. 6d.

£22,496,045 6s. 6d.

Owing to evils incidental to all Japanese manufactures, namely, deterioration of quality, the export of the silk stuff called *Kaiki*, which is produced chiefly in Kai, Kiryu, Ashikaga, and Hachioji, fell to a very low figure at the end of last year. Since then the weavers have organized themselves into a guild and are endeavouring to restore the reputation of their staple. How far they have succeeded and how far custom has been recovered are points not yet clear. Korea is now one of the best purchasers of this kind of stuff. Assuming that Kai and the other weaving centres produce about 50,000 *hiki* (pieces of 21½ yards) per annum, about one-fifth to said to go to Korea. Though inferior in point of lustre and durability to Chinese stuffs, *Kaiki* has the redeeming quality of being cheap and comparatively durable. Hence the favour in which it is held in Korea.

THE BUDGET COMMITTEE'S AMENDMENTS.

The deliberations of the Budget Committee were brought to a conclusion at 4 p.m. on the 1st inst., and the Committee's report was at once placed in the hands of the President of the House of Representatives. The period allowed by law for the Committee's deliberations is only 15 days, but, owing to various circumstances which prevented speedy progress, the days of the Committee's actual session were only 10, if we exclude the days devoted to mere technicalities. The chief amendments recommended by the Committee are as follow:—

FOREIGN OFFICE.

Of four new Legations that the Government proposed to establish, those in Siam and Hawaii are approved, but those in Mexico and Brazil are rejected. Of five new Consulates, those in Sydney and Antwerp are approved, but those in Chicago, Manila, and Newchwang are rejected.

The secret service fund is cut down from 80,000 *yen* to 60,000 *yen*, the latter being the sum appropriated in the previous Budget.

HOME OFFICE.

In this Department, the secret service fund of 100,000 *yen* is reduced to 57,000 *yen*, which is the amount voted for the same purpose last session.

ARMY.

The only reduction effected in this Department is a retrenchment of 30,000 *yen* in an appropriation of over 230,000 *yen*, on account of new buildings.

DEPARTMENT OF EDUCATION.

The local school inspection fund of 63,000 *yen* is struck out.

DEPARTMENT OF COMMUNICATIONS.

The Telephone expansion fund, standing at 577,373 *yen* in the original Budget, is amended to 2,026,298 *yen*; the Government Railway Improvement fund is increased from three million *yen* to 3,600,000 *yen*. However, as the Government itself had introduced amendments in this sense, the changes cannot be fairly attributed to the Budget Committee. The two appropriations, thus amended, are in the form proposed by the financial programme of the preceding Cabinet.

The subsidy to the Hokkaido Tanko Railway Company is promised until the 33rd fiscal year. Hence the Treasury stands pledged to pay the Company further sums totalling 230,000 *yen*, approximately. The Budget Committee recommends that the Government open negotiations with the Company with the object of reducing the aggregate amount of subsidies to 160,000 *yen*. The Committee's idea is not so much to retrench official expenditures, as to effect a modification of an agreement which has provoked much popular dissatisfaction.

The two items of Telephone Service Expansion and Improvement of State Railways having been restored to the form suggested by the preceding Cabinet, the Public Undertakings Loan will have to be increased, says the *Nippon*, to 61,320,000 *yen*, or over 66 million *yen*, if the Railway Loan of 5 million *yen* be added.

POSTHUMOUS NAME OF THE EMPRESS DOWAGER.

It has been decided that the posthumous name of the late Empress Dowager shall be *Yeikwo Kotaike*, or Supremely Illustrious Empress Dowager. Vernacular newspapers state that the practice of giving such names to deceased members of the Imperial Family used to be invariably followed in ancient times, but fell into abeyance from the time when the administrative power was usurped by the military aristocracy.

EMOLUMENTS OF SCHOOL TEACHERS IN JAPAN.

An Imperial Ordinance, issued under date of December 29th, 1896, over the signature of the Minister President of State and the Minister of Education, must have been hailed with delight by public school teachers. The Ordinance is designed to ameliorate the condition by increasing the stipends of these hitherto most wretchedly paid officials. The Ordinance provides, among other things, that the average monthly salary of teachers in ordinary common schools in towns containing over 100,000 inhabitants, shall be 16 *yen*; 14 *yen* in towns of smaller population, and 12 *yen* in urban and rural districts. Teachers in higher common schools are to have an average of 20 *yen* per mensem in towns of over 100,000 inhabitants; 18 *yen* in towns of smaller populations, and 16 *yen* in urban and rural districts. These, it will be observed, are the average figures. As for the minimum stipend, it is fixed at 10 *yen* in the case of a male teacher in a higher common school; 8 *yen* for a female teacher; 7 *yen* for an assistant male teacher, and 5 *yen* for an assistant female. Turning, finally, to the ordinary common schools, we find that the minima for male teachers and assistant teachers are 8 *yen* and 6 *yen* respectively, and that the corresponding figures for females are 5 *yen* and 4 *yen*.

With regard to the effect of this Ordinance in increasing the emoluments of common-school teachers, a tolerably accurate idea may be formed from the case of Tokushima. In that prefecture there are 19 teachers of higher common schools, drawing an average salary of 9.52 *yen*; and 59 teachers of ordinary common schools, whose average stipend is 8½ *yen*. Estimated at the average rate of 18 *yen* for the former and 14 *yen* for the latter, the outlay for higher common-school teachers will be increased by more than 1,600 *yen*, and that for teachers of inferior standing by 3,800 *yen*, approximately; that is to say, a total of over 5,500 *yen* divided among 78 teachers. These figures are exclusive of salaries for assistant teachers. In other words, the educational expenditure on account of the prefecture of Tokushima will be increased by 25 per cent. Tokushima has had terrible experiences in the matter of inundations during recent years, and its inhabitants may murmur about this addition to their burdens, but Japanese publicists must welcome the reform as absolutely essential. Passing from Tokushima to the country at large, we find this comparison, namely, that whereas the average monthly stipend of common-school male teachers ranged from 12.906 *yen* to 7.455 *yen*, at the close of 1895, it cannot henceforth be less than 12 *yen*, though individuals may receive as little as 8 *yen*. The figures are still painfully small, however, especially in the case of women. An assistant female teacher in a common-school at 4 *yen* monthly, or, say, three pence three farthings a day, suggests a person perpetually crushed by poverty. It is scarcely conceivable that any girl should deliberately undertake to equip herself for the position of a teacher when the reward of success is so paltry. Some time ago, we published statistics showing that the average yearly emolument of licensed teachers throughout the empire was 118 *yen*, and the emolument of temporarily licensed, or assistant teachers, 64 *yen*; which means,

9.83 *yen* and 5.35 *yen*, respectively per month. In fact, numbers of these men were in receipt of incomes such as a *betto* or a house-servant would reject with scorn. That was a state of affairs calling loudly for remedy, and although the measure of relief now afforded is still small, educationists will welcome it with profound gratitude. The measure redounds to the credit of the Matsukata Cabinet, and we venture to congratulate H.E. Marquis Hachisuka most heartily that his name is associated with a reform so excellent. After all, a *yen* signifies to a Japanese about as much as half-a-sovereign does to an Englishman, and if we were asked to express the emoluments of Japanese teachers in sterling, that is to say, the emoluments prior to the Ordinance just issued, we should say that they ranged from about sixty to thirty pounds annually. If Count Matsukata and his colleagues would now approach the question of the Judiciary's salaries in a similarly liberal spirit, they would stand credited with two of the most beneficial reforms of the *Meiji* era.

ARMAMENT EXPANSION EXPENSES.

It is stated by the *Shogyo Shimpō* that, according to explanations given by the Government Delegates to the Budget Committee of the House of Representatives, the total expenditures of 294 million *yen*, in round figures, on account of Army and Navy Expansion, are to be divided as follows, with reference to the manner of payment:—

Payments from the Indemnity ...	196 million <i>yen</i>
Payments in the form of Loan	
Bonds	77 " "
Payments from the General Revenue	21 " "

The question of the Public Undertakings Loan, to be floated during the approaching fiscal year, has naturally become a subject of much speculation. Money is decidedly tight in Japan at present. Omitting subsidiary coins, and noting that gold and silver virtually perform no part as media of exchange in Japan, we may say that the total volume of the circulating currency, including convertible notes and Treasury and Bank notes, does not exceed 240 million *yen*. With that sum—quite paltry when compared with the floating capital of any important nation in the West—the Japanese have been building railways, purchasing ships, starting numerous industrial enterprises, and otherwise spending money freely during the past decade. The limit of a *yen*'s potential activity is an unknown quantity, but that it has been pretty nearly reached is proved by the great difficulty that enterprising men now experience in obtaining accommodation, and by the high interest that banks are willing to pay on fixed deposits. Under such circumstances, the possibility of successfully floating a five-per-cent. domestic loan of over 59 million *yen*, looks decidedly remote. The Budget Committee in the Lower House has been investigating the problem, and in the *Fiji Shimpō* we find a statement of the opinion expressed by the Minister of State for Finance, in reply to queries from the Committee. The gist of His Excellency's view is that, although the immediate floating of the loan would be out of the question, the chances of getting it subscribed by and by are good; for from this time onward large amounts from the indemnity

will pass into the hands of the people, and they will be glad to find a means of investing the money. In a word, the Treasury looks forward to paying out the Indemnity with one hand, and drawing it back with the other.

THE "CASSINI CONVENTION."

Two writers, apparently, have discussed the "Cassini Convention" in the *Saturday Review*. At all events, their point of view is different. One considers the effect of the Convention, assuming it to be true; the other briefly examines the internal evidences of truth or falsehood furnished by the document itself. Both are in exact agreement with what we ourselves wrote on the subject when the "Convention" was published by the *North-China Daily News*. More than one local English newspaper has declared that Russia's doings in Manchuria matter nothing to England, and that Her Majesty's Government may look on complacently even though the littoral of the Yellow Sea, the Regent's Sword Peninsula, and the northern coast of the Gulf of Pechili fall under Russian sway. Against such a view we have always contended. For although we are not among those that abuse Russia for extending her sphere of influence and supremacy, for doing, in short, precisely what England herself is continually doing, we cannot choose but recognise the radically different consequences of the two Powers' expansion: free-trade England throwing open to the whole world's commerce every square mile of territory added to her dominions; protectionist Russia employing all means to exclude every nation except her own from the territories governed by her. Commenting upon the facts that Great Britain's total trade with Africa, which a century ago was £600,000, is now forty-three millions sterling, and that out of that fine total, over forty millions is with districts under British control and only two millions with non-British Africa, one of the writers in the *Saturday* says:—"At present our trade with China stands to that of other countries somewhat, let us say, in the same proportion. How long would that proportion last if Russia held Manchuria, if there was a Russian railway terminus at Port Arthur, and Russian soldiers entrenched along the Straits of Pechili, and if France in the south had followed the good example set her in the north?" As to the reality of the Convention, the other writer in the *Saturday* classes it with "tales which suggest doubt by their completeness." We dare say that even the journalists in the Far East who extended readiest credence to the "Convention" when it was published, have by this time learned to share the conviction expressed by us from the outset, namely, that the elaboration and conclusion of such an agreement by responsible Russian and Chinese statesmen can not be credited for an instant. The public are always reminded, whenever these strange betrayals of diplomatic secrecy occur in China, that the venality of Chinese secretaries and Chinese officials furnishes a means of access to all Peking archives. But there is another side to that doctrine, namely, that the same venal unscrupulousness may easily furnish access to imaginary archives. If any Chinaman is prepared—which we greatly doubt—to perfoliate a State paper and betray its contents, why should he not also be

ready to manufacture bogus State papers and sell them as genuine? Why not, indeed? So long as the editors of foreign local journals, or the agents of foreign Powers, offer a fine market for such commodities, a supply is likely to be forthcoming. We have been favoured by the *North-China Daily News* with two bogus agreements between China and Russia. That line of sensation has now been pretty nearly extended to its limit.

MRS. CAREW'S REPRIEVE.

Sir Ernest Satow has shown much tact in his method of reprieving Mrs. Carew, and wise clemency in the fact of the reprieve. Very few of the British residents were aware, we imagine, and certainly we ourselves were not, that a power so great is vested in the Queen's Representative at the Japanese Court. As to the propriety of the arrangement there can be no question. Justice, to be effective, must be speedy, and so long as the Sovereign's signature is needed to give validity to a death warrant, authority to sign in lieu of the Sovereign must of necessity be delegated to the British Minister in a distant country where Her Majesty's Courts exercise jurisdiction under a special Convention. It would be intolerable if the execution of a sentence had to be delayed until reference were made from Tokyo to London. Being, then, invested with authority to sign a death warrant in his capacity of the Sovereign's Representative, Sir Ernest Satow necessarily possesses also the power of reprieve. Never before, however, has there been any occasion to exercise that power in Japan, and we count Sir Ernest Satow most fortunate that it has fallen to his lot to save a lady from a felon's death. If Mrs. Carew be guilty of the cold-blooded murder of her husband, everybody must desire that she should receive adequate punishment. But the day has long passed when civilized humanity could tolerate the idea of executing a woman on the scaffold, and though Judge Mowat had no choice but to pronounce sentence of death, Sir Ernest Satow has been able to step in and avert a consummation that would have shocked the British people. It must have occurred to Sir Ernest, on carefully perusing the evidence, either that Mrs. Carew is innocent of the crime laid to her charge, or that she can not be held entirely responsible for her actions. In either case her execution would have been a horror and an injustice. If she is innocent, time is now afforded for the operation of the invincible power in which we have all learned to trust at the darkest crises of our lives, the power of truth. If she is irresponsible, a shocking tragedy has been averted. Under any circumstances, justice has been tempered with mercy. We confess that it disturbs our sense of proportion to speak, in the same breath, of the fact that Her Majesty's Minister has been able to impart to his well-judged act a complexion of sympathy with the present mourning of the Japanese nation, and with the measures adopted by the Sovereign of Japan to pay respect to the memory of the late Empress Dowager. Still it will be recognised by the world that Sir Ernest Satow's solution of a difficult problem evinces very admirable tact, and that consideration cannot but augment the satisfaction felt by His Excellency's nationals on learning of the reprieve.

DISTRESS OF JAPANESE LABOURERS IN BRITISH COLUMBIA.

Mr. Nosse, Japanese Consul at Vancouver, has reported to the Foreign Office under date of December 5th, that much distress exists among Japanese labourers in British Columbia. After describing the abnormal trade depression that prevails in British Columbia, the report observes that among over 1,400 Japanese collected in the vicinity of the Fraser River with the view of engaging in salmon fishing, not only some sixty leading men, accustomed to manage the business on their own account, but also almost all other Japanese fisherman, except a few lucky gamblers, have fallen more or less into debt, so that labourers aggregating over a thousand are at a loss what to do. The state of affairs is in marked contrast to previous records, for, hitherto at the close of the salmon season, more than one half of the Japanese used to be able to go home, or to cross the frontier into the United States. Collieries and saw-mills have either been temporarily closed or have reduced their business operations owing to the general depression. Not merely do they refrain from engaging any new hands: they are obliged to dismiss many of those already in their employ. When the salmon season was over, several hundred Japanese labourers were at once thrown into considerable distress, and the Consulate found it incumbent to seek some employment for them. Inquiries were made not only in British Columbia but also in Oregon and Washington, but no employer has yet been discovered; moreover, the bankruptcy of two saw-mills in Vancouver has resulted in swelling the number of unemployed labourers by 50 or 60, and another mill that used to give work to about 80 Japanese has decided to reduce wages to 75 cents., or even to 50 cents. a day, for the supply of labour is now five or six times in excess of the demand, and an employer finds no difficulty in engaging workmen on his own terms. To this already greatly overstocked labour market, new additions are continually made by Japanese immigrants. The *Victoria*, which arrived in Vancouver at the end of October, brought over 50 labourers from Fukushima. Seventy more were expected by the middle of December, and as a large number of labourers from Shiga Prefecture will probably arrive in the spring, these newcomers are sure to experience great hardships. It is most important that the true state of affairs should be made known in Japan. From about the end of autumn to the date of the report, over 20 Japanese labourers on the banks of the Fraser had died, and not one of them possessed a cent. Whenever a Japanese falls ill or dies, a sum of from 50 to 60 dollars must be collected among his fellow-countrymen to pay for his medicines and burial. Of course, in times of prosperity, work can be found without much difficulty, and Japanese labourers obtain employment at one place or another, even though they arrive in large numbers. But nothing of the kind is possible at present. The arrival of 50 Fukuoka labourers was particularly ill-advised, for they originally went to Hawaii with the view of getting work there, but subsequently changed their mind and proceeded to the colder and more expensive Vancouver, at a season when, owing to the snow, work must be suspended in great part, under any circumstances.

THE THEATRICALS AND CONCERT IN YOKOHAMA.

It is a graceful act on the part of the British and American residents of Yokohama to postpone the performance of the Amateur Theatricals and the Tea and Coffee Concert originally fixed for the 30th January and the 6th February, respectively. One of these affairs was for a charitable purpose, and on that plea exemption might have been claimed from any obligation to observe the period of national mourning for the late Empress Dowager. But the American and British residents are evidently disposed to pay every possible deference to the customs of the country, and the spirit shown by them is worthy of all applause. They do not desire, we are persuaded, to have public attention drawn to such a deed of kindly sympathy, but since we advertised in these columns on the fact that the Theatricals and Concert, had their original dates remained unaltered, would have fallen within the period of mourning, it becomes our pleasant duty to record the postponements now made. It is to be hoped that such of the vernacular journals as show readiness to seek out and condemn any conduct capable of being construed into an evidence of want of consideration on the part of foreigners towards Japanese, will give publicity to this very cogent proof of friendship and good will. In no Occidental country does a custom prevail similar to that now voluntarily observed by the foreign community of Yokohama, and, we may add, of Tokyo also, for not only has the Tokyo Dramatic and Musical Society postponed a charitable performance which had been fixed for the 23rd January, but many foreign residents have abandoned musical evenings for which all arrangements had been made. The death of a reigning Sovereign in a European country would not involve any of the abstentions imposed by Japanese custom. After two or three days, people would go about their ordinary avocations and everything would move in its wonted groove, just as though no unusual incident had occurred. Hence, in giving up all public entertainments, and refraining even from a musical evening, merely because that method of national mourning is adopted in this country, the foreign residents display a degree of consideration that ought to effectually dispel the misconceptions of Japanese chauvinists like the *Nippon* and its supporters.

EXQUISITE POLITENESS.

A Nagasaki English journal says that "one of the almost universal traits of primeval savagery is the imposition of the most frightfully discomforting (*sic*) and even aggravating religious rites and ceremonies upon all subjects in the event of the death of a potentate." The reference is to the methods of mourning adopted by the Japanese nation in memory of the late Empress Dowager. Being abusive of Japan, the article containing this pretty piece of grammatical courtesy is immediately copied into the columns of a Yokohama English journal. And yet we all wonder and cry out "shame" if a Japanese student behaves roughly towards people represented by such journals! One of almost universal traits of primeval savagery is to be frightfully and even aggravatingly indifferent to the feelings of others. Nagasaki and Yokohama can fairly claim the credit of possessing some types of that category.

THE SENTENCE OF DOOM.

NEVER has so solemn and impressive a scene been enacted in a Consular Court in Yokohama, as that which, on Monday afternoon, closed the last public act of the CAREW tragedy, so far as concerns the unfortunate lady now convicted of murder.

The day had been dark and dreary from the morning. Drizzling rain fell from a sullen, murky sky. The cold was piercing when the proceedings began, but as the hours wore on the atmosphere inside the little Court room seemed to grow stifling and oppressive, the excitement of all within rising to fever heat. His Lordship took his seat shortly after half-past ten, and at once began his charge to the jury, speaking until a little before twelve o'clock, when the Court rose for lunch. The intensity of suppressed feeling that manifested itself at the outset, was allayed somewhat by the calm, stately tones of the Judge, as he delivered with terrible lucidity the crushing arguments of his charge. But, in the afternoon, evidences of the painful suspense under which the audience laboured could not be concealed. The accused woman, haggard, thin, and careworn, her lips tightly compressed, her frame rigid with nervous energy, could scarcely be seen behind the screen that shut off the back of the prisoner's dock, but to the Judge, the jury, and the journalists who sat facing her, the great and shocking change wrought in her appearance by long torture on the rack of suspense was painfully visible. Behind the Bench, and at the side where the jury sat, the windows were half draped with dark blue curtains, and these added to the gloom of the darkened Court room. At twenty-five minutes past two, the Judge concluded his summing-up, and within a few minutes the Jury had left the Court. No doubt the last words of the Crown Advocate were still ringing in their ears, and pressing upon their minds:—

Pay no regard to anything but to the internal voice of your own consciences, and to that sense of duty which you owe to God and man on this occasion, seeking no reward except the comforting assurance that when you look back to the proceedings of this day you will feel that you have discharged to the utmost of your ability and to the best of your power the duty which it was yours to perform. If on a review of this whole case, comparing the evidence on the one side and that on the other, and weighing it in the even scales of justice, you can come to the conclusion of innocence, or can even entertain that fair and reasonable amount of doubt of which the accused is entitled to the benefit, in God's name acquit her; but if, on the other hand, all the facts and all the evidence lead your minds, with satisfaction to yourselves, to the conclusion of her guilt, then—but then only—I ask for a verdict of "guilty" at your hands. For the protection of the good, for the repression of the wicked, I ask for that verdict by which alone—as it seems to me—the safety of society can be secured, and the demands, the imperious demands, of public justice can be satisfied.

The Judge then left the Court. He was followed out by the Counsel for the Crown, Mr. H. S. WILKINSON and Mr. H. C. LITCHFIELD. The prisoner's Counsel, Mr. J. F. LOWDER, looking worn and an-

xious, remained a short time, to address a few cheering words to his unhappy client. Then he, too, left. Slowly the minutes ticked themselves away, but within a briefer space than had been expected, signs that the Jury had agreed began to be discernible. The Chief Clerk of the Court, Mr. C. D. MOSS, entered, followed by Mr. WILKINSON. Then came Mr. LITCHFIELD, and finally Mr. LOWDER. Anxiety was depicted on every face. At three o'clock the Judge entered, and within a minute a clatter of feet on the paved stones leading to the Court's private entrance announced that the Jury were returning. The accused stood up and, with parted lips and steady, piercing eyes, awaited the words that were to restore her to liberty or condemn her to a felon's doom. The Clerk of the Court formally put the question to the Jury: "Gentlemen of the Jury, have you agreed upon your verdict?" The answer was in the affirmative. Then, his voice quivering with emotion, the Clerk propounded the next momentous question. Mr. PATTERSON, foreman of the Jury, a Scotchman of that calm, firm type that recalls the old Covenanters, replied:—"Guilty." The silence that ensued was terrible. The face of the accused became over-spread with a ghastly dull blue tint: the lines of her lips changed to chalky white; her eyes assumed the look of an animal stricken to death: her hands clutched convulsively at the dock. Asked whether she had anything to say why sentence should not be pronounced upon her, she replied, in a voice whose husky dullness contrasted painfully with her wonted tones, "No," and sank back exhausted into her chair. The Judge then sat upright in his place. It could be seen by all that he mastered his emotion with the greatest difficulty. First he informed Mr. LOWDER that the sentence he was about to pronounce—the sentence that must always follow such a verdict—could not be carried out unless the Court were so instructed by Sir ERNEST SATOW, HER MAJESTY'S Representative in Japan, under his own hand and seal. Then, amid an even more painful silence, he assumed the three-cornered black cap, always donned by British Judges when about to pass capital sentence. In a voice broken and trembling, he uttered the words of doom, the final sentence of all—"May God have mercy upon your soul"—being scarcely audible. Thus EDITH MAY HALLOWELL CAREW, the bright, attractive, refined lady, whom so many in this small community have known intimately, and so many have been happy to call their friend, passed from the pale of the society that she once graced; stepped down, a condemned felon, with the sentence of a shameful death ringing in her ears. There were some whose morbid curiosity so far overpowered their feelings of humanity, that they waited to see her descend the steps

of the Court to the sombre vehicle which carried her back to jail. We can only hope that a chance of mercy is suggested by the words of the Judge in prefacing the sentence of death. If it falls within the competence of Sir ERNEST SATOW to save this most unhappy woman from the gallows, he will be laying up a blessed memory for himself and earning the strong approval and gratitude of his nationals by exercising his power in the cause of clemency. Justice demands no such shocking sacrifice as her killing. Who shall venture to gauge the suffering that drove her to a deed so desperate? If she sinned, she was also deeply sinned against. The story of her life is before us. The giddiness, the moral instability, the love of admiration, that marked some of her acts—are they not sins to which an environment such as that of her daily existence is only too apt to betray human beings? For the sake of her family; for the sake of her children; for the sake of the friends that still have the courage and constancy to support her; for the sake of the repentance that she can work out by years of patient effort, we must all hope that mercy will be substituted for vengeance. Civilization is happily leading the world farther and farther from the stern law of equal retaliation, and teaching us the truth of the old principle that the virtue of justice consists in moderation.

THE CAREW CASE.

MRS. CAREW has been pronounced guilty of the murder of her husband by poison. The verdict was based on circumstantial evidence. No direct proof was forthcoming. Circumstantial evidence is always unsatisfactory in the sense that its value may be largely affected by the personal equation of its analyzer. Rarely will two men agree exactly in the deductions drawn by them from the same items of circumstantial evidence. This difficulty was clearly outlined by Judge MOWAT'S instruction to the Jury in the CAREW case. He bade them find the accused guilty should the proofs against her convey to their minds the same degree of certainty that they would require for their guidance in acting decisively in any grave business of their own. Judge MOWAT is not primarily responsible for that dictum: it emanated from a distinguished American jurist. But what a shifting standard it prescribes! The degree of assurance that a man requires for guidance in grave affairs of life—does it not differ materially according to the man? Will not one man act confidently on *data* that to another seem wholly inadequate? We have an example, a striking example, in this CAREW case itself. Up to last Friday morning the firm belief of seven persons out of every ten among the general public was that the jury could not possibly con-

vict. Then came the final speech for the prosecution. It reduced the ratio to, perhaps, five out of every ten. Still the moiety remained persuaded of the inadequacy of the evidence. The five jurymen, however, needed only 25 minutes' deliberation to agree that the woman was a murderess. They had sat for 21 days listening to testimony complicated, prolix, and perplexing. Twenty-five minutes sufficed them to deduce from it a certainty such as each of the five would have deemed sufficient for guidance in the grave affairs of his life. A certainty about what? A certainty that an educated, refined lady, after living for several years on terms of apparent affection with her husband, the father of her children, suddenly set herself to kill him under circumstances of awful cruelty, pouring poisons into him day after day, and watching with cold indifference his prolonged tortures. Such an incident lies so far beyond the range of ordinary conception that some explanation equally extraordinary is essential to credence. No explanation is forthcoming. We have to fall back on the hackneyed and totally inadequate hypothesis that she desired to be free; that she resorted to the foul crime of murder merely for the sake of obtaining a fuller measure of liberty than a married woman enjoys while living with her husband. It was not shown that her love for some one else had attained the dimensions of an absorbing passion. She had flirtations, indeed, with other men, but they were light affairs, not, apparently, involving conduct to which her husband took serious exception. She did not abhor the father of her children; she was not jealous of him; her affections had not been strongly engaged elsewhere. Hatred, jealousy, love, the three mainsprings of great crimes, were all absent. Yet she has been judged guilty of perpetrating a great, a shocking, crime.

Briefly stated, the evidence against Mrs. CAREW was, first, that between the 11th and the 21st of October, there came into her possession three ounces of Fowler's Solution of Arsenic; secondly, that between the same dates her husband died, and that his death may have been due to arsenical poisoning.

As to the particulars of the first point, we put the quantity of arsenic at 3 ounces, for though $3\frac{1}{2}$ ounces were certainly procured, and $4\frac{1}{2}$ ounces possibly, a half-ounce bottle is alleged to have been broken—and there is no positive proof that it was not—and an ounce bottle could not be definitely traced. Hence it cannot be alleged, beyond all doubt, that more than three ounces were actually available. Out of those three ounces, two half-ounce bottles were obtained ostensibly for use by Mrs. CAREW herself, under the orders of her medical adviser. On October 10th, Dr. WHEELER prescribed arsenic for her in the form of Fowler's Solution. On

the next day, she sent his prescription to a chemist, and received a half-ounce bottle of the Solution. That was perfectly legitimate. But on the 17th; she procured another bottle from the same chemist. The first bottle might have sufficed for 16 days' doses and ought to have sufficed for 12 days'. It seems to have been exhausted in 6. The first suspicion attaches to this rapidity of consumption. But obviously any estimate of the number of doses to which a bottle will run when its contents have to be measured out drop by drop three times a day, is liable to large error. The slightest defect in the dropping process may involve the loss of three, four, or even a dozen doses. When, by an involuntary movement of the hand, the drops change into a stream and a dangerous dose is found to have been poured out instead of a medicinal, few people take the trouble to save the excess: they throw it away and have recourse to the bottle again. These are accidents of everyday experience. Results that may reasonably be ascribed to such accidents, cannot justly be taken as evidences of criminality. So much for the rapid consumption of the first bottle. The second half-ounce bottle, obtained on the 17th of October, is said to have been broken. Whether it was broken or was not broken, could not be proved beyond doubt. Therefore, the Jury had no further concern with the question, and it follows that the procuring of another half-ounce bottle on the 21st, nominally to replace the broken one, may have been a perfectly innocent act. Suppositions of evil intent are thus limited to two ounce bottles obtained from a Japanese chemist, one on the 20th of October, the other on the 21st. The contents of these two bottles represented 8 grains of arsenic. A generally fatal dose is 2 grains. Dr. DIVERS, who chemically examined the internal organs of the deceased, arrived at the conclusion that some 8 grains of arsenic were present in the body at the time of death. The sickness of Mr. CAREW developed its worst phases almost simultaneously with the entry of the first ounce bottle of arsenic into his house. He died on the day following the introducing of the second. These are terribly pregnant coincidences. The inference they suggest is valueless, however, unless it be fortified by some conclusive proof that Mr. CAREW died, not merely from arsenic, but from arsenic in the form of Fowler's Solution.

This brings us to the second salient point of the evidence. The chemical analysis of the deceased's remains disclosed three poisons: dissolved and absorbed arsenic; solid white arsenic, and sugar of lead. Was death due to one of these poisons alone? Was it due to the combined action of two of them? Was it due to the united operation of all three? These questions still await conclusive answers. Seven experts were summoned

to give testimony as to the cause of death. The first (Dr. WHEELER) said that "the symptoms were quite consistent with arsenical poisoning," but that "if arsenic and acetate of lead were exhibited in large doses, the lead might have produced similar symptoms." The second (Dr. TODD) said that the "symptoms were compatible with death from irritant poison;" that, "in his opinion, the poison was arsenic," and that he "surmised it to have been arsenic in fluid form." The third (Dr. MAY) said that, "in his opinion, death was due to arsenical poisoning;" that "in his opinion there ought to be no difficulty in distinguishing between the symptoms of lead poisoning and arsenical poisoning," but that he "had not had any practical experience of either." The fourth (Dr. DIVERS), who performed the chemical analysis, said that, in his opinion death was due to arsenic; that "the fact of his having found no white arsenic in the liver was against the notion that it was given in the form of white arsenic;" that "the presumption was that it was given in the form of solution;" that he "could not positively assert that lead did not contribute to the death;" that he "could not positively assert whether the arsenic absorbed was white arsenic or from Fowler's Solution," and that "the white arsenic found was not sufficient to account for death, but would indicate a likely or probable cause." The fifth expert (Dr. ELDRIDGE) said that "he could not draw any deduction except that the arsenic present had all been derived from white arsenic;" that it was "impossible to say whether arsenic, or lead, or both caused death;" that there was "nothing to show that death might not have occurred from a single large dose of white arsenic;" that "the amount of white arsenic found might have caused death without any Fowler's Solution," and that he "should say that death was due to white arsenic." The sixth expert (Dr. BAELZ) said that, from the results of the chemical examination, "he would not assume that arsenic had been taken in any other form than white arsenic;" that it was "not possible to say with absolute certainty whether death had been due to arsenic or lead or to both;" and that "the presence of white arsenic was inconsistent with death by Fowler's Solution alone." The seventh expert (Dr. MUNRO) said that "it would be impossible to state as a definite fact that death was due to either lead or arsenic, if both these poisons were found in the body;" that "the appearances were all in favour of white arsenic having been taken;" and that he agreed with the opinions expressed by Dr. BAELZ.

The gist of all this is that the most competent medical testimony available in Japan proved insufficient to determine whether death had been caused by white arsenic alone; by Fowler's Solution of arsenic alone; by acetate of lead alone;

or by any combination of two or three of these poisons.

The law is stern in such matters. It does not require that, if a person is charged with having administered to another a deadly poison with murderous intent, that poison, and that poison alone, shall be proved to have caused death. It is sufficient to establish that the specified poison contributed to cause death. Was that established? Among all the experts called by the prosecution Dr. DIVERS spoke with most confidence. He showed a very strong disposition to attribute the catastrophe to Fowler's Solution alone. Yet, in cross-examination, he admitted that he could not "positively assert whether the arsenic absorbed was white arsenic or from Fowler's Solution." If it was white arsenic, then the chemical analysis failed to furnish any evidence whatever that Fowler's Solution had been administered; a failure signally emphasized by the testimony of Drs. BAELZ, ELDRIDGE, and MUNRO, who agreed in asserting that death might have been due to white arsenic alone, and that there was nothing to demonstrate the contributory effects of Fowler's Solution.

It may be said, however, that whether white arsenic or Fowler's Solution, the poison was a form of arsenic, and that Mrs. CAREW procured and had in her possession large quantities of arsenic at the time of her husband's fatal sickness. That loose fashion of reasoning is inadmissible. All the expert testimony went to show that though arsenic administered in the form of white crystals, may be dissolved in the stomach or absorbed in the organs so as to become indistinguishable from arsenic administered in solution, white crystals of arsenic can not be manufactured by the stomach out of arsenic administered in the form of Fowler's Solution. Hence the presence of white arsenic in the intestines established the fact that white arsenic had been administered. Where did it come from? It is before all things necessary to trace poison to the possession of a person accused of using it. White arsenic was not traced to Mrs. CAREW's possession. Not the faintest clue was obtained as to the source from which it had come, or as to its presence at any time in the house of the CAREWS. The importance of this glaring lacuna in the case for the prosecution is much greater than appears at first sight. We are confronted not merely by the fact that a poison of wholly unknown origin, a poison entirely unconnected with Mrs. CAREW, was found in the body of the deceased, but also by the alternative either that some one in the CAREW's household was in a position to procure arsenic surreptitiously, or that some one outside the household had access to Mr. CAREW and administered white arsenic to him.

For the sake of clear sequence of ideas it becomes necessary here to pursue the

question along another line of reasoning. The defence claimed that Mr. CAREW himself had been in the habit of taking arsenic; that in former years he had taken it for congestion of the liver and malaria; that in late years he had taken it for stricture, and that in recent times he had taken it as a dram. The first contention was proved conclusively. Dr. G. MOORE GRAHAM testified that, in 1880, when acting in a medical capacity on board a steamer by which Mr. CAREW was travelling home from the East, invalidated on account of congestion of the liver, jaundice, and malaria, he Dr. GRAHAM, compounded a prescription handed to him by Mr. CAREW; that the principal ingredient in the prescription was arsenic; and that Mr. CAREW believed firmly in arsenic as a remedy for the ailments then troubling him. Now Mr. CAREW remained subject to those ailments. He continued to suffer, more or less, from a disordered liver during his residence in Japan. He had little faith in doctors, and was always indisposed to consult them. Nothing seems more probable than that he should have employed, on his own account, the remedy which had originally proved efficacious and in which he believed. As to his use of arsenic in later years, evidence was adduced which, to ordinary minds, seems conclusive, though the Judge, in his summing up, did not give it much weight. Two witnesses testified that, within the previous year, Mr. CAREW spoke to them in the Club of his taking arsenic. Judge MOWAT construed the statements as referring to events of past time rather of the time when the conversations occurred. Past time in that case meant fourteen or fifteen years previously. The actual words of the conversations, as recalled by the witnesses, did not establish the distinction. The conversations contained nothing to indicate past time rather than present. If there was a doubt about the point the prisoner was entitled to the benefit of it. She did not receive that benefit. Again, testimony that admitted of no doubt was furnished by Dr. MUNRO. Mr. CAREW had told him that he was taking arsenic for stricture, and that he obtained relief from it. Thus the fact that Mr. CAREW used arsenic for a malady contracted three years previously was established. A fourth witness, Mr. KAUFMANN, deposed that, about a year and a half previously, Mr. CAREW told him that he had taken, or was taking, more arsenic than an ordinary man could stand. Now that statement was made in connection with a pain from which Mr. CAREW was suffering at the moment, and it was a pain to relieve which Mr. CAREW, according to independent testimony given by his wife at the inquest, was in the habit of taking arsenic. Mrs. CAREW's statements may or may not be worthless. Different people will form different estimates of them. But no one can fail to appreciate

the remarkable relation between her evidence and that of Mr. KAUFMANN and Dr. MUNRO. Mrs. CAREW alleges that her husband was in the habit of taking arsenic for a malady—stricture—contracted by him in 1893. Mr. KAUFMANN alleges that Mr. CAREW, under the pressure of actual suffering from that very malady, said that he took arsenic. Is it conceivable that Mr. CAREW's statement on that occasion referred to a period some fifteen years previous? Is it conceivable that the pangs caused by a stricture contracted in 1893, would have impelled him to speak of a medicine that he had taken fifteen years previously for totally different diseases, jaundice and malaria? No such theory will stand the test of a moment's intelligent reflection. When Mr. CAREW spoke to Mr. KAUFMANN of arsenic in the Yokohama Club, it is as plain a deduction as any deduction can be plain that he alluded to arsenic taken to assuage the pain from which he was at the instant suffering. And if any one admits the justice of that inference, he must also admit, he has no choice but to admit, that Mrs. CAREW spoke truly when she asserted her husband's habit of taking arsenic to relieve his stricture. There is another witness. Mr. R. D. ROBISON, tiffing with the CAREWS in the spring of 1895, saw a bottle of arsenical solution on the side-board in the dining-room; was about to take it into his hand, and was informed by Mrs. CAREW, in the presence of her husband, that it contained arsenic; "WALTER'S drops," as she expressed it. All this evidence, supplemented by the testimony of a lady who, sitting beside him at a dinner-party a few days before he fell ill, was informed by him that he "had dosed himself with quantities of drugs, arsenic among the rest"—all this evidence is more than sufficient to convince any impartial person that Mr. CAREW was administering arsenic to himself during the last few months of his life. It constitutes a mass of testimony far more conclusive than any combination of circumstances adduced by the prosecution in support of the charge of murder.

Passing, for a moment, from the main thread of the argument, it will be well to consider here one or two minor issues. According to Mrs. CAREW's evidence at the inquest, her husband's alleged reason for taking arsenic was that the drug had been prescribed as a remedy for stricture contracted by him during her absence in Europe. But Dr. MUNRO, who attended him for stricture, did not prescribe anything of the kind. That contradiction has been construed as throwing doubt on Mrs. CAREW's statement. But why should Mrs. CAREW have invented such a story? Had it been her purpose to manufacture a pretext for her husband's arsenic habit, was there not ready to her hand the established fact of his having taken the drug in former years for congested liver and

malaria, troubles from which he had never ceased entirely to be a sufferer; troubles from which his medical adviser actually diagnosed him to be suffering in his last illness? Suppose Mrs. CAREW to be the stupidest liar conceivable, could she have been so stupid as to reject a plausible, incontrovertible explanation in favour of a phantasy of her own invention that a word from Dr. MUNRO must dispel at any moment? What did she know about stricture? Had she ever heard of such a disease before her husband spoke to her of it? And why should he have spoken to her of it? The first impulse of any husband would be to conceal such knowledge from his wife. Is there, then, any rational theory to account for his having been at once so candid and so deceitful? It seems to us that there is: the theory that he had acquired the habit of drinking arsenic as a dram. Suppose him to have given up the use of arsenic for some years after his arrival in Japan. Suppose him then to have resumed it. Suppose that his wife, on her return from Europe, found him drinking arsenic habitually. What can be more conceivable than that he should have assigned a satisfying reason, and that it should have been a reason which she could neither gainsay of her own knowledge nor discuss with her friends? For the rest, the man himself may have implicitly believed in the drug's efficacy for the purpose specified. From his statement to Mr. KAUFMANN, it appears that he did believe. Everything points to his having entertained a strong faith in arsenic as a medicine suited to his constitution and to his special ailments. One of those ailments was a tendency to inflammation of the bladder. He had consulted Dr. BÄRLZ about it in 1894, and had received a prescription. During the last few weeks of his life the ailment asserted itself. Twice during the twelve days of his final illness he had Dr. BÄRLZ'S prescription compounded and took the medicine. If he had learned to regard arsenic as a general "pick-me-up," and as a remedy alleviating trouble of the urethra, he may well have resorted to it either directly to relieve pain in the bladder or indirectly to combat the liver affection which had again assailed him and with which he probably associated aggravation of his other symptoms.

From every point of view there appears to be reason to believe, and certainly there is not sufficient reason to deny, that Mr. CAREW was in the habit of taking arsenic within the past year, or two years, of his life. For the prosecution, however, it was alleged that had such been his habit, there should have been no difficulty in showing by what method he obtained the arsenic. The three foreign chemists of Yokohama swore that they had not sold him any. The principal Japanese chemist swore that he had not sold him any. Where, then, did he procure it? Now if

that argument has any cogency, it must be taken to signify that no arsenic found its way into the CAREW household except the arsenic of which the purchase was traced to Mrs. CAREW. If other arsenic can be shown to have entered the house, and if the source from which it entered can not be traced, then the whole argument becomes worthless. But there was other arsenic in the house. There was the white arsenic which the chemical examination showed to have been taken by the deceased, and there was the solution of arsenic seen by Mr. R. D. ROBISON in the spring of 1895. Whence did these two forms of arsenic come? It is not known how they were obtained, yet they were certainly in the house. By no conceivable process of sound reasoning can it be asserted that, although some arsenic assuredly did enter the house on two occasions from an unknown source, no other arsenic can have entered on any other occasion without its source being known. That is not the kind of logic that should be adopted in trying a charge of murder. Every taxidermist in Japan knows that arsenic can be procured in almost unlimited quantities without medical authority, and that it can be procured in such a manner as to conceal the identity of purchaser and vendor alike. There is no practical reason why Mr. CAREW should not have obtained arsenic without giving his wife any clue as to the place of making the purchase. Why should he have given her any clue? She was not habitually the medium through whom his medicines were obtained. She became the medium when sickness disabled him, but up to that time it is entirely conceivable that, just as his habit was to doctor himself, so he had his own means of getting the necessary drugs. There is abundant positive testimony that his custom was to take arsenic. Is the whole of that testimony to be out-weighted by the single negative fact that his wife can not tell whence he obtained the arsenic? Is that justice? Is that the kind of reasoning by which a practical man would be guided in dealing with the momentous affairs of his daily life? Add, now, to all these considerations the fact that Mr. CAREW'S state of health was certainly such as render arsenic specially dangerous. Add the fact that his kidneys, which would have played a conspicuously active part in eliminating an irritant poison, were never subjected to careful medical examination, and may have been so diseased as to render little or no assistance in getting rid of the arsenic. Add the fact that the arsenic from which he expected to obtain relief, may have aggravated his symptoms, and that, ignorant of its deleterious effects, he may have increased the dose in the mistaken hope of procuring ease. What difficulty now presents itself in concluding that his death was due to an overdose of the poison administered either with his own hand or at his own request? In the evidence thus far epitomized and analysed, is there anything that forbids such a conception?

(TO BE CONTINUED.)

THE LATEST IN BICYCLES.

Next to an arrangement for dispensing with the chain, contrivances for applying brake power seem to occupy the attention of bicycle manufacturers. Doubtless the number of accidents with cycles would be largely diminished did riders possess some means of rapidly checking speed. The most approved kind of brake is said to be the "Doolittle," concerning which we read that it is "a checking apparatus fitted to the hub of the wheel, and that it is applied by the mere operation of back-peddalling." There is also a device by which the braking power is communicated from the saddle to the back wheel, the rider having only to lean back in his seat. The front-wheel brake has not gone out of vogue, but is now almost entirely concealed within the head of the machine. An excellent improvement is said to be Esmond's "Victoria" pneumatic anti-vibrator, which consists, first, of a ball of rubber fixed on the seat pillar just underneath the saddle; and secondly, of a cushion fixed to the head of the machine just below the handle-bar. Another equally important improvement is Bagot's anti-skidding tyre. "On either side of the treadle are two specially constructed parallel grooves, running in the direction of rotation; when any angular pressure is applied to the tread-arc, such as is produced in describing curves, these grooves become automatically closed, and thus set up such strong gripping action with the ground that skidding is rendered almost impossible."

All these things sound very fine, yet only quite recently we were told that "the cycle of 1896 was almost as near perfection as human ingenuity could bring it." An immense number of second-hand wheels must be offered for sale in England by wealthy men whose fad is to be always up to date.

In England the prejudice against divided skirts retains much of its old force. A great achievement is said to be a skirt of an "undivided" order, designed by Messrs. J. R. Dale and Company. It can not possibly, we read, be blown about or otherwise disturbed by even the rudest wind.

IMPERIAL DIET.

THURSDAY, JANUARY 28TH.

HOUSE OF PEERS.

The House met at 10 a.m., but rose a few minutes afterwards, having entrusted the Bills in the Order of the Day, as specified below, to the Budget Committee:—

HOUSE OF REPRESENTATIVES.

The House met for Committee purposes only.

FRIDAY, JANUARY 29TH.

HOUSE OF PEERS.

The House met at 11 a.m., the Order of the Day being:—

- 1—Supplementary Budget No. 1, for the 29th fiscal year; sent up from the Lower House.
- 2—Supplementary Budget No. 2, for the 29th fiscal year; sent up from the Lower House.
- 3—Supplementary Budget No. 3, for the 29th fiscal year; sent up from the Lower House.
- 4—Supplementary Special Finance Budget No. 4, for the 29th fiscal year; sent up from the Lower House.
- 5—Supplementary Special Finance Budget No. 5, for the 29th fiscal year; sent up from the Lower House.
- 6—Contract to be concluded by the Department of Education over and above the Budgetary Items; sent up from the Lower House.
- 7—Contract to be concluded by the Department of Communications over and above the Budgetary Items; sent up from the Lower House.
- 8—Representation relating to State Aid to the Historical Society.

9—A Private Bill relating to the amendment of Art. 185 of the Law of Election of the House of Peers.

Viscount Tani, Chairman of the Budget Committee, reported on the first seven Bills. He stated that all the items in the Supplementary Budgets, except one of 183,000 yen, in round figures, for altering the design of the Kure Dock-yard, had been passed by the Committee without discussion. The objection raised against that particular item, was that, considered either from the point of view of the failure in the construction of the Sasebo Dock-yard, or from that of the defective building of No. 1 Dock yard at the Kure Station, it would be imprudent to vote a sum of over 183,000 yen for completing the construction of No. 2 Dock-yard at the same Admiralty until the House had received a satisfactory explanation of the cause of the defect in No. 1 Dock yard. For the purpose of investigating this point a Special Committee had been nominated, with the result that the Budget Committee finally decided to endorse the vote of the House of Representatives and pass the Bill in the form proposed by the Government.

The above report by Viscount Tani was supplemented by Viscount Soga, who stated, in his capacity of Vice-Chairman of the Budget Committee, that the Government Delegates having explained to the Committee that the failures which had thus far attended the naval constructions in question, were not technical, but were attributable to faults of arrangement only, and the same delegates having assured the Committee that no such faults should be repeated, the Committee had decided to recommend the appropriation.

The Bills from 1 to 7 on the Order were passed by the House without further comment or explanation.

The Representation standing eighth on the Order was explained by Viscount Yuri, one of the introducers, who dwelt on the importance of taking suitable steps for preventing the loss or dispersal of historical materials; and urged that the Government should act on the suggestion repeatedly approved by the House, and should extend suitable State Aid to the Historical Compilation Society. A supplementary Budget in that sense ought to be promptly framed and placed before the Diet.

In answer to a question by one of the members, the Viscount replied that the materials he alluded to were connected with the history of the Restoration.

Viscount Tani, explaining the Bill standing last on the Order, said that as no provision whatever was specified in Art. 185 of the Law of the House of Peers with regard to the procedure to be adopted when the votes in a division were equal, he moved that the provision of Art. 47 should be adopted for cases of the kind. The Representation was passed without comment or division.

The President asked the opinion of the House as to the propriety of suspending its session from the 2nd to the 13th prox., saying that the members would be attending the Funeral of the late Empress Dowager, in Kyoto.

The suggestion was adopted, the House of Representatives having already decided in the same sense.

The House rose at 25 minutes to 1 p.m.

MONDAY, FEBRUARY 1ST.

HOUSE OF PEERS.

The House was occupied with Committee work alone.

HOUSE OF REPRESENTATIVES.

The House met at 2 p.m., an hour after the prescribed time, the Order of the Day being:—

- 1—Second Reading of a Government Bill relating to an increase of the Permanent Working-Fund of the Tokyo and Osaka Arsenals.
- 2—Second Reading of a Government Bill relating to an increase of the Permanent Working Fund of the Senju Woolen Factory.
- 3—Second Reading of a Government Bill relating to the Special Accounts of Formosan Finance.
- 4—First Reading of a Private Bill relating to the amendment of the Civil Code.

Before the Bills on the Order were taken, Mr. Komuro Jyuko (Liberal), made a report on

petitions presented to the House. He stated that 214 petitions had been received, and that of the number 6 had been selected by the Petitions Committee for submitting to the House, and 3 had been rejected.

Mr. Ebara Soroku (Liberal), on behalf of the Special Committee, reported the result of the Committee's deliberations on the Bills standing 1 and 2 on the Order. The Committee, without any discussion, had decided to recommend the first Bill. The second had also been approved, in consideration of an explanation by the Government Delegates that no private factory existed which could confidently undertake the manufacture of woollen cloth for the use of soldiers and sailors.

The two Bills were passed without discussion, the Second and Third readings being dispensed with.

Mr. Obata Iwajiro (Liberal), reported the result of the Special Committee's deliberations on the Bill standing third on the Order. The Committee had decided to recommend the Bill, but Mr. Obata himself dissented from the opinion of the majority, and wished to explain why he was opposed to the Bill. The grounds adduced by the Government for making Formosan finance a special account were, remoteness of the place, exceptional conditions existing in the island, and also the intention that the new dominion should be made self-supporting. If remoteness and the existence of exceptional conditions warranted the adoption of a special system of accounts for Formosa, why should not the same argument apply to Okinawa and Hokkaido, or even to Legations abroad? Further, how could the system of special accounts conduce to make Formosa self-supporting? That was inexplicable, for the method of special accounts could never promote economy any more than the method of ordinary accounts could augment outlay. Moreover, if special accounts were adopted for Formosa he failed to understand why the system was to be applied to administrative expenses alone, and why military expenditures, that constituted about a third of the whole Formosa outlay, should be included in ordinary accounts. The Government's project seemed calculated to create suspicion only. The system of ordinary accounts had been tried in Formosa and no inconvenience had resulted. The question whether special accounts should be substituted could not be answered without two or three years' additional experience.

Mr. Nakano Buyei (*Shimpo-to*), could not endorse the opinions of Mr. Obata. If the latter failed to see why Formosa finances should be specially treated, he must be equally at a loss to understand why the Governor-General of Formosa was vested with special competence to issue laws and orders. Mr. Obata seemed to think that special accounts did not come under the control of the Board of Audit, and that they were consequently likely to encourage wastefulness. Such an apprehension was entirely chimerical, for both ordinary and special accounts fell under the control of the Board and were audited by it. Special accounts facilitated the self-supporting policy to be adopted for Formosa, which should be organized and managed so as to be independent, as far as possible, of any help from the Central Treasury. The objection that military expenses should be equally included in special accounts was not based on any sound argument, for the military defence of the island was entirely distinct from its civil administration, and must be regarded in a different light. The Government had at first employed the ordinary method of accounts for Formosan finance, because there was no time to prosecute thorough investigations as to whether the system of special accounts would be more advantageous to the island. From a theoretical point of view, the Government had been inclined from the outset to adopt the special system for Formosa.

When Mr. Nakano had proceeded thus far with his speech, Mr. Motoda Hajime, chairman of the Budget Committee, while apologizing to the speaker for interrupting him, asked permission to introduce an urgency motion in the sense

that the Bill now under discussion should be laid aside for future debate. He was compelled to make the proposal in such an unusual manner, because the Budget Committee's deliberations on the General Budget must be brought to a conclusion that day, and it was therefore necessary that the members of the Committee should proceed with the business at once.

The motion having been put to the House, was adopted by a small majority.

For the same reason the Bill standing last on the Order was temporarily withdrawn by the introducers.

The House rose at 2.50 p.m.

JAPAN'S NATIONAL DEBTS.

Statistics collected by the Department of Finance and published by the *Hochi Shimbun* show that the national debts of Japan at the end of last year were as follow:—

	Yen.
Consolidated Bonds	172,061,700
War Bonds	120,421,935
Five-per-cent Pension Bonds...	36,036,120
Currency Redemption Bonds ..	22,000,000
Naval Bonds	16,950,000
Railway Bonds	6,000,000
Old Public Bonds	5,486,362.50
Insurrection Expenses Bonds..	4,000,000

Total Domestic Debt ... 376,956,117.50

The Foreign Debt stood thus:—

	Yen.
New Foreign Debt	233,752
This remnant of indebtedness abroad will be completely paid off in the approaching fiscal year.	

Turning, now, to the loans that are to be floated during the fiscal year 1897-8, we have these figures:—

	Yen.
Public Undertakings Loan ...	59,280,600
Consolidated Bonds	2,502,250
Railway Bonds	5,327,350
Total	67,110,200

Grand Total	444,300,069.50
Redemption to be effected during the fiscal year 1897-8 ...	5,742,313
Debt remaining on March 31st 1898:	438,557,756.50

In these figures no account is taken of Treasury Bills to the amount of 28 million yen, a loan of 25 millions to form the capital of the Industrial Banks, and another loan of 30 millions to form the capital of the Agricultural and Manufacturing Banks; these being figures that do not properly fall within the category of national debts.

THE NEW COMMUNION PLATE FOR ST. PAUL'S.

Probably very few of Her Majesty's subjects are aware that, about 80 years ago, burglars entered St. Paul's and stole the whole of the sacramental plate, since which time the Cathedral has remained without any worthy representative of that important article of furniture. The want is now about to be supplied by Mr. E. T. Hooley, one of Her Majesty's Lieutenants for the City of London. The Goldsmiths and Silversmiths Company are manufacturing, to his order, two flagons, four chalices, and four patens, in the renaissance style of the seventeenth century, the prominent feature of the decoration being vines and cherubs. The service is to be pure gold, its total weight, 300 ounces. Mr. Hooley, by the way, first made his money through the bicycle boom: then he bought out the patent rights of "Bovril" for some two hundred thousand pounds, and this, after a while, he turned into a limited liability company. He is also a large landed proprietor

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

The disturbances among the Buddhists, which we noticed in our last summary, have not subsided, with the single exception of the commotion in the Otani-ha. Here, in order to appease the agitators, the business manager, Atsumi Kei-yeu, has been dismissed and the uncle of Archbishop Otani, Otani Shōchin, has been appointed to the post. Changes in the heads of Departments of the Sect have also taken place in nine instances. There are those who affirm that the reforms are more apparent than real, that the change of officers does not mean a change of administration, and that there is no guarantee against the abuses complained of occurring again.

Annoyed at their defeat in the Law Court, the Nichiren zealots have been holding public meetings in various parts of the country for the purpose of abusing the sects denounced by the Nichiren, and have succeeded in convincing the public that in narrow-mindedness and bigotry they have no equals.

In addition to the discord of which we gave an account last month, the Shingon Sect has developed a new trouble in the form of a strong party which clamours for independence.

It is important to observe, however, that not a few influential Buddhists regard the commotion in the Buddhist world as a good omen. The *Meikyō Shinshi*, which, it must be borne in mind, is not the organ of any special sect, comes to the conclusion that Buddhism is on the eve of a great change, and it gives the five following reasons for holding this opinion:—(1) The general agitation in favour of reform at the head quarters of each sect. (2) The united feeling shown by all the great sects in their desire for the redress of grievances. (3) The earnest efforts which are being made to bring the sects into closer union with each other and the appointment of delegates to devise means for effecting this end. (4) The prevalence of a spirit of free inquiry, resulting in a fuller understanding of the doctrines of Buddhism. (5) The discussion of such subjects as education, sociology, economy, law, and government from a Buddhist standpoint.

We read in the *Kyōrin* that a grand festival is to be held at the Tenshō-taijūgū, in Ise, in March next, in commemoration of the dedication of the shrine 1,900 years ago. The festival will begin on the 10th of the month and last for seventy days. A Committee has already been formed for making the necessary arrangements, and a Society has been organised called the Hōshuku-kai (the Congratulation Society) which already has 400,000 members. In consideration of the crowds that will be attracted to Ise during the festival, the railway companies are making arrangements for running extra trains at special rates.

The *Kirisutō kyō Shimbun* states that it is now a year since the establishment of the Nihon-dendō Kaisha on an independent basis. Up to the end of October the money subscribed to this body (Japanese) amounted to 2,436 yen. The society's agents are carrying on work in the following eight places, Wakuya (Rikuzen), Tokyo, Nagoya, Fukui (Echizen), Kōchi (Tosa), Hiroshima, Miyazaki (Hyūga), and Kumamoto.

The Greek Church organ the *Seikyō Shimpō* in addressing new year's salutations to its readers, expresses doubt as to the character of the civilisation adopted by Japan. In the opinion of this magazine there are important elements of Western civilization which the Japanese have not as yet appropriated. The *Seikyō Shimpō* proceeds to urge greater earnestness among professing Christians. The Evangelisation Society connected with the Greek Church Mission has been too quiet of late. Conflict with the supporters of other religions is unavoidable. It is a more aggressive religion that will prevail in the end. As long as things

are quiet, conservatism among the Buddhists holds its own.

In the same periodical we read that by numbers of country people a visit to the Capital is not considered complete without inspecting the splendid Surugadai Cathedral, and between January 1st and December 15th last year there were no fewer than 62,893 persons admitted to the cathedral, 45,193 of these being men.

We are told also that it is now ten years since the Women's Benevolent Society was founded by the Greek Church, and that during the term of the Society's existence it has expended 997 yen in benevolent objects. Relief of the poor has been extended to 300 cases, and of sick persons to 80, while contributions to funeral expenses have been made in 50 cases. The Greek Church has erected a Church in Nagoya which has been largely subscribed to by Japanese Christians, some of these giving fifty or even one hundred yen. The names of the donors are published in the *Seikyō Shimpō*.

In the *Nihon Shūkyō*, Katayama Sen observes that the existing great religions of the world were not manufactured *de novo* by the persons with whom their names are associated, but were simply improvements on older forms of faith. Buddhism is an improvement on Brahmanism, Christianity on Judaism. So Japanese should not talk of founding a new religion, but should adopt one of the existing forms of faith; either Zoroastrianism, a very high class cult and suited to Japan, or Christianity. It is no time, continues this writer, for Christianity to be assuming the defensive or apologetic tone. It must be aggressive or nothing. There are those who talk of Japan's scholars as though they were competent to choose doctrines from various creeds and found a new creed. The ignorance and narrow-mindedness of the persons who hold such views are pitiable to behold. Why do they not perceive that if Japan is to take her place alongside the foremost nations of the earth she must, like other countries, adopt a faith whose power has been well tested.

A writer in the *Sekai no Nihon*, when discussing the present state of Christianity in Japan, expresses the opinion that Christian zeal throughout the country within recent years is not to be compared to that shown at the commencement of the Meiji era. In the opinion of this critic an unnecessary number of Church conferences are held, and time is wasted in mere talk; many missionaries and evangelists are mere gospel preaching machines, out of touch with the spirit of the age and hence offering little that is attractive to ordinary ears. The writer is not a mere grumbler, however. He says that there is great need for religion in this materialistic age and that existing abuses in the Christian Church are by no means beyond remedy. But reform must be carried out with boldness and without regard for the feelings of inefficient evangelists. According to this essayist the great fault of Japanese Christians is a certain diffidence in saying what they think on questions connected with the character of mission agents. Old and useless agents should be dismissed. With Tōkyō as the great centre, the Christian Church should prepare itself to enter on a new era of usefulness.

The *Shinri* (Truth) has articles on the existence of God and the Philosophy of Kant, both by Dr. Christlieb; and an interesting account of Religion in Formosa, of which we furnish the following summary. Confucianism, Buddhism, Taoism, and Christianity are all taught and practised in Formosa. The Confucianists there teach that man is endowed with three souls, one of which goes to the grave with the body, another descends to Hades at the time of death, and a third remains in the house. Funeral ceremonies are conducted much as they are in China in the case of Confucianists. Women who are professional mourners are hired, and they weep aloud in a most plaintive manner. Buddhism is represented by the Rinzaï (臨濟) and Sōtō (曹洞) sects, but little zeal is shown

by the priests, who are poorly educated and many of whom indulge in the use of opium. The hold that the Taoist teachers have on the people is dependent on the divination that they practise. The popular belief in prognostication of all kinds is very strong, and fortune-tellers drive a brisk trade. Christianity is represented by the English Presbyterian Mission, in the North, the Canadian Presbyterians in the South, and by Spanish Roman Catholic Missionaries. The Greek Church has no mission in the island. The Presbyterian missions are most prosperous. Dr. Mackay, who combines Mission and medical work, has been in the field 20 years, and the following are mostly the results of his labours, 2 ordained native ministers, 60 male evangelists, 24 female evangelists, 60 buildings used for public worship, a "Hall of Science," a College called the Oxford College, a girl's school, a museum, a hospital, and elementary schools. Secondary benefits of the mission may be classified as (1) The spread of education and a spirit of inquiry, (2) The use of Roman letters, instead of the difficult Chinese characters, enabling people to learn to read in a few months, instead of a few years. (3) Physical benefits derived from Dr. Mackay's practice of medicine and instruction given by him on hygiene and kindred subjects. (4) The general correction of abuses. Dr. Mackay's converts are thoroughly at home in the use of the Roman character. Their correspondence and studies are carried on exclusively by this means. At first there was great prejudice against the introduction of the new form of writing, but recently its superiority as a quick means of conveying knowledge has been recognised on all hands. Dr. Mackay has gone about with the Bible in one hand and the forceps in the other, preaching the gospel for an hour and then extracting teeth for another hour. As a dentist he has treated over 25,000 patients. In addition to the above, Dr. Mackay has founded anti-opium Societies, Total Abstinence Societies, and Anti-Footbinding Associations. In reference to the latter it is mentioned that the cruel practice has been abandoned by all the Christians attached to the Presbyterian Church. The Buddhists have lately sent a dozen priests to Formosa, but according to the *Shinri*, they are making little headway.

The *Shinri* undertakes to furnish its readers with foreign news month by month. The number before us contains a group of interesting items. One of these refers to the Rev. Wilfrid Spinner, who 22 years ago laid the foundation of the German Church in Japan. Mr. Spinner has been appointed Chaplain to the Grand Duke of Sachsen-Weimar, a very influential position, in which Mr. Spinner displays his wonted zeal and ability.

The *Tōyōtetsugaku* states that a letter of considerable force and eloquence has been addressed by Dr. Inouye Yenyō to those members of the Otani-ha who have graduated at the Tetsugakkan, urging the necessity of the reform of the sect. In Dr. Inouye's manifesto it is stated that, since its establishment ten years ago, no less than 17,000 young men have been trained at the Tetsugakkan. Half of these have studied for educational purposes, half in order to fit themselves to become teachers of religion. Among Dr. Inouye's disciples 1,700 are priests attached to the Otani-ha. It is to these that Dr. Inouye's earnest appeal has been addressed.

Dr. Inouye Tetsujirō is publishing in the 藏宗 Zenshū a series of articles entitled, *Shūkyō Kakushin ni okeru Nihon no ichi* (位置) "Japan's place among the Authors of Reformed Religions." We make a brief abstract of the first lecture as reproduced in the pages of the *Tōyōtetsugaku*. It is a remarkable fact that the three most powerful religions of the world Buddhism, Christianity, and Mohammedanism are all of Asiatic origin and that Europe, with all its civilization, has not succeeded in producing a religion that has taken any strong hold on the minds of men. But among the nations that have attained to the enviable distinction of having originated a religion, Japan is not to be

reckoned. India has its Shaka Muni, Palestine its Christ, Persia its Zoroaster, Arabia its Mahomet, China its Confucius. The teaching of these great men has not only benefited the countries to which they belonged, but has spread to other lands and been gladly received by alien races. But, sad to say, Japan has exercised no such influence over foreign countries. She has been a receiver, but not a giver. In the former capacity she has shown unusual activity in recent years. In addition to a knowledge of Shintoism, Confucianism, Buddhism, and Christianity, there are not a few Japanese who have made a study of Taoism, Brahmanism, Parseeism, Judaism, and Mahomedanism, and who have even examined the religious ideas of various schools of philosophy. So that modern Japan may be regarded as the rendezvous of all religious notions and opinions, ancient and modern. And yet it cannot be affirmed that as a nation we have been benefited by this unprecedented influx of religious thought. The religions that are propagated in our midst doubtless profit by contact with each other. Strength and weakness are both revealed by comparison with other systems. The advocates of one religion have had the opportunity of seeing how much truth there is in faiths that are regarded as alien, and so religious zealots have been growing more liberal-minded towards each other. Seeing this, one often hopes that a further step of progress will be made and that the representatives of the various creeds will keep in abeyance minor differences and, assembling in solemn conclave, will endeavour to give practical effect to those principles of concord on which many of them are wont to lay such stress. But the indulgence in these sanguine expectations is suddenly interrupted by the remembrance that any such movement among religious leaders would certainly be an indication that the faiths which they have hitherto expounded had already begun to lose their power in the world.

A marked feature of the religious press of today is the increased attention paid to sociology and even to socialism. The *Rikugō-sasshi* leads the way. No. 191 contains articles entitled *Shakai-butsurigaku* (Social Physics) and *Shakai shugi no hitsuyō* (The Necessity of the Social Principle). In No. 192 of the same magazine the following subjects are discussed: "The Founder of German Democratic Socialism," and what is the principle of Socialism? In the *Shūkyō*, the *Kirisutokyō Shimbun*, and other publications, articles on the same topic have appeared. After insisting on the spread of socialistic principles in Japan and discussing their connection with religion, the *Rikugō-sasshi* asserts that the distinctions between rich and poor, between the upper and lower classes of society in Japan are more marked than they ought to be and that even with persons who profess religion there is too great a tendency in many quarters to flatter the rich and despise the poor. Religion, by treating all men as equal, by befriending the poor and the destitute, should show its superiority to worldly conventionality. Though Buddhist teaching favours socialism, there are few priests to be found who are prepared to carry the principle of social equality into practice. Those who are acquainted with Judaism and with Christianity are aware that both systems proclaim in no uncertain manner the equality of all men. The Gospel is full of words of comfort for the poor and of reproach for the rich. The preaching of Christianity in Europe and America has been adapted to the class feeling prevalent in the West. Hence the enunciation of the socialistic principles of the Bible has been neither clear nor hearty. We are in favour of preachers of Christianity in Japan proclaiming boldly the doctrine of social equality.

The *Kirisutokyō Shimbun*, in an article entitled *Kirisutokyō-to bummei-shakai* (Christianity and Civilized Society), after referring to the influence exercised by Christian socialism in the West, proceeds to observe that there has been abundant proof that socialism unchecked by religion runs to excess and endangers the

constitution of society. This fact has impressed itself on the minds of religious teachers in Europe and America, and they are now doing not a little in the way of modifying socialistic doctrines and preventing them from being abused. As yet the great question of labour and capital, the employer and the employed, has not become a vital question with us. But it is not to be supposed that our experience as a nation will differ from that of those countries whose civilisation we have adopted. Hence now, before the minds of men are agitated by the 101 social questions discussed in Europe and America, is the time for religious teachers to proclaim Bible Socialism, to show that in its contempt for wealth as wealth and its regard for the poor, the oppressed, and even the foolish, Christianity has no equal.

Commenting on these outspoken utterances, the *Nihon Shūkyō* says:—We can see no religion in the heart of the person who is a stranger to the feeling here expressed. We have heard of men who after being made atheists by the study of theology have reverted to theism after coming into contact with society. It is not by reading theological tomes by the score or Buddhist books by the hundred that men become impressed with the necessity of religious belief, but by practical acquaintance with the wants of their fellow-men. The number of sceptics among theologians and Buddhist scholars is astonishing. Of what use in the world are men through whose minds not a single anxious thought for the welfare of the community in which they live has ever passed?

The *Fuku-in Shimpō* divides modern religious believers into three classes: (1) Conservatives, (2) eclectics, and (3) reformers. (1) The Conservatives are engaged in patching up old garments with old material. They are sticklers for precedent. They draw on Buddhism, Confucianism, Shintoism, and ancient feudalism for material. Hence the garment produced is marked by an odd combination of colours. We are far from saying that this type of devotee effects no good, says the *Fuku-in Shimpō*. In some cases they do much to improve and purify the lives and hearts of their fellow men, but what is to be regretted is that, like the frog, their eyes are so placed that they can only look back and hence that they spend their time over an attempt at reproducing the old instead of making something new. We regard them with pity rather than with ridicule. (2) Next come the eclectics, with their attempt to patch up old garments with new material. They know not that the new wine will burst the old bottle, that their efforts at patchwork will only end in huge rents. This party is attempting to erect a building that neither resembles a Buddhist temple, a Shintō shrine, nor a Christian Church, that is altogether nondescript in character. It takes pleasure in what we consider to be laughable conferences of Buddhists, Shintoists, and Christians, and runs a magazine called the *Nihon Shūkyō*, that is neither Buddhist, Christian, nor Shintō, which in difference from its companions stands like a spectre (*yūrei no yō*) in the religious world. Of all the difficult tasks that have been attempted by men this project of the eclectics* is the most difficult. "The spirit of the age, the overpowering force of circumstances, constrains us to bring about the union of Oriental and Occidental religion," say the eclectics. To us it seems that the exposition given of the term 大勢, *laissei*, the predominant spirit or influence of the age, by these would-be reformers is incorrect. Is not this spirit in favour of replacing that which is imperfect with that which is perfect? When heavenly influences cover the land like a wave from the ocean, it follows that all earthly influences will be swept aside. That God's will be done on earth as it is done in Heaven—this is what the spirit of the age points to. The influences which bring about this consummation are the most powerful of influences, and hence are more worthy of being termed *laissei* than the spirit extolled by the eclectics.

* The reference is to the Unitarians.

(3) Lastly there is the party of reformers, who are in favour of all things being made new, of new wine being put into new bottles. St. Paul was remarkable as a heretic and afterwards became remarkable as a Christian. So is it with many a Japanese. Like Nicodemus, the Japanese are proud of their antecedents. They boast of their loyalty, their *Yamato-damashii*, and what not, but they must be taught that they need to be born again.

In the news columns of the *Fuku-in Shimpō* there are notes on the bright projects of the Shizuoka Methodist Church; the progress of Christianity in Yokkaichi, Ise; the work carried on in Hongō, Tōkiō, connected with the Chūō Kairō, and on the addresses delivered in Sendai by Mr. Mott, an agent of the "World's Young Men's Association" (*Bankoku Seinen Kai*), and an account of the work and the project of the *Fūshi dendō-tai* (the Earnest Evangelist's Association), of which Mr. Miyagawa Tsuneteru is the President, and which aims at sending preachers to every part of Japan. This movement originated with the Kumiai Churches in Kyōto, Osaka, and Kōbe. It bids fair to be one of the most successful attempts at rendering Christian work entirely independent of foreign aid that have been made in recent years.

The *Shūkyō*, No. 63, provides its readers with a great variety of matter. There are articles entitled:—The "Teacher and the Preacher;" "The Ethics of Buddhism;" "Imagination in Religion;" "Modern Social Problems;" the real significance of the Hongwanji Problem;" "How to extirpate superstition." And under the head of current thoughts from the West, notes are published on a variety of interesting subjects which we have no space to refer to here. In an article entitled "Advice to the Future Preacher," Mr. Matsumoto observes that the latter part of last year was marked by considerable religious activity of one kind and another. There were attempts at amalgamation in some quarters and in others conflict between antagonistic creeds. Though the prevailing spirit of the day is undoubtedly in favour of more union among religious professors than has hitherto been known, Mr. Matsumoto counsels men of conviction not to lose confidence in the truths to which they have been wont to attach importance. Compromises must have a limit.

The writer of the article entitled "Imagination in Religion," the Rev. W. Kitashima, has an interesting history. He went to San Francisco at the age of 16 in 1883, graduated at one of the Californian Schools, then entered the Melville School of Divinity in Pennsylvania, where he took the degree of Bachelor of Divinity, studied Divinity and Metaphysics at the Harvard University, received the degree of Doctor of Philosophy from a Theological Seminary in Allegheny, Pennsylvania, served as a Unitarian Minister in New Jersey for two years, and then returned to Japan.

The *Shūkyō* gives a short account of the second meeting of the Comparative Religion Society held on December 12th. One of the subjects discussed was sacred numbers in China and Japan. The subject of the significance and relative importance of numbers was treated. The *go-sekku*† were gone into and the reasons for their observance stated, and the facts on which the theory that with women the 19th, 33rd, 42nd, 61st, and 70th years and with men the 25th, 42nd, 61st, and 70th years are unlucky. It was pointed out that many of the notions connected with numbers are based on physical facts. Many of the observations recounted by the *Shūkyō* as having been made at the meeting bearing on numbers are of an extremely elementary character. The foreign antipathy to the number 13 was referred to, a member of the society alleging that no satisfactory explanation of this feeling had been given.

That some Christian organs should denounce

† 1st of the 1st month, 3rd of the 3rd month, 5th of the 5th month, 7th of the 7th month and the 9th of the 9th month.

Buddhism is but natural, but that Buddhist organs should openly confess that Buddhism is effete and practically worthless as a religion is worthy of note. In order to show the trend of opinion on this subject, we quote from a few well-supported Buddhist magazines. "Whatever religion be defined to be," says the *Mujintō*, "Buddhism is on its last legs. No settled peace is to be derived from it. Faith in its power daily grows less. Signs of life there are none. Its professors display no warmth of feeling. Its preachers, with all their noisy demonstration in public, live lives that will not bear scrutiny." "Buddhism," says the *Hansei sasshi*, "is one of the greatest religions of the world. But there could be no greater contrast than that which exists between the greatness of its name and its actual weakness; with a long and illusory history and a set of doctrines that are as perfect as doctrines can be, it is absolutely without influence in the world." "At no time," says the *Ayase*, "has the reforming and evangelistic power of Buddhism been so reduced as it is now. The utter destruction of traditional Buddhism is certain." In the pages of the *Nihonjin*, Mr. Sakaino Tekkai, a Buddhist priest, adds the following testimony to the above: "I am bold to affirm that the influence of Buddhism on Society resembles that of poison. To say that Buddhism is corrupt does not describe its real state. It is even worse than that."

The *Kyōrin*, a *Shintō* organ, has an article on orthodoxy and heterodoxy in which the writer, *more suo*, maintains that the chief object of a religion is to aid and preserve the State, and that all religious doctrines which conduce to this end are to be considered orthodox; the rest heterodox. Just as different countries require different forms of government, so do different countries require different religions. A system of government, to be successful, must be constituted so as not to do violence to national customs, institutions, and feelings. In its being the embodiment of national opinion and instinct lies its strength. It is the same with religion. It must be bound up with the history of a people, must be an essential part of their national life. Thus is it with Shintoism, and, in so far as it has succeeded in Japan, thus has it been with Buddhism. Buddhism has become nationalised and has recognised that many of its divinities are nothing but Shintō gods under other names. The same thing is happening with Christianity. We now hear it said that the Old Testament is similar to our Shintō scriptures, and that the 天主 *Tenshu* of Christians is no other than *Ame no mi-nakanushi no Kami*. Thus it would seem that it is quite unnecessary for Buddhists, Shintoists, and Christians to be disputing as to what is orthodox and what is heterodox, for to a large extent they are worshipping the same gods under different names. But while this is so, Shintoism possesses a distinct advantage over the two rival creeds. These two creeds are dependent on reason for their position in the world. Hence they are constantly being altered to suit the changes of public opinion, and there are not wanting indications that the very susceptibilities of which they boast so much, the readiness to adapt themselves to all circumstances, may eventually lead to their utter extinction. The existence of Shintoism depends on the existence of the Japanese people. To the Japanese nation it must ever be the most sacred of all sacred things.

It is announced that at the end of this month Dr. Inouye Yenyō will publish the work on which he has been engaged for many years on Indian philosophy and religion. The title of the work is 外道哲學 *Godō Tetsugaku*, (Alien or Heterodox Philosophy) †. In the preparation of this book, Dr. Inouye has consulted over 600 learned works. The *Godō Tetsugaku* deals in a scholarly manner with Indian momenclature, geography, history, and customs,

† The sense in which the above term is to be understood can be gathered from the fact that Dr. Inouye writes as a Buddhist. Hence the belief and theories he describes are termed heterodox.

and with the state of opinion on learned subjects in different ages. It is stated in the *Bukkyō* that the essay which obtained for Dr. Inouye his degree, entitled 佛教系統論 *Bukkyō Keitōron* is to form a part of the above named work. The *Godō Tetsugaku* is being published by the Tetsugaku Shoin, and its price has been fixed at 1 yen 20 sen per copy.

FAILURE OF THE JAPANESE IN SIAM.

Up to the present, most of the Japanese who have engaged in trade in foreign countries seem to have been persons without any understanding of what trade really is, as well as without any concern for their own reputation, their one aim being to make money by the shortest possible way. Out of many instances recorded, we select two or three illustrating the injury that Japan's commercial prospects have suffered by the doings of these adventurers.

Mr. Iwamoto, known as the most earnest promoter of the Japan-Siam trade, visited that country for the first time, when it was in a state of hostilities with the French. He had been a military officer, and the Siamese appear to have expected that he would procure aid for them to maintain their independence.

He found a good friend in the Siamese Minister of State for Agriculture and Commerce, who obtained for him the grant of a tract of Government land, in consideration of Iwamoto's promising to bring a hundred Japanese farmers to settle there, towards the expense of which enterprise the Minister gave him ten thousand yen. Besides the money, he was entrusted with a gold mounted sword, which the Minister wished to have decorated by some Japanese artist. Iwamoto came back to Japan and tried to obtain the promised farmers, but he failed to get them in time. The shipowner, however, by whose steamship he was to take the men, could not get the vessel ready by the appointed day, so he applied to Mr. Iwamoto for a postponement. This was in reality convenient for both parties; but Ishibashi Takiro and other schemers urged Iwamoto to demand from the shipowner several thousand yen by way of compensation for breach of agreement. He got the money through the court, and then arranged another day with the shipowner. But the latter now threw every possible obstacle in the way of Iwamoto's getting the farmers, the result being that Iwamoto, failing to be ready by the date fixed in the second instance, was sued in turn by the shipowner for breach of agreement, and to get out of the scrape had to hand over the ten thousand yen that he had received from the Siamese Minister, and also to pledge the gold mounted sword and sell all his own belongings. Subsequently, with much difficulty, he raised some money and took about sixty farmers with him as far as Hongkong, where he found himself so poor that he could neither proceed to Bangkok nor return to Japan. In despair he was on the point of performing *harakiri*, when Yamamoto Yasutaro, an interpreter, came and informed him that the Siamese Minister had arrived *en route* for Japan. An appeal to the Minister produced the means for Iwamoto and his farmers to reach Siam. After a time he obtained funds for the purpose of starting the Japan-Siam trade, and came back to Japan, leaving 30 of his followers in Siam. Apparently he applied the money to wrong purposes. As for the men in Siam, they gradually fell into distress. Some died of sickness; some of starvation, and only six remained at last, eking out a miserable existence by working almost like slaves. When Iwamoto returned to Japan, which was last spring, he persuaded Messrs. Baba, Oyamada, and others to form the Japan-Siam Trading Company. Abbraving many of the particulars given by the *Chuo*, which writes at great length on the subject, we pass on to the autumn of last year, when Iwamoto and Baba started for Bangkok, followed by two merchants of Yokosuka who took with them goods to the value of 1,500 yen. Baba

was introduced to the Siamese Minister of State through the medium of Iwamoto, and was promised that should the wares sold at his store prove appropriate for use at the Court, he should receive the same measure of patronage as that enjoyed by some of the foreign merchants in Bangkok. Thereupon he rented a large house, and set out his commodities, consisting of bamboo ware, flowerpots, stuffs for Japanese summer garments, linen, and toys. These goods, worth only 1,500 yen, naturally made a poor show, and, moreover, were not well adapted to the taste of the Siamese. Baba, however, was bold enough to ask the Ministers to visit the store, but when they came they were so disappointed with the display and indignant at the exorbitant prices asked, that all chance of Court custom was forfeited. The shop failed to attract buyers and things went from bad to worse with it. Meanwhile, Iwamoto and Baba quarrelled, and Baba shook the dust of the Siamese capital off his feet, borrowing money to get away. The two Japanese merchants left in the store found themselves then in a strange predicament, for since the quarrel with Iwamoto they were without even the means of holding any intercourse with the Siamese. At last the shop had to be shut and the two merchants made their exit from the scene amid the sneers of the Siamese and the resident Japanese as well. As for Iwamoto, he has assumed the character of a mendicant priest, and is wandering about Japan, begging his bread.

The *Chuo* then reviews a similar though less disastrous failure made by Mr. Nakamura Yōroku. Our contemporary displays so much malicious glee in recounting the story that its details must be accepted with caution. It avers that Messrs. Nakamura, Inukai, Ozaki, and Oishi, all prominent men in the *Shimpo-to*, are now living at the charges of Baron Iwasaki, who has been generous enough to help them. Mr. Nakamura is regarded as an expert in timber. He graduated in a dendrological course in a foreign seminary and was for many years an official of the Dendrological Bureau in the Department of Agriculture and Commerce. He is now President of the Tokyo Timber Company. The object of his journey to Siam, whither he went with Messrs. Iwamoto and Baba last fall, was to obtain a supply of teak for use at the Naval Dock-yards. Hitherto, about 30,000 tons of teak have been annually used in the Dock-yards. They obtained the timber through Messrs. Jardine, Matheson & Company's Agents in Yokohama. But when public tenders for a quantity of teak were invited, last year, Mr. Nakamura's tender, which had been specially compiled in accordance with advice given to him by certain naval officers, it is said, but which, in truth, was put at ruinously low terms, obtained the approval of the Naval Authorities. The *Chuo* alleges that the purpose underlying the exceedingly low offer was to induce the Naval Department to place all its orders with the Tokyo Timber Company, instead of resorting to public tender, and adds that the device succeeded. Mr. Nakamura then proceeded to Bangkok, and made such a foolish parade of his business that the leading timber merchants of Siam leagued together and raised prices more than 50 per cent. Mr. Nakamura, however, had no choice but to make a purchase. He concluded a contract with a wholesale lumber merchant for 200 tons of timber, and then had to reduce the amount to 70 tons, owing to want of money. The merchant sued him for breach of contract, but through the influence of the French Consul in Bangkok he managed to win his case, though he had to resort to intimidation and corruption. We must say frankly that the *Chuo*'s method of telling these stories, a method far more circumstantial and personal than can be gathered from our brief synopsis, suggests so much prejudice as to throw doubt on the whole. It remains to be seen what steps Mr. Nakamura and the rest will take, but we are disposed to suspect that political motives lie at the root of the *Chuo*'s history.

ECONOMIC TOPICS.

In spite of talk of tradal depression during the latter half of last year, Spinning Mills and banks appear to have succeeded in making almost as large profits as they did in the corresponding period of the previous year. That is apparently inexplicable, inasmuch as the quotations for yarns stood lower during the former of the above half-years, while coal and labour were both higher. Thus the price of yarn fell from about 93 *sen* to 91.40 *sen* per bale; 10,000 catties of coal that could be purchased at little over 16 *yen* in the second half of 1895, rose to over 18½ *yen* in the corresponding period of 1896, and the daily wages of male and female operatives rose from 18.1 *sen* and 10.3 *sen* respectively to 20.3 and 12.2 *sen*. The principal factor on the other side was a fall in the price of raw cotton, which stood at 27 *yen* per bale (American), 22.75 *sen* (Bombay), and 22.50 *yen* (Chinese) in the latter part of 1895, but fell in the corresponding period of 1886 to 24 *yen*, 20.65, *yen*, and 21.20 *yen*, respectively. Another disadvantage under which the mills laboured, especially those in the Kei-Han districts, was the trouble that occurred with the Kanagafuchi factory. The outlay involved in keeping up the boycott was 5 *sen* per spindle for all mills of the Union. Nevertheless, as will be seen from the subjoined table, the record for the second half of 1896 shows little evidence of these unfavourable circumstances:—

Name of Mill.	Dividend for the second half of 1896. Per cent.	Dividend for the second half of 1895. Per cent.	Profit per spindle for the second half of 1896. Yen.
Tokyo	18.00	14.00	5.9817
Amagasaki.....	18.00	15.00	2.5682
Himeji	20.00	17.00	3.4641
Miye	30.00	18.00	4.3579
Noda	10.00	8.00	3.1523
Iyo	13.00	20.00	3.7781
Osaka yarn throwing	10.00	12.00	—
Kyoto	5.00	12.00	3.1454
Uwajima	15.00	17.50	3.7692
Kanakin.....	12.00	13.00	—
Kanagafuchi ..	10.00	11.00	3.6134
Okayama	15.00	17.00	1.1451
Osaka	15.00	18.00	2.7879
Sakaye	16.00	18.00	4.5265
Osaka	10.00	16.00	3.1664
Meiji	8.00	14.00	2.6087
Asahi	8.00	12.00	1.8696

We may note here that the profit per spindle for the last half-year ranged from 5.9817 *yen* at the Tokyo Spinning Mill to 1.1451 *yen* at the Okayama.

The records of the banks do not differ much from those of the mills, despite the talk of a panic, especially in Osaka, and despite the failure of a few small banks. It is true that the people of Osaka and its vicinity fell into a state of alarm, and hastened to withdraw their deposits from their bankers, while the banks, on their side, adopted an attitude of caution, and refused accommodation even on securities of the best character; still, the rise in the rate of interest seems to have counteracted these disadvantages, for, with a few exceptions, the banks in Osaka and its vicinity have declared for the last half-year dividends equal to those for the preceding half of the same year. Here are the return of the banks in questions:—

Bank.	Dividend. Per cent.	Reserve. Yen.
Osaka Shogyo	10.00	4,000
136th	14.00	7,000
13th	6.00	20,000
Sekizen Domei.....	10.00	7,500
Osaka Savings	10.00	15,000
Sakaye	9.00	4,150
50th	15.00	200
Osaka Kyoritsu	10.00	15,000

Thus the average rate of dividend was over 10 per cent., though considerable differences appear in the sums added to the reserves.

According to researches conducted by the Tei-pei Local Authorities, the profit accruing on the tea industry in that particular district of Formosa is far greater than the profit derived

from the same industry in Shizuoka, the largest tea centre in Japan proper. We give below the comparative schedule:—

GROSS RECEIPTS.		GROSS DISBURSEMENTS.	
From one <i>tan</i> (½ of an acre) in Shizuoka.	Yen.	From one <i>tan</i> in Formosa.	Yen.
Crop of leaves averages 120 <i>kwamme</i> (1,000 lbs.), from which 30 <i>kwamme</i> (250 lbs.) of good and inferior tea is manufactured, of a total value of 48 <i>yen</i> , at the rate of 1.60 <i>yen</i> per <i>kwamme</i> (8½ lbs.)	48.00	Crop of leaves averages 76 <i>kwamme</i> (633 lbs.), manufacture into good and inferior tea, weighing 19,750 <i>kwamme</i> (165 lbs.), of a total value of 53 <i>yen</i> , at the rate of 33 <i>yen</i> per 100 catties (133½ lbs.)	53.00
Taxes675	Tax on tea (under former Administration)	2.963
Interest on capital	7.500	Inte est on capital	8.000
Wear and tear of implements	3.000	Wear and tear of implements	5.000
Cultivation	1.700	Cultivation	2.400
Tending	1.040	Picking	11.875
Manure	4.150	Cost of curing	12.500
Picking of leaves.....	6.875		
Cost of curing	18.000		
Total	42.440	Total	42.738
Profit	5.760	Profit	10.262

According to the above estimate, the tea industry in Formosa gives 4.502 *yen* more profit than the industry in Japan, though the taxes levied in the former under the Chinese Administration are over four times as large as the taxes in Japan. We do not see why the wear and tear of implements, and the cost of cultivation and of picking should be so very much greater in Formosa than in Japan, but the figures are given as quoted above. Certainly if land devoted to the culture of tea in Japan gives a net return of only 23.04 *yen*, or, say, 50 shillings, per acre, the industry can not be said to be very profitable.

Incidentally it is interesting to note the ratio that the taxes levied on land in Japan, according to the above figures, bear to the value of the land. Nominally the Land Tax is 2½ per cent. of the taxable value of the land, and the taxable value of the land is generally supposed to be assessed at about one half of the market value. Now, at twenty years' purchase, land giving a net income of 5.76 *yen* should be worth 115.2 *yen* in the market, and is therefore ratable at 5.76 *yen* for purposes of taxation, assuming—though there is no legal right to make any such assumption—that the taxable value is only one half of the market value. Hence it ought to pay Land Tax to the amount of 1.44 *yen* annually, whereas, according to the above estimate, it pays only 0.675 *yen* in Land Tax and Local Land Rate combined. The Local Land Rate being one-fifth of the Land Tax, it follows that the land in question pays only 0.562 *yen* by way of Land Tax, whereas it ought to pay 1.44 *yen*, even supposing the taxable value to be one-half of the true value. In fact, it pays nearly two and a half times less than it ought to pay, on any calculation. Incidental figures of this kind give a better insight into the state of fiscal affairs in Japan than any general schedule prepared for the special purpose of demonstrating either the heaviness or the lightness of the Land Tax. If the above showing with regard to tea land in Shizuoka be true of the whole empire, it would follow that the total Land Tax collected by the Treasury ought to be, not 38½ million *yen*, as it is, but 95 millions, and even then the tax would not be one-fortieth but one-eighth of the market value of the land. Of course, we should err did we conclude that the Shizuoka ratio may be accepted as applicable to the whole empire. The general assessment for purposes of taxation at the commencement of the *Meiji* era was carried out much too quickly to secure uniformity, and it is well known that great diversities exist in the incidence of the tax in different localities. Still, we have never heard that the province of Shizuoka was supposed to be a particularly favoured district, yet here we are confronted with the fact that the Land Tax actually levied on tea plantations in that province is not one-fortieth of the value of the land, as the law supposes it to be, but one-two-hundredth. We must remember, too, that this so-called "tax" is not a tax in the ordinary sense of the word. It is in reality the rent paid by the

owner for land made over to him in fee simple without one *sen* of purchase money being put up by him. Yet, a few years ago, our ears used to be wearied by a perpetual outcry for reduction of the Land Tax; an outcry emanating solely from political agitation.

THE POLICY OF THE BANK OF JAPAN.

Baron Iwasaki has been interviewed about the policy of the Bank of Japan with respect to the volume of convertible notes, the granting of accommodation to persons starting new enterprises, and the system of security at present adopted. Our readers are aware that there has been talk, of late, about the quantity of convertible notes—195 millions—in circulation, some economists asserting that such an amount is excessive. Baron Iwasaki rightly observes that no fixed rule can be laid down in this matter. At different times the volume of notes required by the public varies within pretty large limits. The Baron himself thinks that, considered from the stand-point of the purchasing power of the silver represented by these notes, the quantity now in circulation is less than the quantity in circulation in 1878. The lowest gold price of silver in the latter year was 51 pence an ounce, and the highest price during 1896 was 31 pence, so that a currency of 150 millions in 1878 represented at least the same purchasing power in terms of gold as a currency of 240 millions represents to-day. Concerning accommodation, the Baron explained that the Bank did not contemplate any illiberal policy, but that certainly it would not place any funds at the disposal of speculators whose immediate purpose was to start enterprises for the sake of making money by potential shares, and who were not really concerned to establish a paying and permanent industry. With regard to the onerous system of security now pursued, Baron Iwasaki said that, since it had been dictated by a temporary condition of doubt, its abolition might be looked for in time. But he did not speak very hopefully of the outlook. On the contrary, he commented in severe terms upon the methods pursued by the business men of Japan, and their tendency to engage in all kinds of speculative enterprises outside their legitimate occupations. There could be no proper system of credit under such circumstances, and the development of credit meant the development of trade. It was absurd that men should complain of being unable to obtain credit, when they did not take measures to acquire a capital entitling them to be trusted.

JAPANESE MANUFACTURES IN EUROPE.

Mr. Fuha Hikomaro, a Counsellor of the Department of Agriculture and Commerce, has sent to the Government from London a report on the outlook for Japanese manufactures in Europe. His conclusion is that Japan can not hope at present to compete with the great manufacturing countries of Europe in their own markets. Japanese tastes and Japanese methods differ too radically from the methods and tastes of Europeans. Even in the case of this country's woven fabrics, of which so much has been said, the colours and patterns are quite unsuited to the rapidly changing fashions of people in the West. Moreover, in point of industrial organization, command of capital, and manufacturing experience the Japanese are so far inferior that to pit them against Europeans would be like backing a boy in a contest against a grown man. Fortunately for Japan there are many nations in the Orient to which she is superior in the qualities that make for industrial success. She should make it her chief aim to find customers among these nations. Her practical business men should visit them and study their wants *in loco*. Such is Mr. Fuha's advice.

TOKYO MARINE COURT.

On Thursday morning in the Marine Bureau of the Department of Communications, the finding of the Court of Inquiry in the case of the stranding of the steamer *Himeji Maru*, on the Bombay Reef, Paracel Islands, on November 1st, 1896, was delivered by the President, and afterwards interpreted by Captain J. M. James, Captain Tipple, the Master of the vessel, and Mr. Harrison, the chief officer, were present, and also representatives of the *Japan Mail* and the *Japan Gazette*. The two Master-mariners attended in accordance with a summons from the Marine Office; the reporters in the discharge of their public duty. All four gentlemen were shown into a waiting-room, and after a while Captain Tipple and Mr. Harrison were asked to go upstairs into the Court. The journalists thereupon make request of an English-speaking attendant for permission to be present during the delivery of the finding. To their surprise—for such a request has never before been refused by this Court—the answer was returned that Captain James said that as the journalists had received no intimation of the sitting of the Court from the Court, their request could not be acceded to; and the President assented to this course being pursued. After the finding had been delivered, a request to the President that the judgment be handed to the Press representatives to be copied, was granted, and thus, after waiting nearly an hour and a half kicking their heels in a desolate waiting-room, the reporters were able to obtain one of the principal matters for which they had journeyed to Tokyo. To demonstrate that their presence in the Court would have conduced to the benefit of the public, we subjoin the following report of a little incident that occurred at the close of the reading, by Captain James, of the finding of the Court:—

Capt. Tipple asked permission to lay before the Court the "China Sea Directory Supplement," corrected to 1893, wherein the Eastern track (*i.e.* 30° E. of the Bombay Shoal) is stated as the track for steamers going south.

Capt. James—The case is closed and nothing can now be accepted.

Capt. Tipple—You ridiculed the idea of my taking the eastern track, and here is proof that you are wrong and I am right.

Capt. James—You may thank me that your certificate is not suspended for a longer period.

Capt. Tipple—I thank you for nothing, except your hectoring manner.

Capt. James (excitedly)—If I'd had anything to do with it, your certificate would have been suspended for 12 months: the Court is adjourned.

AMNESTY TO CONVICTS.

The following Ordinances have been published, under date of the 31st of January:—

As a special act of clemency in connexion with the Funeral, We hereby order that the following mitigation of punishments be put into force.

[Sign-Manual.]

&c., &c.,

IMPERIAL ORDINANCE No. 7.

Art. I.—The sentences of convicts already undergoing or about to undergo, punishments inflicted by the sentence of a Court of Law prior to the promulgation of this Ordinance, shall be reduced as follows:—

- (1.) Capital sentences shall be commuted to life imprisonment, or life exile.
- (2.) Sentences of life imprisonment or life transportation shall be commuted to sentences of 15 years' imprisonment, and 15 years' transportation, respectively.
- (3.) Sentences of imprisonment for a term shall be reduced by a fourth of the term. But if the reduced term does not fall within the limits of the periods provided by law, the largest term of the next lower class shall be adopted.

Art. II.—When the periods of punishment reduced in accordance with Clause 3 of the preceding article, become equal to, or less than, the shortest period prescribed by law for the convict's offence, the following rules shall be adopted for the nomenclature of punishments:—

- (1.) Imprisonment for the shortest term prescribed by law for the offence, or for a shorter term, shall be hard labour. Transportation for the shortest term prescribed by law for the offence, or for a shorter term, shall be major imprisonment.
- (2.) Hard labour for the shortest period, &c., shall be light labour, and major imprisonment for, &c., shall be minor imprisonment.
- (3.) Light labour for, &c., shall be major confinement, and minor imprisonment for, &c., shall be minor confinement.
- (4.) Major or minor confinement for, &c., shall be detention. But in the case of persons undergoing sentence under the military or naval penal code, the sentences of major or minor confinement may hold good, according to the nature of the offence.

Art. III.—Persons undergoing sentence under the old code shall have their sentences reduced by one degree.

Persons sentenced to penal servitude under the provisions of the Gambling Regulations promulgated in the 17th year of *Meiji*, shall have their terms of punishment reduced by one-fourth.

Art. IV.—The provisions of this Ordinance shall not apply to accessory penalties.

Art. V.—Convicts whose punishments are reduced under the provisions of this Ordinance, shall continue to serve their reduced terms at their present places of confinement, whatever be the nomenclature of their reduced punishments.

Art. VI.—Convicts confined in Hokkaido jails who are to be immediately released in consequence of the reduction of penalties provided by this Ordinance, shall be sent to the Prefectures or Cities where their sentence was originally pronounced.

As an act of clemency in connexion with the Funeral, and in order to confer the benefits of the Imperial grace upon Our subjects in Our new dominion of Formosa, We hereby direct that, in addition to the reduction of penalties prescribed by Ordinance No. 7, the following special provisions of amnesty shall be applied:—

(Sign-Manual)

&c.

IMPERIAL ORDINANCE, No. 8.

Art. I.—Persons in Formosa who, prior to the issue of the present Ordinance were convicted of any of the following crimes, shall be pardoned:—

- (1.) Offences falling under Articles 121, 122 123, 125, 126, and 127 of the Penal Code.
- (2.) Offences falling under Articles 136, 137, and 138 of the Penal Code.

[The Articles here enumerated relate to civil war, insurrection, armed sedition, rebellion, and so forth.—*Ed.* 7.M.]

Art. II.—Pardon shall also be extended to persons sentenced under the Old Code if their crimes belong to the same category as those enumerated above.

Art. III.—With respect to persons convicted of several offences, though the gravest of them be pardoned under this Ordinance, the pardon shall not extend to the other offences.

Art. IV.—Although a pardon may have been obtained under this Ordinance, fines already collected, or goods confiscated, shall not be restored.

Art. V.—The Governor-General of Formosa shall enact whatever Regulations may be required for enforcing this Ordinance.

IMPERIAL RESCRIPT.

As an act of special grace and assistance to the various localities, in connection with the Funeral, We hereby direct that contributions to the Funds of Cities and Prefectures shall be made from the Privy Purse.

IMPERIAL COURT PROCLAMATION.

In connection with the Funeral, Consolidated Bonds of a total face value of four hundred thousand *yen*, shall be distributed to the various Cities and Prefectures, to Hokkaido, and to Formosa, for the purpose of being added to their Relief Funds.

(Here follows the distribution.)

CORRESPONDENCE.

A REPLY TO QUERIES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—A correspondent, signing himself "B.C.," asks in what respect the *Uchū Shinkyō* misrepresented Mr. Fukuzawa's views in an article dealing with certain remarks made in one of his series of essays. The gist of the criticism of the *Uchū Shinkyō* was to the effect that a more serious view of life must be taken than is advocated by Mr. Fukuzawa, criticism which ignored the fact that in other essays and throughout the whole of his life Mr. Fukuzawa has advocated the necessity of taking

an earnest view of life. To found a theory on an isolated passage culled from the writings of a man who has made it his chief aim to show how various are the aspects of human life, is evidently unfair. The translations of "some of Mr. Fukuzawa's essays" to which "B.C." refers, were not known to me prior to the publication of his letter. I have had no time to compare them with the original, even had the latter been in my possession. But I observe that in one of them the words occur "Human life is but a joke; yet we should not consider it merely a joke," but live an industrious life," &c. I have known Mr. Fukuzawa's writings for the past twenty years and have read a good many of the Hundred Essays lately published, and can therefore say with confidence that Mr. Fukuzawa entertains no such flippant view of life as the *Uchū Shinkyō* condemns.

To "B.C.'s" second query the reply is that in no respect was Dr. Kato misrepresented. The essay on which my remarks were founded is published in Vol. II., No. 2 of the *Nihon Shūkyō*, to which I refer your correspondent. The words quoted by "B.C." are as literal a rendering of the original as an adequate expression of its meaning allows. The sentence to which "B.C." objects, "What I do maintain is that to the man who is thoroughly acquainted with the nature of things, with the principles which control the world, religion is superfluous" is thus stated in the original. *Yō no dō (在々) ni shite shūkyō muryō no gotoku genron (言論) aru wa yoku jiri (事理) no hai (解) shitaru gakusha ni taishite no koto nari.*

It is not always possible in a Summary to give the exact words of the writers quoted, but there have been instances when it has seemed to me important to do so, and the case referred to by "B.C." was evidently one of these.

Into an explanation of Dr. Kato's views on the subject in question I cannot enter now, but would refer your correspondent to the various statements of the position occupied by this philosopher published in back numbers of this journal.

I am, your obedient servant,

THE WRITER OF THE MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

January 20th, 1897.

THE LATE TRIAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Every heart which pulsates with human feeling and human sympathies will respond with eager endorsement to the manly expressions and to the merciful sentiments which pervade your noble article to-day, concerning the awful doom to which the recent verdict and sentence have condemned the unhappy lady whose protracted trial has just closed. Every one who hopes for mercy rather than righteous justice at the hands of the great Judge of all the earth, and at that awful tribunal before which every one of us must stand, will now desire that mercy may be extended to one of our fellow creatures, and that fellow creature a woman and a mother. God knows, and God only knows, the fierce soul struggle she must have endured, and he alone can measure the depths of her guilt. The law knows no mercy, but humanity does; and it is to human mercy and divine clemency that we now look for a commutation of her sentence. Justice has uttered its voice. Its fiat has gone forth. The law is vindicated before men. Its protecting ægis has been thrown around society. The sacredness of human life is asserted, and now it remains to be earnestly pleaded that a term of years may be substituted in punishment, and not that a human soul should be swung into eternity.

Yours faithfully,

F. STANILAND.

Clarendon House, 2nd Feb., 1897.

INUNDATIONS RELIEF FUND.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The money put into my hands in answer to your appeal and that of Bishop Bickersteth for the relief of sufferers from the September floods in Gifu and Aichi Prefectures has not yet been all distributed, so I can at present only give an interim report to show the subscribers what is being done with their liberal donations. When funds were being asked for it was specially mentioned that it was not the intention to distribute them hastily, but to make careful investigation and help in only the neediest cases, and to continue relief work throughout the winter.

This principle has been acted upon. I myself have made frequent visits to be afflicted districts and have, either personally or by means of reliable

* The italics are mine.

Japanese helpers, looked into all the cases where relief has been given, enlisting of course in each district the help, always cordially given, of the local officials.

Up to the present, we have given aid in the towns of Ogaki, Takasu, Inao, and the villages of Jaiki, Ogure, Omaki, Takada, Nishijima, Kano, Fukuoka, Wakino, Hinahara, and Tsuchikura—all lying in the districts that suffered most from the inundations.

The help given has been principally in the form of bedding, 372 futon having been purchased up to the present time. A certain sum has also been spent in providing permanent relief for a few of the most destitute cases, and a small amount has been distributed in cash, mainly in sums of one yen and under. These small grants will be continued monthly in some cases until next June when the necessities of life will have become cheaper and the people of the district will be better able to help their own needy ones. Bishop Bickersteth's appeal was for the Aichi sufferers as well as for those in Gifu, so the sum of \$100 has been handed over to the Rev. J. Cooper Robinson of Nagoya for the relief of the needy in the flooded district north of that city.

The balance now in hand will have been all expended by the end of this month, with the exception of the amount needed to provide for promised monthly allowances.

Among those who have received futon are more than 40 widows, some with a number of children to support, others far on in years and quite alone. It may not be out of place to mention some individual cases in which relief has been given. On a cold, windy day in December I looked into a straw hut put up for the houseless on top of the river embankment at Ogure village. All the occupants had moved out except one old woman, 73 years of age, who had neither home nor friends to whom to go. She was boiling a little pot of vegetables over a handful of fire. Her name had already been given to us by the local office as that of a deserving case, so, when I saw that her bedding consisted only of straw matting and an old mosquito net, no time was lost in providing her with a pair of warm futon.

"It's cold, sir, very cold," she said, "the house is like a basket too, and this is all the clothing I have," touching at the same time the two thin old cotton kimono she was wearing. "only one is mine," she said, "the others are borrowed."

Another case was that of a hard-working farm labourer with a wife and large family. He had saved all his household goods from the flood and stood them on top of the embankment, but unfortunately a fire broke out in that crowded little space and nearly all his possessions were lost. After the water had subsided he returned to his house only to find its walls all stripped of plaster and from not much of a shelter the weather. A pair of large futon given to the family will enable them to get through the winter in comparative comfort. In a little hut at Omaki-mura were three people, the father sick and lame, the son half-blind and simple, and the mother alone able to work. The hut was about four mats in size, a loom took up one mat's space, fire-place and pots another, and the family had two mats left to live on. The hut was made of old boards and straw roughly put together, no door to it, one end open by day and half closed in at night, allowing free entrance not only to the inmates but to the cold winter air as well.

One more case: a friendless, homeless old woman in Ogaki, over eighty years of age. Her house had fallen and she cooked, ate, and slept under a few old boards, which rested on a low, open fence at one end, and on the ground at the other. She asked for time to sell out her belongings before going to the Nagoya Yose-in. We thought that she might possibly realise 12 yen from the sale, but as she also wished to say good-bye to her neighbours we left her in Ogaki for a short time before taking her off to a place of food, clothing, and shelter for the rest of her days.

Of course all the people helped were not in such bad circumstances as these, but many others were but little, if any, better off.

Straw-mat huts, plasterless, tottering houses, straw quilts or mosquito-net quilts, food slim in quantity and poorer in quality, are not pleasant to think of this cold winter weather, much less to experience.

I cannot then, too heartily, thank those who, in answer to your appeal, have provided one of the witnesses of such things with the means of relieving many of those whose hard lot it is to experience them.

Adding a short financial statement, I remain,
Yours faithfully,
H. J. HAMILTON.

YOKOHAMA AMATEUR ROWING CLUB.

The annual general meeting of the members of the Yokohama Amateur Rowing Club was held on Friday evening at Keil's Buildings. Mr. F. J. Hall, acting Captain of the Club, presided, and amongst the forty seven members present were Messrs. H. C. Litchfield, G. H. Seidmure, W. W. Campbell, W. Sutter, F. W. Thomas, K. Kingdon, J. B. Rentiers, W. Tucker, G. Hood, F. L. Elinor, E. H. Irwine, P. von Hemert, L. Salabell, W. Goddard, M. Schellenberg, A. Owston, J. D. Hammond, W. T. Payne, J. K. Trafford, L. Mottu, A. Lewis, A. R. G. Clarke, C. B. Clausen, R. Boyes, R. Ahnheim, G. C. Gibbs, J. B. Coulson, C. K. M. Martin, Rev. E. C. Irwine, etc.

The CHAIRMAN stated that as the Hon. Secretary, Mr. Muir, was suffering from the effects of an injury received in a football match and was unable to be present, Mr. W. W. Campbell had kindly offered to act in his place.

Mr. CAMPBELL then read the notice convening the meeting.

The CHAIRMAN suggested that the minutes of the last meeting should be taken as read, and the proposal was seconded and passed.

The CHAIRMAN having commented briefly on the various matters referred to in the report of the Committee, including the proposal to strengthen the executive of the Club by the election of a President, to preside at meetings, etc.

Mr. SUTTER proposed that the report and accounts as presented be adopted.

Rev. E. C. IRWINE seconded the resolution, and it was carried unanimously.

REPORT.

ACCOUNTS.—Show a Credit balance of \$912.97.

ROWING.—The Committee are pleased to report that the interest in rowing has been well sustained. The K. R. & A. C. sent crews to compete against the Club at the Spring Regatta in Pairs, Pairs, Double Sculls and Single Sculls. In all these events the Club's representatives were victorious. The victors, however, rowed at a great disadvantage. They and their boat came up on the "Teucer" and encountered a typhoon. Their boats were badly damaged, which necessitated their rowing in our boats, in which they were naturally not so much at home as they would have been in their own. They are to be heartily congratulated on their plucky bid for victory, especially in the 4-oared race. At the Regatta a crew of gun-town officers from H. M. S. Edgar competed in the Junior Fours. Your Committee were glad to welcome a crew from such a source and trust that the Club may often in the future see crews from the Navies of the World taking part in the Club's Regatta.

At the Autumn Regatta the weather was unpropitious, heavy rain falling nearly all day; but, as the water was good (which rarely occurs in the Autumn), the Committee decided to hold the Regatta. The chief event was that for International Fours, which was won by the English crew.

The "Kirin" Cup for Champion Pairs was won at this Regatta, for the third time by Messrs. A. L. Mottu and H. S. Goddard, and so passes into their possession.

SWIMMING & AQUATIC SPORTS were held during the Summer. The competition was keen, but scarcely up to the standard of previous year.

BATHING BARGE.—The Bathing Barge, with the exception of the canvas on the roof, is in an excellent condition. It will require to have the usual annual painting, and new canvas on the roof and new matting. The anchors and chains were taken up and thoroughly overhauled, about 30 feet of new chain being put on. The moorings are now about 50 ft. further out and in deeper water. The sampan had comfortable seats put in for the convenience of Members. It would be a good idea to build one more sampan of the same description. The Landing Stage is sound, and is guaranteed by the Engine and Iron Works for another year.

BOATS.—The Club Boats and Oars are all in good order. With the 5 new boats built in Hongkong, the Club now possesses 10 four oars; as this is a larger number than the Club really requires, it might be desirable to dispose of, say, 3 of the old boats. The 5 new fours (including the fitting of swivel rollocks) cost \$1,400 85. Three sets of 4 oars have been ordered from home, and should arrive before the opening of the coming season.

PROPERTY AND HOUSE.—The House is in sound order, the roof having been recently overhauled. A new

sliding door has been fitted and the slip extended to facilitate the handling of boats. The rigging and rigging has been overhauled and painted and a new socket fitted.

RULES.—At an Extraordinary General Meeting held on 25th Feb., 1896, it was decided to put the election of new members in the hands of the Committee and not admit any more Honorary Members.

Your Committee at the General Meeting will bring forward a proposition that the management of Club be strengthened by the addition of a President and will propose that Rule XIII. be altered accordingly.

During the year under review, Members have to deplore the loss of two old and prominent Members, who had always taken an active interest in the Club and its management. The departure of Mr. Rickett for England left a gap not easily to be filled. The Club, before his departure presented him with an artistic album, containing photographs of the Boat House, old and new, and crews in which Mr. Rickett had either rowed or coxed. A further testimonial in the shape of a handsome silver bowl, was subscribed for by Members and forwarded to Mr. Rickett. Mr. Boag's sad death robbed the Club of the Captain, and Mr. Hall was appointed to act in that capacity for the balance of season.

The Committee place their resignations in the hands of the Members, with their best wishes for the continued prosperity of the Club.

Compared with the vouchers and found correct.

Ed. BOSPHART,

Yokohama, January 10th, 1897.

The CHAIRMAN proposed the name of Mr. H. C. Litchfield for President, and the voting for President, Captain, Hon. Secretary, and Hon. Treasurer was then proceeded with, Messrs. Trafford and Sutter acting as scrutineers.

The result of the ballot was the election of Mr. Litchfield as President; Mr. F. J. Hall as Captain; Mr. Mair, as Hon. Sec.; and Mr. Schellenberg as Treasurer. Mr. Hall thanked the members for their confidence in him.

Mr. Owston and Rev. E. C. Irwine acted as scrutineers of the ballot for four members of Committee, which resulted in the election of Messrs Rentiers, J. McArthur, and H. S. Goddard, while

Messrs. D. McLaren and W. W. Campbell tied for the fourth place. Upon another ballot being taken to decide which of those two should be elected, there was a majority of votes for Mr. McLaren, who was declared elected.

The Rev. E. C. IRVING congratulated the members on the election of an old and formerly active member of the Club to the position of President, and on his proposal three cheers were given for the new President, Mr. Litchfield.

This concluded the business of the meeting.

MESSRS. LANGELEDT & CO., LTD.

The ordinary half-yearly meeting of shareholders in Messrs. Langfeldt and Co., Ltd., was held on Saturday afternoon. There were present Messrs. J. F. Lowder (in the Chair), O. Keil, F. Reiz, F. H. Bull, R. Bleifuss, and H. Feicke, Secretary. The meeting was very short, lasting only three and a half minutes. The report and accounts as presented were approved and adopted Messrs. Reiz and Bull were re-elected Directors, and Mr. C. Gummer, auditor. The following were the accounts:—

REPORT.

The Statement of Assets and Liabilities, and the Profit and Loss Account for the half-year ended the 31st December, 1896, accompany this Report.

The Net Profit for the half-year, including balance brought forward from the 30th June, 1896, and after providing for General Expenses, Directors and Auditor's fees, Depreciation, and Losses, amounts to \$32,579.86 which it is proposed to apply as follows:—

In payment of a Dividend of \$ 20 per share.....	\$30,000.00
In payment of a Bonus to the employees of the Company.....	1,500.00
Balance to be carried to new account.....	1,079.86
	\$32,579.86

Messrs. Reiz and Bull retire from the Board, but offer themselves yet for re-election.

The Directors have much pleasure in recommending the re-election of Mr. Cecil Guinness as Auditor.

CECIL GUINNESS, Auditor.

The settlement started by Lieutenant Gunji in the Kuriles several years ago is still struggling along and endeavouring to maintain itself by the sale of marine products caught in the northern sea. The settlers established a branch bureau recently at No. 8, Hachiman-cho, Nishikubo, Shiba, Tokyo, for the convenience of applicants who wish to share their enterprise.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

December 7th.

Mr. McKinley was elected by electoral and popular majorities far in excess of anything either hoped or feared. The press and the people seem to have concluded that this is the psychological moment for giving advice to the president-elect. Retire the green-backs, extend the circulation of the national bank-notes, and take the government out of the banking business, say the chambers of commerce. Redeem the pledge of the Republican party and endeavour to secure a stable ratio between gold and silver through an international agreement, say the bimetallicists. Remember that the business interests of the country are opposed to tariff-tinkering of any kind, assert the gold democrats. You are pledged by the platform of your party as well as by your own past to a really protective tariff measure, is the emphatic advice of the majority of staunch Republicans. These are some of the disadvantages of a big majority, and Mr. McKinley is destined to disappoint many moderate men who voted for him; not merely men such as the well known anarchist Herr Most, whose support during the campaign was more embarrassing than helpful. The excitement during the election was all absorbing. There was no end to speeches and processions. A resident of Waltham, a town close to Boston, spoke for more than thirteen hours in favour of silver to a delighted audience, many times renewed, at the headquarters of the bimetallic club there. He gave fifty reasons why the people should support Bryan, but none of them convinced his fellow townsmen, proud though they were in the knowledge that Waltham possessed the champion talker of the country, a man quite superior to Senator Allen, of Nebraska, who could boast of a record of eleven hours only. In the good old days, a Western clergyman stated that during a certain electoral campaign he could not preach on three of the ten commandments without his people complaining that he was dragging politics into the pulpit; this time, however, the private life of the candidates was treated with the respect it deserved. The pulpit, where so inclined, could deal with the moral aspects of the campaign as it liked. Where sermons are preached on the new woman, the bicycle, the "bloomers," the fatted calf, etc., political topics can not produce much additional sensation. Dr. Wilson's sermon on "Satan in Politics," in which he proved that Satan was personally a Prohibitionist but had lately joined the silver ranks, was probably the best, or the worst, furnished in this time during the campaign. The excitement of the election affected even the "stranger within the gate." So far as known, every Chinese in Boston qualified to exercise the right of franchise did actually cast his vote, while Mr. K. Nakamura, a graduate of Harvard, wrote to the *Boston Transcript* a long and very able defence of silver, showing how much Japan had been benefited by her silver policy. The editor's reply, briefly summarized, was that Japan was a silver country because she could not possibly help it, not because she had deliberately decided in favour of the white metal. When McKinley is inaugurated he will find that President Cleveland has "filled the stables with democratic horses," that is, by his executive order of last year all consular offices with salaries not exceeding \$2,500 have been made civil service posts, and thus of the consular offices in Great Britain, which are eagerly sought for, six only will be at McKinley's disposal if he respects the order of his predecessor. Thus far there has been no backward step in civil service reform.

The arbitration treaty with Great Britain has been welcomed everywhere. The absence of a Venezuelan representative on the board of arbitration shows that England considers the question as one in which the United States have a voice and are entitled to speak the decisive word; but this right is acknowledged only where the question is one involving the forcible acquisition by a foreign power of territory on the continent of America. Canada did an unusually graceful thing by fixing the same date for her Thanksgiving Day as ours—the third Thursday of November. All that now remains to be wished for is a general arbitration treaty between the two countries, to be followed by treaties between all the civilized powers.

The condemnation by the Supreme Court of the United States of Mr. Chapman, a stock-broker, to an imprisonment of thirty days for his refusal to answer certain questions put to him by the Senate Committee investigating the Sugar Trust rumour in connection with the Taft Bill of 1894, has made an excellent impression upon the people. The Managers of the Sugar Trust, Messrs. Haver-

meyer and Searles, have also to submit to trials in the district courts on similar indictments. Mr. Cooper, the Hawaiian Minister of Foreign Affairs, was in Boston last week and then went on to Washington. Ex Secretary of State, John Foster, has also gone to Washington, immediately after his return from Hawaii. He tried to secure a concession from the government there for a cable from Honolulu to Japan and Australia, but the Ministers were naturally enough unwilling to act until they knew whether Congress would vote a subsidy for the cable from San Francisco to Hawaii. Here the matter rests for the time being.

The work among the several hundred Armenian refugees in and near Boston is being pushed vigorously. For those among them that do not know any language but Armenian, and their number is considerable, services in Turkish are being held regularly. Unfortunately for these Armenians and their American friends, some of their own countrymen have encouraged them not to take up work unless paid at the same rate as American labourers, which, owing to their total ignorance of English and the large number of Americans still unemployed, is an utter impossibility. Some of the refugees have actually abandoned work given them and returned to their friends, preferring to live on charity rather than labour for their support on the terms to be had. If they persist in this, they will inevitably become public charges. "If the Armenian refugee work in Boston is kept much longer before the public," writes a gentleman intimately acquainted with the work done so far, "the government may be justified in excluding Armenians who may land in this country as liable to become public charges." Secretary Olney's statement last week to the press has also been very discouraging. "The demonstrations of revolutionists in Turkey," he says, "are now the chief danger so far as our missionaries are concerned, whose safety is not promoted by intemperate expressions of public opinion excited by appeals to sentiment, regardless of facts." This statement has, of course brought the question of veracity to the front, especially as between Drs. Hanlin and Kimball and Minister Tirrel, and very acrimonious attacks have been made upon the latter. Side by side with these discussions, Mr. Moody's efforts to help the poor in Boston have been going on. Many thousands of bushels of apples were distributed among them during the last few weeks. Encouraged by the success of the Salvation Army in the Boston slums, if such a term is permissible, the Protestant Episcopal Church is about to organize an army of uniformed evangelists under military discipline. It will be modelled to some extent on the lines of the Church Army in England. The action of the American Board in its recent session at Toledo has, with regard to Japan, been summarized thus: "The Japan Mission is to be maintained in its full strength in the belief and expectation that Christian agencies are still imperatively needed there." The W.C.T.U. at its recent meeting at Pittsfield has condemned high license and the use of feathers of birds on the hats of the ladies. There seems to be no connection between the two, but some clerical friends of the ladies slyly intimate that of late the cock-tail has been quite as much in evidence in the bar-room as it has been upon the ladies' hats. Since my last letter, there has been quite a storm in the local tea-pot. Into the court of the Boston City Library a statue, a Bacchante, had been placed as a fountain figure. Objection was raised to this on the ground of public morality. The court was then daily crowded by eager spectators that wanted to see and judge for themselves, and the discussion waxed warmer as the days grew colder. Even the clergy that seemed at first unanimous, especially on the principle that silence gives consent, became divided, a few claiming that they could see nothing offensive in the statue, and that everybody might be expected to find in it what he brought to it, while others denounced its presence in the library as a wrong to the young and a disgrace to the city. After much hesitation, it was finally and definitely decided by the Art Commission that the Bacchante might remain. In a few days, however, the statue will be removed to its temporary winter quarters.

Mr. R. G. Lehmann has arrived at Cambridge, from England, to coach the Harvard men. The defeat of Yale at Henley is the chief cause of this invitation, and after a contest between Harvard and Yale—the former friendly relations in athletics are about to be resumed—the victorious university is sure to challenge either Oxford or Cambridge, whichever should win the next race on the Thames. Harvard is in earnest and will give a good account of itself.

LETTER FROM WASHINGTON.

(FROM OUR OWN CORRESPONDENT.)

Washington, D.C., Dec. 12.

Four days ago Congress met in regular session on the first Monday in December. Nothing of importance has been done and nothing will likely be tried this session, which is a short one, ending on Mar. 4. Tariff talk fills the air, but the Republicans are almost in the condition of the Democrats after Cleveland's election in 1892, they cannot agree on a bill. The Western farmers want a high rate on raw wool, the eastern manufacturers don't. The Pacific coast senators call for a duty on coal and lumber, but Boston and other Atlantic seaboard cities desire Canadian woods and Nova Scotia minerals as cheap as possible. Many Republican agriculturists are very restive under a system that makes all factory products dear for them and gives no compensating increase on what they sell. Another pitfall lies the support of the Gold Democrats during the campaign. They look as yearningly toward free trade as they ever did, and are sure to growl if import duties are raised. Hanna, McKinley, and other leaders have publicly and impressively said that they won only by the help of this wing of the Democrats. With these difficulties ahead the Republicans also in control of the Lower House naturally hesitate about tinkering with a revenue measure this winter. The prospects of putting through a radical one even after the inauguration of their candidate are rather gray as it is doubtful whether they will have control of the Senate. In North Carolina, Kentucky, Dakota, and Washington, it is uncertain whether the Republicans can put in their man for the Senate. It is necessary to get all four to have a safe working majority. In the meantime there is a deficit of several millions monthly. The wave of prosperity that the political gold orators so loudly and so numerously promised during the fall, have signally failed to materialize. The two leading commercial agencies, Dun's and Bradstreet's, both report greater dullness than usual at this season, and merchants expect no improvement until after New Year. The failures for November were greater than for the corresponding month four years ago, and the failures this week have been more than last week, and more than the same week in 1892 and 1893. In many localities there was the usual picking up after the usual stagnation of a hot presidential campaign, but decidedly there has been no general revival in business.

The silver men are doubtless chuckling over the continued depression, because it is an endorsement of their views. They still declare there can be no permanent change for the better until our financial system is seriously modified. As they argue the rural elements are discriminated against, and with one-half of the country too poor to buy, finished products will be a drag on the market, and the more of them turned out under the artificial stimulus of protection, the worse will be the glut and the worse will be the outcry of "hard times." Some of them shrewdly assert that it is to their best interests to give the Republicans all the rope they want for enacting protection. They do not, however, relax their efforts for the eventual crowning of their white mistress; though their captains discourage unnecessary agitation. They counsel constant watchfulness but "masterly inactivity" at present, to send out literature to keep up club rolls, together with enrolling recruits quietly but to sound no note of battle. When Bryan went to Denver out in the Rocky Mountain section a few weeks since, and was received as a coronetted king instead of a defeated general, he urged his followers, while standing by their godless, to give hearty support to McKinley's policy so that we could see what his remedy was worth. This morning the chairman of one of the national silver committees issued an address along the same lines. A meeting of representative leaders from all the silver camps will be held in Washington in a few days to consult as to future efforts in this cause. It will be quiet but earnest and important. It will be studied by all thoughtful observers of politics, as it is a question much discussed whether the bimetallic issue is dead in this country or not. The *New York World*, *Harpur's Weekly Review of Reviews*, and other large periodicals "have sat on the body" and solemnly and aggressively pronounced it dead, but sapient journalists have so often killed off questions that obsequiously bobbed up afterwards very "live corpses" that no one but a bitter partisan puts any faith in their deliverances. In the summer of 1895 a small number of democratic politicians gathered at one of the hotels in Washington to confer about the best means of committing their party to the fight for free silver. They were lightly noticed by the dailies as a

rather obscure lot of cranks, but when the Southern delegates turned up at Chicago in July almost to a man in favour of the issue we began to reflect on the enormous results of the unheralded work of that little band. The crusade began a quarter of a century ago and it has been growing in intensity ever since. It is abruptly dropped now it is the first instance in history of a vast mass of people so suddenly dropping a cherished idea. Preparations are now being made in Chicago by the oldest and strongest Democratic organization there to give Bryan a rousing welcome when he attends their annual banquet on January 1st. Efforts are being made to have him here on a similar occasion later in the winter. He is almost as much noted now as when a candidate. He is writing a book on bimetalism to appear in January, and has been engaged at an extravagant figure to lecture throughout the country. This seems a risky venture on the part of his agent, Wilson, Breckinridge, Hill, and other political celebrities have sadly failed to draw when an admission fee was charged.

McKinley is industriously toiling away at his cabinet construction out in Canton. The papers as usual are strewn thick with guesses, but no authoritative announcements have been uttered. It is the opinion of all that Hanna can have what he wants, and it is the belief of many that Dingley of Maine will hold the treasury portfolio. It is reported, though, that Hanna refused to accept any gift. McKinley has always favoured silver, but his critics assert he is now inspiring himself towards the other metal. One sharp fellow has found out that he uses a porcelain-lined bath-tub inlaid with gold.

Our new congressional library is practically completed and will be turned over for the books in February next. There are two most remarkable things in connection with this building: it will be ready within the time stipulated and it costs less than the original estimate by some two hundred thousand dollars. The total expenditure on it will foot up not quite six million dollars. With its rich carvings, its bas-reliefs, its ornamented panels, its wall paintings, its statues and bronzes, its ideal figures of the Muses, arts and sciences, its stained glass, its polished woods, with its parks its lawns and fountains all around it is by far the most beautiful and artistic structure in America, and the grandest book-home in the world. We have now almost a million volumes for it, but it will hold five millions. The joint committee of Congress have been seeking testimony from the most experienced librarians for the best government for this noble institution. These unbiassed experts were virtually unanimous in recommending that it be made a national library instead of congressional, that it be removed wholly from the sphere of politics, that it be under the supervision of a board of trustees. None of these sensible suggestions have been embodied in the report of the committee as outlined in the paper to-day, but the report may be amended. The total force to be employed is about one hundred, or half of that in the British Museum. It is an inadequate number, but our legislature is very economical unless voters are to be pandered to. Some very short-sighted enthusiasts are trying to get this building with all its delicacy of adornment and finish for the inaugural ball to be held in next March. This function has always drawn a crush and jam of all sorts of people because anyone can attend that will pay the price of a ticket. In such a throng there would certainly be some simpaton to scratch their names on the walls, and some vandals to break off relics. Happily slight favour has been shown the move by members of Congress.

A long account has just come out of Professor Langley's air-ship. He has made a machine on the general principle of a bird with out-stretched wings, carrying a one-horse-power engine in its body, the whole apparatus weighing less than thirty pounds. Two weeks ago it rose of itself from a table and sailed through the air against the wind at the rate of thirty miles an hour for nearly two minutes, or until the steam gave out, and then settled down gently on the water, without damaging any of its parts. He considers the problem of atmospheric navigation scientifically solved, and is confident it will be commercially solved also by the close of the century. He is secretary of the Smithsonian Institution, the chief encourager of learned investigations in America. His studies in air propulsion are a bye-product of his intellectual labours.

Mr. Cleveland has already chosen a retiring spot to go to after laying aside the toils of office next spring. Princeton, one of our oldest and foremost universities, will be his dwelling place, though he is not connected with the teaching staff. He has purchased a commodious residence and will have extensive additions and stables built.

AUSTRALIA AND JAPAN.

BY JOHN PLUMMER, M.J.S.

Sydney, December 10.

There can be no question that the new policy of the Nippon Yusen Kaisha Company in running their own vessels to and from the leading Australian ports, has raised questions of some magnitude in colonial commercial and industrial circles, where it is generally regarded as the beginning of a struggle for the maritime trade of the East. The *Ballarat* (Victoria) *Star* says:—The industrious and enterprising Japanese are seeking to build up national prosperity upon the model so successfully established by Great Britain. Wherever a profitable avenue for trade offers itself they strive to push their wares, and it is not surprising that they should have turned their attention to Australia. Regular and direct communication between the two countries is now an accomplished fact, the Nippon Yusen Kaisha line of steamers having opened a monthly mail and passenger service. • • • Whether the claim of Japan to participate in the dominance of the Pacific can be maintained remains to be seen. In any such pretensions she will have to reckon with Great Britain as well as with Australia. As regards her efforts to extend her trade to these colonies, if she can, to mutual advantage, strengthen the commercial ties between them and her, well and good. But it is certain that anything like an invasion of our shores, whether peaceful or otherwise, would be resented. So far as any Japanese articles sold in Australia are concerned, there does not seem to be much ground to fear the threatened competition. The Japanese have proved themselves to be clever imitators; but the imitations are still behind the original articles in point of merit, and the manufacturers have yet to show that they are originators. The great fear seems to be owing to the low wages paid to the artisans and labourers, but there is already an improvement in this respect, and as the manufacturers push their way into the world's markets a still further increase in wages may be anticipated. In has been so in Germany, and even to a limited extent already in Japan, and the rapidly with which Western ideas are assimilated there is not likely to stay outside of the workshop. Up to the present there is nothing to be feared from Japanese competition, and it does not appear as though danger is likely to arise in the future."

The views expressed by the *Ballarat Star* seem to be largely shared by the leading provincial papers in the colonies; but more than one journal affects to see in the new line a source of danger to Australian shipping interests. Thus the *Western Gracier* (New South Wales) remarks that the arrival of the Japanese vessels in Australian ports is a notable incident, and one which shows the trend in the tide of affairs. "For a long time past the cheap labour of the East has been looked upon with longing eyes by British capitalists, and many of them have quietly been investing their cash in factories, shipping, &c., especially in Japan, where the labour available, as well as being cheap, is intelligent. The fall in the prices of produce in gold standard countries has caused money to accumulate in vast useless masses in London, because it is no longer profitable to employ it in productive enterprise, and the rate of interest, until the American election caused a demand for gold for the United States, was only nominal. But in Japan, China, India, and other silver-using countries the producer is still making very good profits. The fall in prices only affects the countries which have limited themselves to the use of gold. Prices in silver standard countries are as high as ever they were, and the producers' labour is as well repaid as ever it was. Not only has the investor who goes to the East a prospect of obtaining all the labour he requires at a low rate of wages. The wages, low as they are, are stated and paid in silver, and a sovereign to-day buys about twice as many yen or Japanese dollars as it did when silver was bringing five shillings an ounce. Here, then, in competition with gold standard countries; is 50 per cent. protection straight away. This is what is driving Newcastle coal out of the markets of the East, to be replaced by "black diamonds" from Japan. This, moreover, is shutting up Australian tin mines, because they cannot compete with the Straits miners, who get as good a price in silver with tin at £60 as they used to get when silver was five shillings an ounce, at £120. This 50 per cent. protection by reason of the low silver exchange will also make the new Japanese lines of coastal steamers to which we have already alluded a very formidable competitor. There is no pretence of maintaining for the Japanese seaman anything like the standard of living which the Australian seaman insists upon. Not only is his pay smaller, and his food poorer, coarser, and cheaper. Not only is there this 50 per

cent. bounty by reason that he receives his wages in cheap silver. But the Japanese shipowners are free from the numerous laws and regulations which have been passed in the desire to safeguard the lives of Australian seamen, and which can only be observed by dint of considerable outlay. Being worked so much more cheaply, and and on so much lower a standard, it is obvious that the Japanese ships will be able to "cut" rates much lower than their Australian competitors, and still show a balance on the right side. It is difficult to see what can be done to redress the balance, but it is more than probable that there will be a strong demand shortly for some definite remedy. Shipowners will represent to the Government that it is quite as unwise and unjust to allow the Japanese—with their low wages, their low standard of living, and their contempt for all the hygienic precautions which we deem necessary—to demoralise our shipping as it would be to allow them to come in by wholesale in person and take the bread out of the mouths of our citizens. Meanwhile, there is another side to the picture. The investment of European capital in erecting factories in Japan has caused a strong demand for raw material, such as wool, hides, and tallow—a demand, moreover, which is likely to become much stronger. The inhabitants, too, are becoming large consumers of meat, and we should be able to supply them on more advantageous terms than the stockowners of any other country. It seems almost certain that a big trade will spring up between Australia and Japan, and that the competition of the latter will be more formidable to British manufacturers than to Australian producers. Australia will get another and a rapidly expanding market for her staple products, and that fact ought to prove of material assistance in enabling her to get more remunerative prices."

The Rockhampton (Queensland) *Morning Bulletin* says:—"In contemplating the advantage it may be to our commerce and trade to have a large and populous country opened up to both within comparatively easy reach of Australia, it may be well to consider probable results in other directions. The expansion of Japan must be regarded in connection with the prosperity, independence, and integrity of the British Empire. Whether there is cause for apprehension of any kind may not be altogether lost sight of. The late war between China and Japan has led to much new information being disseminated regarding the latter country, and to her ambition, power, and aims becoming matter for reflection. Japan is a country with an ambition: aspirations and hopes have taken possession of the minds of the governing classes, and have been instilled into the hearts of the common people. The idea that the nation may become great, and accomplish great purposes in the world has become a sort of national belief. For many centuries China has been going on under the pleasant superstition that it was the foremost country in the world, that it was the pearl of the universe; that its inhabitants alone were civilised, and that the denizens of other parts of the world were barbarians. The Japanese have lived under the shadow of this superstition. Intercourse with the nations of the West have led to a great change taking place. Thinkers in Japan have applied their minds to the facts of European history, and they have formed conclusions and fostered ideas, which have led to the sudden and practical expansion of views, regarding the condition of their own country, and the means by which changes in it by may be carried out. A man with a purpose in life has a great stimulus to action, and a sustaining power in conflict. The same may be said of nations. While China and Japan in the past have remained content with their condition, because they had no thought or hope of anything better, other nations have been growing in civilisation and all that it means. The United Kingdom and the United States have been leading the van. Others have been marching on towards independence, national prosperity, and comfort. Japanese statesmen have formed an ambition that their country should be as independent, self-reliant, and prosperous as any other, and in their endeavours to realise it they are adopting European methods. The visit of the *Yamashiro* is some proof of this. In the endeavours to realise their ambition, the Japanese have become conscious of the value of power, and of their possession of it. Besides building fleets and drilling armies, they have cultivated the capabilities of organising, planning, and directing. It was their intellectual as much as their physical superiority which enabled them to defeat the Chinese. Having the comforting assurance that in the use of means of modern military warfare, they having nothing to fear from their immediate neighbours, the Japanese are bent on cultivating the arts of peace. The training of the youthful aristocracy in

Europe has shown them the multifarious advantages of foreign trade and commerce—of the industrial arts of production and manufacture. It is in these that progress is to be observed, and that in the opinion of some British patriots, room for apprehension is to be found. Britain has long been spoken of as the workshop of the world, and even the competition of the United States has not been able to greatly impair her supremacy. Japan threatens to interfere with that supremacy among those eastern nations with which Britain has had almost indisputed trade relations. Labour is cheap in Japan, and the people have displayed an aptitude and desire to learn manufacturing arts and industries. The country is already competing with Britain. Sedentary pursuits are not distasteful to them. It has been said Japan is a nation of weavers, and some proof of this is to be found in the fact that within the last ten years the export of textile fabrics has risen over forty-fold. These are chiefly cheap silks and flimsy materials for the American market, where novelty may increase their sale. Within the last half dozen years the number of people employed in cotton spinning has risen from a little over seven thousand to upwards of forty thousand. So far as the cotton trade is concerned it is already being predicted that England is doomed. Cotton mills are going up rapidly in Japanese towns, and some idea of the uses to which the cloth is put is furnished by the fact that the number of umbrellas exported annually amounted not long ago to two millions. What has been done with regard to cotton manufactures may be accomplished in connection with woollen. Cheap wools from Australia have already given manufactures a start, and the prospect increases of their being able to turn out goods to compete with those manufactured in England. Then, the Japanese have become conscious of their own powers in the arena of manufactures, and they are essaying to consolidate and render their efforts as effective as possible. They have their Chambers of Commerce, and in imitation of European nations some centuries ago they are forming guilds and associations, assimilating in some respects to English classes for technical education, with the view to improving the quality and increasing the uniformity of their goods. Conscious of their power and progress they are also proud of it. Mr. Kaneko, Vice-Minister of Agriculture and Commerce in Japan—a gentleman educated at one of the great European universities, and of wide experience in economical and statistical matters—addressing a Chamber of Commerce, said: "The cotton spinners of Manchester are known to have said that while the Anglo-Saxons had passed through three generations before they became clever and apt hands for the spinning of cotton, the Japanese have acquired the necessary skill in this industry in ten years' time, and have now advanced to a stage where they surpass the Manchester people in skill." Of course while the aptitude of the people to engage in industrial pursuits may be great, we cannot overlook the fact that it has been open to them to learn and acquire in Britain all the science and skill which have there been gained by years of experience and observation. The most modern machinery is purchased in the United Kingdom and the United States, and when set up in Japan is worked by artisans who have already been made familiar with it by experience in the countries where it was made. Should the industrial arts multiply in Japan, should she be able to send out worsted and woollen goods equal in quality to those made in Europe, then the time may not be far distant when large consignments of Australian wool may be despatched to Japan, and in return we may receive woollen goods of all kinds and excellent quality. Such changes in the currents of trade and commerce are possibilities which must give rise to varied, and to Britons, perhaps not altogether satisfactory or comforting reflections."

The foregoing extracts may be regarded as a fair epitome of Australian public opinion upon the subject, and may be appropriately supplemented by the following quotation from the *Sydney Daily Telegraph*:—"To those who look candidly at the matter from the standpoint of national interest, there can be no question about the public benefit that will result to us from the new line of steamers. The success of the undertaking will mean that a great market has been opened for a number of our products, while at the same time a means has been provided for the better and cheaper supply of our wants. Both as sellers and as buyers we will gain. How many kinds of the things we produce will be bought by the Japanese it is as impossible to foresee as the numbers and nature of their products which we will be glad to buy. The fact that the Japanese Government have heavily subsidised the new line of steamers is good evidence of their confidence that its inauguration will be justified. As Mr. Burns remarked, in re-

sponding to the toast proposed by Sir George Gibbs, this country has reason to congratulate itself upon what has been done. While in other colonies a great deal of expense is being incurred in efforts to develop the export trade, the Japanese Government and the enterprising owners of the new line of ships have undertaken at their own cost and risk to aid very considerably in developing ours. No conditions are asked; the vessels will come here, bringing to us anything we wish to buy from Japan, and taking away anything the Japanese wish to buy from Australia. This simple solution of the problem of the trade relationships has been brought about by the simple method of freeing our ports to commerce. The commencement which has been made is full of promise that Sydney will become, as Mr. Burns predicts, "the London of the Southern Seas." The cargo brought by the *Yamashiro Maru* largely consisted of articles consigned to Sydney for distribution among the other colonies. The absence of customs duties here naturally makes Sydney the most desirable port in Australia as a central agency for distributing goods brought to our shores and a chief depot for the collection of those required in exchange. The steady expansion of the new branch of commercial activity which has been thus opened will directly occasion employment for a large number of workers in connection with maritime trades. It will also stimulate industry throughout the country in producing the articles which our Japanese customers find it most advantageous to purchase."

MARINE COURT OF INQUIRY.

TRISHINSHO, TOKYO, FEB. 4TH.

STRANDING OF THE "HIMEJI MARU"—FINDING.

On Thursday morning in the Mercantile Marine Bureau of the Department of Communications, Tokyo, Mr. J. M. James read the finding of the Court in the case of the stranding of the *Himeji Maru*, as follows:—

JUDGMENT.

The *Himeji Maru* was a steamer of 1,940 tons net register, of 222 nominal horse-power, and owned by the Riku gun-sho (Army Department). The master was Rennie Tipple, and the chief officer, Thomas Law Harrison.

An inquiry was held into the circumstances attending the stranding of the ship on the Bumbay Reef, Paracel Islands, on the 1st November, 29th year of *Meiji* (1896), and the import of the statement given by the Master and the chief officer was as follows:—

The Master—On the 17th of October, 29th year of *Meiji*, the ship left Yokohama, bound for Europe via Kobe, Moji, and Hongkong. At about 1 p.m. on the 30th of the same month, she left Hongkong bound for Singapore; at 5 p.m. Gap Rock was abeam, bearing E.S.E. (magnetic) distant 1½ miles. The patenting was then streamered, and the course was S. 8° W. (true) to take the ship 30 miles east of the Bumbay Reef. At this time, the weather was dull, and the wind was E.S.E. with a force of 2; at noon of the 31st, the weather became rainy, the wind N.N.E., its force increasing up to 5. Although it was the N.E. monsoon, I did not expect much current, so I made no allowance for it, and at noon I worked up the position of the ship by dead reckoning. The course was then altered to South (true); to S. 5° E. (true) at 8.0 p.m.; to S. 17° E. (true) at 9.30 p.m., and to S. (true) at midnight. The reason why the course was so frequently altered was to take the ship 50 miles east of the Bumbay Reef as observations could not be obtained during that day. Considering that the ship would pass to the eastward of the Bumbay Reef at 4.0 a.m., on the 1st November as expected, without being set to the S.W. by wind and current between Gap Rock and that reef, and moreover, she would be still safe although she might be driven to the S.W. after that, I wrote instructions in the Night Order Book to the effect that at 4.0 a.m., on the 1st November, the chief officer on watch should alter the course to S. 30° W. by compass (S. 32° W. true). After I left the bridge, at midnight, of the 31st, at about 4.35 a.m. it was reported to me that the ship had stranded. I went on the bridge, and found that the ship had taken the coral reef in such a manner that the bottom grazed once the coral from the foremast aft, the bow having hardly touched it at all. There was neither shock nor concussion, the coral seeming to crumble away as the ship passed. This took place at 4.35 a.m., when the weather was cloudy and overcast; horizon being visible about 2 miles, and the wind was E. by S. with a force of 5. The position where the stranding took place was 4 miles to the westward of the eastern extreme of the Bumbay Reef, Paracel Islands, i.e., lat. 16° 6' N.,

long. 112° 34' E. Immediately after the stranding, the engines were worked full speed astern, and an anchor was run out from the stern to try and heave the ship off the reef, but without avail. On the same day, I sent the life-boat with the second officer in charge to Tounon Bay, to wire the disaster to the Company's agent in Hongkong. On the 10th, the German steamer *Seigfried* arrived to render assistance. The passengers and majority of the crew were taken off by that vessel, which sailed for Hongkong on the 13th. Subsequently the *Himeji Maru* was badly damaged on her bottom by the wind and sea; all the holds became flooded with water, and there was no possible chance of saving the ship. I, in company with the remaining crew, left the ship at 3.30 p.m. on the 20th, on the *Seigfried*, on her second visit, and arrived at Hongkong all safe.

The Chief Officer—On the voyage of the *Himeji Maru* from Hongkong to Singapore, I was on watch from 4 a.m. on the 1st November, 20th year of *Meiji*, and altered the course to S. 30° W. by compass in accordance with the instructions in the Night Order Book. At this time the weather was dull and overcast, with a moderate E.N.E. breeze; the horizon was visible as far as 2 miles, but neither breakers nor islands were in sight. At about 4.33 a.m., I saw breakers on the port bow, and immediately put the helm hard-a-port, and telegraphed the engines to go full speed astern. By the time the engines started to work astern, the ship had stranded. This was at 4.35 a.m. Afterwards, acting under the orders of the Captain, I tried to get the ship off; but it was of no avail. At 2 p.m. on the 3rd, I started in charge of the life-boat to the eastward as far as 35 miles, and exhibited distress signals, and waited for any passing vessels, but it was of no avail. I returned to the ship at 10 a.m. on the 5th; and at 4.30 p.m. the same day, I left in the same boat for Tounon Bay, where I arrived at 2 p.m. on the 8th, and met the second officer who had arrived there previously. Afterwards, I, in company with him and crew, arrived at Yokohama all safe, via Hongkong.

The Court, taking into consideration the evidence given by the witnesses before the Court, and the documents relating to the case, is of opinion, as follows:—

The Master, Rennie Tipple, left Hongkong at 1.25 p.m. on the 30th of October, 20th year of *Meiji*, bound for Singapore, intending to pass eastward of Paracel Islands, being the N.E. monsoon. From the time of passing Gap Rock, the wind was always blowing on the port-side of the ship, its force varying from 2 to 5 at midnight of the 30th October; under such circumstances he should have made a proper allowance for the drift caused by the wind and sea. But according to the chart by which he was navigating the ship (without making any such allowance, when he worked up position of the ship at noon of the 30th and other times), at and after 8 p.m. of the same day, he frequently altered the ship's course to the eastward. Misjudging the ship's position at 4 a.m. on the 1st November, to be 50 miles east of the Bombay Reef, he altered the course to S. 30° W. by compass for Singapore; stranding was the result. This accident is to be attributed to the master in that he did not make any allowance for the drift caused by wind and sea, and consequently he misjudged the position of the ship. The Chief Officer, Thomas Law Harrison, was on watch from 4 a.m. of the 1st, and at that time, he altered the course to S. 30° W. by compass according to the instructions given by the master; 4.33 a.m. he sighted the breakers on the port bow, and immediately he put the helm hard-a-port, and worked the engines to full speed astern. This was of no avail, and the ship stranded. On the part of the Chief Officer he is held to be free from blame for the manner in which he executed his duties.

The Court therefore declares, under section 10 of the General Regulations for Examinations of, and granting Certificates to, Masters, Mates, and Engineers, suspension for four months of the Master's Certificate of First Grade held by the Master, Rennie Tipple; and exonerates the Chief Officer, Thomas Law Harrison, free from all blame.

K. MORIMOTO, President.
N. NOGURA, Assessor.
S. IRO, Assessor.

I hereby approve of the above decision, and order it to be enforced accordingly.

Vicount Y. NOMURA,
Minister of Communications.

The 4th day of February, 30th year of *Meiji*.

The premises of Messrs. Arnhold, Karberg & Co., and of the Tientsin Trading Co., at Tientsin, were entirely destroyed by fire on Monday, the 11th. They were fully covered by insurance.

IN H.B.M. COURT FOR JAPAN.

Before JAMES TROUP, Esq., Assistant Judge—
FRIDAY, February 5th.

CHARGE AGAINST MISS JACOB WITHDRAWN.

The Court-room was filled this morning by an eager, expectant crowd of spectators some time before proceedings commenced. Miss Jacob, who was accompanied by a lady friend, took a seat just behind her Counsel, Mr. G. H. Scidmore. She looked bright and composed, and had smiles for those of her friends whose faces she encountered among the crowd. Mr. J. F. Lowder, the prosecuting witness, was early in the Court, and when the Assistant Judge entered, rose at once to make application to withdraw the charge.

Mr. Lowder said—Since the institution of these proceedings, another person has been convicted of the crime charged against Mary Jacob, and I shall, therefore, of course, offer no further evidence against her. It is right to add that I had taken this decision before the conclusion of the recent trial, in consequence of the withdrawal of his evidence by one witness, and the failure of another under cross-examination, thus leaving me with the statements of two Japanese maid-servants only, who turn out to be cousins, and who were in the pay of Mrs. Carew, to establish a point which I considered of vital importance to the success of the prosecution, namely, that the relations that had existed between the accused and the deceased were such as to make it probable that she knew of Annie Luke. By the weakening of that link, the chain of evidence connecting the accused with the charge became so attenuated that I determined to proceed no further with it; and I sent a note to that effect to Mr. Scidmore, to be communicated to Miss Jacob. With that explanation, and with your Honour's permission, I will now withdraw from the prosecution.

Mr. Scidmore—May it please the Court. Before the order is made to dismiss this case, I desire to make an application to the Court in connection with the case.

His Honour—Have you only one application?

Mr. Scidmore—No, your Honour; two or three. His Honour—Then we shall have to take them one by one; or are they connected?

Mr. Scidmore—They are all connected.

His Honour—I will first enter on the record the application made by the prosecuting witness.

Mr. Scidmore (after a pause)—I have several applications to make to your Honour, but many of them are merely formal.

His Honour—Yes.

Mr. Scidmore—The least important I will proceed to make first: that is, the least important ones under the circumstances of this grave matter. The first is, that the accused be furnished with the usual certificate, certifying the nature of the cause and of its dismissal.

His Honour—You say cause?

Mr. Scidmore—I mean charge. It is set out in form 56, I believe. Referring to the Rules of Court I find this form:—

"This is to certify that a charge made on the [] day of [] by C. D., of [] [labourer], against A. B., of [] [labourer], for that [as in summons and warrant] is now considered by this Court, and is by this Court dismissed [with costs]." (Seal).

Concerning the matter of costs, as I shall have something to specially address your Honour upon, later on, I do not allude to them at present.

His Honour—This form refers to another matter not consistent with the charge now being heard by the Court. The Court is sitting here now to take evidence for the purpose of finding whether it is sufficient to commit.

Mr. Scidmore—If the Court determines that the evidence submitted is not sufficient to determine you to commit the accused, then the fact would be entered on the record of the Court that the charge had been investigated and had been dismissed. (After a pause)—Mr. Lowder reminds me that this rule and form apply to summary proceedings only.

His Honour—That form applies to the hearing of a charge before a magistrate in summary jurisdiction. There has been no trial here.

Mr. Scidmore—No, your Honour.

His Honour—Of course, if there has been no trial—

Mr. Scidmore—All your Honour requires is to be satisfied that a *prima facie* case has been made out before you commit, and if it is not, then the charge is dismissed by you.

His Honour—What part of the Rules does Form 56 refer to?

Mr. Scidmore—To Rule 223, under the heading of Summary Proceedings.

His Honour (turning to the Rules) read:—

323.—In case of dismissal of the charge, the Court may, if it thinks fit, on being requested so to do, make an order of dismissal (Form 55) and give the accused a certificate thereof (Form 56), which certificate shall, on being produced, without further proof, be a bar to any subsequent charge for the same matter against the same person.

That, Mr. Scidmore, is under the heading of Summary Proceedings, and Rule 310 says:—

310.—The following Rules (under the sub-heading "Summary Proceedings") apply exclusively to cases where the charge is to be heard and determined, not on indictment, but in a summary way.

Mr. Scidmore—But, your Honour, you have Rule 323 where, in case of the dismissal of a charge, the Court can grant a certificate such as I ask for.

His Honour—But that is under the heading "Summary Proceedings."

Mr. Scidmore—Of course this is a more serious matter than could then come before you for determination. The allegations in this case, prefer a charge more serious than that of a misdemeanour.

His Honour—You see that it is not competent for this Court to grant such a certificate: it only has the power in cases of summary proceedings.

Mr. Scidmore—The matter is, I submit, one for your Honour's discretion.

His Honour—Under the Rules, I am not competent.

Mr. Scidmore—But under the spirit of the Rule, I think, that in case you dismiss the charge, you can grant such a certificate.

His Honour—I could only give a certificate in Summary Proceedings. I shall enter on the record that the charge was dismissed, the evidence not being sufficient to commit.

Mr. Scidmore—Then, your Honour, I could apply to have a certified copy of such an entry.

His Honour—The entry will be made on the minutes. As I said at a previous sitting of the Court, the evidence so far placed before me is not sufficient to commit.

Mr. Scidmore—Your Honour will appreciate the fact that the accused will shortly be going home, and the possession of such a document will be invaluable to her.

His Honour—Such a certificate could only be granted if the case went to trial and the accused were acquitted.

Mr. Scidmore—Quite so, but I think such a certificate could be granted under the circumstances.

His Honour—I must say that I cannot agree to grant your application, as it does not fall within the provisions of Rule 223. This is my ruling, on the ground that this rule deals only with summary proceedings. I have not referred to you Mr. Lowder.

Mr. Lowder—I have nothing to say.

His Honour—I thought the point was sufficiently clear without reference to you (To Mr. Scidmore)—Your application that the accused be furnished with a certificate that the charge has been made and that it has been withdrawn, is therefore refused.

Mr. Scidmore—My next application is that there should be returned to the accused the box containing correspondence and other papers except such exhibits as were required as exhibits in this case and in the case *Regina v. Carew*.

His Honour—Such documents, shall we say?

Mr. Scidmore—Yes. I believe some documents were only put in as exhibits in this case, for the purpose of this enquiry only.

His Honour—The box itself was put in. Your application is that it, along with its contents, be restored?

Mr. Scidmore—With the exception of such documents as were used as exhibits in this case.

Mr. Lowder—I have no objection.

His Honour (to Mr. Scidmore)—Your application then is granted.

Mr. Scidmore—And now I apply that the bail bond of the accused may be cancelled.

Mr. Lowder—That follows as a matter of course.

Mr. Scidmore—Yes, as a matter of course.

Mr. Scidmore—And further that the complaining witness be ordered to pay the costs.

His Honour—One moment, please.

Mr. Scidmore (after a pause)—I apply that the prosecuting witness, John Frederic Lowder, be ordered to pay to the accused, all costs and expenses incident to these proceedings.

His Honour—Under what Rule do you make this application?

Mr. Scidmore—It appears from the Rule of the Court, Form 55 applies, under the Order in Council.

His Honour—That brings us back again to the heading "Summary Proceedings." I think you ought to avoid that if you can.

Mr. Scidmore—I merely use it as a peg to hang my subsequent remarks upon. It appears that in prosecutions under charges of misdemeanour, when such charges are dismissed on the ground of insufficient evidence, that persons can recover compensation for costs and the odium that has been unjustly thrown upon them. If that is applicable to cases of mere misdemeanour, with what greater force must it apply to a charge of the character as this now alleged. It appears from the practise in England that provision has been made in such matters under the provisions of the Vexatious Indictments Act of 1859. That law provided for charges of "perjury, subornation of perjury, conspiracy, obtaining money or other property by false pretences, keeping a gambling house, keeping a disorderly house, or indecent assault." In these cases if the "accused person is acquitted the prosecutor may, and probably will, be ordered to pay the defendant's costs." I am reading from a work on "Criminal Procedure," by Disney and Gundry, and published in 1895. I have not access to later authorities than that, your Honour. These authorities, do not, I admit, cover the present case, but they suggest to my mind that the Court has discretion to make the order for which I apply. I presume your Honour is fully advised in the matter. The reasons for the application must be apparent to your Honour's mind. The result of the trial in the Carew case has demonstrated beyond doubt that this charge was brought hastily, inconsiderately, and heartlessly, and has utterly failed. And to my mind it has been withdrawn by the prosecuting witness, coldly, formally, and without one word of regret. This young girl has been subjected to mental, and I had almost added physical, torture. Her character has been traduced, a charge of murder brought against her, and another allegation was made against her that, to a virtuous woman, must have been worse than a charge of murder itself. Yet the prosecuting witness has stood up here this morning and asked leave to withdraw his charge without one word of regret or remorse.

His Honour—Your application that the prosecuting witness John Frederic Lowder should be ordered to pay all the costs and expenses incident to this charge, I think is governed by the finding in the case of *Regina v. Bearley*. I have not the record of that case before me, but if my memory serves me, that is the case. The present prosecutor was Counsel—

Mr. Lowder—I was Counsel for the accused.

His Honour—You appeared for the defence in that case. It was a case that came up on appeal before the Judge and myself, and it was ruled that the costs and expenses of the defence could not be granted.

Mr. Lowder—I think that was the ruling. I do not accurately remember now.

His Honour—Do you recollect what year it was?

Mr. Lowder—Two, or three, or four years ago. The Clerk of the Court was directed to find the case in the archives of the Court.

His Honour (to Mr. Scidmore)—Have you any authority to cite to me?

Mr. Scidmore—Really, I have no authority that covers this case.

His Honour—The ruling I refer to is quite recent, and if there is not a later one I am bound by it.

Mr. Scidmore—I know of nothing later that applies. That is the reason that I applied to your Honour for information.

His Honour—In regard to what you just now cited, that refers to quite a different case: to a case that had gone to trial.

Mr. Scidmore—To an enquiry before the magistrate.

His Honour—But it arises on acquittal after trial. In the volume you read from it says that "in case the Justices of the Peace who hear the charge refuse to send the accused person for trial, the prosecutor may require them to take his recognisance to prefer an indictment and prosecute the charge." That is where the Justices send the case forward in that manner and require the prosecuting witness to enter into his own recognisances to prosecute the charge on indictment. That implies a trial; there has been no trial here.

Mr. Scidmore—No, sir.

His Honour—This would not apply. (The Chief Clerk at this point brought in the Record of *Regina v. Bearley*)—This was a case on which the Hongkong and Shanghai Banking Corporation sued one D. S. Bearley, and the prosecution failed for want of sufficient evidence, and I made an order that they should pay the defendant the costs of the proceedings. This order was appealed against and a motion filed

that it should be discharged. The evidence adduced, as I said, was not sufficient to warrant a committal. An application was made that the costs of the defence should be paid by the prosecution. The magistrate—that was myself—allowed it. This decision was appealed against and the appeal was heard by the Judge and myself, and the matter was fully argued. The application of the appellants was granted—that is to say the costs were refused, I am bound by that decision. I must therefore refuse the application.

Mr. Lowder—Before we pass away from the subject, may I be allowed to say something with reference to what has fallen from Mr. Scidmore with regard to myself, that is with reference to preferring the charge. He accuses me of having acted hastily, inconsiderately, and heartlessly, and beyond that he made use of the words "false charge." By such a phrase I suppose he means to suggest that I knew at the time that it was an untrue charge. If that were so, he implies malice, and if this charge was laid maliciously then the accused would be entitled to much more than her costs; for she would be entitled to bring an action for malicious prosecution.

Mr. Scidmore—I have nothing to say to that part of the case. But there is one matter to which I wish to call your Honour's attention. On the second day—I think it was the 12th January—the accused left this Court to go to the jail to remove some of her effects. After she arrived there she found in her cell a paper covered volume of a book entitled "A Romance of Two Worlds." This was lying on the table in her cell.

His Honour—Has this anything to do with this case?

Mr. Scidmore—It is very necessary that I refer to it now; I may not have another opportunity.

His Honour—Is it not a matter of jail discipline?

Mr. Scidmore—I think it has a bearing on this case, your Honour. Your Honour will remember that this volume, "A Romance of Two Worlds," was used by Mr. Lowder in the course of this case. In that exhibit occurs the phrase "our twin souls," and it was used in this case to connect the accused with the person who signed her letters A.L.,—the Anne Luke. It was used to show that the accused was familiar with the phrase, and for that reason I now allude to the incident. The book was shown to have been kept on a shelf in the dining-room of Mrs. Carew's house and was accessible to every one in the house. We have now the fact that some one placed a second copy of that book in the cell of the accused. From what I have since ascertained, it is my duty to state that the jailer, Mr. Hodges, was totally unaware of the book having been placed there.

His Honour—I think it is a matter concerning the discipline of the jail.

Mr. Scidmore—It is my duty to bring the matter forward.

His Honour—As Assistant Judge, sitting in this case, I cannot take cognisance of it; but in my capacity as Governor of the jail, I may tell you that I have made enquiries into the matter, and I may inform you that the jailer was not responsible for it; nor were the prosecution either. A subordinate in the jail was responsible for putting the book there and not the jailer.

Mr. Scidmore—I am glad to hear it.

His Honour—And it was not in any way connected with the prosecution; not in any way.

Mr. Scidmore—I am glad to hear it.

His Honour—In fact it appears to have been a pure accident that the incident of the book occurred.

Mr. Scidmore—It was certainly a most unusual coincidence.

His Honour—An application was made for some books to read; by a most unlucky coincidence that book, along with another, was placed in the cell. It was a pure accident, I am perfectly satisfied as to that.

Mr. Scidmore bowed his acknowledgements.

His Honour—On your third application that the bail bond be cancelled, I have ruled that this application be granted. Permission is given for the withdrawal of the bond. The accused is dismissed from bail, and her bondsmen are relieved from the bond. With reference to what was said by you in the latter part of the application for permission to withdraw the charge, I will only say that I am satisfied that the prosecutor at the time he made the charge was convinced of the truth of the charge. That I think I may say.

Mr. Lowder—I am much obliged to your Honour.

The proceedings then terminated.

The following steamers have passed the Canal outwards:—*Agamemnon, Melbourne, Oolong, Dieke Rickmers, and Normandie*, January 26th. Homewards:—*Benledi and Radnorshire*, January 26th.

THE CAREW CASE.

We regret to find that, in the first part of the Judge's summing-up, dealing with the law applicable to the case, several inaccuracies have occurred in our report, and we therefore reprint that portion in a correct form this morning.

His Lordship said—Gentlemen of the jury, the prisoner is charged with the murder of her husband by the administration of arsenic, and it is incumbent on the prosecution to establish the charge beyond a reasonable doubt. What is meant by that expression is very well explained in the definition read to you by the prisoner's Counsel from the summing-up of an American Judge, and I adopt it. It reads thus: "Just what a reasonable doubt is, gentlemen, it is not quite easy to say; but you are practical men, and I instruct you that you should be satisfied of the defendant's guilt to that degree of certainty which you would require for your guidance in acting decisively in any grave matter of your own within such time as is ordinarily given to a jury for deliberation in the case." Now the charge being made up of the two elements, death by arsenic and administration by the prisoner, it might not unnaturally appear to you that the prosecution have to establish beyond reasonable doubt by the medical evidence alone that death was actually caused by arsenic to the exclusion of any other cooperating cause. This indeed, as I understand, was the view put forward by the able Counsel for the prisoner in his opening address. But that is not so. The contention must be limited in two directions in order to represent the law, as I understand it, and as I lay it down to you. In the first place it is not necessary that death should be shown to be actually due to the particular poison: it is sufficient if it is shown that such poison conducted to the death. And in the next place, it is to the evidence as a whole—and not merely to the medical part of it—that you are to look in order to see who her or not arsenic conducted to the death. If on the medical evidence you are satisfied that the symptoms of the illness, the *post mortem* conditions, and the results of the chemical analysis of the intestines are consistent with arsenical poisoning, that is all that need be established by the prosecution from the medical evidence: they can then call upon you to look beyond it to see from the rest of the evidence whether, with that foundation, you are able to say that that poison did as a fact conduce to the death. And the reason of this limitation is obvious enough. The symptoms produced by some poisons may not be distinguishable from the symptoms produced by certain diseases; and no medical expert could pretend to say with absolute certainty to which of the two causes death was due. If, then, the prosecution in any such case were stopped from going beyond the medical evidence to establish the cause of death, death by poison could not be established, though the particular poison might be traceable to a particular individual. So, where two poisons which manifest themselves by similar symptoms are found, doctors might not be able to say positively to which of the two deaths was due, and the prosecution would fail although the opportunities of administering one of the poisons and a motive for the crime might be clearly provable against a particular person. The other limitation on the proposition laid down by the Counsel for the defence is that it is sufficient if it be shown that the poison in question conducted to death. That arises from the rule of our law that it is equally murder to accelerate death as to cause death. The prosecution here, therefore, must satisfy you of three things:—First, that the symptoms of the illness, the *post mortem* conditions, and the chemical analysis, taken together, are consistent with arsenical poisoning. Second, that the prisoner wilfully administered arsenic in the form of Fowler's Solution to the deceased with felonious intention. Thirdly, that such poison conducted to his death. And if these three propositions are established, you must find the prisoner guilty. For the first and third of them you must look to the medical evidence; for the second you must look to the other evidence (sometimes called, by way of distinction, the moral evidence) in the case. Now as to the first point: Are the symptoms, the *post mortem* conditions, and the chemical analysis, taken together, consistent or inconsistent with arsenical poisoning? If you find they are inconsistent with that, then the case for the prosecution is at an end, and you will acquit the prisoner. The evidence on that branch of the case is really all one way. Even the doctors for the defence admit that the symptoms and other matters that I have referred to, are consistent with arsenical poisoning. Dr. Eldridge says the symptoms are not inconsistent with arsenical poisoning; it was an indication of arsenical poisoning; the presence of lead found by Dr.

Divers did not render the case inconsistent with arsenical poisoning: "I am not prepared to say that death was not due to arsenical poisoning or that arsenic did not conduce to the death," Dr. Baelz, when Dr. Divers' evidence was read over to him, said that it was not inconsistent with death by arsenical poisoning; the presence of white arsenic was consistent with death by Fowler's Solution alone. Then again: in all probability the arsenic largely contributed to the death; arsenic is the great deal more deadly poison; and, further on, all the symptoms might be of lead poisoning, but they are more commonly indicative of arsenical poisoning; "there is nothing in the symptoms inconsistent with Fowler's Solution, lead, or white arsenic." I have made a slight mistake; it was Dr. Munro who made the last statement. If you remember, Dr. Munro was called and examined, and he was asked if he heard the evidence of Dr. Baelz, and he said he adhered to the views of Dr. Baelz and to Dr. Baelz's answers given in cross-examination. Thus the doctors for the defence practically admit the first part of the case. I pass over for the present the second question, to deal with the third, for that depends on medical evidence like the first. The same evidence—I do not need to read it—would seem to establish this part of the case; that arsenic conduce to the death. If, of course, you have any reasonable doubt on the point, you will acquit the prisoner. But if not, if you find in favour of the prosecution on this point, as on the first, you will proceed to answer the remaining question: Did the prisoner wilfully administer arsenic in the form of Fowler's Solution to the deceased with felonious intent? The administration in the form of arsenious acid or white arsenic has been, as you will remember, abandoned by the prosecution, as no white arsenic has been traced to the prisoner. Now as to this part of the case, while it is alleged by the prosecution that the prisoner procured between Oct. 17th and 22nd—the day on which the deceased died—4 ounces of Fowler's Solution, it is not denied by the prisoner that she procured during that period 3 ounces of Fowler's Solution—that is from the 17th to the 22nd. She alleges, however, that it was procured at the request of the deceased, who was accustomed to take the drug, and it is suggested by her Counsel that his death was due to misadventure by his taking an overdose. Another theory was mentioned by him as a possibility only, namely that the deceased may have committed suicide. You will have to consider whether there is any foundation whatever in the evidence for that theory. No motive for such an act, as her Counsel observed, appear. If you negative that theory, the case is practically reduced to one of misadventure by the deceased or wilful administration by the prisoner, who was his constant attendant and nurse. Of course you rarely, if ever, in cases of poisoning have direct proof of administration. Such proof is scarcely to be expected. The administration is necessarily left to be inferred from all the circumstances of the case, including the acts and conduct of the prisoner, not merely at the time the drug was procured but up to the time of the death; and the intention has similarly to be inferred from the same sources, including the acts and conduct of the prisoner after the death as well as before. These two theories, misadventure or wilful administration, must necessarily be considered on the same evidence; and it is on a review of the whole evidence in the case on that point that you will have to form your opinion as to the true theory.

Kobe, February 3.

Lieut.-General Kawakami and suite arrived at this port to-day from Nagasaki by the *Ogura Maru*.

Sendai, Feb. 3.

Lieut.-General Nishi, Commander of the Second Army Division, and Mr. Katsumada, the Governor, left for Kyoto this morning to attend the funeral services.

Sapporo, Feb. 3.

Prisoners to the number of 1,462 have been sent to Yokohama and Kobe by the *Nagoya Maru* from Otaru, and 133 others undergoing hard labour at various Hokkaido gaols were also set at liberty.

Shizuoka, February 3.

H.I.H. Prince Kanin passed this town to-day en route to Kyoto.

Moji, February 3.

Lieut.-General Yamaji, Commandant of the Western Section Head-quarters, will precede to Kyoto to-morrow via this port.

Kyoto, February 4.

H.I.H. Prince Kanin arrived here last night, and H.I.H. Prince Yamashina to-day.

Kobe, February 4.

H.I.H. Prince Nashimoto arrived here last evening from Hiroshima and en route to Kyoto.

Lieut.-General Sakuma, Commandant of the Middle Section Head-quarters, left Kyoto for Suna last night, but will return to Kyoto about the 6th inst.

Marshal Nodzu, Commandant of the Eastern Section Head-quarters, and Baron Ito, Chief of the Bureau of Naval Command, arrived here this afternoon by the *Saityo Maru* from Yokohama. They leave for Kyoto to-morrow.

Moji, February 4.

Lieut.-General Yamaji, Commandant of the Western Section Head-quarters, and Lieut.-General Ogi, Commander-in-Chief of the Sixth Army Division, passed this port last night en route to Kyoto.

Matsuyama, Feb. 4.

The steamer *Sanko Maru* of the Osaka Shosen Kaisha, collided with vessel off Oura, Kazahaya-gun, Ehime-ken and sank immediately. Out of one hundred passengers only twenty-one were saved.

Osaka, Feb. 4.

A train that left Kobe 1 a.m. to-day for Osaka was derailed while passing the east of Kamizaki River. The passengers are safe.

The action against some promoters of the Kobe Silk Exchange was heard in the Kobe Local Court to-day.

Kyoto, Feb. 5th.

The Funeral Bureau has removed to the residence of Mr. Oi, at Higashizume, Kawabata-noboru, Gojo-Ohashi.

Lieut.-General Yamazawa, Commandant of the Fourth Army Division, being ill, his representative will attend the funeral of the Eisho Kotoiko.

Mr. Rikaei, the Korean Ambassador, is suffering from brain trouble. He will proceed to Tokyo as soon as he is sufficiently convalescent.

Kobe, Feb. 5.

The collision of the *Sanko Maru* of the Osaka Shosen Kaisha, with the *Owari Maru* of the Nippon Yusen Kaisha, took place about 4 a.m. yesterday morning. Out of 91 persons on the *Sanko Maru*, (including the crew) 70 were drowned. The *Owari Maru*, of the N.Y.K., is expected to arrive at this port this evening.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m. Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

SOLUTION OF PROBLEM No. 281.

Problem No. 280.—Correct solution to hand from J.D.

PROBLEM No. 285.
By OTTO WURZBURG.

BLACK.

White to play and mate in three moves.

PROBLEM No. 286.
By E. B. SCHWANN.

BLACK.

White to play and mate in two moves.

THE LASKER-STEINITZ MATCH.

At the time of writing we have to hand result of the tenth game in the above match, which terminated in a win for Lasker, Steinitz resigning on the 41st move. It is curious to note that in each of the drawn games Steinitz inaccountably allowed winning chances to slip from his grasp: this will be seen on the careful following out of games 7, 8, and 9, which are given below. In the tenth game of the match Lasker again fairly outplayed his opponent, and won an excellent game in his best style.

GAME No. 648.

TSCHIGORIN V. CHAROUSEK.

The match of 4 games between these two players to decide the winner of the first prize in the Budapest Tournament has been played out, and was won by Tschigorin with 3 wins to 1. Tschigorin won the 1st, 2nd, and 4th games; Charousek, the 3rd. The following is the second game and is of a very lively character:—

GAME NO. 652.

TWO KNIGHTS' DEFENCE.

WHITE. Tschigorin.	BLACK. Charousek.
1—P to K 4	1—P to K 4
2—Kt to K B 3	2—Kt to Q B 3
3—B to B 4	3—Kt to H 3
4—P to Q 4	4—P takes P
5—Castles	5—B to B 4
6—P to K 5	6—P to Q 4
7—P takes Kt	7—P takes B
8—R to K sq. ch.	8—B to K 3
9—Kt to Kt 5	9—Q to Q 4
10—Kt to Q B 3	10—Q to B 4
11—Q Kt to K 4	11—B to Kt 3
12—Kt to Kt 3	12—Q to Kt 3 (a)
13—Kt takes P	13—P takes Kt
14—R takes P ch.	14—K to Q 2
15—Kt to R 5 (b)	15—K R to K sq.
16—Kt to B 4	16—Q to B 2
17—Q to B 3	17—Q R to Q sq. (c)
18—B to Q 2	18—P takes P (d)
19—Q R to K sq.	19—R takes R (e)
20—Kt takes R	20—R to K sq.
21—Kt to Kt 5	21—R takes K ch.
22—B takes R	22—Q to K 2
23—Q to B 5 ch.	23—K to Q sq.
24—B to Q 2	24—Q to K 7 (f)
25—Q takes P ch.	25—Kt to K 2
26—P to K R 4	26—P to Q 6
27—Kt to B 7 ch.	27—K to B sq.
28—Q to R 8 ch.	28—K to Q 3
29—Q to Q 8 ch.	29—K to K 2
30—Kt to Kt 5 ch.	30—K to B 4
31—Q to K B 8 ch.	31—Resigns.

(a) If Q takes P: 19—Kt to R 5; Q to Kt 3; 20—Kt takes B, P takes Kt; 21—R takes P ch., and wins the queen next move.
(b) White is actually somewhat behind in his development, and Black is threatening to take possession of the king's file with one of his co-operating rooks. But White, playing with desperate ingenuity, gets over his disadvantage, and with each move his development proceeds in subtle fashion.
(c) Supposing 17—to be right, P to Kt 4; 28—Q to Q 5 ch.; K to B sq.; 29—Kt takes R ch.; There hardly seems anything better. Q takes R; 30—Kt to K 6; K to Q sq.; 31—Q takes Kt ch.; Q takes Q; 32—Kt takes Q; K takes Kt; 33—B takes P, K to Q 2; 34—R to K sq.; R to K sq., and the issue would be uncertain.
(d) If R takes R: 19—Q to Q 5 ch.; K to B sq.; 20—Q takes R ch.; Q takes Q; 21—Kt takes Q, followed by P to B 7 with advantage.
(e) Kt to K 4 was much better, as it would have put an end to White's artificially maintained attack.
(f) An impetuous move. Kt to K 4 might still have assisted him greatly.

YOKOHAMA CHESS CLUB.

Owing to rebuilding and alterations at the Club Hotel, the quarters of this Club have been removed to "Clausen's Hotel," No. 66, Main Street, until further notice. Meetings every Monday and Thursday as usual.

Undaunted (12), British cruiser, Captain John S. Hallifax, 29th January,—Nagasaki 26th January.

LATEST COMMERCIAL.

IMPORTS.

The improvement continues, and Yarns have a fair amount of buyers' attention at quotations. Grey Cloth also shows a slight symptom of returning animation, and dealers are enquiring about "contracts to arrive." Fancies have not fully woken up, as yet but Turkey Reds continue to be in good demand and Velvets move to some extent. Woolleus quiet, nothing moving except a few Blankets.

COTTON PIECE GOODS.

	PER YARD.
Grey Shirtings—24 yds, 39 inches	—
Grey Shirtings—36 yds, 45 inches	—
F. Cloth—7 yds, 24 yds, 32 inches	\$1.70 to 1.95

Wire Nails, assorted	5.50 to 6.50
Iron Plates, per box	5.50 to 6.00
Pig Iron, No. 3	1.80 to 1.85

KIOSKINE.

Prices well maintained for "spot," but "futures" are lower. Importers are willing to accept \$2.05 per case for March arrival.

American	\$2.20 to 2.25
Russian	2.15 to 2.20
Langk	—

SUGAR.

Brown—Fair sales of China and Manila sorts, but in spite of small stocks the market is easy and sellers are current. Formosa—Buyers are willing to pay \$4.05 for new sugar "to arrive," but importers will not accept that figure at present. White—Moderate business, prices unchanged.

	PER POUND.
Brown Takau	\$4.00 to 4.10
Brown Manila	4.40 to 5.00
Brown Daitong	3.80 to 3.85
Brown Canton	3.70 to 4.00
White Java and Penang	6.70 to 6.80
White Refined	7.00 to 9.00

EXPORTS.

RAW SILK.

The demand from Europe has increased, and a good business has been done, holders very sensibly taking current rates as they probably wanted funds for the Old New Year up-country. When that is past, they may perhaps ask a little more money for their wares. The American market still gloomy and disappointing. Total stock here is 16,000 piculs.

QUOTATIONS.

Filatures—Extra 9/11, 10/12 den.	\$760 to 770

ARTIFICIAL PERFUMES.

CAUTION!

Messrs. J. & E. ATKINSON warn their customers against the Artificial Chemical Perfumes at present so extensively offered. Though strong they are nasty, and from a hygienic point of view their use is to be strongly deprecated.

ATKINSON'S "NATURAL" PERFUMES are made from flowers, and possess all their natural fresh sweetness. They cannot be surpassed either in delicacy or strength.

ATKINSON'S "WHITE ROSE."
"A charming Scent."—H.R.H. The Duchess of York.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It cures eruptions, itching, and burning, curing skin diseases, and in arresting and subduing all inflammation.

Mr. L. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. It gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas; and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1896.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

June 14th, 1896.

A. SAVY & CO., ENGINEERS.

162, Rue de Charenton, Paris.

THE OLD G. HERMANN DEBATISTE WORKS.
ESTABLISHED 1830.

The Oldest and Largest Makers in the World of Chocolate, Cocon, and Confectionary Plants.

Over 2,500 Chocolate Factories fitted up to January 1st, 1896.

GRINDING MACHINERY for all kinds of dry or wet substances, colours, printing inks, toilet soap, perfumery, and chemicals.

MIXING, CRUSHING, AND PULVERISING MACHINES FOR ALL MATERIALS.

Address Messrs. BOYES & Co., YOKOHAMA.

November 21st, 1896.

37.

DINNEFORD'S

The Universal Remedy for Acidity of the Stomach, Headache, Heartburn, Indigestion, Sour Eructations, Biliary Affections.

MAGNESIA

Sold Throughout the World.

N.B.—ASK FOR DINNEFORD'S MAGNESIA.

The Physician's Cure for Gout, Rheumatic Gout and Gravel; the safest and most gentle Medicine for Infants, Children, Delicate Females, and the Sickness of Pregnancy.

NOTICE TO CORRESPONDENTS.
No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEB. 13TH, 1897.

DEATHS.

At No. 50, Tsukiji, Tokyo, at 6.30 a.m., on the 10th inst., HENRY HARTSHORNE, M.D., LL.D., of Philadelphia, U.S.A.

At the Meiji Gaku-in, Shirokane, Tokyo, at 1 p.m. on the 10th inst., the Rev. JAMES M. McCauley, D.D.

SUMMARY OF NEWS.

HEAVY falls of snow are reported from the West coast of Japan.

YOKOHAMA has been beaten twice this week at football by Naval teams.

THE Interport Football Match has been fixed for Saturday, February 20th.

THE Education Bill has passed the first reading in the House of Commons.

It is expected that the present session of the Diet will close early in March.

THE Hospital attached to the Imperial University, Hongō, was destroyed by fire on Friday.

H.I.H. PRINCE YASU, who has been in a delicate state of health for some time, is now recovering.

News again comes from Sōul of the approaching departure of the King from the Russian Legation.

A LIGHT-HOUSE has been erected at Bitokaku, Taipei, Formosa, and has been lighted since the 1st instant.

THE third performance of the original burlesque

"Cinderella" was given in the Public Hall on Thursday evening before a full house.

A FATAL fire occurred in Kobe on Monday night, three compositors and a coolie being burnt to death.

THE subscription lists opened at the various banks in Yokohama in aid of the Indian Famine relief, are filling well.

MR. SHIRANE SENICHI, late Minister of Communications, has been raised to the peerage under the title of Baron.

AN organ recital and a performance of the sacred cantata "Ruth" took place in the Union Church Yokohama, on Friday.

MR. SAKAKIBARE, an instructor in the Medical College of the Imperial University, died of consumption on the 6th inst.

MR. YAMOTO SANTARO, a member in the House of Representatives for the tenth district of Aichi Ken, died on the 4th inst.

It is rumoured that some changes will take place among the Ministers of State after the conclusion of the Imperial Diet.

THE mausoleum of the Yeikwo Kotaiko (the late Empress Dowager), will be named the Nochi-no-tsukinowa Ushitora-no misasagi.

WE hear that His Majesty the Emperor has recovered from his illness, and that the Empress is expected to be convalescent within a week.

H.I.H. THE CROWN PRINCE, now at Numazu, is in a better state of health. As soon as the cold weather passes he will return to the capital.

MR. SASA TOMOFUSA, a well-known member of the *Shimpo-to*, is undertaking a tour through Europe, leaving the capital on the 15th inst.

THIS week has been the coldest during the present winter. Skating has been indulged in at Yokohama, Shinagawa, Hakone, and Tokyo.

THE collision between the *Sanko Maru* (O.S.K.), and the *Owari Maru* (N.Y.K.), in the Inland Sea, has occasioned lamentable loss of life.

IN accordance with the provisions of the special amnesty, ninety-seven soldiers belonging to the First Army Division have been released from gaol.

COLONEL FUKUSHIMA YASUMASA, who became so well known after his journey through Siberia, is now touring through the southern portions of Asia.

ON Tuesday Judge Mowat exempted twelve gentlemen from further service on the British Jury List, ten pleading over-age, and two deafness.

AT a meeting of the Hokkaido Tanko Railway Company, held on Thursday last, a dividend of 1.25 per cent. was declared for the latter half of last year.

HIS HONOUR MR. JUSTICE MOWAT is visiting Nagasaki to hold a Commission in Lunacy in the case of Mr. Norman, proprietor of the *Nagasaki Express*.

VENEZUELA has signed the Arbitration Treaty with Great Britain. Lord Herschell and Mr. Justice Collins have been appointed the British Arbitrators.

REPORTS come from the Palace at Peking that H.E. Li Hung-chang is in high favour again with the Emperor, with whom he has had seve-

ral informal audiences. Li's enemies are greatly disturbed, as it is believed that Li will be specially honoured at the coming New Year.

ACCORDING to a telegram received by the authorities on Tuesday, we learn that the Portuguese Cabinet has resigned and that a new Cabinet will be formed by Progressionists.

THE ceremonies connected with the interment of the remains of the late Empress Dowager concluded in Kyoto on Monday. That day was observed as a general holiday all over the country.

THE Hayado River, Nakakambara-gun, Echigo, has overflowed its banks (owing to the melting of snow on the neighbouring mountains), and the embankments recently repaired have been damaged.

IN the House of Commons Sir Michael Hicks-Beach, Chancellor of the Exchequer, in moving the vote for the Egyptian Loan, said the French opposition had caused the prolonging of the British occupation of Egypt.

THE Ota Railway Company will hold a general meeting on the 15th inst. when yen 170,000 will be added to the present capital (yen 340,000). The Head-office will not be built at Ota-machi, Ibaraki Ken, but at Mito.

LORD LANSDOWNE, Secretary of State for War, has announced that it is intended to increase the strength of the army in various branches to the extent of 7,085 men, which will necessitate an increase in the estimates of £985,500.

THE Ministers of State that visited Kyoto on the occasion of the Imperial funeral took advantage of the opportunity to inspect the schools, barracks, and engineering works in and around Osaka and Kyoto before returning to the capital.

THE Hon. W. St. J. Brodrick, M.P., Parliamentary Under-Secretary for War, introduced a motion in the House of Commons authorising of a loan of £5,458,000 for barracks, camps, and rifle ranges, for fortifying Berehaven, Lough Swilly, Falmouth, and the Scilly Islands, for encircling London with forts, and for the purchase of sixty square miles of Salisbury Plain for manœuvres. The motion was adopted.

THE Import trade continues much as last reported in the matter of actual business, but there is a good enquiry and a general feeling of confidence in the early resumption of operations on a good scale. As the spring is approaching, the present feeling is perhaps justified, for the general stocks of foreign goods throughout the country are doubtless reduced to a very low level. Textiles are taken in moderate quantities, but there is still next to nothing doing in Metals; the offers for the latter cannot be entertained, being still below home figures. The Kerosene market remains as last reported, "spot" Oil firm, "future delivery" weak. Not much moving in the Sugar trade, and offers for new crop Formosa are still refused, due to the fact that buyers do not bid high enough. No change in White sorts. Advices from Europe avert the principal Export are not encouraging, and little for that quarter has been done, but a buyer has gone in for a big deal for the States, taking 2,000 piculs of good Filature and Re-reeled Silk at bottom prices before he left off. A reaction in prices was the immediate result, and the trade is once more quiet. Nothing doing in Waste. Nothing to report in the Tea trade. Exchange has been steady, and though silver declined a point rates were not affected.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

How to lead the liberated convicts into the paths of respectability and how to dispose of the Imperial gift of 400,000 *yen*, may be considered the principal topics dealt with journalistically during the week.

The *Kokumin*, arguing from information that the liberation of the convicts has reduced prison expenditures by about 600,000 *yen*, suggests that the whole, or at least a portion, of the saving be used for starting work-shops in which the liberated convicts may find employment. It also urges the people to show as much magnanimity as possible towards the convicts, for to treat them with aversion and to hold them at a distance would certainly drive them again into evil ways.

The want of an establishment where liberated convicts may find work must be considered, argues the *Nichi Nichi*, a blot on the civilization of Japan. Let philanthropists and friends of the poor combine to start institutions of the kind. Now is the time to do it.

The *Nippon's* ideas about the disposal of the Imperial grant are these:—

- 1.—To poor folk that faithfully observed the injunction against musical and theatrical performances during the first 15 days of mourning, relief should be extended.
- 2.—To convicts liberated on account of the amnesty, employment should be given.
- 3.—The grant should be used as the nucleus of a charitable fund in each locality, and private subscriptions should be invited to supplement it.

The *Yiji* thinks that the benefit of the Imperial gift should be secured, in the first place, to the poorest class of professionals, who must have suffered considerably during the first period of mourning. Our contemporary refers to the charitable acts of the poor *ame-ya* of Shiba, as related in another column, and says that the story illustrates the distress prevailing in some quarters. There is no occasion to extend the Imperial bounty to persons whose business was not interrupted by the mourning. No method exists of discriminating the worthy from the unworthy objects among the general body of the indigent, a fact amply demonstrated by the experiences connected with the distribution of alms on the occasion of the demise of the late Prince Mori. Whatever remains after giving suitable succour to destitute *geinin* should be reserved for charitable purposes in the various localities, or kept as a provision against unusual calamities.

The *Osaka Asahi* thinks that the amnesty and the grant of money out of the Imperial purse will be specially opportune in Formosa, where, owing to the recent urgency of restoring tranquillity, and the impossibility of accurately distinguishing law-abiding people from disturbers of the peace, not a few of the former must have suffered undeserved punishment; and where, in consequence of raids made by mobs and frequent skirmishes between the *hakkas* and the Japanese troops, the property of the people must have been considerably injured.

The last number of the Liberal's Fortnightly Proceedings argues that the political world of to-day may be distinctly divided into two sections, one the section of unconstitutional politics represented by the Matsukata Cabinet and its supporters; the other, the constitutional section, consisting of the Ito-Itagaki alliance and its supporters. The political career of Count Matsukata, since the inauguration of constitutional politics, has been one of systematic outrage upon the principles of that system. His first offence consisted in officially interfering in the general elections, and now he has advanced a little in his methods, and purchases the articles ready made, a process cheaper and less troublesome than the manufacture of articles for his own use." Nothing could be easier than

to bring about the downfall of such a Cabinet, but to do so in the august arena of the Diet, would be to sully the dignity of that body and to enable the Cabinet to die with decency. Let the crusade against the Cabinet consist merely in setting forth its glaring iniquities and let an appeal be made to the judgment of the people. The Cabinet had better be suffered to commit suicide.

The *Sekai no-Tomo* echoes the above sentiments, and declares that the Matsukata Cabinet, when it was in office a few years ago, earned the cognomen of the "outrageous Cabinet." It has now merited the discredit of being the most clumsy, inferior, and wicked Cabinet of the era.

The *Yiji* urges the Government to be resolute in rescuing its supporters, the *Shimpo-to*, from the embarrassed and more or less ignominious situation in which they are now placed. The task presents no difficulty. Nothing is required except to act up to the pledges that the Cabinet offered to the nation at the time of its assumption of power. There ought to be no conflict of views on the subject of that openly declared policy among the members of the Cabinet, for the programme was subjected to strict examination and received amendments at the suggestion of one Minister or another. The camera influence should no longer be permitted to have deterrent effect, for the *Genkun* now assume the attitude of strangers towards the Cabinet, and are wholly indifferent about its interests. No objection will be offered to the admission of able men from the public at large into the ranks of officialdom, or to the enforcing of strict discipline among officials. Those things having been openly promised by the Ministry, they are under an obligation to carry them into effect.

The Ministry in power, writes the *Kokumin*, are mediocrities. No distinguished achievement can be credited to them; no serious fault can be laid at their door. The people neither love nor hate them. That, however, is a dangerous state of affairs, for men will soon weary of such a Cabinet.

The *Tokyo Shimbum* offers advice to its partisans, the Liberals, with special reference to the internal troubles that now break out among them in such quick succession. "If the Liberals be faithful to their true interests," argues that paper, "they should be content rather than dissatisfied to find themselves, at this juncture, a small but firmly united body, and should resolutely assist the process of eliminating corrupt elements." That is the best policy for regaining ascendancy after the Satsuma Cabinet goes out of office, a contingency which, according to the *Tokyo Shimbum*, must soon occur.

The *Yiji* recommends the Government to do away with imposts like the income-tax, which is opposed to the traditions and usages of the country, and the miscellaneous tax, or charges levied on mechanics of all descriptions, and on *geinin*, a paltry source of revenue productive of much discontent. The Government should adopt the bold and statesman-like course of increasing the tax on *saké*, and abolishing all petty and vexatious imposts.

The *Kokumin* makes an interesting suggestion with reference to the relative prosperity of the *Shisoku* and the *Heimin* at present. In the early part of the Restoration era, the *Shisoku*, from various causes, were in a very pitiable condition, which contrasted strongly with that of the *Heimin*. But being more richly endowed with ability, the *Shisoku* showed greater foresight than the *Heimin*, and did not neglect, even while suffering from indigence, to educate their sons and younger brothers, an important point to which the *Heimin* paid less attention. The result is that while the *Shisoku* do not fail, whenever any new business is inaugurated, to take part in it, and to enjoy the profits accruing from it, the *Heimin*, less astute, are generally

content to hold fast by the property that they already possess. Hence, relatively speaking, the *Shisoku* are growing more and more thriving, whereas the *Heimin* are retrogressing in prosperity.

The *Sekai no-Tomo* prefers a grave accusation against Count Okuma, namely, that his incompetence has resulted in making Japan suffer much indignity at the hands of Foreign Powers, in connexion with the decease of the Empress Dowager. When the late Czar died, writes this paper, the Japanese Court observed strict mourning for the space of 3 days. It was confidently expected that similar courtesy would be shown by the Powers on the present occasion. But to the surprise of every one, that mark of international respect has been shown by Korea alone, all the European Powers confining themselves to sending short messages of condolence. It does not appear that any one of them has observed mourning. The *Sekai no-Tomo* has incurred considerable expense for the purpose of ascertaining by telegram whether any of the European Courts has announced the observance of mourning. Answers are not yet hand from all sources, but beyond any doubt Germany and France have not made any such announcement. Even China has been guilty of the same slight. For the omission of this act of international courtesy, the Powers should not be held responsible. The fault must rather be laid at the door of the Japanese Foreign Minister. The Powers might have been disposed to be negligent, but had Count Okuma enjoyed confidence and influence among the Foreign Representatives, a mere hint from him would have saved Japan and the Japanese Court from this indignity. Our anti-Government contemporary wants to know what explanation the Court can offer to the Court and the people.

EDITORIAL NOTES.

"CINDERELLA."

THE third performance of "Cinderella"—given on behalf of the Convent and the Public Hall—went as well as any of the previous presentations, the interest of a large house being maintained to the end. Several new bits of local "gag" were introduced, as well as two German verses to the parody on "You shan't play in our yard," which took immensely. Mr. Wileman was in splendid form and voice as *Jack*, while his hornpipe in the second act—an entirely new turn—was perfection, and received applause proportionate to its merits. Mrs. McWilliams (*Gorgonsola*) maintained her reputation as a clever burlesque actress, and made plenty of fun along with Mr. Smith (*Ohayo*). *Soulful Alifortorna* (Miss Lloyd-Thomas) was suffering from a bad cold, but she carried out her part well, and for her beautiful rendering of "Were I his bride," received a lovely bouquet. *Cinderella* (Miss Wheeler), was as charming as ever, presenting a bewitching figure whether in the rags of the kitchen or arrayed in the glorious robes of the ball-room. The *Fairy*—and authoress—(Mrs. Dinsdale) was all that one desired in the part, and so was *Prince Up to Date* (Mr. Coghill Jackson), and *Ohayo* (Mr. A. Brooke Smith), the inimitable policeman. The community owes much to this clever little company of ladies and gentlemen for the honest amusement so generously afforded, for what better tonic can the wearied workers of this community have than this—

Sport that wrinkled Care derides,
And Laughter holding both his sides.

A SHOCKING CASE.

MAN's inhumanity to man finds its strongest exemplars among the lower class of Chinese: their heartless callousness is almost incredible. The *China Mail* tells a terrible story of a shocking case of cruelty and neglect recently brought to the notice of the Hongkong Police. On the 27th January, some fishermen were fishing with dynamite near Laichikok and in the course of the operations one poor fellow had

both his arms blown off above the elbow. The people who were along with him put him ashore and left him lying on the beach enduring terrible agony. On the 28th he was discovered by some Customs officers lying on the beach almost insensible. They reported the matter to Dr. Rennie, who ordered the man's removal to the Alice Memorial Hospital with all possible speed, but he died on the voyage across the harbour. When discovered the stumps of the man's arms were covered with maggots.

THE "KAMAKURA MARU."

THE first of the new vessels being constructed for the Nippon Yusen Kaisha has been launched from the yard of Messrs. Workman, Clark and Co., Limited, Belfast. She is a steel twin-screw steamer, built to the order of Mr. A. R. Brown, Glasgow, for the Nippon Yusen Kaisha, and named the *Kamakura Maru*. The principal dimensions of the vessel are:—Length, 445 ft.; breadth, 49 ft. 5 in.; depth, moulded, 38 ft. 6 in.; with a gross tonnage of about 5,900 tons, built to Lloyd's highest class, and with Board of Trade passenger certificate. The propelling power will consist of two sets of engines, with cylinders 20 in., 33½ in., and 56 in. in diameter by 48 in. stroke, with steam supplied from four steel boilers at a pressure of 200 lbs. The launch of the second of the new vessels being built for the Nippon Yusen Kaisha took place on 21st December. This was from Henderson's yard on the Clyde, and was unfortunately not unattended by accident. She is named the *Hakato Maru*, and while launching her one of the check chains broke, causing the vessel to run into the opposite bank of the river. It was expected she would get off next tide, but it was not till the afternoon of the following day that she was properly put into her future element. It is stated that the damage she sustained is only slight.

FIRE IN KOBE.

THERE was a big blaze about seven o'clock on Monday evening at Hanagumacho, on the north side of the railway and a quarter of a mile west of the Kairyotei Hotel, Kobe. Five small houses were involved with the laundry-man's shop in which the outbreak originated; and a larger two-storied dwelling in front was needlessly wrecked, says the *Hogo News*, by the hook-and-ladder brigade. Two men were crushed in the ruins, three others perished in the flames; one foreigner is said to have been badly injured, but of this we have not been able to obtain any confirmation. Six policemen were also hurt, and three or four firemen. Mr. Sim had two of his engines at work and rendered splendid service in keeping back the fire on the south side. There was for once a good supply of water. The crowd all round the scene of the fire was dense, and in many places somewhat rowdy.

MARCHES FOR THE FUNERAL OF THE EMPRESS DOWAGER.

In the *Mati's* report of the ceremonies connected with the obsequies of the Empress Dowager it was inadvertently stated that the Funeral March of Chopin was played by a military band during the progress of the procession through the streets of Tokyo. This, we learn, was an error. At the suggestion of Baron Sannomiya, Grand Master of Ceremonies, two mourning marches were composed expressly for the occasion by Mr. F. Eckert, and these only were given by the two bands on duty in this city—that of the Guards and that of the Toyama Gakko. To assist in the observances at Kyoto four bands have been summoned—those of the Guards, the Osaka Garrison, the Yokosuka Station, and the flag-ship *Matsushima Kan*. The new compositions of Mr. Eckert will be performed by all of these.

BARON SHIRANE.

FROM the latest news appearing in the vernacular papers, we are led to entertain a hope that the illness of Mr. Shirane Senichi, late Minister of Communications, may not prove fatal. He is suffering from cancerous growth in the

stomach, and Dr. Baelz and Dr. Aoyama are unremitting in their attentions. In consideration of the services rendered to the State by Mr. Shirane, the Emperor has graciously conferred upon him the title of Baron, the patent of nobility reaching him at the Imperial University Hospital on the 7th inst. Mr. Arakawa Gitaro, Secretary of Kanakawa Kencho, is a near relative of Baron Shirane.

THE PORT DARWIN HURRICANE.

By the mail brought up from Australia by the steamer *Taiyuan*, we gather some particulars of the recent terrific storm that swept the coast of eastern Australia. When the vessel reached Port Darwin the port was found to be a perfect wreck. The storm which has been described as a little tornado swept over Port Darwin on the 6th Jan. The houses were principally built of wood with sheet iron roofs, but a few of the more important buildings were of stone. During the gale the rain fell in torrents, and upwards of ten inches fell during the day. The principal street, which was lined with Japanese stores, presented a pitiful spectacle, being one mass of debris. The Commercial Bank, a stone building of considerable dimensions, had the roof carried away and the walls blown in. The manager and his wife had a narrow escape. The China Navigation Company's offices were completely wrecked. In the harbour the storm did terrific damage. Pearling tuggers disappeared in great numbers, and since the storm nothing has been heard of the Government launch. When the ship left Port Darwin over twenty lives were known to have been lost. There is not a house in the place that has escaped damage, and a photograph of the main street shows nothing but a confused mass of wreckage. The storm has been felt very severely in Sydney. There appear to have been one or two serious gales previously, as a tornado is reported to have caused damage to the extent of £8,000 at Nevertire, on the line from Sydney to Bourke, in Christmas week.

RISE IN FREIGHTS IN THE STRAITS.

THE twenty-shilling rate, agreed upon by the Straits homeward conference, came into existence on the 1st of January, subject to a rebate to shippers who confine their shipments entirely to "conference" steamers. To-day (19th January), the rates have been raised to 22s. 6d. for February, and 25/- for March and April. Tin has gone up from 5s. before the conference started to 12s., for February, March, and April. In outward rates there has been a rise of from 30s. at the beginning of the year to 42s. 6d. now for fine cargo (measurement), and nearly all the steamers leaving the United Kingdom have been shutting down cargo heavily. Trade seems much livelier than it has been for some time, tonnage being very scarce both outwards and homewards. It is considered doubtful, however, whether the increase of the Straits homeward rate has not been too sudden. It is a temptation to outside ships to come in.—*Straits Times*.

INTERPORT FOOTBALL MATCH.

WE understand that the Interport Football Match has been fixed for Saturday, Feb. 20th. A game was played on Wednesday afternoon between teams representing the Y.C. & A.C. and the Navy, in which the former were beaten by two goals to nil. We are glad to see Pinckney back again in the Yokohama field, he will help materially by his cool style of play to get the Interport team into shape. It is about time that some definite selection was made, for the team that played yesterday requires weeding in favour of some of the "colts" who played last Saturday.

THE IVORY CASE.

ON January 20th, the Crown Prosecutor withdrew the charge of conspiracy to cause a dynamite explosion brought against Edward J. Ivory, alias Bell, the saloon-keeper from New York, arrested at Glasgow in September. Shortly after opening proceedings, the Solicitor-General, Mr. R. B. Finlay, announced that he had definitely ascertained on Jan. 19th that the delivery of the explosives at Antwerp occurred after Ivory left that place,

and there was no legal evidence that the prisoner was cognizant of their delivery. Therefore it had been decided not to present evidence thereon. Mr. Finlay said that while he felt the correspondence which had fallen into the hands of the police and the movements of Ivory permitted the gravest suspicion, there was no evidence justifying the Crown in asking for a conviction. After complimenting the police upon the intelligence shown in the discharge of a difficult duty, Mr. Justice Hawkins directed the jury to return a verdict of not guilty, which was done at once.

FOOTBALL.

A CAPITAL game of football was played on Saturday afternoon between a Club team and an eleven from H.M.S. *Undaunted*. From the start to the finish the game was very fast, the local men playing much better together than in any previous match this season. The naval visitors won the match by three goals to two, although Yokohama was ready only entitled to one point, the extra goal being awarded in mistake. A few more games like that of Saturday would do a lot of good to the young players in the Yokohama Club, and fit them for places in the Interport team. Kobe seems confident of winning this match again, but if the Yokohama colts bring out all that is in them, the Southern port will have to fight well for the laurel.

A SHIP DISPUTE.

ON Saturday morning, in H.B.M. Court, before Jas. Troup, Esq., Assistant-Judge, Frederick Lachman, a fireman on board the steamer *Balmoral*, was charged by the Chief Engineer with assault and battery and refusing duty on the 4th inst. His Honour, after hearing the evidence of the complainant and the third engineer as well as the statement of the defendant, acquitted the man of the first charge but convicted him of refusing duty. He was sentenced to pay \$12 costs and to go back on board his ship.

MONDAY IN YOKOHAMA.

ON Monday, Yokohama again assumed mourning garb out of respect to the late Empress Dowager. The ships in harbour flew their flags at half-mast all Sunday and at 6 p.m. began their salute of minute guns. This lasted till far into the evening. On Monday all the foreign stores, offices, and banks closed, as did the majority of the Japanese houses of business.

MANILA NOTES.

WE much regret to learn, from the Manila *Comercio*, of the death of the Rev. Father Faure, director of the Manila Observatory, which occurred on the 23rd January. Father Faure's death is a serious loss to science. Mr. O'Shea, the special correspondent of the *New York Herald and China Gazette*, returned from Manila on January 29th.

PROBABLE KOBE TEAM.

THE *Kobe Herald* announces that the following will compose the eleven from the Southern port in the Interport football match:—F. L. Marshall, goal; W. Braess and Lightfoot, Backs; Meek, Abell and Kerr, Half-Backs; Bethell, Hutton, Wilkinson and Summers, Forwards. Hutton plays Centre Forward. One other Forward has still to be arranged for.

A LEGAL APHORISM.

A LITTLE aphorism of Mr. Justice Vaughan Williams the other day ought not to go unrecorded. Addressing the Solicitor-General, he said:—"The measure of Counsel's remarks is not so much what he thinks to be right as what he thinks the Judge knows."

SKATING AT SHINAGAWA.

WE understand that good skating can be obtained from to-day at Osaki-mura, Yayama, Shinagawa. In Yokohama skating has been possible these past two days on the Skating Club pond.

CONSTITUTION DAY.

THURSDAY was the anniversary of the declaration of the Japanese Constitution, and many foreign business houses closed in deference to the wishes of their Japanese employees.

THE OBSEQUIES AT KYOTO.

Sunday was a very chilly day in Kyoto, snow falling at intervals until four p.m., though the sun was at times visible. The influx of visitors to view the ceremonies connected with the funeral of the Yeikwo Kotaiko (the late Empress-Dowager) was enormous, and the ancient city was taxed to its utmost to find accommodation for the constantly increasing crowds. Along the roads to be traversed by the funeral cortège were posted placards advising the people that a clear space must be kept, and in addition down each thoroughfare were stretched straw ropes, beyond which none but those engaged in the ceremonies were permitted to pass. Behind this slight barrier the crowds were allowed to gather, and by three o'clock on Sunday afternoon these streets presented a curious sight, the spectators being packed closely together along the whole length of the funeral's route. Their faces formed a solid wall of impassive silence. At half-past five o'clock, the Naval Band played a funeral march, and soon the hearse was observed emerging from the Western gate of the Palace. First came some mounted police-inspectors, then a battalion of soldiers, consisting of cavalry, infantry, artillery, and the Guards; and then the troops of the Fourth Division, from Osaka. Next followed stands of *sakaki* trees, torch-bearers, twenty banners of white brocade, each borne by two men; next a casket containing the funeral votive viands; then some clerks of the Imperial Mausolea Bureau, the Chief of the Bureau, and so forth, all in due order. The hearse was drawn by three oxen harnessed in single file. The wheels of the car were so constructed that as they slowly revolved they emitted a mournful creaking. Each animal was led by two officials on foot, with two assistants, who walked behind, holding the silken cord fastened to each ox. These again had other assistants, fifteen on each side. Officers of the Imperial Body-guard walked near each ox, and on either hand, behind the hearse, walked members of the Japanese peerage. Prince Arisugawa, Chief Mourner, followed on foot, attired in ancient Japanese mourning costume, and carrying on a pilgrim's bamboo wand. His Imperial Highness, who appeared exceedingly careworn, never raised his eyes from the ground during the whole ceremony. As the Prince approached, everybody respectfully bowed. Two naval lieutenants walked behind the Prince; then followed two torch-bearers. Their Imperial Highnesses Prince Fushimi, Prince Komatsu, Prince Komatsu, Jun., Prince Kuni, and Prince Kanin came next, followed by the special Commissioners of Obsequies. Separated from the Princes by a pair of torch-bearers, walked Marquis Ito, alone. He was followed by the Ministers of State, officials or officers, of *shinnin* rank, and so forth. The procession was about two English miles in length. At 6.20 p.m., the Hearse left the Sakaye-machi gate of the Palace, and at 8.45 p.m. crossed Yume-no-ukihashi, the "Bridge of Dreams." Up to this point honours had been paid to the remains as though they represented a person still alive. But a special ritual for the newly dead had now to be gone through. This concluded, the mournful cortège proceeded, at 9 o'clock, to the temple of Senyo, where the funeral service proper was conducted. Some thousand persons took part

in this, the ceremonies not concluding till fully half-past twelve o'clock.

The following was the exact order of the procession:—

THE FUNERAL PROCESSION IN KYOTO.

Ten mounted Police-inspectors, five in each line, with a mounted Chief Inspector of Police between. Companies of Cavalry, Infantry, Commissariat and Artillery, of the Imperial Guard (or of the Osaka Division), a Military Band, a Naval Band, and a battalion of Blue jackets.

Two torch-bearers abreast, robed in gray and white.

Two *masakaki* stands, borne by three men, robed as on the occasion of the departure of the casket from Tokyo.

Two torch-bearers abreast.

Twenty white silk brocade banners, ten on each side of the road; each borne by two men.

Two torch-bearers abreast.

Two clerks of the Imperial Mausolea Bureau abreast, robed in ancient ceremonial costume.

Chief of the Bureau in ancient uniform.

Two torch-bearers abreast.

Casket containing votive viands, borne by four men, and flanked by one assistant officer of services.

Rain-coverings flanked by trestles.

Two torch-bearers abreast.

Casket containing votive viands, borne by four men and flanked by one assistant officer of services; followed by rain-coverings, flanked by trestles.

Two torch-bearers abreast.

Two assistant officers of services, abreast.

Eight torch-bearers on each side of the road and eight officers of services in ancient costume on foot, each escorted by two torch-bearers.

The Master of Services on foot, two officers of Services in front and behind.

Eighteen musicians in two lines. Two torch-bearers abreast.

Twelve halberd-men in rows, six in each.

Two torch-bearers abreast.

Ten *sakaki* stands, each borne by two men, in two rows, 5 in each.

Two clerks under the Lord Steward to the Empress Dowager, abreast.

Vice-Lord Steward to the Empress Dowager on foot.

Two torch-bearers abreast.

The Lord Steward to the Empress Dowager, accompanied by a clerk.

Ten master ox-drivers in five rows, two abreast, flanked by torch-bearers or clerks of the Court; also 30 assistant ox-drivers in two rows.

The BIER, drawn by three oxen harnessed one after the other; the Bier flanked by eight Peers in waiting, four on either side, and also flanked outward by 20 officers of the Body guard, 10 on either side; decorations and daggers of defence placed on either side of the coffin.

Six torch-bearers, in three rows.

A wheelwright.

Rain-coverings, bearers, and other paraphernalia in three rows. Two torch-bearers abreast.

The Chief Mourner in ancient robes, on foot.

Two Naval lieutenants, on foot.

Two clerks of the Court, abreast.

Two torch-bearers abreast.

Three Princes of the Blood abreast, on foot.

Six officials abreast, in full uniform.

Two torch-bearers abreast.

Vice-Commissioner of the funeral, on foot.

Two torch-bearers abreast.

Two Commissioners, abreast, on foot.

Two assistant commissioners.

Two torch-bearers abreast.

Holders of the Grand Cordon of Honour, Ministers of State, Officials and Officers of *Shinnin* rank, &c., on foot.

Military Escort.

Mounted Police Inspectors.

The following was the order of the Procession from the Bridge of Dreams to the Burial-mound:—

Two torch-bearers abreast.

Two *masakaki* stands borne by three men.

Two white silk brocade banners, abreast.

Two clerks of the Imperial Mausolea Bureau, flanked by torch-bearers.

Officer of Services.

Two torch-bearers abreast.

The Master of Services.

Two torch-bearers abreast.

Two halberd-bearers abreast.

Two *sakaki* bearers abreast.

Vice-Lord Steward to the Empress Dowager, flanked by torch-bearers.

Lord Steward to the Empress Dowager, flanked by torch-bearers.

Two rows of torch-bearers.

Two Peers in Waiting, abreast.

The Bier, borne by 70 men in ancient uniform. In front and behind the Bier, two Peers in waiting, walking abreast, and beside them, away from the Bier, two Officers of the Guard; the Bier was flanked by 16 maids of honour, in two rows, eight in each.

Two torch-bearers, abreast.

Two Peers in Waiting, abreast.

Two torch-bearers, abreast.

Trestles and Rain-coverings.

Two torch-bearers, abreast.

The Chief Mourner.

Two naval officers.

Two Clerks of the Court.

Two torch-bearers.

Two Princes of the Blood, with two officers behind each.

Two torch-bearers.

Vice-Chief Commissioner of Obsequies.

Two torch-bearers.

Two Commissioners of the funeral.

Two Clerks under the Commissioners.

Officials and others connected with the interment.

When all those admitted to the hall of ceremony at Senzan had taken the seats assigned to them, their Imperial Highnesses Prince Komatsu, as representative of the Emperor, and Princess Komatsu, as representative of the Empress, entered the hall and were conducted by Mr. Saito, a Chamberlain, to the places of honour. At 11.35 a.m., that is to say, 15 minutes after the Imperial Delegates were seated, the ceremony began. The curtain hanging in front of the Bier was rolled up, and the band played one of the funeral marches specially composed for the occasion. The following votive viands were then offered:—hulled rice, *saké*, *mochi*, five kinds of fish (carp, *tai*, spring salmon, *funa*, and *hobo*), a wild goose, a pheasant, a tame duck, a wild duck, six kinds of sea-weed (*arame*, *kanten*, *anori*, *akakusa-nori*, *mishima-nori*, and *kombu*), radishes, carrots, *mitsuba*, lotus root, turnips, dried persimmons, oranges, cakes, salt, and water.

The Master of Services then reverentially advanced to the Bier and read the following prayer:—

"I, Kuga Kentsu, of the Second Grade of the First Rank, and First Class of the Order of Merit, Master of Services, most reverentially address the departed spirit of the illustrious Empress Dowager, *Yeisho*. The Bier has been laid to rest at this place of ceremony, and the public functionaries and the people, offering before it *nusa* and various votive viands, with most profound respect, are about to perform the ceremony of burial and to lay the coffin in its place of final repose. May the remains most peacefully, tranquilly, and everlastingly rest at this Tsukinowa-yama, where the remains of the ex-Emperor repose."

When the Master of Services, had resumed his seat, Prince Kujyo, an officer of Services, advanced and read the following funeral oration:—

"Now that the coffin of the Empress Dowager *Yeisho* is about to be laid, with the most profound reverence, beneath the earth of this Tsukinowa-yama, I, Prince Fujiwara Asomi Norimichi, First Grade of the Third of Rank and Sixth Class of the Order of Merit, proceed to recount the memorable events in the life of the Empress Dowager *Yeiko*. Harken ye public functionaries and others, present at this place of ceremony, and harken also ye people of the Realm.

"The Empress Dowager *Yeisho* was born on Dec. 14, of the 4th year of the *Tempo* era, being the sixth daughter of the former First Minister of State Kujyo Naotada, honoured with the title of *Fun-sankyu*, and of the Second Grade of the First Rank. Her mother was a daughter of the former

Councillor, Karahashi Zaiki, of the First Grade of the Second Rank. "Asako" was the personal name of the Empress Dowager. On Dec. the 15th, of the 1st year of the *Kayei* era, she was duly installed in the Imperial Court, and on March the 18th of the 1st year of the *Meiji* era, she received the honourable title of Empress Dowager. In March of the 5th year of the same era, she left Kyoto, and during the following month removed to the detached palace of Akasaka. In July of the 7th year, she moved to the new Palace at Aoyama. In January of the 10th and 20th years of the era, she performed due ceremonials at the resting place of the ex-Emperor, on the occasion of the anniversaries of his demise. This year, it had been her purpose to discharge the same office, going to Kyoto for the purpose, and due arrangements were in progress to that end. But an illness unfortunately contracted, suddenly grew serious, and finally, to the profound regret and pain of all, she died on January 11th, at the age of sixty-five. On the 30th of the same month she received the designation of *Yeisho Kotoigo*.

"The Empress Dowager Yeisho was of perfectly upright conduct, thrifty, and profoundly benevolent. She took the deepest interest in all the work of women, especially sericulture. She caused a cocoon-rearing room to be established within the precincts of the Palace, and, with admirable condescension, not only took part in the work, but also encouraged the ladies in waiting to follow her example. Justly did the people respect her as the mother of the country. To tranquillize the public mind, agitated and darkened with sorrow, I, Prince Fujiwara, pronounce this eulogy with the deepest reverence."

The reading of this oration concluded, Prince Komatsu, on behalf of the Emperor, and Princess Komatsu, on behalf of the Empress, offered *tamakushi* (a sprig of *sakaki* with *gohei* attached), and thereafter the Prince and Princess were conducted out of the hall by Baron Sannomiya, Lord Chamberlain, and Mr. Nagasaki, a Chamberlain.

Lieut.-General Kurokawa, on behalf of the Crown Prince, next performed the same rite, and was followed by Delegates of the Princesses of the Blood; by the Chief Mourner; by Princes Fushimi, Kanin, Kuni, Kwacho, and Nashimoto. Then followed in order Commissioners of Obsequies, the Korean Ambassador, holders of the Grand Gordon, Ministers of State, Privy Councillors, functionaries of *Shinnin* rank, and so on. Not until half-past 1 a.m. on the 8th inst., did the ceremony come to an end. At about 2 a.m. the coffin was borne out of the hall, and again deposited in the hearse, by which it was slowly conveyed to the place of interment about half an hour later. Arrived at the spot, the Chief Mourner and others took seats prepared in front of the grave, while a maid of honour stood with bowed head at each of the four sides. The coffin was taken out of the hearse, and placed on cross beams spanning the grave. A final prayer was then read by one of the Officials of Services, and the Chief Mourner paid his last respects to the remains. The coffin, which had a covering of silk brocade, was then suspended over the grave, and the cross beams having been removed, was slowly lowered. So deliberately was this done, that about an hour elapsed before the coffin reached the bottom of the

deep grave. Then the Chief Mourner threw his bamboo stick into the grave, and, taking a spade in his hands, shook earth over the coffin. This done, the Chief Mourner and the others officiating rested for a short space in the Senyo Temple, leaving the work of interment to 96 *hocho* (the name of a bird used since ancient times to designate grave-diggers) and their overseers. At about 11 a.m. the interment was completed, whereupon the Chief Mourners and the others came from the temple, and offered sprigs of *sakaki*. They left the grave at noon. Thus more than 22 hours were occupied from the commencement of the ceremony at 2 p.m. on the 7th inst. to its conclusion on the following day.

A point of interest worthy of mention here is that formerly it was deemed disrespectful for men acting as grave-diggers to throw earth upon the coffin of a member of the Imperial Family. Hence those grave-diggers were regarded not as men but as birds, which being devoid of reasoning faculties, perch even upon tomb of an Emperor. It used to be the custom to count the diggers as one, two, or three birds, not as so many men. When this strange fashion originated, history does not say.

THE LATE BARON NISHI.

The late Baron Nishi, who died on the 1st inst. at the age of 69, was the son of a medical practitioner belonging to the fief of Tsuwano, Sekishiu. While still young, he left his native place for Osaka, where he took lessons in medicine. This study did not hold him long, and he was recalled home by his parents. However, his ambitious desires would not allow him to stay long at Tsuwano, and one night he absconded with the intention of reaching Yedo, there to acquire the Dutch tongue. He had no money to pay the expenses of the journey, and the privations he experienced before reaching his destination are said to have been indescribable. In Yedo, he did not know a single soul who could help him, and he was driven to the verge of starvation, passing many a night under a bridge adjoining the *Shoheiko*, an educational institution at that time maintained by the Tokugawa Regency. Quite accidentally he discovered a fellow-student of Osaka who had settled down in Hongo. The Baron called on him, represented his condition, and earnestly solicited help. Through the good offices of this friend he was appointed a "menial-student" (*gaku-boku*) of Mr. Tetsuka, one of the Dutch scholars of the time. This occurred when Nishi was 26 or 27 years of age. At this period the (*jo-i*) anti-foreign spirit was rampant, and students that wished to acquire a foreign language prosecuted their studies at the risk of their lives. Mr. Kanda Kohei, now a member of the House of Peers, Major-General Otsuka, and Mr. Tsuda Sen, a prominent agriculturist, were among the scholars that studied language under the same teacher as Baron Nishi. It was the time when a student who could disburse one *ryo* per month as school expenses was accounted rich among his fellows. So indigent was the Baron, that he could not even afford sufficient clothes to keep him warm. His only property consisted—we are quoting from the *Sekai-no-Nippon*—of a copy or two of the Chinese classics, a small Dutch-Japanese dictionary, a suit of

clothes, and one *futon* (quilt). About this time he became acquainted with Dr. Nakahama's father, who had returned home after many years' wandering in America, where he had been stranded. From this gentleman he borrowed an English-Dutch dictionary, and thus began the study of English side by side with Dutch. The acquisition of a foreign language was beset with great difficulties then, two months being required for finding out the meaning of a page. Being an absconder from his father's house, the future Baron had no registration papers at first, but through the good offices of Mr. Nishimura Shigeki, now Director of the *Kwasoku Yogakko*, he obtained them eventually from the fief of Sakura, and, a short time after, was employed at the *Banshotorishibejo* (Foreign Books Investigation Office), receiving rations for 20 persons. We next find the Baron on the point of being despatched to Holland with Viscount Enomoto, Mr. Tsuda Shindo, and so forth, and subsequently his career was one of great usefulness to Japan. His connexion with military affairs was not very intimate, but it is said that he was one of the first persons who advocated conscription. Subsequently he took part in civil affairs. In consideration of the distinguished services rendered by him, the patent of Baron was conferred upon the deceased a few days prior to his death. The funeral was conducted on the 6th inst.

THE JURY IN THE CAREW CASE.

Some of the journalistic comments evoked by our review of the Carew case are penned with the evident purpose of suggesting that we accuse the Jury of failing to give the evidence due consideration, because they required only 25 minutes to decide an issue that had been under discussion for nearly as many days. It was not our intention to reflect in the slightest degree upon the action of the Jury. We have no doubt that they devoted to the case whatever measure of conscientious care and profound reflection it seemed to demand. None the less it is a fact, and a very remarkable fact, that the sequel of such a long and complicated trial should have been an exceptionally brief retirement of the Jury. The circumstance suggests inferences not necessarily connected in any way with the Jury's morality in discharging their functions. It suggests that, in their opinion, the guilt of the accused was most conclusively established by the evidence, and that no perplexing elements existed. Without pretending to speak with absolute assurance, we believe that we are right in saying that no charge of murder where circumstantial evidence alone had to be relied on, has ever before been so expeditiously dealt with by a Jury. Two explanations of this celerity have been advanced. One is that, "impressed with the gravity of the case, the Jury made copious memoranda of the principal points in the evidence and discussed them day by day." That is not an explanation at all: it is a mere platitude. If the Jury had failed to make such memoranda and to engage in such discussions, they would indeed have been guilty of the "inconsiderate and hasty" action which we are falsely charged with attributing to them. But until the moment of their retirement the Jury could not have found any adequate opportunity of discussing the last day's proceedings, namely, the Judge's summing up, which

to them should have possessed paramount importance. And this brings us to the second explanation that has been offered of the Jury's promptness, namely, that they "had discussed the evidence and the speeches of counsel, and agreed upon their verdict before the Judge began his summing up." That explanation is actually put forward by a local English Journal in order to rebut what it calls the "libel upon the Jury" that they "needed only 25 minutes' deliberation to agree that the woman was a murderess." If the editor of a newspaper is so profoundly ignorant of the functions of a Jury as to suppose that their verdict may be properly agreed upon before they have heard the Judge's summing up, the question may well be asked whether trial by Jury is not an entirely unjustifiable form of procedure. It is from the Judge that the Jury have to learn the law of the case. Until they hear the Judge's charge they have no manner of right—we may almost say that they are forbidden by their oath—to arrive at any conclusion. If it be true that they "had agreed upon their verdict before the Judge began his summing up"—and the *Japan Daily Advertiser* declares itself "assured" of the fact—they are convicted of precipitancy such as no one would have thought of laying to their charge. We do not believe that it is true, but since the statement has been publicly made, and since it reflects most injuriously on the Jury's conduct, we recommend them to take some steps to repel the accusation.

FINANCIAL TOPICS.

The opinion that gold should be made the standard in Japan has begun to attract public attention. Indeed, according to information obtained by the *Mainichi*, the Treasury is now prosecuting inquiries on the subject, with the view of submitting the results for the consideration of the Cabinet. The same paper avers that the Premier and four or five Ministers of State are strongly in favour of gold monometallism, and adds that the introduction of that system may be expected before the close of the Diet's present session, or, at any rate, not much later.

The *Yiji* says that various circumstances connected with *post-bellum* measures constitute the most potent recommendation for the adoption of the gold standard. Expansion of the national armament, development of means of communication, and so forth, involve an expenditure of over 60 million *yen* during the coming fiscal year, in addition to the sums actually provided. But the state of the money market does not permit the floating of a loan, and it is therefore probable that the Treasury will be obliged to have temporary recourse to the Indemnity. That expedient, however, can not be relied upon after next year. Steps will have to be taken to meet the national requirements in some other manner. The introduction of foreign capital is thought the best resource. Hence the sudden revival of the often discussed problem of a gold standard. The Indemnity received and to be received from China might be used for the purpose of a specie reserve to facilitate the operation.

Opinions vary considerably as to the proximate cause of the recent rise in the market price of commodities. Mr. Taguchi Ukichi, a member of the Diet, and his

fellow economists, attribute the appreciation to a redundancy of circulating media; whereas Mr. Kawashima, also a member of the Diet, and other writers, refer the phenomenon to the operation of other factors. Mr. Kawashima is diametrically opposed to Mr. Taguchi's view, and holds that the cause must be sought in the excess of demand over supply. The Japan-China War, he says, has enormously increased the purchasing power of soldiers, contractors, and so forth, while, simultaneously, the sudden inception of various engineering enterprises, as railways, harbour construction, and so forth, has created an extraordinary demand for labour, thus raising wages, and helping to augment the funds at the disposal of the consuming classes. It is true, observe these economists, that the volume of the currency has been more or less augmented, but that is a natural result of the annexation of Formosa and of the activity of industrial enterprise. There is, however, one point demanding the serious attention of financiers and publicists, namely, the necessity of devising means to facilitate the circulation of money. For that purpose the development of the credit system must be encouraged, and the Treasury should also find some profitable means of employing the funds that lie idle in its vaults. If the market were better supplied with money, and if better means of distributing it existed, apprehensions like those of Mr. Taguchi that Government bonds of 100 *yen* face value will fall to 90, or that a Public Undertakings Loan can not be floated at a lower interest than 7 per cent., would be chimerical. Mr. Kawashima has memorialized the Minister of Finance on this subject, and is precluded from giving further details.

According to the *Chuo*, the following is said to be result of investigations made by the authorities as to the burden of taxation per head in the various countries of the West:—

	Population.	Military burden.	Administrative burden.	Indemnity national debt.	Total per head.
England ...	39,134,166	8,877	8,399	6,050	23,226
France	38,343,192	9,059	12,792	11,961	33,812
Germany ...	51,758,364	5,606	4,777	0,665	11,048
Russia ...	129,545,000	4,106	8,645	3,121	15,872
U. S. A. ...	62,982,214	2,578	10,308	1,056	13,942
Italy	30,913,663	3,944	7,020	9,580	20,544
Spain	17,565,632	3,488	6,068	6,828	16,384
Japan	42,270,620	3,278	1,873	0,700	5,851

The total average burden per head in Japan is far below that of any other country in the list, but the fact must be viewed relatively, seeing that the standard of living in Japan is lower than that of any other country specified above. From 1890 to 1895, the total average burden per head in Japan was about 2.30 *yen*, or less than half of what it is now.

It is anticipated that so soon as the Diet resumes its sittings (15th inst.), the Government will introduce, in the form of an urgency measure, a Supplementary Budget for the current fiscal year (1896-7), covering grants in aid of public works necessitated by floods, seismic disasters, and other calamities, that occurred since the opening of the year (April 1st, 1896). The amount will aggregate over nine million *yen*, of which about one million will go to Toyama Prefecture. Twenty three other localities are to receive sums ranging from 600,000 to 70,000 *yen* each. As these grants will constitute seven-tenths of the whole cost of the works, it would appear that the total outlay necessitated by natu-

ral calamities during the year, so far as engineering operations are concerned, is 13 million *yen*.

According to information published by the *Yiji*, Japanese bankers contemplate discontinuing the custom of using *rin* in their calculations. The entering of such a small sum involves considerable trouble, and not infrequently much time is wasted over a mistake of only one *rin*, or the thousandth part of a *yen*, in auditing the accounts of the Treasury or of banks or companies. Indeed, the labour and expense squandered for the sake of this paltry unit of value must be such that the bankers may well be excused for wishing to limit their calculations to two places of decimals of a *yen*. The Mitsui Bank has taken the initiative in the reform, and has already put it into operation, or is about to do so immediately. In the Hongkong and Shanghai Bank at Yokohama fractions below 10 *sen* are not reckoned—(truly?)—and no complaints are made by clients. It is not yet clear, however, whether fractions of a *sen* are to be treated as a loss to the bank or a loss to the client. Probably the fairest rule would be that anything over half a *sen* should be put to the client's credit as 1 *sen*, and any amount under half a *sen* should go to the bank.

The *Yiji*'s Osaka correspondent wires that the shareholders of the Shanghai Spinning Company have decided to dissolve, and that a meeting will be held to discuss the process of carrying out that decision. Should any shareholders be desirous of continuing the project, the land purchased in Shanghai and the plant of machinery will be handed over to them. It is said that about one-third of the capital of the Company comes from Chinese merchants. Hence there is a difficulty about transferring the concern from Shanghai to Japanese soil.

FORMOSA.

The Formosa correspondent of the *North-China Daily News* writes as follows:—

The mountain retreat of the rebels of the central district has been captured at last, after a day of sharp fighting. The rebels, who numbered about a thousand, had taken refuge in Tapintien, and kept themselves in plenty by an occasional raid on the surrounding villages. The place they had selected was one difficult of access, but after preliminary attacks, a strong assault was made on the 28th of December, which was successful, the rebels retreating. It is hoped that having lost their retreat, the majority of them will settle down to some peaceful occupation, and those who will not, will probably eventually fall into the hands of the police. In the fortifications were found cows and rice, supplies for the whole party for at least three months. The rebels appeared to be armed with new repeating Mauser rifle, and with ammunition which did not appear to have been long out of the factory. It is at present a query among the Japanese as to whether China had or had not a hand in the furnishing of arms. The Japanese loss in the two engagements was nearly one hundred killed and wounded. Rebel loss unknown. Rebels about 600 strong made an attack on Hozan on the 10th inst, but were driven back after some fighting.

Mr. Nomura, the Commissioner of Customs, returned a few days ago from the scene of the remains of his first junk-catcher. To aid in preventing smuggling the Customs had purchased a revenue cutter, but after a career of less than a month, the zeal of her commander led him to tackle a gale with the hopes of catching a junk whose location had been spoken. The storm was too severe and to save life it became necessary to run her ashore. The officers and crew all got off, but the little steam-vessel was not so successful and the Commissioner sadly informs me that she is beyond all hope.

THE CAREW CASE.

ACCORDING to what we have shown, it falls entirely within the limits of reasonable credence that Mr. CAREW died from the effects of arsenic taken in accidental excess. That hypothesis does not conflict either with the testimony of the medical experts examined at the trial, or with the record that trustworthy and independent witnesses were able to furnish of Mr. CAREW's sayings and doings during the three years preceding his death.

Here it is necessary to note one of the most unfortunate incidents of the whole tragedy. On the morning of the day when Mr. CAREW died, suspicions were entertained that poison had been administered to him. These suspicions emanated from Miss JACOB, the CAREW'S nursery governess. Through her the last purchase of Fowler's Solution had been made on the preceding day. She communicated her suspicions to a Miss CHRISTOFFEL, another nursery governess, who told Mr. DUNLOP, and through him they were communicated to Dr. WHEELER. Steps were at once taken by the Doctor to secure the patient's removal to hospital, and pending the necessary arrangements, he asked Mrs. CAREW's brother, Mr. PORCH, to watch by the sick man's side. What instructions Dr. WHEELER gave to Mr. PORCH the evidence does not clearly show. Since, however, the object was to guard the patient against danger of further doses of poison, and since Dr. WHEELER admittedly suspected Mrs. CAREW of being the poisoner, he must have taken Mr. PORCH into his confidence. But neither to Mrs. CAREW nor to Mr. CAREW was a word said on the subject. One word to either the husband or the wife would have settled the question whether arsenic had been taken with the sick man's consent or feloniously administered to him. It is shocking to think of that omission, and still more shocking to think of the brother mounting guard under such conditions. We do not suggest any reproach. What happened is, perhaps, what might have been expected to happen in the circumstances. But the loss of an opportunity so vital can never be too much regretted.

In addition to two forms of arsenic, the chemical examination disclosed the presence of acetate of lead in the remains, and the bulk of the medical testimony went to show that acetate of lead might have been the cause of death. By whom was this lead administered? The prosecution did not charge Mrs. CAREW with having administered it. So far, indeed, as the prosecution was concerned, no such thing as lead had any existence. But it is impossible to dismiss the lead in that simple fashion, for its presence in the body has an important collateral bearing on the case. Either it must have been administered with murderous intent, or it

must have been taken with Mr. CAREW's consent. If it was taken with his consent, then he was treating his ailments after his own recipes, and was using poisonous drugs without the knowledge of his medical attendant. If it was administered feloniously, then Mrs. CAREW must have administered it.

As to the former inference, it is in evidence that sugar of lead was obtained, for the first time, on October 18th. A quantity of the same substance had been procured months previously for use in the stable, but that need not be taken into account here. October the 18th was the third day of Mr. CAREW'S serious illness, and the ninth day after his becoming Dr. WHEELER'S patient for liver trouble. On Oct. 13th and on October 16th, he obtained from the dispensary medicine prescribed for him two years previously by Dr. BAEZ for inflammation of the bladder. The autopsy also showed that his bladder was in a diseased condition. It is certain, then, that in the early stages of his last illness he was suffering from his bladder; that he made no mention of the fact to Dr. WHEELER, and that he procured and took medicine to relieve pain which, in all probability, was very severe. It is just possible that he tried sugar of lead also as a remedy. Sugar of lead is one of the stock medicines in such maladies, but it is used as an injection, not taken internally. Did Mr. CAREW fall into the error of taking it internally? He told his wife, if her sworn testimony be credible, that he used it as a lotion for his liver. She knew nothing of his bladder trouble. He seems to have concealed that from her. Assuredly had she known of it, she would have made use of the knowledge to account for the various drugs used by her husband, when it became a matter of vital importance that she should account for them. Had she been disturbed by any guilty feeling about the sugar of lead, it would have been much easier to refer its use to the bladder trouble, which had been concealed from Dr. WHEELER, than to the liver affection which he was actually treating. Let her be ever so deficient in astuteness, the superior credibility of the former explanation must have been apparent to her. But she said nothing of the lead after her husband's death because she was not sensible of any reason to speak of it. And here we may conveniently refer to a cognate fact, namely, that throughout her husband's illness she maintained silence about his recourse to both arsenic and sugar of lead. That silence was construed to her disadvantage. It is contended by the prosecution that had not her cognisance been guilty, she would have given information to Dr. WHEELER when she saw him perplexed to account for the symptoms. Now as to the arsenic, she explained that her husband, when he reposed confidence in her about his stricture, asked her to conceal the fact from Dr. WHEELER. Let us hear what

Judge MOWAT had to say to the Jury about this:—

It was quite correct for her to conceal the circumstances from Dr. Wheeler which her husband did not wish him to know, and that will be kept in your mind, up to a certain extent, but whether it is an adequate consideration up to the end you will have to think over and decide. It is one of the main facts in the case. You may say that arsenic might have been mentioned to Dr. Wheeler without any reference to the complaint for which the husband was supposed to procure it. Then, why was sugar of lead procured? Sugar of lead was being brought into the house at the same time by her. Why was that not mentioned? That could not have had any connection with the complaint for which the arsenic was procured. Her husband said to her that sugar of lead was for an external application for the liver. Well, it was liver that he was supposed to be suffering from, and what reason was there for not telling the doctor about the sugar of lead? There were two doctors puzzling themselves over the matter, why the biliousness did not yield to the remedies applied, and enquiries were made from the prisoner about the cooking utensils and yet she does not give any information on the point. Up to a certain point, as I say, I can understand the motive that may have influenced her action. We have in her own evidence a statement that she puts forward in explanation of the purchase of the arsenic. But why was not the sugar of lead mentioned by her? She saw that Dr. Wheeler was so very puzzled about the case that he asks to be allowed to call in another medical man's opinion, and it might have occurred to her then to tell him that—if not arsenic—at least sugar of lead had been purchased. She tells us in one statement that her husband used sugar of lead as a lotion externally. For what? For his liver, and that was what Dr. Wheeler thought he was suffering from at this time. The prisoner remains silent as to the purchase of both poisons at a time when all such matters should no longer have been concealed. The time had arrived, as I say, to put aside all necessity to conceal the matter further, in the face of the intense suffering of the deceased. Yet she remains silent. And this, too, at a time when, falling in with the suggestion of a friend, she writes to Dr. Wheeler regarding the getting down from Tokyo of another medical practitioner for the sole and particular purpose of finding out what was really wrong with the patient. That, gentlemen, is a point for you seriously to consider, her concealment of this fact from her husband's medical attendant from the 20th, all during the remainder of the illness, down to the end. The explanation advanced on her behalf by her Counsel, you have heard; you will give it the consideration that you may think it deserves. You are asked to adopt that explanation by the defence: but I will point out to you that she called the medical attendant's attention to the arsenic having been taken on the evening of her husband's death, after she had heard that a *post mortem* was to be held. Then she sent for Dr. Wheeler and told him of the arsenic having been purchased and taken by the deceased, because she then knew that arsenic could be traced in the human body.

Had Judge MOWAT forgotten, when he spoke these words to the Jury, that Mrs. CAREW believed the sugar of lead to have been used externally? If that was her belief, by what conceivable train of reasoning could it have occurred to her that the sugar of lead might be responsible for the internal symptoms which puzzled Dr. WHEELER? She must at least be credited with ordinary intelligence, and no woman of ordinary intelligence would think of connecting nausea, pains in the stomach, and diarrhoea with an external application of acetate of lead. From that point of view, her omission to inform Dr. WHEELER about the sugar of lead appears quite natural, and does not warrant any construction unfavourable to her innocence. And her action about the arsenic, does it not suggest an inference at least as logical as that drawn by Judge MOWAT, but diametrically different. What the Judge suggested was that she kept silence

about the arsenic until the immediate prospect of an autopsy made discovery certain. Why, then, did she keep silence about the lead, if she had administered it, or if she knew that it had been taken? If her mention of arsenic is to be construed as indicating guilty knowledge of the presence of that poison in the corpse, why should not her silence about lead be equally construable as an indication of ignorance that sugar of lead had been swallowed? If she administered sugar of lead with murderous intent, she must have well understood that its presence would be detected, and that the necessity of accounting for it was fully as urgent as the necessity of accounting for arsenic. Yet she said not one word about the lead. What is the most reasonable explanation of her silence? Is it not that she was ignorant of lead having been taken internally, and that she believed it to have been used as a lotion only? We are thus brought to the conclusion that Mr. CAREW took, during his illness, drugs of which even his wife was not fully informed, and if that be true of acetate of lead, why should it necessarily be false of arsenic. It will perhaps be contended that some person other than Mrs. CAREW may have administered the sugar of lead. A moment's thought will show, however, that if the sugar of lead was exhibited with murderous intent, it must have been exhibited by Mrs. CAREW. The proposition is not necessarily true either theoretically or practically. But it is necessarily true from the point of view of the prosecution. For if some person other than Mrs. CAREW was engaged in the poisoning, then that person may have administered Fowler's Solution and the white arsenic as well as the sugar of lead. Such a hypothesis can be dismissed at once. If acetate of lead was given as a poison, Mrs. CAREW was the giver. Now the first purchase of acetate of lead was made on October the 18th. Mr. CAREW had then been ailing for seven days, and confined to his house for two. On the 16th, he complained of nausea and sleepiness; on the 17th, the irritability of his stomach had increased and he was vomiting. Is it to be assumed that the poisoning process had already commenced, and that the sugar of lead was procured to hasten the result? That is not inconceivable, but it involves another perplexity, namely, if Mrs. CAREW could procure arsenic, which is tasteless and certainly efficacious, why should she have had recourse to sugar of lead, a clumsy, nauseous, and comparatively ineffective poison? There remains, too, the difficult question, how could the sugar of lead have been administered without the patient's consent. The evidence adduced went to show that even a medicinal dose, which is the 30th part of the minimum fatal dose, could scarcely be disguised in a tumbler-full of liquid. On October the 15th, Mr. CAREW was put on a diet of milk, Vichy,

and slops. He had no medicine to take. On the 17th, Dr. WHEELER gave him some tincture of podophyllin on a lump of sugar. The medicine was administered by the Doctor himself and it produced vomiting. In the evening a mustard sinapism was applied. No other medical remedies were employed. On the 18th, Dr. WHEELER, thinking that the podophyllin previously used had been inert, prescribed a liquid preparation of the same medicine. Mr. CAREW must have known perfectly well what remedy had been ordered for him. No change was made in it until the 20th. It is evidently out of the question that he can have been induced to take sugar of lead under the pretext of Dr. WHEELER'S orders. Was it, then, given in his food? The answer is that on the 18th, when the acetate of lead came into the house, Mr. CAREW was already unable to retain food and most averse to taking any; a condition which thenceforth underwent no material improvement. A large stretch of imagination is needed to conceive any means by which sugar of lead could have been administered in fatal doses without the patient's consent. On the whole, we may confidently conclude that he took it of his own free will, and that to the last his wife remained ignorant of its having been taken internally. Of course the supposition that Mr. CAREW drank it, instead of using it as a lotion, for his bladder trouble, is exceedingly difficult to entertain. But there is another hypothesis. He may have believed in it as a means of arresting any danger of hæmorrhage from over-large doses of arsenic. He was concealing from Dr. WHEELER two maladies that caused him much pain, correlated maladies but not necessarily co-existent. For one of those maladies he was using medicine obtained two years previously from Dr. BAELEZ. For the other, he was using arsenic. To correct one dangerous consequence of arsenic he took sugar of lead, and both poisons being imbibed in large quantities, reacted upon each other with fatal results. There remains one very important point to be noted about this sugar of lead. It was procured by the order of Mr. CAREW himself on the 18th of October while Mrs. CAREW was absent at church. We have that fact on the evidence of RACHEL GREER, which does not conflict with any other evidence and is not unworthy of credence. It is a fact sufficient in itself to dispel all suspicion with regard to felonious use of the sugar of lead by Mrs. CAREW. Why Judge MOWAT ignored RACHEL GREER'S evidence, we fail to comprehend. Nothing impugning her veracity was adduced.

Before we pass on to examine Mrs. CAREW'S general conduct and its bearings upon the case, reference must be made to one or two points in the Judge's summing up, for though his Lordship doubtless marshalled the evidence with the fullest

desire to be impartial, some of his deductions appear harsh and unwarranted.

On October the 21st, Mrs. CAREW sent to the Normal Dispensary for a half-ounce bottle of Fowler's Solution for herself, and to the Japanese chemist, MARUYA, for an ounce bottle; the latter at her husband's request, according to her own statement; for the purpose of killing him, according to the prosecution. She sent in the openest possible way, the messenger being Miss JACOB. In the whole history of criminal experience has such a method of procuring poison ever been recorded? The prosecution readily elaborated and took pains to establish a theory that, in procuring arsenic on the 19th, Mrs. CAREW resorted to the greatest secrecy. With equal readiness they attributed a felonious purpose to what was practically a public purchase made by her on the 21st. Passing that over, we come to Judge MOWAT'S comments on the fact that arsenic was bought at two different places:—

Now, gentlemen, I must call your attention more particularly to the evidence that has been given as to the purchase of the arsenic, and it would be more convenient to refer specifically to the purchase that was made on the last day—on the morning of the 21st. She sent that morning for some arsenic, sending her governess down the town to make the purchase, along with other little commissions. One call was made at Brett's, another at Curnow's, another at Schedel's. At Schedel's the governess went, in accordance with her mistress's instructions, to obtain a half ounce bottle of Fowler's Solution of arsenic. Then, gentlemen, from Schedel's the governess, still in obedience to her mistress's desire, goes on to Maruya's. To do what? To purchase an ounce more of Fowler's Solution! That is to say, the purchases of arsenic made on the 21st, at the same time, by the same messenger, through the same means, were from two different chemist's shops. * * * Now what explanation is there for a proceeding of that kind? If you want medicine you generally send to the nearest chemist for it, if you do not go to your own chemist. Then why did she send, or tell her governess to go to two chemists? What explanation is there of this procedure that is compatible with innocence if there is question as to whether this is an innocent act or not? If it is compatible with innocence, and there was urgent necessity for the purchase of such a quantity of poison as one and a half ounces of arsenic, why not get it all at Schedel's, the first chemist?

Surely that is a laboured and far-fetched argument. The plain fact is that SCHEDEL would not have sold arsenic to any one without a physician's authority. Mrs. CAREW had hitherto been getting her own arsenic at SCHEDEL'S: the arsenic ordered for her by Dr. WHEELER. On the 21st of October, she wanted Dr. WHEELER'S prescription refilled for herself, and she wanted a bottle of Fowler's Solution for her husband. She could not obtain the latter at any foreign druggist's: therefore she sent to a Japanese. What could be more natural? Admit that her husband asked her to procure arsenic for him, and the fact of her getting it at MARUYA'S store loses all incriminating significance. She could not get it any where else. That is all there is about it.

Here is another case of unwarrantably harsh interpretation, as we think.

The next witness is Mr. R. J. Ward who appears to have been but a slight acquaintance of the deceased, a comparative stranger you might say. He speaks of giving the deceased some Fowler's

Solution for a dog. This was as far back as 1894 or early in 1895, nearly two years ago. Mr. Ward says that when he gave the arsenic to the deceased he remarked that it was arsenic and that deceased should be careful how he used it. To this deceased replied that "he was quite familiar with the use of it." Now the question that I put to you upon this evidence is this. That if he was a large consumer of arsenic at this time, he would hardly have required to have obtained from a comparative stranger, a half bottle of arsenic for his dog. He said to Mr. Ward that he was quite familiar with the use of arsenic, but, gentlemen, I think, that if he had had some of it by him he would have been more likely to have also said, "I have plenty of it"—or words of that kind. Instead of that, we find him accepting half a bottle from Mr. Ward.

Now it did not appear in evidence that Mr. WARD told Mr. CAREW whether or not the medicine for the dog was Fowler's Solution pure and simple, or whether it Fowler's Solution mixed with something else. From a bottle-full of the Solution WARD poured a portion into another bottle and carried the latter, with some ointment to Mr. CAREW in Yokohama. Is it likely that Mr. CAREW, having sought WARD'S assistance on behalf of the sick dog, would have told him to carry the bottle back to Tokyo, inasmuch as he, CAREW, already had arsenic in his possession? Even if he did not think that the bottle contained anything more than Fowler's Solution, he would have accepted it, as a matter of course. Judge MOWAT'S interpretation of this piece of evidence does not sound reasonable or impartial. And it is worth noting, *en passant*, that no one seems to have been at all surprised at finding bottles of Fowler's Solution in the possession of Mr. WARD, a railway employé, though the prosecution thought it so strange that Mr. CAREW should be able to procure the drug without attracting notice. The fact is that any person can, or could before this trial, obtain any quantity of arsenic in Tokyo without medical authority of any kind.

We do not wish to be understood as reflecting generally upon Judge MOWAT'S charge. On the whole we find it eminently impartial and luminous. But in the special passages to which we have referred, an unwarrantable prejudice appears to be created against Mrs. CAREW.

To the lay section of the public, the section from which juries are chosen, no feature of the CAREW case is stranger than the prosecution's failure to discover any motive for the heinous crime laid to Mrs. CAREW'S charge. Every one knows the ordinary man's habit of mind in the presence of some abnormal occurrence. If we are told that so and so is said to have perpetrated a singular act, our first impulse is to ask, why on earth did he do such a thing. If the answer is that no reasons are forthcoming, then we experience an insuperable difficulty in crediting the story. If, however, the fact be based not on mere hearsay, but on indubitable evidence, then we accept it with astonishment. That is a simple statement of the ratiocinative processes of the human mind. Precisely identical

is the principle underlying the law, as expounded by Judge MOWAT. "The law," he said, "is not concerned with motives—they are often inscrutable—but with acts and intentions. * * * In matters of this kind where the law is concerned, the law is that if the facts are clear, then you do not require to look any further." It must be observed, *en passant*, that the law, as applied to the case of Mrs. CAREW, appears to be absolutely rigid wherever its extension might have benefited the prisoner, but elastic wherever, by stretching it, her chances of escape could be diminished. There was a possibility, though not a probability, that Mr. CAREW committed suicide. The Judge dismissed that contingency with the curt comment, "no motive for such an act appears." There was a remote possibility, though not a probability, that a woman living on affectionate terms with her husband, obeyed a sudden vertigo and slaughtered him. The Judge dealt with that contingency by saying, "the law is not concerned with motives—they are often inscrutable—but with acts and intentions." Let the application of the law be ever so various, however, its spirit, as enunciated by Judge MOWAT, admits of no question. "If the facts are clear, then you do not require to look any further." We have seen what the facts were. To establish anything like a probability that Mrs. CAREW poisoned her husband, it was essential to show that he died from the effects of a poison to which she had access, or which was in her possession, at the time when it might have been administered. Two poisons were found in the body; white arsenic and acetate of lead. No arsenic was found that could be identified as having been originally in the form of Fowler's Solution. All the absorbed and dissolved arsenic disclosed by chemical analysis might have been derived from white arsenic. There was no scientific indication that any of it had been derived from arsenic in solution. Of the two poisons found, one, the acetate of lead, had been purchased by order of Mr. CAREW himself. Therefore the hypothesis that it was administered to him without his consent becomes virtually untenable. The other poison, the white arsenic, could not be traced to the possession of Mrs. CAREW. No attempt was made to trace it. No attempt was made to account for its presence in the dead body. The prosecution, very properly, abandoned all idea of connecting the accused with the administration of white arsenic. Nothing could be clearer than the Judge's declaration on that point. "The administration in the form of arsenious acid, or white arsenic," said his Lordship, "has been abandoned by the prosecution, as no white arsenic has been traced to the prisoner." So, then, it comes to this, that of the only two poisons the presence of

which in the dead man's body could be scientifically established, one, according to all reasonable inference, was taken by him voluntarily, and as for the other, the prisoner was not accused of administering it. Such are the facts deemed sufficiently clear to dispense with all consideration of the question of motive. Let us state the matter in another way. Arsenic in the form of solution *may* have been taken by the deceased. Arsenic in the form of solution *may* have contributed to cause death. Arsenic in the form of solution is known to have been in Mrs. CAREW'S possession. Arsenic in the form of arsenious acid was unquestionably taken by the deceased. Arsenic in the form of arsenious acid *may* have been the sole cause of death. Arsenic in the form of arsenious acid is not known to have been in Mrs. CAREW'S possession. She is not charged with administering arsenic in the form of arsenious acid. Therefore, the net result is that she administered arsenic in the form of solution; that she administered it with murderous intent; and that it contributed to cause death. Were we confronted by such a process of reasoning in the affairs of every-day life, we should laugh it to scorn; unless, indeed—and there is an "unless"—unless it could be established conclusively that Mrs. CAREW had an overwhelmingly strong motive for desiring her husband's death. Then, perhaps, the harshly judging section of the public might be disposed to conclude that, as the symptoms disclosed by the autopsy and by the chemical examination were consistent with death by arsenic, in whatever form taken; and as Mrs. CAREW had a form of arsenic in her possession; and as an imperatively powerful motive impelled her to get rid of her husband, therefore she probably did poison him with arsenic. But failing the establishment of a motive, no unprejudiced person would consent to entertain such a suspicion. Never, in truth, was there a case where the exposition of motive constituted a more essential link in the chain of incriminating evidence. No motive was shown: not the semblance of a motive. The prosecution spent many hours endeavouring to decipher letters which an amateur spy had stolen, in a fragmentary form, from Mrs. CAREW'S waste-paper basket, and another amateur spy had stitched together. Seldom has a law Court been obliged to handle a dirtier piece of evidence. The method of filling in these skeleton epistles and eliciting the facts about them, made an appropriate object lesson. Their writer was a man who imagined that he had robbed Mrs. CAREW'S husband of her affections: a man bound by whatever obligations love, whether honourable or dishonourable, imposes to shield the woman that had made sacrifices for his sake. This man stood up in Court, and consented to read out the fragmentary

letters: consented to fill in from memory the lacunæ that the work of the spies had been unable to avoid. The Judge had no shadow of power to compel such a procedure on the part of a witness. He could only suggest its convenience. The witness accepted the suggestion. He was even willing to negative a rendering that would have deprived a telegram of features unfavourable to the prisoner. Such scrupulous complaisance can scarcely have been dictated by a sense of the claims of veracity, for the same witness had given, at the inquest, evidence diametrically opposed to the belief he must then have entertained. These things, however, are a side issue. What concerns us is that the prosecution, by the aid of two spies and a renegade lover, was enabled to show that Mrs. CAREW had maligned her husband to the object of her passing fancy. We do not wish to be interpreted as reflecting in the smallest degree on the conduct of the prosecution. To men like the Judge and the two Crown Advocates, nothing can have been more distasteful than contact with these bits of waste paper collected by stealth, connected by suspicion, and construed by disloyalty. The prosecution had to do its duty, however repugnant. But what resulted from the evidence that these letters furnished? They did not suggest a motive for the crime of murder, since the representations that they contained about Mr. CAREW's treatment of his wife were proved to be entirely false; were never, indeed, credited for an instant by those that had knowledge of the facts. They did show, however, that where affairs of the heart were concerned, Mrs. CAREW was an untruthful woman, and from that fact the prosecution asked the jury to infer that no statement made by her on any subject could be trusted. Does that indeed follow? Does not the story of life in all countries and at all epochs abound with pages proving that illicit love belongs to a sphere of sentiment where judgment and honour have no sway, and where delirium and deceit reign supreme? Do not the canons of modern society recognise that, though a man stand up in Court and swear falsely to hide the guilt of a woman who has sinned for his sake, his title to be believed in other matters is in no sense impaired? Narrow indeed must be the experience of any one ignorant that woman's habit, the world over, is to hide from one lover the affection she bestows upon another, and that this path of deceit once taken, leads often to a black abyss of falsehood. Still, facts must be faced. This "E.H." correspondence, or rather the "H." side of it which alone emerged from the waste-paper basket, certainly showed that Mrs. CAREW does not belong to the class of women—let us hope that they are largely in the majority—whose moral fibre is proof against the disintegrating influence of the *major lex*, and who could never

stoop to employ slander of their husbands as an instrument for the furtherance of their own amorous intrigues. Men of the world will remember the profoundly wise saying of CATULLUS:—

*Mulier cupido quod dicit amanti,
In vento et rapida scribere oportet aqua.*

But any jury must conceive a prejudice against a wife convicted of such conduct, though no jury would be justified in rejecting as consequently unreliable every statement made by her on whatever subject. In short, except as showing that, in affairs of the sexes, Mrs. CAREW is not what the world calls "a good woman," the "E.H." correspondence had no bearing whatever on the charge for which she was tried.

There was another batch of correspondence, the "A.L." letters. The method of dealing with these letters is one of the most singular incidents of the whole trial. They were anonymous letters, written in a disguised hand. As evidence they were absolutely valueless unless their authorship could be traced. The prisoner was suspected of having written them, and if the fact were established, she stood convicted, at least, of having engaged in a mysterious intrigue, almost inexplicable as to motive, but certainly suggestive of moral instability. No jury empanelled to try a capital charge within the limits of the United Kingdom—we may, indeed, go farther and say, within the limits of any Occidental country—would be asked to form a conclusion about the authorship of such documents without the assistance of trained experts in caligraphy; men who had devoted years of hard study to that particular branch of inquiry, and had obtained public recognition of their title to give a sterling opinion. There are no such experts available in Tokyo or Yokohama. All that the prosecution could do was to call a dilettante expert, an amateur, who had, at one time, taken up the study of handwriting in a desultory manner, and who possessed no recognised qualifications whatever. He gave his testimony with all the modesty dictated by the circumstances. But of what value was such testimony? Was it just to a prisoner, arraigned on a capital accusation, that the Jury should have been invited, or rather required, to determine the authorship of these letters without any expert assistance? There is an unhappy tendency to belaud jurors in British Courts of law; to praise them for the display of qualities that their oath requires them to exercise, and to credit them with the possession of abilities that are purely conjectural. "The handwriting," said Judge MOWAT in his summing up, "the handwriting has been dealt with by Counsel on both sides, and I hardly propose to say much about it to you. You are more competent by far to form an opinion on that matter than I am, and, perhaps, even than Counsel." Why were the Jury so competent? Why should they be so competent? What con-

ceivable qualifications could they be supposed to bring to the solution of such a problem? Few tasks present greater difficulties than the identification of disguised handwriting. In numerous trials before English law courts where questions of the kind have had to be discussed, experts of the highest ability have been found to deliver diametrically opposed views. A British Judge and British barristers of long standing, whose business it has been for years to sift evidence and to discriminate the credible from the incredible, ought surely to be better qualified, *a priori*, to undertake a comparison of two specimens of caligraphy, than five jurors chosen at random from among a community of merchants, and not necessarily endowed with more than average intelligence or possessed of any special education. Instead of leading the jury to imagine themselves qualified for such a task, it seems to us that the Judge's instructions to them should have been couched somewhat in this form:—"As to the A.L. letters, the conditions under which they are presented to you dictate the greatest caution with regard to their reception as valid evidence. The prosecution has not been able to fortify its theory by producing expert testimony in support of it. No caligraphic experts possessing publicly recognised qualifications are available in Japan, and in their absence I must warn you that, unless you discover absolutely conclusive indications of authorship, the letters should be altogether omitted from your consideration of the case." Judge MOWAT, however, as is abundantly evident from his language, had himself arrived at a definite opinion about the identity of the mythical "ANNIE LUKE," and the writer of the letters, and we can not choose but say that we find some of his statements on the subject very difficult to endorse. That the real "ANNIE LUKE," had she come all the way to Yokohama in search of Mr. CAREW, would not have disguised her handwriting when appealing to his memory of old times, and would not have concealed her place of abode when her paramount object was to be traced, are self-evident conclusions. But the Judge went on to say:—"Furthermore, there was no one who knew of the existence of ANNIE LUKE but the deceased and the prisoner." How had that been ascertained? How could it possibly have been ascertained? A negative is incapable of proof. In default of omniscience, no human being can assert that the existence of "ANNIE LUKE" was known to only two persons in Yokohama on October 10th, and that those two persons were Mr. and Mrs. CAREW. The importance of the Judge's proposition can scarcely be over-estimated, for if no one in Yokohama except Mr. and Mrs. CAREW knew of the existence of "ANNIE LUKE," then, since Mr. CAREW certainly did not write the "A.L." letters, it

follows conclusively that Mrs. CAREW did write them. The Judge left no room for doubt as to his meaning. "The Counsel for the prosecution," his Lordship said, "would have you conclude that the person who created ANNIE LUKE, created her letters also. That, I think, is quite clear." No one ignorant of "ANNIE LUKE'S" existence could have created her. The creator of ANNIE LUKE was the writer of the "A.L." letters. Mrs. CAREW alone, with the exception of her husband, who is out of the question, knew of the existence of ANNIE LUKE. Therefore Mrs. CAREW wrote the "A.L." letters. That was Judge MOWAT'S instruction to the jury. He did not, indeed, formulate the conclusion of his premises, but the conclusion was absolutely unavoidable. Now we submit that the Judge had no warrant for giving such an indication to the jury, nor any evidence before him to support it. For aught that his Lordship could say, a dozen, a score, fifty, persons in Yokohama may have known of the existence of "ANNIE LUKE" on October 10th, 1896. Was it fair to make an unproved, an unprovable, negative the basis of a hard-and-fast affirmative to the prejudice of the accused? And in the immediate sequel of this strange instruction, we find his Lordship saying:—"Later, it is possible that Miss JACOB came to know of ANNIE LUKE by its being spoken of at the dinner-table the next evening. But I do not think she could have come to know of it so soon." We need scarcely comment upon this. The time when Miss JACOB first acquired the knowledge of "ANNIE LUKE'S" existence is a matter of pure conjecture, and in the absence of evidence the jury had nothing to do with it. The Judge then proceeded to tell the jury that, in deciding the authorship of the letters, they had to choose between Mrs. CAREW and Miss JACOB. We fail to see why the choice was limited to those two. It is true that Counsel for the defence suggested Miss JACOB. But the defence was not required to find any author: that responsibility rested entirely with the prosecution. If the prosecution asked the jury to identify Mrs. CAREW as the writer, and to place to her discredit whatever inferences the "A.L." letters suggested, then the prosecution was bound to demonstrate Mrs. CAREW'S authorship, and the failure of the defence to furnish an alternative theory, could not in any way lighten the prosecution's *onus probandi*. In this respect, also, we can not think that Judge MOWAT'S limitation was fair to the unfortunate prisoner.

We come now to the contents of the "A.L." letters, a point that need not occupy us long. Do the letters really contain anything to indicate that their writer was Mr. CAREW'S murderer? Here is what Judge MOWAT said on that subject:—

The writer of these letters assumes that suspicion is

aroused, but Miss Jacob was not under suspicion. * * * I will not say any more about the letters, except to point out that in the one to Mr. Hall she mentions the fact that, "we have bamboozled the lot of you, 1 the doctor, 2 the chemist, and 3 yourself." This writer has no doubt as to the character of the death of the deceased. In so many words she accuses herself, and continues, "I have done my work well and have taken good care to escape the effect of the law." Of course, gentlemen, while that is so, you are not to strain that circumstance more than you should do. It is not to be taken as definite, because the confession of a crime is often made when there is no truth in it. Therefore, even if the letter had been written by the prisoner it is only a circumstance which should be taken into account as one of the many circumstances in this case to which you have to give attention in order to arrive at a just decision.

Here again we fail to find sufficient warrant for the more important of the Judge's inferences. His Lordship alleges that "in so many words" the writer of the letters "accuses herself." She does not accuse herself, so far as we can see. In the first letter she writes, "We between us electrify Japan;" and in the second she says, "between us we have bamboozled the lot of you—I, the chemist, 2, the doctor, and last but not least, that fool his wife." So far from accusing herself of murder, she explicitly, in both letters, associates the deceased in the processes, whatever they were, that led to his death. As to the fact that the writer had "no doubt about the character of the death," it is to be remembered that the inquest was opened on October 24th, and that the first two "A.L." letters were written on October 29th. All Yokohama knew, by the latter date, that Mr. CAREW was supposed to have died from the effects of arsenic, and we have it in evidence that, from the morning of the day he died, namely, October 22nd, suspicion, through the instrumentality of Miss JACOB and others, had attached to Mrs. CAREW. Thus the point made by the prosecution and endorsed by the Judge, that the writer of the "A.L." letters "had no doubt as to the character of the deceased's death," possesses no incriminating significance, and the point that the writer "accuses herself" is not consistent with the language actually employed. We mention these things as contributing to demonstrate that the evidence against the prisoner was construed in a harsh manner, and that she never received that wholesome measure of grace accorded by British law to all prisoners at the bar of justice, the benefit of the doubt.

THE AFFAIR OF MISS JACOB.

THE action taken by a number of the leading residents of Yokohama in the case of Miss JACOB, evinces a spirit that one likes to regard as essentially British, though many other nationals might properly resent any English claim to such a monopoly. Miss JACOB seems to have suffered unjustly, and if that be so, it is right that public sympathy should be displayed towards her in some substantial shape. She spent a night in prison; was arraigned upon a charge of murder, and lay for many days under the shadow of another accusation scarcely less injurious to a woman. It is impossible not to applaud the effort that is being now made to com-

pensate her, in some degree, for her misfortunes, and to furnish an emphatic testimonial of her innocence.

The past is irrevocable. Little can be gained now, perhaps, by commenting on the strange magisterial procedure adopted in Miss JACOB'S case. She was arrested after the CAREW trial had been going on for several days: arrested on sworn information charging her with committing the very crime for which Mrs. CAREW was held. After two preliminary hearings, the further investigation of her case was postponed for twelve days. It was not postponed on application by prosecuting counsel, or in consideration of the need of time to produce additional evidence. It was postponed by a simple announcement on the part of the magistrate, and no objection was raised by either the prosecutor or the defending barrister. Meanwhile, the trial of Mrs. CAREW was continued as before. We can not see that such procedure was compatible with the interests of justice. Miss JACOB'S arrest having taken place many weeks after Mrs. CAREW'S committal, and several days after Mrs. CAREW'S public trial had commenced, suspicion was diverted into a new channel, and until it could be clearly shown whether *prima facie* ground existed for arraigning Miss JACOB, there was no apparent possibility of deciding Mrs. CAREW'S guilt or innocence. What is more, the fact of Miss JACOB'S arrest was made known by the Crown Prosecutor to the Jury empanelled for the trial of Mrs. CAREW. Had no such information reached the Jury, they could have determined the CAREW issue solely on the evidence submitted for their consideration. But so soon as they knew that another person had been arrested on suspicion of committing the murder charged against Mrs. CAREW, it is difficult to see how they could arrive at an independent verdict in Mrs. CAREW'S case until that other suspicion had been dispelled or confirmed. To suspend the trial of Mrs. CAREW until it could be distinctly ascertained whether warrant existed for suspecting Miss JACOB, would have been an intelligible procedure. But to leave the suspicions against Miss JACOB uninvestigated, and to continue the independent trial of Mrs. CAREW on the same charge, could scarcely be called a rational or proper course. An opinion in that sense was undoubtedly entertained by many thinking persons at the time, and it further seemed to them a cruel thing that Miss JACOB'S title to a full and speedy hearing should be subordinated to considerations not possessing any apparent cogency. Moreover, the general sentiment of pity was accentuated by Miss JACOB'S sudden illness—illness apparently due to the excitement and mental disturbance produced by the painful situation in which she found herself. The accusations against her have now been unreservedly

withdrawn; HER MAJESTY'S Consul, Mr. TROUP, has exercised a wise and kindly discretion in giving her, under his official hand and seal, a declaration that no imputation whatever rests upon her, and many of the leading members of the British community are subscribing sums that promise to make a handsome solatium.

Satisfactory as is this ending to a painful incident, and admirable the generous anxiety to make retribution to Miss JACOB, we venture to think that an excess of zeal in the cause of justice threatens to betray people into injustice. Miss JACOB'S counsel, speaking in H.B.M.'s Court on the 5th instant, after the prosecution had been formally abandoned, made use of the words "hastily, inconsiderately, and heartlessly," to describe the bringing of the charge, and in a public advertisement of a subscription for Miss JACOB, we find the charge designated as "unwarrantable." Now, is there in this community any man prepared to assert his belief that the accusation against Miss JACOB was not laid in perfect good faith? Suppose that the two bases of the accusation had been well founded, as the accuser undoubtedly conceived them to be; suppose that Miss JACOB had really written the "A.L." letters, and had really been so intimate with Mr. CAREW as to know Annie Luke's history, would there not have been warrant to connect her with the crime of murder? Miss JACOB is the idol of the moment, but, after all, she is an idol with feet of clay. Her clandestine extraction of her employer's letters from a waste-paper basket is an act that may be extenuated, but can not possibly be reconciled with the strict canons of honourable service, any more than the subsequent failure of other persons to insist on the restoration of the letters either to their writer or to their owner, instead of using them to blast the reputations of both, can be catalogued among deeds sanctioned by the laws of society. There was an established right to regard Miss JACOB with suspicion that would not have attached to a person with a less varied record. Mrs. CAREW'S counsel had to perform his duty towards his client, and it certainly would have been incompatible with that duty to take no action on the evidence that suddenly seemed to present itself, implicating another person. It must be remembered, too, that a barrister in Yokohama is peculiarly circumstanced. He is not in a position, as barristers in England are, to consult technical experts in any and every branch of an inquiry. Had really competent experts in caligraphy been available, Mr. LOWDER would certainly have had recourse to them before openly referring the authorship of the "A.L." letters to Miss JACOB. But he was driven to trust entirely to his own judgment, a judgment untrained in such investigations, and if he erred, surely his error does not warrant the emotional crusade now waged

against him. It appears to us that he made a brave and resolute fight on behalf of Mrs. CAREW, his client, holding to her case under difficulties that would have justified him in abandoning it at any moment. He has not offered any display of grace in withdrawing the accusations against Miss JACOB, but men find it hard to be graceful when scanty grace is displayed towards themselves. It is well to console Miss JACOB for what she has had to suffer, but it is not well to vindicate justice by being unjust.

MORE HYPOTHESES.

DR. EDWARD DIVERS, F.R.S., has written to one of our local contemporaries a letter, the purpose of which is to assist in establishing the guilt of Mrs. CAREW. It will be remembered that Dr. DIVERS performed a chemical examination of the remains of the late Mr. CAREW; that he found white arsenic, as well as absorbed and dissolved arsenic; and that, while not denying that the absorbed and dissolved arsenic would result, under ordinary circumstances, from arsenious acid taken into the stomach, he did deny that, so far as his scientific knowledge went, white arsenic could be manufactured by the digestive processes out of arsenic administered in the form of Fowler's Solution. This white arsenic was the great stumbling block of the prosecution. For, in order to convict Mrs. CAREW of administering poison to her husband with murderous intent, one step in the only thoroughly conclusive procedure was to prove that all the poisons found in the stomach of the deceased had been in her possession before his death. But there was no evidence whatever to show that she had ever possessed or procured arsenious acid, and it thus resulted that she could not be connected with the poison to the sole action of which her husband's death might have been due. After the conclusion of the trial and the conviction of Mrs. CAREW, Mr. SCHEDEL, a chemist of Yokohama, expressed to a representative of the journal now addressed by Dr. DIVERS, his belief that, "by careless dispensing, that is to say by the use of common potash and negligent filtering, it would be quite possible, nay more, it would be very probable, that minute particles of white arsenic might be present in suspension in the arsenic dispensed by the Japanese chemist, and, as three ounces were purchased, all the specks found by Dr. DIVERS might easily have been derived from the Fowler's Solution, although arsenic once in solution could not by any possibility crystallize into white arsenic." This was a very important opinion. It offered a possibility that the death of Mr. CAREW might have been caused by Fowler's Solution alone, and that the white arsenic found in the body might be attributed to

the defective quality of the solution. Dr. DIVERS has now voluntarily come forward, and published the following testimony with regard to Mr. SCHEDEL'S theory:—

TO THE EDITOR OF THE "JAPAN GAZETTE."

SIR,—In a valuable review of the Carew case given in the leading articles of the *Japan Gazette* of the 3rd and 4th inst., you express the belief that the white arsenic found in minute quantity in the stomach of the victim had been derived from Fowler's Solution. It may interest your readers to be told by me that that has been my own belief since I heard, after my evidence had been given, of the failure of all endeavours to discover that any white arsenic had been made use of. I am quite unable, as I stated in my evidence, to explain how the white arsenic could be, under the circumstances, again deposited from the solution, since the potash required to dissolve the white arsenic in making Fowler's solution is not afterwards necessary to preserve the solution. But there is, after all, enough ignorance of what may go on in the stomach to permit the admission that such deposition is possible. I value highly Mr. Schedel's opinion on the subject, but, from what I know of the Fowler's Solution found in Japanese shops, I cannot myself accept his simple explanation of how the white arsenic got into the stomach as one that carries probability with it. The first sentiment created by a careful perusal of these remarks must be one of profound perplexity. Does Dr. DIVERS hold that the white arsenic found by him in the body of the deceased may have resulted from Fowler's Solution, or does he deny the tenability of such a theory? He does both. For he tells us, in the first place, that "that has been my own belief since I heard of the failure of all endeavours to discover that any white arsenic had been made use of," and he tells us, in the second place, that "from what I know of the Fowler's Solution found in Japanese shops, I can not myself accept Mr. SCHEDEL'S simple explanation of how the white arsenic got into the stomach as one that carries probability with it." So, then, he believes the theory, but does not accept it as probable. We leave this puzzle to be resolved by clearer heads than our own. But Dr. DIVERS introduces a new hypothesis. "There is, after all," he says, "enough ignorance of what may go on in the stomach to permit the admission that such deposition is possible"—i.e. the deposition of white crystals from Fowler's Solution. We are not chemists. We are not medical experts. But as folks of ordinary intelligence we stand amazed at the mysteries here suggested. The ordinary business of the stomach is to digest substances taken into it. That it should set about the business by first reducing the substances to a less digestible form, is a kind of wanton freakishness difficult to connect with the economy of nature. From all the medical testimony given at the inquest, we gather clearly that arsenic taken in the form of solution produces fatal effects more rapidly than arsenic taken in the solid form. But now it appears that, owing to scientific "ignorance of what may go on in the stomach," no one can be sure whether arsenic taken in the form of solution does not, when subjected to the action of the gastric juices, become crystallized into the less digestible and less fatal form of arsenious acid. How could the wonder happen? In preparing Fowler's Solution, potash is

employed to dissolve the arsenic. But as Dr. DIVERS tells us, "the potash is not afterwards necessary to preserve the solution." So, even though the stomach assimilated the potash first, the arsenic would not resume its crystalline form. Unfortunate Mrs. CAREW. Where science fails to convict her, "ignorance of what may go on in the stomach" is to be invoked for the prosecution. Dr. DIVERS is an eminent man of science. We entreat him to protest against the dissemination of all hazardous hypotheses, instead of lending to them the support of his great authority.

Had not Dr. DIVERS, indirectly but still distinctly, endeavoured to discredit our analysis of the evidence produced at the trial, we should not further refer to his remarks. But since he does make that endeavour, we feel constrained to answer him. In the second part of his letter to the *Japan Gazette*, he enters into a long argument to prove that a certain stain upon a fender could never have been produced by the falling and breaking of a bottle of solution of arsenic. At the trial he stated, simply, that "there was no arsenic on the fender where the stain was," and that "the stain consisted of urine; human urine." He now devotes 39 lines of print to an exposition of his reasons for arriving at that conclusion. If Dr. DIVERS has done us the honour of reading our articles—and we presume that he has, since he undertakes to contravert them—he must have seen that we rigidly confined ourselves to an examination of the evidence adduced in Court. Did we venture outside that evidence, as he does, we could, perhaps, offer some suggestive remarks. One comment, however, we may be permitted to make. Dr. DIVERS says:—"The stain on the fender was not the stain of a liquid scattered and splashed from a breaking bottle. It bore no scratches such as glass would make." Now we suggest an experiment to Dr. DIVERS. Let him take a half-ounce bottle containing fluid. Let him wrap it in paper, as chemists usually wrap bottles. Let him tear off the paper round the cork, or stopper only, as people frequently do when using the medicine. Let him then drop the bottle upon a fender, without removing the cork or stopper, and if he necessarily finds scattering, splashing, or scratching, we shall be much surprised. His chemical deductions we do not for a moment question. But his mechanical premises show that doubts favourable to the prisoner find no place in his reasoning.

One other protest. Dr. DIVERS speaks of "the valuable review of the CAREW case given in the leading articles of the *Japan Gazette* of the 3rd and 4th instant." By way of testing the nature of what Dr. DIVERS calls "a valuable review," we shall refer to two points in the lauded articles. The *Japan Gazette* says that "the most important witness for the prosecution was Mr. MASON," and that "his

testimony left the impression, which no subsequent evidence effaced, that Mrs. CAREW was herself the author of the ANNIE-LUKE letters." Mr. MASON was invited to give an opinion about the original of disguised hand-writing. He is not a professional expert in caligraphy. He has no publicly recognised qualifications in that line. Yet, we are told that he was "the most important witness for the prosecution." A strong prosecution, in truth! The second point in the "valuable review of the CAREW case" is this. The prosecution, perplexed to account for the arsenious acid found in the stomach of the deceased, attempted, at first, to connect it with a white powder given by Mrs. CAREW to a *betto* for use in the stable. But the chemist who had supplied that white powder, enumerated its ingredients at the trial, and swore that it contained no arsenic whatever. Thereupon the Crown Advocate distinctly withdrew the original suggestion, with something very like an apology for having advanced it at all. What does "the valuable review of the CAREW case" say about this? Here are its words:—"The *betto's* evidence followed, and he deposed to a white powder being given to the pony. In the minds of many, that white powder has been associated with the solid white arsenic found in the internal organs of the deceased." Thus the compiler of "the valuable review" had so little acquaintance with his subject that he was absolutely ignorant of some of the most striking incidents in the whole trial, and resuscitated a myth definitely abandoned by the prosecution. We trust that few judgments will be based on such "valuable reviews."

THE "SANKO MARU" DISASTER.

The *Yomiuri's* Kobe correspondent sends to that journal an account of the shocking disaster that occurred in connexion with the loss of the *Sanko Maru*. The details are furnished by one of the surviving mates of the vessel, who arrived at Kobe to report to the Shosen Kaisha, to which Company the ship belonged. The steamer had been built at Hyogo more than 10 years previously. Her displacement was 320 tons, and she was valued at about 35,000 *yen*, by the latest estimate. She had been advertised to sail from Osaka on the afternoon of the 2nd inst., but postponed the departure until the next morning, owing to inclement weather. She called at Kobe, Tadotsu, and Imaharu, and thence continued her voyage towards Hosojima, in Hyuga Province, with the intention of touching at various intermediate ports. While approaching Mitsugahama, at about 3 a.m. on the 4th inst., a steamer was suddenly sighted some 8 miles off the nearest coast of Iyo. So close was the distance separating the two vessels that before the captain of the *Sanko Maru* could alter his course sufficiently to avoid a collision, the *Sanko's* bow struck the port side of the *Owari Maru*, a steamer of over 1,100 tons displacement,

belonging to the Nippon Yusen Kaisha, which was on her way back from Okinawa. The *Sanko* at once began to sink, and a scene of great excitement and commotion ensued. Every one tried to jump into the boats with the result that the boats were upset, and terrible loss of life occurred. Out of 60 passengers 51 were drowned, and the same fate befel 12 out of the crew of 29. The night being dark and the master of the *Owari* uncertain about the condition of his ship, she did not, apparently, remain at the scene of the catastrophe, but steamed off to Mihara, in Bingo, where most of the passengers landed and took the train, not caring to prosecute their voyage by sea after such an experience. On receipt of the intelligence, the Osaka Shosen Kaisha despatched one of its steamers to the rescue, several officials of the Company, and also a number of smiths and carpenters, going in her. When the *Sanko* cleared Osaka she had on board cargo valued at 5,000 *yen*, destined for various places west of Mitsugahama, but it is not yet clear what additional cargo she loaded at Kobe and other ports where she subsequently called. The spot where the collision occurred was in the neighbourhood of the place where the *Chishima* was sunk by the *Ravenna* some years ago.

A telegram received by the *Fiji* says that the Shosen Kaisha has decided to send a present of 50 *yen* to the families of each of the persons lost, and that the officials of the Company will also contribute 10 per cent. of their monthly salaries to the same purpose. Only 16 bodies have been recovered thus far.

Further particulars of the disaster are given in later issues of the Tokyo papers. When the *Sanko Maru* found herself within sight of the *Owari Maru*, off Cape Hazuma, it was a little past 3 a.m. on the 4th inst. Why the steamers failed to clear each other we can find no explanation. They appear to have been visible to each other for some time, for it was not until five minutes to 4 a.m. the collision occurred. The bow of the *Sanko* struck the port side of the *Owari*, and almost immediately the ships fell apart. The Captain of the *Sanko* gave orders to steer for the coast of Hazuma, but the vessel had sustained such injury that before she had traversed half a league, she began to sink. The captain ordered one of the two boats to be lowered. Into this the purser and four of the crew jumped, and taking the mails with them, rowed towards the shore. They landed at Naniwa-mura, and knocking at the doors of the fishermen appealed for rescue. Unfortunately it was New Year's day, according to the old calendar, and the fishermen's services could not be easily obtained. Finally a life-boat was launched, but so much time had elapsed that the rescue proved too late. About a quarter of an hour after the launching of the first boat, the ship, which had been rapidly sinking all the time, went completely under.

The captain had previously caused the second boat to be lowered, but such a rush was made for her that she capsized, and the majority of the passengers and crew were drowned. When the first boat returned, accompanied by one or two other craft, the steamer was no longer visible and only some dozen men, including the captain, were found on floating planks. They were picked up. One woman of about 24 or 25 years of age was discovered drowned, with a little child bound on her

back. The accounts given by the crew of the *Owari Maru* and the survivors of the *Sanko Maru* do not exactly tally. The former say that the night was dark and the wind strong; that a good watch was kept on board the steamer; that suddenly another vessel loomed up close in front; that the whistle was blown and an alarm sounded, but that it was too late. The bow of the unknown steamer struck the port side of the *Owari* at a spot about 6 yards from the bow and 5 inches above the water line. The *Owari* hove to, and seeing that the other ship was dangerously near, would have stood by her, but having herself sustained serious injury and finding that she was in a critical condition, the captain decided to drive her at full speed to Mihara.

The *Sanko's* survivors on the other hand say that the *Owari*, being a steamer far larger than the *Sanko*, and having her hull divided into several compartments, no injury sustained by one or two of them could cause her to sink. Moreover, the distance from the place of the disaster to Mihara is 4 hours' steaming, and if the *Owari* could cover that interval in safety, it is evident that her injuries must have been comparatively slight, and that she could have rescued the passengers and crew of the *Sanko*, the sinking vessel, had her Captain pleased. The *Owari* had six boats, and she could undoubtedly have succoured the unfortunate folks.

KOREAN NEWS.

There has been a change in the Korean Cabinet, Mr. Pak Chung-yang, Minister of Home Affairs, having resigned, and been succeeded by Mr. Nam Chung-chul, who is said to be a statesman of the old school of politics. He has served as President of the Foreign Office and Governor of Pyeng-gan province, and was a Councillor of State immediately before his last appointment.

A printing establishment and two banks have been started in Seoul. The banks have a paid-up capital of \$50,000 each.

It is certainly an instance of filial piety when a son agrees to spend three years in a Korean jail instead of his father. A youth called Hong has been discovered performing that devoted act in Seoul. The elder Hong had been sentenced to three years' penal servitude for maliciously desecrating the grave of a neighbour's father. His son went to prison in his stead, and had put in several months of the sentence before the truth was found out.

Another band of 260 Korean soldiers has been placed under the instruction of the Russian officers in Seoul.

A correspondent of the *Independent*, writing from Peking, lauds the Korean postal and telegraphic services, and says that letters travel more safely and with greater regularity in Korea than in Japan.

Particulars of the collision between the Nippon Yusen Kaisha's S.S. *Echigo Maru* and H.B.M.S. *Narcissus*, in Chemulpo, show that the former vessel, when going dead slow, refused to obey her helm, and drifted right across the bows of the latter. The ram of the *Narcissus* punctured a hole 10 feet by 8 in the *Echigo Maru*, mid-ships, chiefly of course below the water line. The hole opened partly into the coal bunkers, and partly into the engine room, and the ship's engines could be seen plainly from the outside. Her water-tight compartments

alone kept her afloat. The in-flowing tide held her fixed on the ram for over an hour, and she was ultimately towed by the Company's tug to the sand-bank between the Station and Observation Island. She will be temporarily repaired, and then sent to Nagasaki. Her cargo, consisting mainly of oranges and straw bags, was stowed between decks, and was not damaged. The *Narcissus* suffered no injury whatever.

The *Independent* contains an appreciative notice of the life of Miss Anna P. Jacobson, a Presbyterian missionary, who died in Seoul on January 20th, at the early age of 31. This lady seems to have worked with indefatigable zeal and excellent results in the Seoul hospitals.

Mrs. I. L. Bishop (Miss Bird) left the Korean capital on the 23rd January, after a stay of three months.

An express company has been organized by Koreans in Seoul. Waggoners are to be obtained from America. The company's capital is ten thousand dollars.

The Tonghaks are again showing themselves. The scene of their operations is the Namwon district.

Cases illustrating the extraordinary methods of administering justice in Korea, are reported from Pyengtak. A foreigner, calling himself a Catholic missionary, arrived at the local magistracy, in company with two Koreans, and demanded that one Choi Haksui, against whom a charge had been preferred by his step-mother, should be arrested and brought to the magistracy. This demand seems to have been unquestioningly complied with. On the coming of Choi, the foreigner and his companions, constituting themselves Judge and Jury, compelled the man to give up the title-deeds of certain land, and took their departure. A few days afterwards, two Koreans, also calling themselves Catholics, came to the magistracy conducting three other Koreans bound with ropes, and, in the presence of the magistrate, the two administered an unmerciful beating to the three, then handing them over to the magistrate, who incontinently clapped them in jail.

It appears that Seoul does not possess a single foreign drug store, or anything like a first-class tailoring establishment. The *Independent* thinks that both enterprises would pay well. It is strange that no enterprising Japanese has taken up the matter.

The name of the new Korean Representative in Japan is Ye Hayung.

A stamp duty has been inaugurated in Korea.

Seven prisoners held in the district jail of Yangju, on a charge of highway robbery, all died before judgment. The warden of the prison has been sent to Seoul for examination.

Wolves have appeared in the north of Kyengsang, and killed over 20 persons, as well as numbers of domestic animals.

Professor Foster, of Howard University, has received the following letter from one of seven Koreans studying there:—

My Dear Mr. Foster: Do you have very best, [i.e., do you have very good health?] I hope you so I am not sickliness this is a good thing. I cannot speak my word with pen. I will mail letter to you again. Your friend,

JUNG S. AHN.

We hear that T.I.H. Princesses Tsune and Kane, now living in the Takanawa Palace, will proceed to the villa of H.I.H. Prince Komatsu, at Mishima, Idzu Province, on the 15th instant.

CURRENT TOPICS.

As the Imperial gift of 400,000 yen was granted without special directions beyond the broad instruction that it should be applied for charitable use and for purposes of relief, the Tokyo City Office is considering to what particular use the portion received by the municipality should be applied. With the view of determining whether it should be employed for endowing charitable institutions or for giving aid to persons that suffered while the veto against musical and theatrical performances was in force, the Office is about to convoke a meeting of chiefs of rural and urban districts.

The *Sekai-no-Tomo* learns with indignation from its Peking correspondent that the Court of Peking has not yet announced any intention of going into mourning on account of the decease of the Empress Dowager of Japan. Asked by one of the staff of the *Sekai-no-Tomo* as to the authenticity of this report, Mr. Okazaki Kuni-suke, a member of the Diet, replied that he also had received the same news from a fellow-member identified with the *Shimpo-to*, who had received a letter to that effect from a person residing in China. The *Sekai-no-Tomo* of course wishes to call Count Okuma's attention to this alleged act of discourtesy on the part of the Chinese Government, and wants to know whether the Count is prepared to take proper steps in the matter.

How greatly the poorer classes of *geinin* must have suffered while the veto against musical and theatrical performances was in force, may be gathered from the following story told by the *Yiji*:—A certain *ame-monger* living in Mita, Shiba district, used, in ordinary times, to make the round of the streets, his stock in trade carried on a small hand-waggon. To the waggon was attached a drum which the hawker beat to attract the attention of customers, usually children. Sometimes he would dance, when favoured by munificent patrons, and divert them by his queer pantomime. Altogether, he enjoyed much popularity and was comparatively well off. When the veto was promulgated, he ceased beating his drum, but kept on making the round of his customers. One day, chancing to pass through Shinami, Shiba, one of the poorest quarters in Tokyo, he was surprised to hear haggard looking fellows telling each other that they had fasted for two or three days, and that they felt as if they must either die or have recourse to theft or incendiarism. Struck with pity at the condition of those persons, and fearful lest they should be tempted to perpetrate the acts they spoke of, the *ame-monger* hastened home, pawned his effects for two yen, and returning to the quarter, distributed the sum among those that seemed most in need of relief. When he arrived in the same street next morning, he was literally besieged by an army of destitute persons, who implored the benevolent man to help them. It was beyond his means to do so. He went home musing how to save the starving folks, and finally struck out the device of preparing a number of packets of *ame*, which he presented to his principal patrons, explaining to them, at the same time, into what a pitiful condition the denizens of Shinami had fallen, and what urgent need they had for help. He was much praised for his charitable intentions, and succeeded in collecting a goodly sum, which, together with money obtained by the sale of his remaining goods, he carried to Shinami and distributed among the maimed and sickly. A few days ago, these recipients of the *ameya's* charity forwarded a letter of thanks to their benefactor through the medium of the Head-man of the quarter.

Mr. Tsujioka, Chief of the Yokohama Sanitary Inspecting Bureau, having been transferred to Osaka, left Yokohama on Thursday for his new post.

The Osaka Mint struck the following amount of coin, during January last:—5-yen gold pieces, yen 110,000; 1-yen silver pieces, yen 60,000; 10-sen silver pieces, yen 220,265; 5-sen nickel pieces, yen 109,500.

FUNERAL OF DR. HARTSHORNE.

The funeral services of the late Henry Hartshorne, M.D., LL.D., of Philadelphia, Penn., U.S.A., were held on Thursday, Feb. 11th, in the meeting-house of the Friends' Mission in Mita, Shiba District, Tokyo. They were marked throughout by a very impressive simplicity and repose, quite in accord with the expressed desire of the deceased. The building was filled with friends, Japanese and foreign, old and young, missionaries and merchants, teachers and students, who united to pay their last respects to the dead. The commingling of so many different kinds of people gave evidence of the wide circle of the deceased's acquaintanceship and influence.

None knew him but to love him,
Nor named him but to praise.

The exercises were conducted by Mr. Joseph Cousand, of the Friends' Mission, in a very quiet and calm manner which made a deep impression; and consisted of an appropriate intermingling of English and Japanese. Two of Dr. Hartshorne's favorite hymns, "Jesu, Lover of My Soul," and "More Love to Thee, O Christ," and two Japanese hymns, were sung. The opening prayer and the benediction were in Japanese by Mr. Mizuno, of the Friend's Mission; the closing prayer was by Rev. A. A. Bennett, of Yokohama, who was a pupil of Dr. Hartshorne in the Philadelphia High School more than 30 years ago. Two excellent addresses were delivered; one, in English, by Rev. B. Chappell, of Tokyo, and the other, in Japanese, by Rev. G. F. Verbeck, D.D., of Tokyo. Both emphasized the lovable and deeply spiritual nature of the deceased.

A large number of friends, both Japanese and foreign, attended the interment at Aoyama Cemetery. The body was carried from the hearse to the grave by foreigners and Japanese. The last prayer was offered by the Rev. Julius Soper, D.D., of Tokyo. When the coffin had been lowered into the grave, it was covered with flowers and evergreens.

Two years ago, after his first visit to Japan, and when a second one was in mind, Dr. Hartshorne wrote a poem expressive of his desire to be buried in Aoyama. He always preferred, however, to think of Aoyama, not as "Green Hill," but as "Hill of Love" (Ai-no-yama). This poem reads as follows:—

AOYAMA.

Beyond the crowded city's utmost reach,
Near but to hospital and college halls,
Where on the ear no sound repellent falls,
Only sweet bell-tones, or soft Nippon speech;
Where moss-grown tomb-stones tell their weird air,
With silent liturgies of attendant trees:
Stirred now and then to whispers by a breeze;
Where all things "man is mortal" gently teach:
Are we not farthest there from all the din,
Of life's discordant, of the haunts of men,
Where love and joy are fain to enter in,
Yet strife and sorrow come and come again,
When, on this earth, I make my last remove,
Be it to Aoyama, Hill of Love.

H. HARTSHORNE.

Written in anticipation, Germantown, Pa.

NEWS FROM THE SOUTH.

Captain Boisragon, who escaped from the massacre at Benin, says the *China Mail*, is the step-brother of Mrs. Grimwood whose husband was killed in the massacre at Manipur a few years ago.

Three Chinamen have been fined \$25 each at Singapore for belonging to the Yua Shin Feng secret society.

A small slip has been erected at the bath-house of the Victoria Recreation Club, Hongkong, for the purpose of overhauling the yachts of the Royal Hongkong Yacht Club.

Admiral de la Bédollière, who succeeds Admiral de Beaumont in command of the French fleet in these waters, left Marseilles on the 3rd January for Saigon.

The *China Mail* understands that the *Descartes* and the *Pascal* (French cruisers of the first-class), *L'Elaineur* (third-class) and the new gun-boat *Surprise* will join the French fleet in the Far East in a few weeks. The *Des-*

cartes left Brest on the 11th January. The *Isly* will probably follow the *Alger* to France in a month or two, the *Descartes* and the *Pascal* being their reliefs.

A Hongkong contemporary writing on the 25th January, remarks—There is quite a large number of warships in the harbour just now. The *Centurion* and *Grafton* are both lying at anchor, each flying the Admiral's flag of Sir Alexander Buller and Rear Admiral Oxley. The *Immortalité* has also been here for some time. Including the torpedo destroyers and the *Victor Emanuel* and *Tamar*, there are thirteen of Her Majesty's ships in the harbour. Three German men-of-war arrived to-day—the *Kaiser*, *Arcona*, and *Princess Wilhelm*. The French are represented by the *Isly*. Two Russian cruisers, the *Admiral Korniloff* and *Rurik*, arrived to-day. After the Russians had saluted the British flag, they exchanged salutes with the Frenchman.

At the Criminal Court, Bangkok, on the 6th January, nineteen gang robbers stood their trial for murder and rapine. Three of them, including a Malay, were sentenced to death. Twelve others received sentences of imprisonment and flogging with sixty strokes each. Four were acquitted.

The *Deli* Lightship seems to be a misnomer as regards the "light," says the *Singapore Free Press*. If what we hear is true, the light is out on more nights than it is in. Twice in a week is stated to be the average, and in consequence of the uncertainty or absence of light two ships lately have run ashore, and a third nearly ran down the dark-ship itself. It does not speak well for the port authorities or their desire to facilitate trade, although their zeal for collecting port dues burns with a sixteen-thousand candle power.

With the arrival of the U.S. cruiser *Olympia* in Hongkong on Jan. 26, there were five Admirals in that harbour—two British, a German, American, and Russian. The circumstance gave rise to an infinite number of puns, but we will not outrage our readers by reproducing them here.

A Quartermaster named John Franklin, of the P. and O. steamer *Canton*, was charged at the Hongkong Magistracy, with assaulting the fourth officer, on the evening of the 23rd Jan. The prisoner, says the *China Mail*, first of all pleaded guilty, and was sentenced to six weeks' imprisonment. Then he asked that the evidence in the case be heard. This was an unlucky move for him, for it appeared that the prisoner was at the wheel, and the trouble commenced by his striking a lascar, and on being remonstrated with he struck the fourth officer. The Magistrate thereupon said he was a disgrace to the British service, and it was in consequence of men of his stamp that foreigners were finding employment on British ships. He sentenced him to three months' imprisonment.

The first paragraph of some "Recreation Notes" in the *China Mail*, to Yokohama readers will seem reminiscent of an innings once recorded in an Interport match played here: it reads—An Australian cricketer now holds the record. Just about a month ago, he defended his wicket for three hours and was "not out" with the enormous score of 3 runs to his credit! This recalls *Punch's* poem beginning:—

"Block, block, block,
At the foot of thy wicket, O, Scotton!"

The following naval appointments are gazetted:—Commander Murray T. Parks, to the *Undaunted*, to date Dec. 22; Captain Horatio N. Dudding, Paymaster James E. V. Morton, and Assistant Paymaster Edward Hawes, to the *Iphigénia*, to date Jan. 19.

The special correspondent of the *China Mail* with the Spanish forces in Manila, writes:—The rebels in the province of Bulacan are surrendering in large numbers, taking advantage of General Polavieja's amnesty. It is reported here that the rebels in Cavite are fighting amongst themselves, the rebel leaders trying to prevent their men from surrendering to the Spaniards. The country around Manila is fairly well cleared of rebels, whose efforts to make a junction with Bulacan have been entirely

defeated. Whatever chances the rebels had at the outset of crushing Spanish power in the islands has been altogether lost, owing to wretched leadership. Latterly the rebel forces have lacked cohesion and appeared to be without a consistent plan of campaign. With the exception of Cavite, where they are gathered together in strength, the rebels go about in detached bands, and are thus more easily cut up by the Spanish forces. On the 13th January there was an encounter at Bustos, in the Province of Bulacan, and the rebel Generalissimo Eusebio, in command of the rebel forces in that Province, was captured and sentenced to be shot.

Information has lately been received in Hongkong of an armed attack which took place at Laichikok on the 22nd December. A large number of bricks taken from the demolished houses at Taipingshan are stored some little distance from the village. On the evening of the 22nd December, the watchman in charge of the material was surprised in his hut by three men armed with revolvers. The men immediately gagged him secured his hands behind his back by tying them tightly with his queue. They then ransacked the hut and stole \$45 and twelve pieces of clothing. The watchman was discovered about five or six hours afterwards by some villagers almost suffocated by the gag.

The *China Mail* believes that it is the intention of the Hon. Ho Kai to proceed to the United States some time in March as Adviser and Secretary to H.E. Wu Ting-fang, the Chinese Minister in America. It is not yet known how long he will remain in America, the length of his stay depending entirely upon his liking for the post, but it is probable he will remain six months at least. During that period the Hon. Ho Kai will be on leave from his duties as a member of the Legislative Council, but if at the end of six months it is still his intention to remain in his new appointment he will resign his membership of the Council.

THE INDIAN FAMINE.

News is now to hand of the extent of the Indian famine, as ascertained up to the 28th January. The *Straits Times*, writing on the authority of a private telegram, says that it is estimated that at least six hundred lacs of rupees will be required for the relief of the sufferers by the famine. Public meetings are being held at Calcutta, Madras, and other convenient centres. At Calcutta, twenty-nine thousand rupees were subscribed in one room. The Viceroy, Lord Elgin, has contributed ten thousand rupees. It is reported that the distress is appalling. A still later telegram, says that nearly one and a half millions of people are on the relief works. The details are, 662,000 in the North-West Provinces and Oudh; 165,000 in Bombay; 160,000 in Bengal; 145,000 in the Central Provinces; 60,000 in the Punjab; 39,000 in Rajputana; 35,000 in Central India; 30,000 in Burma, and 27,000 in Madras. Supplementing these telegrams, we have to hand a private letter from India which deplores the delay that has occurred in the starting of relief funds. The writer alleges that the Government of India has been very negligent in failing to recognise the dimensions of the disaster with which they have been confronted. They have, however, awakened at length, at a very late hour, to the responsibilities that are cast upon them. The misery of the people over vast areas is terrible, and the wail for relief is such as even India never before has heard.

CORRESPONDENCE.

MCKINLEY'S CABINET.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—If the telegram given in to-day's *Mail* has been correctly transmitted, it evidently means that Lyman J. Gage, President of the First National Bank of Chicago, is to be the Secretary of the Treasury in the next Administration. If this is true, the appointment is a most excellent one, because Banker Gage is a man of ability and integrity. While he has generally affiliated with

the Republican party, he has never been a narrow partisan; and, if I am not mistaken, he was so independent as to support Cleveland in 1892. Since Senator Allison, of Iowa, saw fit to decline that portfolio, it is fortunate that McKinley has been able to secure so good a man as Gage.

The recent mail from America confirmed the Reuter's telegram that Senator John Sherman, of Ohio, is to be Secretary of State. It also brings news that Cornelius N. Bliss, of New York, will be in the Cabinet, probably as Secretary of the Navy; that Judge Nathan B. Goff, of West Virginia, will be Attorney-General; and that Judge Joseph McKenna, of California, has been invited into the Cabinet, probably as Secretary of the Interior. No other position had been positively settled.

This official returns show that the election was not, after all, such a sweeping victory, as this item bears witness:—

"From reliable figures it is seen that McKinley's plurality has dwindled by not far from half the estimates made immediately after the election. The total vote for each presidential candidate, as obtained from the secretaries of state of the various common-wealths, is as follows: McKinley, 7,107,822; Bryan (Democratic), 6,289,866; Bryan (People's), 245,607; Palmer, 133,818; Levering, 130,753; Bentley, 13,956; Marchetti, 33,545. McKinley thus has a plurality of 572,349 votes over the total cast for Bryan by the Democratic and People's parties, while the victor's majority is 260,277."

In the electoral college also, McKinley's majority was somewhat reduced; the vote was 271 for McKinley and 176 for Bryan.

In the Senatorial contest in Pennsylvania, John Wanamaker was defeated by "Boss" Quay's man, State Senator Penrose. The Senatorial contests in Illinois and New York against the "machine" were being fiercely waged, but the chances were unfortunately in favour of the machine.

February 4, 1897.

UNCAS.

MISS McRAE'S SCHOOL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Would you allow me to call attention to the good work being done at Miss McRae's school.

Two boys, last summer, passed the matriculation examination for Harvard; one of these will, after remaining in Japan some time longer, take his second year's course in Harvard.

A boy of 16 left the school last spring and entered the Edinburgh Academy. He was placed in form VII. A, for English; VII. B, for Latin, and in the VIth for Mathematics. The Rector said the boy knew as much Latin as any boy in the school.

A girl of 14 left at the same time and entered Cheltenham College; she is in the VIth form and is the youngest but one in it.

Miss McRae is forced, through ill-health, to take a trip home. During her absence her place will be filled by Miss Britowe, B.A., of London, a former pupil of Miss McRae's.

The school is short of pupils and could do with several more.

I remain, Sir, yours truly,

RICHARD J. KIRBY.

Tokyo, January 31st, 1897.

P.S.—All of the children who have left this school to join schools in the home land, have been well placed when joining schools either in America or England.

THE S.A. IN JAPAN.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It may be of interest to your readers to know that our coffee and lodging house is fulfilling our highest expectations and is a great success. Our 10 *sen* beds are more than full every night, and our 35 *sen* beds three or four nights a week; while we often have several sleeping on *futons* on the floor. Our restaurant, reading room, and baths are increasingly used. The whole establishment has been financially self-supporting from the start, including the salaries of the officers in charge. We have still, however, a considerable debt for the original fitting and furnishing of the building, which we should like to see cleared off as soon as possible.

A gentleman has kindly agreed to lend us his steam launch (at the bare cost of firing and men's time while we have it in use) to run round the harbour on Sunday evenings, bringing from and to the vessels any men wishing to attend our meetings.

Since the formal opening on December 23rd, there have been 425 attendances at our meetings; while during the last few months no less than 550 Salvation Army Papers (*The War Cry*, etc.) in English, German, French, Dutch, Scandinavian,

Finnish, Chinese, and other languages, have been bought in the saloons and on the vessels at 10 *sen* each.

Adjutant and Mrs. Ellis, from our similar home at Gibraltar, are, I am informed, appointed to the work here, and may arrive at any time. I am, Sir, yours faithfully,

W. M. POWELL,

Meantime leader of the S. A. in Japan.

FLORA, GODDESS OF FLOWERS.

A beauteous maiden, fair and graceful, stood
Beneath the trellis of a floral bower;
Her hair, like summer sunshine, fell in folds,
Around her shoulders in an ample shower.
The roses through the trellis work and leaves,
Reached down their odour-burdened buds to press
The sweet and tender lips, which seemed to vie,
With their deep pink, the roses' loveliness.
A grand wistaria drooped above her head,
And honeysuckle, in profusion sweet,
Be-wreathed her queenly form in garlands gay,
And dropped their blossoms down to kiss her feet.
The gentle breezes played among her hair,
And swept her drawers' artistic fold,
As, like a statuette of mould divine,
She stood amid the sunset's burnished gold.
Her eyes, with animate lustre, shone
Like sparkling dewdrops in the virgin light;
And on her classic and peach-blossomed cheek,
There shone the soul's ineffable delight:
Celestial emotions filled her breast,
And found expression in her lovely face;
Ethereal sweetness hovered round her form,
And robed each outline with angelic grace.
Her jewelled hand was poised to catch the gleam,
Of tender sunlight striking from the west,
As slowly sank the wearied orb of day,
To the beatitude of welcome rest.
She gazed upon the flashing gems, which seemed
To scintillate their radiance in her smile;
A vision of pure loveliness divine
Which earthly sordidness could ne'er defile.
Poetic attitude! Artistic pose!
The glinting sunbeams their reflection seek,
Upon the ruby ring her lover gave—
She'd only been engaged to him a week!

F. S.

LETTER FROM AMERICA.

(FROM OUR OWN CORRESPONDENT.)

Ithaca, N.Y., December 22nd.

This is Forefathers' Day! Without strict regard for the actual date, but this time and generally before it, churches, societies and clubs throughout the nation celebrate the virtues of the Pilgrim and the Puritan settlers of New England. It was on December 21st (as critics now agree, though the old date was December 22nd) 1620, that the company from the ship *Mayflower*, landed. On that erratic boulder, which, in the geologic ages before protective tariffs had been invented, came down from Canada or Nova Scotia and settled itself where Plymouth now stands, they stepped: a woman first. In spite of Mrs. Heman's pretty poem, "The Breaking Waves Dashed High," there is hardly a place on the coast of Massachusetts, so deficient in natural rock as the beaches around Plymouth. The now well worn stone, which you can measure with an umbrella, gets its colossal proportions in rhetoric rather than in reality. In speech and poem, which glorify ancestors, this innocent rock becomes a beetling cliff, a range of granite hills, a massive shelter for refugees; in picture, poetry, and especially in after-dinner oratory on Forefathers' Day, it takes its place, as to size, with the Tarpeian Rock, Mount Sinai, or some other lofty landmark. On the contrary, the shores of Plymouth County are low and monotonous, very much like those around Holland. Indeed, all that low and sandy extension and spit, which makes the projecting part of Eastern Massachusetts look like a man's arm doubled up with his first clinched, is explained by geologists to be the deposit of sand which came from the wave-grinding and hollowing out of Massachusetts Bay and Boston Harbour. The rock substance crushed and pulverized, was washed by the ocean waves south easterly and deposited on as to make Cape Cod, Barnstable, and part of Plymouth County.

No town rejoices more in its history, cherishes more nobly and beautifully the traditions of the fathers and, withal, profits by it, even to the turning of many an honourable penny, than Plymouth. Every year, tens of thousands of pilgrims wend their way to this door-step of American history and gaze reverently upon the old boulder as upon a sacred threshold. In the town is the museum, rich in relics Dutch, and English, in books, paintings, and memorials of art. On the hill is the superb monument with colossal figure and bas-

reliefs. Here, first in 1769, began the celebration of Forefathers' Day. Now, the custom has become, in a certain sense, national. For not only the New Englanders and those who inherit the traditions of this "nation within a nation," but the heirs of other history and experience in lands continental and British, have borrowed the beautiful custom. They too make themselves busy, in Japanese phrase, by "lengthening the foreheads of their ancestors." The New England Societies, of which there are about a dozen, chiefly in the large cities of the country, have each a costly dinner. Their feasts, with wines and luxuries, and tickets of admission costing from three to ten dollars, hardly suggest the "four grains of parched corn" to which the Pilgrims were once reduced for a meal. The New York Society not only secures the very best speakers in the country, but its dinners are often the occasion of important political, literary, or social deliverances of opinion which attract more than temporary attention. Then there are about fifty Congressional Clubs, chiefly in the northern parts of the Union, which celebrate by good viands and flowing eloquence the beginnings of the nation. What with the Huguenot Societies, the Scotch-Irish Conventions, the Associations of Germans, the Netherland Societies, and those which meet to recall the memories of France, and Italy, and the various Fatherlands, surely there is no lack of keeping bright the chain of friendship that holds the American to Europe. Every year it becomes more and more evident that the United States of America are less a New England or even a new and greater Britain, than a New Europe.

Every year the question widens in interest whether this nation owes most to the England Puritan or to the Republican Hollander. Not only is the subject widely discussed in reading and study clubs, but about Forefathers' Day the theme comes up for presentation by those who from either side argue the claims of the little Protestant Dutch Republic and of those who founded the English Commonwealth. Language, literature, laws, manifestly came from England, but political models and precedents (with vast improvements) came evidently from the republic where were federal freedom of conscience, free speech and press, the written ballot, and many things which were formerly supposed to have originated in New England, but which in reality were brought there from the land where the English exiles found freedom and a home.

This year, not only has there been a notable crop of books discussing the Pilgrims and the Puritans, but there is a marked tendency of historiographers to acknowledge the profound Dutch influence in the making of the United States. This they demonstrate not only in the four Middle States—New York, New Jersey, Pennsylvania, and Delaware—which Providence fortunately put between the Virginia Cavaliers and the New England Puritans—but also in the moulding of the social life of the Eastern States. As this is the age of monuments and tablets, when the various patriotic societies, now so numerous and increasing in wealth, are marking historic spots with tablets and monuments, it is not surprising to see attention called to old-world localities also. The Congregational Club of Boston once voted to erect at Delfshaven, near Rotterdam, some durable token of the friendship long existing between the Pilgrims and the Hollanders. Nothing substantial has yet been done, though in the church at Delfshaven and on St. Peter's church in Leyden, there are stone or bronze memorials. One "brass" has lately been placed by the municipality upon the old Barbican, at Plymouth, England, near which the *Mayflower* and the *Speedwell* were moored, and whence the lone ship sailed over the ocean freighted with the Pilgrim companies. During the last summer a party of Americans visited the Pilgrim shrines and places of interest in England and Holland, and were everywhere handsomely treated by civic and ecclesiastical dignitaries. At Gainsborough, they with Ambassador Bayard, were present at the laying of the John Robinson Memorial Church, which in its name will enshrine that of the noble self-effacing leader of the Separatists who founded New England. The Delfshaven monument, if ever completed, will be like the statues of President Monroe in the South American republics; or like those which the Jews in America have reared in honour of the American spirit of religious and political freedom.

Not only in literature but also in art the Pilgrim and the Puritan—the one a Separatist and the other a State Churchman—have been well treated. Probably the classic work in fiction is Hawthorne's "The Scarlet Letter," which now, having outrun its forty-two years of copyright, is republished by several book-printers, though nearly a half million copies in various editions have been sold by the

old holders of the copyright. It is now on the market at the price of a dime. It was from this classic, that George H. Boughton, the Anglo-American and the American-Anglican as to residence, received the suggestion and inspiration to paint several of his famous pictures, copies of which are found by the thousands in American homes. Mr. Boughton, by the way, has within a few months past discovered and obtained possession of what is probably the only contemporaneous pictorial document illustrating the departure of the founders of Massachusetts from Holland. It is a picture about two feet square, on oak that is as black with age as teak wood. It probably once belonged to the Duke of Marlborough. Mr. Boughton and his fellow-experts attribute the painting to no less a master than the Dutchman Cuypp, of Dordrecht, whose sunsets are known all over the world. The picture is to come to New York and will doubtless find a purchaser here. One other artist, who has made English Puritan themes his own, is Mr. Charles Whimper, the brother of the great mountain climber. It was he who drew the illustrations for "The Pilgrim Fathers of New England," by that genial Englishman, Dr. John Brown, of Bedford. There are other painters who illustrate this phase of English history, but who treat their themes very much as Washington Irving did the founders of New Netherland—in sarcasm and caricature and with the idea of casting a humorous but not luminous glow over the whole subject.

Certainly in New York, though wine drinking is not a general custom, the people of both country and city can drink the health of their ancestors in cider; for never in the history of the commonwealth was the apple crop known to be so large. In riding from Ithaca to Niagara Falls a few weeks ago, in order to see the new harness and transformation of Niagara Falls water into electricity that moved cars and motors in Buffalo, I saw apples enough to give the whole world, and every inhabitant of it, at least one dish of apple sauce. For scores of miles the railway passed through great orchards where the red, the green, the yellow apples lay in heaps a yard or two high and many feet in length and breadth. The cider mills were in full revolution, sending out rills and streams of the amber-coloured liquid. Professor Liberty J. Bailey, of Cornell University, who is the State Inspector of fruits and vegetables, informs me that all the coopers of New York could not make barrels enough and in time to transport the apples. What has happened in this State has been the case elsewhere. In some of the States, committees have been organized to send carloads of apples to the poor in the large cities. Boston has been especially forward in the efficient organization of means of distribution.

Meanwhile, we in the Empire State, paying slight attention to newspaper rumours, are waiting to see how President elect McKinley will form his cabinet. Not a few of us, in this town at least, are hoping that the able and accomplished educator, legislator, diplomatist, and scholar, Andrew D. White, will be Secretary of State. New York will have at least one man in the new cabinet.

We have had with us for several weeks past Mr. Miller, of the United States Legation in Tokyo, who, with his wife, child and Japanese nurse, is visiting his home where also he was a student. It is very pleasant for your correspondent, though him, to hear of the welfare of many old friends and acquaintances both sojourners and natives in Dai Nippon, to whom, though the salutation be late in arriving, he sends best wishes for a Happy New Year. W.E.G.

LETTER FROM BOSTON.

(FROM OUR OWN CORRESPONDENT.)

Boston, December 26th.

The tariff question has been taken up at Washington, and preparatory to the coming in of a new administration, the Committee of Ways and Means is working at a new Bill. The schedules are already laid out, and the rates of the duties are to be inserted according to the information the Committee can get at the hearings given to the parties interested. The industrial spirit immediately after McKinley's election has not been kept up, and protection is now strongly advocated as the only effective remedy for the hard times. Mr. James Lowther's advocacy of a duty of five shillings on wheat, and Sir Henry Howarth's desire to see preferential arrangements with the colonies, together with Mr. Chamberlain's ideas of an Imperial Customs Union, receive much attention, and their utterances are recommended by the protectionist press as fine specimens of British good sense. It may be safely predicted that the duties of the new tariff—which is promised to be a moderate one—

will nearly all be specific. Tariff experts declare that the difficulty of framing specific duties even for silks is not insuperable, but it is not likely that they will be permitted to try their prentice hands at such delicate work. President Cleveland has taken much satisfaction in telling Congress that the present tariff has this year furnished more revenue than the McKinley Bill during the last year of its existence. While the President-Elect has vainly tried to escape volunteer advisers and office hunters by going away from home, Mr. Bryan has opened his non-partisan lecture tour at Atlanta, Ga., by speaking with his accustomed skill on "The Ancient Landmarks." He is winning golden opinions, and deservedly so, for his letter to Mr. McKinley and his recent Thanksgiving Oration were models of common sense.

Maceo's death has roused much sympathy for the Cuban cause, both in Congress and among the people. There can be no doubt, however, that Representative Henderson, of Iowa, expresses the real sentiments of the mass of the people when he says:—"As a citizen of a republic my sympathies are strongly with the Cuban insurgents. As a citizen of this Republic I am in favour of attending strictly to our own business." Of such business we have enough and to spare. Owing to the very general indifference of the public, Mr. Platt is almost certain to be the next Senator of the Empire State, instead of Mr. Choate, who is by far his superior in every respect. This indifference cannot be got at by legal enactments, as witness the recent decision of the Supreme Court of Missouri, in *Kansas City v. Whipple*. Kansas city had in its charter imposed a fine of \$2.50 for failure to vote; Mr. Whipple failed to vote owing to lateness at the polls, was fined, refused to pay, and carried the case to the Supreme Court, where the provision of the charter in question was declared unconstitutional.

The day before Christmas, Boston was treated to an unpleasant surprise. Nearly five thousand motor-men went on strike that day, and the street railway traffic is almost at a standstill. Boston business men are threatened with a loss of about one million daily, and yet public sympathy is with the strikers. They ask no better wages, and they do not object to the discipline maintained. What they want is a binding agreement with the Company. Up till now the complaint of any individual worker meant loss of pay or discharge, so that grievances could safely be submitted to the Company only through representatives of their labour organization. They complain that they have to work beyond the time allowed by law without getting any pay therefor. They insist on being paid at the rate of thirty cents for every hour of over-work, and demand that all complaints against individuals shall be investigated as soon as possible, and that every motor-man or conductor found innocent shall be paid for loss of time incidental to such investigation. Owing to the strike many children have vainly waited for Santa Claus to come down the chimney, and many a mother is weeping in secret while showing a stout heart to the world. The State Board of Arbitration has lost no time in offering their services to the strikers and to the Company. They have successfully arbitrated between the same parties before and will no doubt do so again. Under the provisions of the proposed charter for Greater New York perpetual franchises are done away with, and after a specified time corporate privileges now in existence are made to revert to the city; a provision that strongly recommends itself to the business men of Boston just now. In the hope of an early settlement of the strike the Bostonians bear the losses entailed by the interrupted traffic as philosophically as they can, and take to walking which, as an exercise, is strongly recommended by physicians, whose advice is now enforced by necessity, that severest of teachers. Some of the older pedestrians return to the tricks of their youth, and may be seen hanging on behind delivery waggons.

The custom of tipping at Christmas is spreading in the United States and seems to have reached its height in New York. The custom may be, and certainly is, very "un-American," but, about Christmas, the janitor, the letter carrier, the laundry man, the news boy, the servants of the club, etc., are all on *evidence*, and the inevitable follows. Mr. Howells has demonstrated, in newspapers and magazines, how inconsistent the taking and the giving of tips is with the loudly asserted independence of the men looking for them; but he, too, according to his own statements, has now bowed the knee to Baal and has offered the yearly sacrifice.

The recent municipal elections have brought no changes of importance. Cambridge, like most of the smaller towns round Boston, has again voted for prohibition, and thus the "dry heat" round Boston has been maintained, much to the satis-

faction of the saloon-keepers along the city boundary of Boston. These reap a rich harvest from this state of affairs, so much so that Governor Wolcott has stopped for the present the granting of liquor licenses for the outlying wards of Boston as well as their transfer from the central parts of the city.

Ex-queen Liliuokalani is spending the Christmas holidays in Boston with the relatives of her husband, the late Mr. Dominis. If the United States should decide to take over Hawaii she is certain to get a very substantial indemnity for the loss of her crown; and this indemnity or a very substantial pension is said to be the cause of her coming to America.

The representatives of the Imperial Railway Bureau of Japan, R. Nomura, K. Takabe, T. Yamaguchi, and H. Iwasaki, have arrived in America, and have set about a systematic study of the railroads of the United States. There is also in Boston a representative of the Chinese government on a very similar mission.

Bicycle riders in Japan are no doubt interested in the outlook for the coming year such as it appears here on this side of the Pacific. Next year there will be bicycles, track racers, in the market not exceeding 12 pounds in weight. That of the ordinary "Wheel," however, is likely to rise from 19 to 22 and even 27 pounds. Chainless bicycles, owing to their superior cleanness, and wooden handlebars, owing to their lightness, are expected to appear in the market and find a ready sale. The price for a really first class machine will remain at a hundred dollars, though some "specials" will cost considerably more. The bicycle craze is far from disappearing and the next year will give it a new impetus. When, a short time ago, several thousand fairly good second-hand bicycles were sold in New York at \$18.00 the machine, the crush was so great that a number of people fainted or were bruised. The tandem will come into still greater vogue, as is evident from the demand now. There will be some novelties such as bicycle polo, which is now, owing to the snow, being practised in the riding academies. The chief requirements are a low-gear wheel, quick eye for distances, and an ability to ride, hands off, at any angle and round any curve. The "slow race," however, is taken up with much greater enthusiasm. He who, without crossing a line that marks off on either side a two foot path, without coming to a dead stand-still, reaches the goal last is the winner and it is certainly not easy to win. Dr. White, of New York, has lately invented an automatic attachment which, when fitted to the wheel, prevents the falling of the machine, and the use of which is strongly recommended to invalids, beginners, and timid folks generally. In New England, most of the roads charge a little less than ten per cent. of the price of the ticket for the transport of a bicycle to the destination of its owner, but other and more progressive lines carry it free as passenger's baggage. About three millions of people use a bicycle in the United States, the capital invested in the industry is 125 millions, and no less than 150,000 men are employed. The export of bicycles is largest to Great Britain; then come Germany and France.

REVISING THE JURY LIST.

On Tuesday morning a special sitting of H.B.M. Court for Japan was held for the purpose of revising the British Jury List for the year 1897. His Honour Judge Mowat was on the Bench, and there was an unusually large attendance of elderly gentlemen anxious to lay down the burden of jury service borne by them for many years in Japan and elsewhere. The first to come forward was Mr. Nicholas Philipps Kingdon.

His Honour—Are you anxious to escape from the privilege of serving on the jury?

Mr. Kingdon—Yes, Sir.

His Honour—On what grounds?

Mr. Kingdon—I was born in 1829, Sir.

His Honour—Then you claim exemption on account of over-age? Will you be sworn?

This was accordingly done, and Mr. Kingdon repeated his former statement in regard to the year of his birth.

His Honour—The rule has been applied here on the ground that a man is exempted after the age of 60 in England, and also that we should make a similar rule analogous here, and of course I shall follow the practise. Under our Order in Council, however, there is no limit of age, it being considered, no doubt, that the older you grow the wiser you will be. You are exempted. Next, please. I should like all those pleading age to come forward first.

Mr. James Winstanley was then sworn.

His Honour—What are your grounds?

Mr. Winstanley—I was born in 1825.

His Honour—You are exempted. Next, please.

Mr. Lamedh Harlow was sworn.
His Honour—You are not over age?
Mr. Harlow—I was born in 1828.
His Honour—You do not look it, I must say.
That will do; next please.
Mr. Patrick Hodnett, who was born in 1834; Mr. William Almeida Crane, born in 1833; Mr. Henry Vincent, born in 1830; Mr. John Marshall Scott, born in 1835; Mr. Edward Whittall, born in 1832; Mr. John Henry Brooke, born in 1826; Mr. Charles George Wilson, born in 1827, were all exempted on the same ground—over-age, some amusement being created at the rapidity with which His Honour "turned them off."
Mr. Francis Staniland and Mr. Charles Barton Stedman were exempted on the ground of deafness, both furnishing satisfactory proof of their statements.
His Honour—All of you are exempted and your names will be struck off the list; and a note will be put opposite the names of those five gentlemen who served the other day.
The Chief Clerk (Mr. C. D. Moss)—I have already done so.
The Court then rose.

TREATY OF COMMERCE AND NAVIGATION BETWEEN JAPAN AND BELGIUM.

His Majesty the Emperor of Japan and His Majesty the King of the Belgians, being equally desirous of maintaining the relations of good understanding which happily exist between them, by extending and increasing the intercourse between their respective States, and being convinced that this object cannot better be accomplished than by revising the treaties hitherto existing between the two countries, have resolved to complete such a revision, based upon principles of equity and mutual benefit, and for that purpose, have named as their Plenipotentiaries, that is to say:

His Majesty the Emperor of Japan,
Viscount Aoki Suizo, Junii, Grand Cordon of the Imperial Order of the Rising Sun, His Envoy Extraordinary and Minister Plenipotentiary to His Majesty the King of the Belgians;
And His Majesty the King of the Belgians,
Mr. Paul de Favereau, Knight of the Order of Leopold, etc., Member of the House of Representatives, His Minister for Foreign Affairs,
Who, after having communicated to each other their full powers, found to be in good and due form have agreed upon and concluded the following Articles:—

Art. I.—The subjects of each of the two High Contracting Parties shall have full liberty to enter, travel, or reside in any part of the dominions and possessions of the other Contracting Party, and shall enjoy full and perfect protection for their persons and property.

They shall have free and easy access to the Courts of Justice in pursuit and defence of their rights; they shall be at liberty equally with native subjects to choose and employ lawyers, advocates, and representatives to pursue and defend their rights before such Courts, and in all other matters connected with the administration of justice they shall enjoy all the rights and privileges enjoyed by native subjects.

In whatever relates to rights of residence and travel; to the possession of goods and effects of any kind; to the succession to personal estate, by will or otherwise, and the disposal of property of any sort and in any manner whatsoever which they may lawfully acquire, the subjects of each Contracting Party shall enjoy in the dominions and possessions of the other the same privileges, liberties, and rights and shall be subject to no higher imposts or charges in these respects than native subjects, or subjects or citizens of the most favoured nation. The subjects of each of the Contracting Parties shall enjoy in the dominions and possessions of the other entire liberty of conscience, and, subject to the laws, ordinances and regulations, shall enjoy the right of private or public exercise of their worship, and also the right of burying their respective countrymen according to their religious customs, in such suitable and convenient places as may be established and maintained for that purpose.

They shall not be compelled, under any pretext whatsoever to pay any charges or taxes other or higher than those that are, or may be paid by native subjects, or subjects or citizens of the most favoured nation.

The subjects of either of the Contracting Parties residing in the dominions or possessions of the other shall be exempted from all compulsory military service whatsoever, whether in the army, navy, national guard, or militia; from all contributions imposed in lieu of personal service, and from all forced loans or military exactions or contributions,

Art. II.—There shall be reciprocal freedom of commerce and navigation between the dominions and possessions of the two High Contracting Parties.

The subjects of each of the High Contracting Parties may trade in any part of the dominions and possessions of the other by wholesale or retail in all kinds of produce, manufactures, and merchandize of lawful commerce, either in person or by agents, singly or in partnerships with foreigners or native subjects, and they may there own or hire and occupy the houses, manufactories, warehouses, shops and premises which may be necessary for them, and lease land for residential and commercial purposes, conforming themselves to the laws, police, and customs regulations of the country like native subjects.

They shall have liberty freely to come with their ships and cargoes to all places, ports, and rivers in the dominions and possessions of the other, which are or may be opened to foreign commerce, and shall enjoy, respectively, the same treatment in matters of commerce and navigation as native subjects, or subjects or citizens of the most favoured nation, without having to pay taxes, imposts, or duties, of whatever nature or under whatever denomination levied in the name or for the profit of the Government, public functionaries, private individuals, corporations, or establishments of any kind, other or greater than those paid by native subjects, or subjects or citizens of the most favoured nation, subject always to the laws, ordinances, and regulations of each country.

Art. III.—The dwellings, manufactories, warehouses, and shops of the subjects of each of the High Contracting Parties in the dominions and possessions of the other, and all premises appertaining thereto destined for purposes of residence or commerce, shall be respected.

It shall not be allowable to proceed to make a search of, or a domiciliary visit to such dwellings and premises, or to examine or inspect books, papers, or accounts, except under the conditions and with the forms prescribed by the laws, ordinances and regulations for subjects of the country.

Art. IV.—No other or higher duties shall be imposed on the importation into the dominions and possessions of His Majesty the King of the Belgians of any article, the produce or manufacture of the dominions and possessions of His Majesty the Emperor of Japan, from whatever place arriving; and no other or higher duties shall be imposed on the importation into the dominions and possessions of His Majesty the Emperor of Japan of any article, the produce or manufacture of the dominions and possessions of His Majesty the King of the Belgians, from whatever place arriving, than on the like article produced or manufactured in any other foreign country; nor shall any prohibition be maintained or imposed on the importation of any article, the produce or manufacture of the dominions and possessions of either of the High Contracting Parties, into the dominions and possessions of the other, from whatever place arriving, which shall not equally extend to the importation of the like article, being the produce or manufacture of any other country. This last provision is not applicable to the sanitary and other prohibitions occasioned by the necessity of protecting the safety of persons, or of cattle, or of plants useful to agriculture.

Art. V.—No other or higher duties or charges shall be imposed in the dominions and possessions of either of the High Contracting Parties on the exportation of any article to the dominions and possessions of the other than such as are, or may be, payable on the exportation of the like article to any other foreign country; nor shall any prohibition be imposed on the exportation of any article from the dominions and possessions of either of the two Contracting Parties to the dominions and possessions of the other which shall not equally extend to the exportation of the like article to any other country.

Art. VI.—The subjects of each of the High Contracting Parties shall enjoy in the dominions and possessions of the other exemption from all transit duties, and a perfect equality of treatment with native subjects in all that relates to warehousing, bounties, facilities, and drawbacks.

Art. VII.—All articles which are or may be legally imported into the ports of the dominions and possessions of his His Majesty the Emperor of Japan in Japanese vessels may likewise be imported into those ports in Belgian vessels, without being liable to any other or higher duties or charges of whatever denomination than if such articles were imported in Japanese vessels; and, reciprocally, all articles which are or may be legally imported into the ports of the dominions of His Majesty the King of the Belgians in Belgian vessels may likewise be imported into those ports in Japanese vessels, without being liable to any other or higher duties or charges of whatever de-

nomination than if such articles were imported in Belgian vessels. Such reciprocal equality of treatment shall take effect without distinction, whether such articles come directly from the place of origin or from any other place.

In the same manner, there shall be perfect equality of treatment in regard to exportation, so that the same export duties shall be paid, and the same bounties and drawbacks allowed, in the dominions and possessions of either of the High Contracting Parties on the exportation of any article which is or may be legally exported therefrom, whether such exportation shall take place in Japanese or in Belgian vessels, and whatever may be the place of destination, whether a port of either of the Contracting Parties or of any third Power.

Art. VIII.—No duties of tonnage, harbour pilotage, lighthouse, quarantine, or other similar or corresponding duties of whatever nature or under whatever denomination, levied in the name or for the profit of the Government, public functionaries, private individuals, corporations, or establishments of any kind, shall be imposed in the ports of the dominions and possessions of either country upon the vessels of the other country, which shall not equally and under the same conditions be imposed in the like cases on national vessels in general or vessels of the most favoured nation. Such equality of treatment shall apply reciprocally to the respective vessels, from whatever port or place they may arrive, and whatever may be their place of destination.

Art. IX.—In all that regards the stationing, loading, and unloading of vessels in the ports, basins, docks, roadsteads, harbours, or rivers of the dominions and possessions of the two countries, no privilege shall be granted to national vessels which shall not be equally granted to vessels of the other country; the intention of the High Contracting Parties being that in this respect also the respective vessels shall be treated on the footing of perfect equality.

Art. X.—The coasting trade of both the High Contracting Parties is excepted from the provisions of the present Treaty, and shall be regulated according to the laws, ordinances, and regulations of Japan and of Belgium, respectively. It is, however, understood that Japanese subjects in the dominions and possessions of His Majesty the King of the Belgians and Belgian subjects in the dominions and possessions of His Majesty the Emperor of Japan, shall enjoy in this respect the rights which are, or may be, granted under such laws, ordinances, and regulations to the subjects or citizens of any other country.

A Japanese vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of His Majesty the King of the Belgians and a Belgian vessel laden in a foreign country with cargo destined for two or more ports in the dominions and possessions of His Majesty the Emperor of Japan, may discharge a portion of her cargo at one port, and continue her voyage to the other port or ports of destination where foreign trade is permitted, for the purpose of landing the remainder of her original cargo there, subject always to the laws and custom-house regulations of the two countries.

The Japanese Government, however, agrees to allow Belgian vessels to continue, as heretofore, for the period of the duration of the present Treaty, to carry cargo between the existing open ports of the Empire, excepting to or from the ports of Osaka, Niigata, and Ebusu-Minato.

Art. XI.—Any ship-of-war or merchant vessel of either of the High Contracting Parties which may be compelled by stress of weather, or by reason of any other distress, to take shelter in a port of the other, shall be at liberty to refit therein, to procure all necessary supplies, and to put to sea again without paying any dues other than such as would be payable by national vessels. In case, however, the master of a merchant vessel should be under the necessity of disposing of a part of his cargo in order to defray the expenses, he shall be bound to conform to the Regulations and Tariffs of the place to which he may have come.

If any ship-of-war or merchant vessel of one of the Contracting Parties should run aground or be wrecked upon the coasts of the other, the local authorities shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the district of the occurrence, or, if there be no such Consular officers, they shall inform the Consul-General, Consul, Vice-Consul, or Consular Agent of the nearest district.

All proceedings relative to the salvage of Japanese vessels wrecked or cast on shore in the territorial waters of His Majesty the King of the Belgians shall take place in accordance with the laws, ordinances, and regulations of Belgium; and, reciprocally, all measures of salvage relative to Belgian vessels wrecked or cast on shore in the territorial waters of His Majesty the Emperor of

Japan, shall take place in accordance with the laws, ordinances, and regulations of Japan.

Such stranded or wrecked ship or vessel, and all parts thereof, and all furniture and appurtenances belonging thereto, and all goods and merchandise saved therefrom, including those which may have been cast into the sea, or the proceeds thereof, if sold, as well as all papers found on board such stranded or wrecked ship or vessel, shall be given up to the owners or their agents, when claimed by them. If such owners or agents are not on the spot, the same shall be delivered to the respective Consuls-General, Consuls, Vice-Consuls or Consular Agents upon being claimed by them within the period fixed by the laws of the country, and such Consular officers, owners, or agents shall pay only the expenses incurred in the preservation of the property, together with the salvage or other expenses which would have been payable in the case of a wreck of a national vessel.

The goods and merchandise saved from the wreck shall be exempt from all the duties of the Customs unless cleared for consumption, in which case they shall pay the ordinary duties.

When a ship or vessel belonging to the subjects of one of the Contracting Parties is stranded or wrecked in the territories of the other, the respective Consuls-General, Consuls, Vice-Consuls, and Consular Agents shall be authorized, in case the owner or master, or other agent of the owner, is not present, to lend their official assistance in order to afford the necessary assistance to the subjects of the respective States. The same rule shall apply in case the owner, master, or other agent is present, but requires such assistance to be given.

Art. XII.—All vessels which, according to Japanese law, are to be deemed Japanese vessels, and all vessels which, according to Belgian law, are to be deemed Belgian vessels, shall, for the purposes of this Treaty, be deemed Japanese and Belgian vessels respectively.

Art. XIII.—The Consuls General, Consuls, Vice-Consuls and Consular Agents of each of the High Contracting Parties residing in the dominions and possessions of the other shall receive from the local authorities such assistance as can by law be given to them for the recovery of deserters from the vessels of their respective countries.

It is understood that this stipulation shall not apply to the subjects of the country where the desertion takes place.

Art. XIV.—The High Contracting Parties agree that, in all that concerns commerce and navigation, any privilege, favour, or immunity which either Contracting Party has actually granted, or may hereafter grant, to the Government, ships, or subjects or citizens of any other State, shall be extended immediately and unconditionally to the Government, ships, or subjects of the other Contracting Party; it being their intention that the trade and navigation of each country shall be placed, in all respects, by the other on the footing of the most favoured nation.

Art. XV.—Each of the High Contracting Parties may appoint Consuls General, Consuls, Vice-Consuls, Pro-Consuls, and Consular Agents, in all the ports, cities, and places of the other, except in those where it may not be convenient to recognize such officers.

This exception, however, shall not be made in regard to one of the Contracting Parties without being made likewise in regard to every other Power.

The Consuls General, Vice Consuls, Pro-Consuls, and Consular Agents may exercise all functions, and shall enjoy all privileges, exemptions, and immunities which are, or may hereafter be granted to Consular officers of the most favoured nation.

Art. XVI.—The subjects of each of the High Contracting Parties shall enjoy in the dominions and possessions of the other the same protection as native subjects in regard to patents, trademarks, and designs, upon fulfilment of the formalities prescribed by law.

Art. XVII.—The High Contracting Parties agree to the following arrangement:—

The several foreign Settlements in Japan shall be incorporated with the respective Japanese Communes, and shall thenceforth form part of the general municipal system of Japan.

The competent Japanese authorities shall thereupon assume all municipal obligations and duties in respect thereof, and the common funds and property, if any, belonging to such Settlements, shall at the same time be transferred to the said Japanese authorities.

When such incorporation takes place, the existing leases in perpetuity under which property is now held in the said Settlements shall be confirmed, and no conditions whatsoever other than those contained in such existing leases shall be im-

posed in respect of such property. It is, however, understood that the Consular authorities mentioned in the same are in all cases to be replaced by Japanese authorities.

All lands which may previously have been granted by the Japanese Government free of rent for the public purposes of the said Settlements shall, subject to the right of eminent domain, be permanently reserved free of all taxes and charges for the public purposes for which they were originally set apart.

Art. XVIII.—The present Treaty shall, from the date it comes into force, be substituted in place of the Treaty of Amity, Commerce, and Navigation of the 1st day of August, 1866, and the additional Convention of the 4th day of October, 1866; and from the same date these Treaty and Convention, as well as the trade regulations attached to the said treaty shall cease to be binding, and, in consequence, the jurisdiction then exercised by Belgian Courts in Japan and all the exceptional privileges, exemptions, and immunities then enjoyed by Belgian subjects as a part of or appurtenant to such jurisdiction, shall absolutely and without notice cease and determine, and thereafter all such jurisdiction shall be assumed and exercised by Japanese Courts.

Art. XIX.—The present Treaty shall not take effect until the sixteenth day of July, 1899. It shall come into force one year after His Imperial Majesty's Government shall have given notice to the Government of His Majesty the King of the Belgians of its wish to have the same brought into operation. Such notice may be given at any time from the sixteenth day of July, 1898. The Treaty shall remain in force for the period of twelve years from the date it goes into operation.

Either High Contracting Party shall have the right, at any time after eleven years shall have elapsed from the date this Treaty takes effect, to give notice to the other of its intention to terminate the same, and at the expiration of twelve months after such notice is given this Treaty shall wholly cease and determine.

Art. XX.—The present Treaty shall be ratified, and the ratifications thereof shall be exchanged at Brussels as soon as possible and not later than six months after its signature.

In witness whereof the respective Plenipotentiaries have signed the present Treaty and have affixed thereto the seal of their arms.

Done at Brussels, in duplicate, the 22nd June 1896.

(L. S.) VICOMTE AOKI.
(L. S.) P. DE FAVEREAU.

PROTOCOL.

The Government of His Majesty the Emperor of Japan and the Government of His Majesty the King of the Belgians, deeming it advisable in the interests of both countries to regulate certain special matters of mutual concern, apart from the Treaty of Commerce and Navigation signed this day, have, through their respective Plenipotentiaries, agreed upon the following stipulations:—

1.—It is agreed by the Contracting Parties that one month after the exchange of the ratifications of the Treaty of Commerce and Navigation signed this day, the Import Tariff now in operation in respect of goods and merchandise imported into Japan by the subjects of His Majesty the King of the Belgians shall cease to be binding. From the same date the General Statutory Tariff of Japan, for the time being in force, shall, subject to the provisions of Article XIX. of the Treaty of 1866, at present subsisting between the Contracting Parties, as long as the said Treaty remains in force, and thereafter, subject to the provisions of Article IV. and Article XIV. of the Treaty signed this day, be applicable to the goods and merchandise being the growth, produce, or manufacture of the dominions and possessions of His Majesty the King of the Belgians upon importation into Japan.

But nothing contained in this Protocol shall be held to limit or qualify the right of the Japanese Government to restrict or to prohibit the importation of adulterated drugs, medicines, food, or beverages; indecent or obscene prints, paintings, books, cards, lithographic or other engravings, photographs or any other indecent or obscene articles; articles in violation of patent, trademark, or copyright laws of Japan; or any other articles which for sanitary reasons or in view of public security or morals, offer any danger.

In all other respects the stipulations of the existing Treaty and Convention shall be maintained unconditionally until the time when the Treaty of Commerce and Navigation signed this day comes into force.

2.—The Japanese Government, pending the opening of the country to Belgian subjects agrees to extend the existing passport system in such a manner as to allow Belgian subjects, on the pro-

duction of a certificate of recommendation from the Belgian representative in Tokyo, or from any of the Consuls of Belgium at the open ports in Japan, to obtain upon application passports available for any part of the country and for any period not exceeding twelve months, from the Imperial Japanese Foreign Office in Tokyo, or from the Chief Authorities in the Prefecture in which an open port is situated, it being understood that the existing Rules and Regulations governing Belgian subjects who visit the interior of the Empire are to be maintained.

3.—The Japanese Government undertakes, before the cessation of Belgian Consular Jurisdiction in Japan, to join the International Conventions for the Protection of Industrial Property and Copyright.

4.—The undersigned Plenipotentiaries have agreed that this Protocol shall be submitted to the two High Contracting Parties at the same time as the Treaty of Commerce and Navigation signed this day, and that when the said Treaty is ratified the agreements contained in the Protocol shall also equally be considered as approved, without the necessity of a further formal ratification.

It is also agreed that this Protocol shall terminate at the same time the said Treaty ceases to be binding.

In witness whereof the respective Plenipotentiaries have signed the present Protocol and have affixed thereto the seal of their arms.

Done at Brussels, in duplicate, the 22nd June 1896.

(L. S.) VICOMTE AOKI.
(L. S.) P. DE FAVEREAU.

MEMORANDUM.

The Undersigned, Minister Plenipotentiary and Envoy Extraordinary of His Majesty the Emperor of Japan and Minister for Foreign Affairs of His Majesty the King of the Belgians, agree to recognize that nothing in the Treaty of Commerce and Navigation they are going to sign between Japan and Belgium affects the right of the two Contracting Parties to regulate, in view of events of war, the trade of arms and ammunition for war through their respective dominions and possessions. It is also understood that in this matter the treatment of the most favoured nation is reciprocally guaranteed to each of the two countries.

Brussels, June 22nd, 1896.

(L. S.) VICOMTE AOKI,
(L. S.) P. DE FAVEREAU.
Japanese Legation.

Brussels, June 22nd, 1896.

The Undersigned, Envoy Extraordinary and Minister Plenipotentiary of His Majesty the Emperor of Japan, in virtue of special authorization from His Imperial Majesty's Government, has the honour to announce to the Minister for Foreign Affairs of His Majesty the King of the Belgians that the Imperial Japanese Government, recognizing the advantage of having the Codes of the Empire which have already been promulgated in actual operation when the Treaty stipulations at present subsisting between the Government of Japan and that of Belgium cease to be binding, engage, not to give the notice provided for by the first paragraph of Article XIX of the Treaty of Commerce and Navigation, signed this day, until those Codes, which are not yet in operation, are brought into actual force.

The Undersigned avails himself of this opportunity to renew to M. Paul de Favereau the assurance of his highest consideration.

(L.S.) VICOMTE AOKI.

LATEST TELEGRAMS.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, February 5.

Venezuela has signed the Arbitration Treaty with Great Britain. Lord Herschell and Mr. Justice Collins have been appointed the British Arbitrators.

The House of Commons has passed the second reading of the Women's Franchise Bill by 228 votes against 157.

The Spanish Government has decreed extensive reforms for Cuba.

London, February 6.

The Education Bill has passed the first reading in the House of Commons.

Lord Lansdowne, Secretary of State for War, has announced that it is intended to increase the strength of the army in various branches to

the extent of 7,385 men, which will necessitate an increase in the estimates of £985,500.

Exchange on London at Paris 25.19
Exchange on London at New York 4.87

London, Feb. 10th.

In the House of Commons yesterday Sir Michael Hicks-Beach, Chancellor of the Exchequer, in moving the vote for the Egyptian Loan, said the French opposition had caused the prolonging of the British occupation of Egypt.

The French press is excited over this statement, considering it a defiance of France and Russia.

M. Hanotaux, Minister for Foreign Affairs, explained in the Chamber of Deputies that it is important not to imperil the concert of the Powers, but that France gives up none of her rights.

(FROM THE "N.C. DAILY NEWS.")

London, January 30.

The Indian Office has ordered officers in the Medical Department who are now on leave to return to India at once, and has applied to the Army Medical Department for volunteers for Plague Service in India. Those who are selected will start for Bombay at once.

The Right Hon. J. Chamberlain, Secretary of State for the Colonies, moved the re-appointment of the Chartered Company Enquiry Committee, adding the name of the Right Hon. Sir John Lubbock.

Mr. James M. Maclean, M.P. for Cardiff, moved an amendment to drop the enquiry, which he stated was inexpedient and needless.

Sir John Lubbock seconded the amendment, stating that it was the duty of the House of Commons to consider the best interests of the Empire, and that the enquiry would revive racial feelings. The debate was adjourned.

The Right Hon. J. Chamberlain, in an impressive speech, urged that the enquiry must apply equally to Dr. Jameson's Raid and the causes which led to it, namely the grievances of the Uitlanders, and the fact that President Krüger's repeated promises to consider the grievances had been but meagrely fulfilled. He stated that portions of the recent Transvaal laws were certainly contrary to the London Convention and had not improved the situation, which latterly showed an undoubted revival of unrest.

Mr. Maclean withdrew his amendment and Mr. Chamberlain's motion was carried without a division.

Pekin, January 29.

Reports come from the Palace that H.E. Li Hungchang is in high favour again with the Emperor, with whom he has had several informal audiences. Li's enemies are greatly disturbed, as it is believed that Li will be specially honoured at the coming New Year. It is expected that he will be made Senior Vice-President of the Board of War, under Prince Kung, or High Commissioner of the combined Peiyang and Nanyang Coast Defences and Superintendent of Trade. These offices are to be separated, it is reported, from the Chili and Liang-Kiang Viceroyalties and given to Li with headquarters at Tientsin, this new office discharging the functions of the former Admiralty Board. The decision rests with the Emperor, who has declared his intention of governing in future, and shaking himself free from the influence of his former advisers.

London, February 1.

The Hon. W. St. J. Brodrick, M.P., Parliamentary Under-Secretary for War, moved the authorising of a loan of £5,458,000 for barracks, camps, and rifle-ranges, for fortifying Berehaven, Lough Swilly, Falmouth, and the Scilly Isles, for encircling London with forts, and for the purchase of sixty square miles of Salisbury Plain for manoeuvres.

The motion was adopted.

Mr. Chamberlain in his speech stated that

the Chartered Company had performed the duties of Government with great spirit.

February 2.

The amendments to the Arbitration Treaty, excising the nomination King Oscar as Arbitrator, and excluding from Arbitration questions which affect the relations between the signatories and other Powers, are considered to reduce the Treaty to absurdity, which is what the American Jingoists desired.

Lord Selborne, speaking at Manchester, stated that a permanent system for depriving the majority of the white men in the Transvaal of a share in the Government was impossible, and that no infringement of the London Convention would be permitted.

Hongkong, February 3.

The Bishop of Macao, D. Antonio Joaquim de Medeiros, did at Timor on the 7th of January.

London, February 5.

President Krüger greatly resents Mr. Chamberlain's coupling the grievances of the Uitlanders with the Jameson raid as a subject of enquiry for the Committee.

A Radical has been elected Member of Parliament for Walthamstow, replacing Mr. E. W. Byrne, Q.C., a Tory, who has been appointed to a judgeship.

(FROM THE "TOKIO PAPERS.")

Paris, January 20.

The body of M. Rousseau arrived yesterday at Marseilles; it was conducted during the morning to the station, attended with the highest honours; all the civil and military authorities accompanied it. The funeral takes place at Paris on the 25th.

January 22.

The Italian Chamber is divided.
The Czar has reviewed the St. Petersburg garrison.

January 24.

France adheres to the sanitary conference which is to meet at Venice. She has interdicted the Mussulmans of Algeria, Tunis, and Senegal from making the pilgrimage to Mecca. The plague is extending to the environs of Bombay.

January 5.

The funeral of M. Rousseau took place at the Church of St. Sulpice with military honours, all the Ministers being present. A number of addresses were made, among them one by M. Lebon, who pronounced a eulogy on the deceased, as the victim of duty. The burial will take place at Finistère.

(FROM THE "SANGHAI MERCURY.")

Hongkong, Feb. 1.

The India Famine Fund has been started here under Government auspices. The Chief Justice has been appointed Chairman of the Fund.

The Singapore Municipality has voted a sum of \$100,000 as a memorial of Queen Victoria's record reign, and \$5,000 for festivities to be held in connection with the celebration. The Colonial Government contributes dollar for dollar with the amounts above named.

(FROM THE JAPANESE PAPERS.)

Kyoto, February 11.

H.I.H. Prince Arisugawa visits the Imperial Mausoleum every day.

Nara, February 11.

Marquis Ito came here from Kyoto last night and put up at the Taizan-ro.

Kobe, February 11.

Count Kabayama, Viscount Takashima, Marquis Nodzu, and Baron Ito left this port to-day for Yokohama by the *Yokohama Maru*.

Kanazawa, Feb. 11.

Miyawo Bunsho, an official in the Ishikawa Prefectural Bureau, has been arrested in connection with the Totori River works scandal.

Sakai, Hoki, Feb. 11.

Snow has accumulated here to a depth of nine feet and still continues.

Fuku, Feb. 11.

Snow is falling here every day.

Kagoshima, Feb. 11.

Snow fell last night and accumulated to a depth of one foot.

Nagasaki, Feb. 11.

The ceremony of formerly opening the Kiushiu-Okinawa Rengo-Kyoshin-kai (Kiushiu-Okinawa United Competitive Exhibition) took place to-day at the Koshinkan, Suwo Park.

According to a telegram from Shanghai, the Japanese man-of-war *Takao* will stay at Shanghai until March next.

CHESS.

All Communications to be addressed to the Chess Editor

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m.

Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

PROBLEM No. 287. By VON GOTTSCHALL.

WHITE.

White to play and mate in three moves.

PROBLEM No. 288. By T. D. CLARKE.

BLACK.

WHITE.

White to play and mate in two moves.

THE LATE MR. A. J. MACKENZIE.

The death is announced of Mr. Arthur J. Mackenzie, Kingstown, Jamaica, one of the finest and most prolific problem composers that ever lived. He was for many years editor of the chess column in the *Jamaica Gleaner*, until recently, when he lost his eyesight. Even after that misfortune he continued the composition of problems. His problems were published all over the world, and acknowledged as masterpieces of the art.

NEWS FROM BOSTON.

Our old friend, Professor W. E. Walz (well-known to our readers as the *Digamma* of this column), writes us from Cambridge, Mass.; and among other good things, he sends us score and notes of two games, in the recent Inter-collegiate match. For which, as indeed for all his favours past, present and future, we return him our best thanks.

The two games follow (Nos. 653 and 654), and are annotated by Messrs. E. E. Southard and A. W. Ryder, two of the players in the match.

GAME No. 653.

RUY LOPEZ.

WHITE.	BLACK.
Southard (Harvard).	Seymour (Princeton).
1—P to K 4	1—P to K 4
2—Kt to KB 3	2—Kt to QB 3
3—B to Kt 5	3—P to QR 3
4—B to R 4	4—Kt to KB 3
5—Castles	5—Kt takes P
6—P to Q 4	6—P to Q Kt 4
7—B to Kt 3	7—P to Q 4
8—P takes P	8—B to K 3
9—P to B 3	9—B to Q B 4
10—Q Kt to Q 2	10—Kt takes Kt

The usual continuation here is 10—B to B 2, Castles; 11—Q Kt to Q 2, Kt takes Kt; 12—Q takes Kt, etc.

11—Q takes Kt	11—Castles
12—Q to Q 3	12—Kt to K 2
13—B to Kt 5	13—B to B 4
14—Q to Q 2	14—P to Q B 3
15—P to QR 4	15—Q to Q 2
16—Kt to Q 4	16—Kt to Kt 3
17—B to K 3	17—Kt takes P

Black seeks to play deeply and, discovering a genuine flaw in White's 18—Kt takes P, Q takes Kt; 19—B takes P, etc., blunders himself into the loss of a piece.

18—Kt takes B	18—Q takes Kt
19—B takes B	19—Q to K 3
20—P to KB 4	20—Kt to B 5
21—B takes Kt	21—Kt P takes B
22—B takes R	22—K takes R
23—QR to K sq.	23—Q to Q 3
24—Q to QB 2	

Black's centre pawns must be dissolved.

25—P to Q Kt 3	24—K to Kt sq.
26—Q takes P	25—P takes P
27—Q to Q sq.	26—R to Kt sq.
28—Q to Q 3	27—P to R 3
29—R to Q sq.	28—R to R sq.
30—Q to Q 4	29—Q to R 6
31—P to B 4	30—Q to Q 3
32—P takes P	31—R to Q sq.
33—R to Kt sq.	32—P takes P
34—R to Kt 6	33—Q to Kt 3
	34—Resigns.

The exchange of Rooks is practically forced.

GAME No. 654.

QUEEN'S GAMBIT DECLINED.

WHITE.	BLACK.
Facker (Columbia).	Ryder (Harvard).
1—P to Q 4	1—P to Q 4
2—P to QB 4	2—P to R 3
3—Q Kt to B 3	3—Kt to B 3
4—B to Kt 5	4—Q Kt to Q 2
5—P takes P	

This exchange is not good. The continuation in the Facker (Columbia) v. Lehlbach (Yale) game was 5—P to K 4, P takes K P; 6—Kt takes P, B to K 2; 7—Kt to Q B 3, P to Q Kt 3, etc.

6—Kt takes P	5—P takes P
7—P to K 4	6—Kt takes Kt
8—P takes Kt	7—Q takes B
9—K to K 2	8—B to Kt 5 ch.
10—Kt to B 3	9—Castles
11—K to Q 3	10—R to K sq. ch.
	11—Kt to Kt 3

This move practically forces the exchange of Queens and saves Black with a winning end game.

12—Kt takes Q	12—B to B 4 ch.
13—Kt to K 4	13—B takes Kt ch.
14—K to K 3	

Best. If 14—K to K 2, B takes Kt P ch.; 15—K to Q 3, B to K 5 ch.; and then 16—K to K 2, B takes R ch.; 17—K to Q 3, B to K 5 ch.; 18—K to K 2, B takes P ch.; 19—K to Q 3, B to K 5 ch.; 20—K to K 2, B to B 7 ch.; 21—K to B 3, B takes Q ch.

15—K to K 2	15—B to B 7 ch.
16—K to B 3	16—B takes Q ch.

17—R takes B	17—Q R to Q sq.
18—B to B 4	18—Kt to B 3
19—P to KR 4	

He should save the Q P by B to Q 3.

20—P to QR 3	19—R to K 5
21—R to Q B sq.	20—K R takes P
22—P to Kt 3	21—B to K 4
23—R to Q Kt sq.	22—R to Q 7
24—K R to K B sq.	23—B to Kt 3
25—B to Kt 3	24—R to Q B 7

B to K 2 is no better, because of 16—Q R to Q 7; 16—K to Kt 2, B takes P; 17—K to R 3, B to Q 5.

25—R to Q 6 ch.

26—Resigns.

The *British Chess Magazine* says:—"Morphy revolutionised chess; Steinitz has remodelled it. Morphy brought life, and dash, and beauty into the game at a time when an age of dullness seemed about to set in, and he did this at a stroke; Steinitz has given it order, and method, and directness, at a time when these were beginning to be lost in the search for brilliancy. Morphy issued imperial edicts; Steinitz laboriously constructs Acts of Parliament, and carefully builds them up clause by clause. Morphy stood like a wizard and with one wave of his wand produced magical effects, one knows not how and hardly stops to enquire; Steinitz is the scientist in his laboratory and he shows us how he works and how he experiments. Morphy was at once the Cæsar and the Napoleon of chess. Like the former his motto was '*veni, vidi, vici*;' like the latter, he launched a fierce cavalry charge upon the ranks of his foe, and trusted to carry everything by a *coup de main*. Steinitz, on the other hand is the Wellington or the Von Moltke of chess. With the former he throws up his lines of Torres Vedras, and with the latter he has his plan of campaign carefully docketed and put away until occasion calls for it. It is scarcely fair, however, to institute comparisons between a chess champion for eight and twenty weeks and the champion of as many years. From 1866 to 1894, Steinitz was never beaten in a match, but defeated by overwhelming majorities every master of the day, while Paul Morphy's meteoric career was as brief as brilliant. In 1862, Anderssen told Steinitz he was no Morphy; in 1866, he placed him far above Morphy, a position also assigned to him by such critics as Burn and Tarrasch. His victor on the present occasion is a young man, and in chess it is specially true that 'youth will be served.'"

The Brooklyn Club is getting its representatives into shape for the coming cable chess match with England, which is arranged to take place on February 12th and 13th. A great amount of practice play has been indulged in by Pillsbury, Showalter, Barry, Hodges, Hymes, Delmar, and Helms, as these players have every reason to suppose that they will be included in the ten who are to do battle for the honour of their club and country. A tournament is being played at the British Chess Club for the purpose of giving practice to the English team. The rules to govern the match have all been arranged and are practically the same as those of last year, with the exception that the teams are to consist of ten players a side instead of eight. Only natives of the United States and of the United Kingdom of Great Britain and Ireland are eligible to play. The drawings for first move will be made by the British umpire in New York or by his deputy. The hours of play are from 10 a.m. to 2 p.m. and from 3 to 7 o'clock in the evening (New York time). Play will be stopped on Saturday at 6.30 o'clock, and all unfinished games adjudicated by Emanuel Lasker. Baron Albert de Rothschild of Vienna will act as referee. The time limit is twenty moves an hour, and the rules of the Hastings tournament will govern the contest. A substantial change, however, has been made in rule 6, which is now more stringent, reading as follows:—

"After play has commenced no consultation, reference to books or manuscripts, or analyzing of his game is permitted to any player during the progress of the match; nor may he lawfully, within said time, receive any instruction, advice, hint or suggestion, if given with the consent, express or implied, of the competing player, shall involve the penalty determined for the infraction of this rule. Any player may, however, be advised as to the state of the score of any game other than his own during the progress of the match without violation of this rule." The penalty for the infraction of this rule is that the game shall be scored against the player in default.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

It is certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Courton, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock.'"

Sold by all Chemists and Medicine Vendors the throughout World.
May 1st, 1895.

MILKMAID

BRAND

CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL" must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, FEB. 20TH, 1897.

BIRTH.

On February 13th, the wife of J. BICKART, of a son.

SUMMARY OF NEWS.

THE Indian Famine Relief Fund in Yokohama already totals more than \$5,500.

MR. KONO HIRONAKA, a leading member of the *Yiyu-iō*, seceded from the party on Monday.

THE Interport football match between Yokohama and Kobe takes place this afternoon.

T.I.H. PRINCESSES NARUHISA and Teruhisa proceeded to Hayama, Kanagawa Ken, on Monday.

THE Budget has passed the Lower House almost in the condition framed by the Government.

THE British Niger Expedition has arrived near Bida, defeating the Foulas' outposts with heavy loss.

A TEA and coffee concert given in the Public Hall on Monday under the auspices of the

Mosquito Yacht Club, proved a highly diverting affair.

THE Shinagawa Electric Light Company recently added *yen* 200,000 to its capital.

THE proposed departure of T.I.M. the Emperor and Empress to Kyoto, is postponed until April next.

SMALL-POX is very rife in Tokyo and Yokohama. Several foreigners have been attacked in both towns.

THE plague in Bombay is largely on the increase, and the famine in India is the worst known for a century past.

AN elderly German resident of Kobe poisoned himself last week, after writing to a friend that he "was tired of life."

THE fund subscribed in Yokohama for Miss Jacob, closed on Wednesday. Seventy-seven subscribers contributed \$2,500.

ACCORDING to statistics compiled by the Authorities, Formosa now possesses 2,464,915 inhabitants in 494,956 families.

POLICE-CONSTABLE NAKANISHI and others left the capital for Pingyang, Korea, on Wednesday to protect the Japanese residents there.

THE new buildings of the Water Police at the entrance to Yokohama Pier having been completed, the staff removed there on Friday last.

COUNT OKUMA made his maiden speech in the House of Representatives on Tuesday. He proved himself to be a parliamentary orator of exceptional ability.

FURTHER letters of withdrawal from Mr. J. F. Lowder have been published this week in connection with the late charge preferred by him against Miss Jacob.

AT the annual meeting of members of the Union Church, Yokohama, a deficit was reported. It was decided to make a special effort to free the Church from debt this year.

MARSHAL MARQUIS YAMAGATA, who came up to the capital to visit Baron Shirane at the hospital of the Imperial University, returned to Kyoto on Wednesday.

THE balmy weather of the early part of the week, was succeeded towards the close by colder conditions, producing cutting north winds, that raised clouds of dust.

THE prisoners who were released by special amnesty the other day have not all taken up honest callings. In most big towns the police force has been augmented in consequence.

THE King of Korea has formally consented to the exhumation and further mutilation of the bodies of the two Cabinet Ministers who were so cruelly done to death in the streets of Seoul last February.

A TELEGRAM received at the Foreign Office on Monday says that the new treaty between Brazil and Japan was exchanged at Paris on the 12th inst. between the representatives of both countries.

IN July, next the election of several members of the Upper House will take place. Owing to the large number of newly created Barons, the members of this section will be increased in the House by 25 or 30.

THE Yokohama Town Council have decided not to sanction the tramcar service proposed by Mr. Tomoda and others; nor the electric rail-

way promoted by Mr. Wada and others of this town, owing to the narrowness of the streets of Yokohama.

MR. NIYAMA, inspector, Mr. Ono, expert, and Mr. Ito, assistant inspector, of the Agricultural and Commercial Department, who have been ordered to Europe to buy horses for the Imperial stud, will leave in March next.

AFFAIRS in Crete are most serious. Greece has presented a note to the Powers stating that she cannot merely remain a spectator. A torpedo flotilla under the command of Prince George of Greece, and the whole Greek fleet have sailed for Crete.

DURING January, Kanagawa Kencho issued 86 passports to foreigners. Classified as to nationality, they were 47 British, 33 Americans, 4 French, 10 Germans, 4 Swiss, 3 Hollanders, 4 Spanish, 5 Norwegians, one Dane, and one Chinese.

ON Dec. 25th there was launched from the yard of Messrs. A. McMillan & Son, Dumbarton, the steel steamship *Fujisan Maru*; this vessel is 290 ft. by 38 ft. by 22 ft.; and 1,900 tons gross, built under Lloyd's special survey, and owned by Messrs. Mitsui and Co.

AT a conference of the Central Tea Business Association held on the 17th inst., the subject of a Government subsidy of *yen* 70,000, the estimated cost of opening a tea shop at the International Exhibition in Paris, was discussed. No conclusion was arrived at that day, and the matter will be decided at the ordinary meeting.

THE Marquis of Lansdowne, British Secretary of State for War, announces that it is intended to add two battalions to the Guards and one to the Cameron Highlanders, another to the Malta Artillery, and another to the West India Regiment, to increase the garrison artillery by 3,500 men, and to raise another field battery. Three battalions of the Guards are to be held available for service in the Mediterranean, and one battalion goes to Gibraltar this year. The above makes an increase in the British army of 7,385 men, and will increase the estimates by £98,400.

THERE is not much to be said about the Import trade, as no great animation as yet exhibits itself and there is still a good deal more talk than business. Textiles are much as last reported, while the looked-for improvement hangs fire, and though the wants of country buyers become daily more apparent there is no movement on the part of dealers for the interior. There is a little more doing in Metals, though not so much as might be expected considering the known wants to be supplied. There is only a moderate amount of business passing in Kerosene, buyers apparently waiting for a turn of prices in their favour. Sugar, both Brown and White sorts, remains fairly steady at late rates. The Silk trade is quiet, and what business has been done shows little alteration in values; the change, if any, indicating an inclination towards weakness on the part of holders. There is still a large quantity of Silk on this market, which will be augmented in due course by spring reelings. There is nothing doing in Waste, and nothing to indicate a revival of business in this line. The Tea trade is finished, and nothing is yet said about prospects for the new season. It will not be long, however, before the usual crop of canards makes its appearance in regard to the new leaf. Exchange has varied very little during the week, fractional changes having followed the slight fluctuations in the value of silver.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

A rumour, suddenly circulated in the latter days of the week, that the Government has well-nigh decided to adopt the gold monometallic standard, is gathering strength. Some papers go so far as to inform us that the Treasury has already issued instructions to the Osaka mint to make preparations for the change, and that a Bill embodying the necessary legislation will be placed before the Diet in a short time.

As yet, the question has received attention at the hands of only a limited number of vernacular papers, and even these have not yet pronounced final judgment. They seem to be a little at a loss what to say, the question being one of great importance and presenting great technical difficulties. What is noteworthy is that even the Opposition journals can not criticise the main idea, but are obliged to confine themselves to its secondary phases.

Whenever a vital question was propounded, writes the *Chuo*, in the course of the recent discussions of the Budget Committee, the Minister of Finance used to elude a definite answer by observing that he entertained certain ideas on the subject of finance, and that, as a temporary expedient, he wished the Budget to be passed. That much-paraded idea seems to have been the adoption of gold monometallism. Some of the consequences of the proposed change would be, first, a striking reduction in the market price of commodities, a result beneficial to possessors of fixed incomes, but markedly injurious to the agricultural classes; secondly, a reduction of the rate of interest; and thirdly, a crippling of Japan's export commerce, especially commerce with China. All these evils will incomparably outweigh the advantage of freedom from the trouble of exchange fluctuations, the sole benefit accruing from the adoption of the gold standard. Another question is how to obtain gold specie for the purposes of a reserve. Mr. Sakatani declares it sufficient to have 100 million *yen*, while Count Okuma is credited with the theory that the amount must not fall below 200 million *yen*. Whence can the latter sum be obtained?

Though desirous of having Japan's finance remodelled on the basis of gold monometallism, the *Tokyo Shimbun* can not see the propriety of employing the Indemnity as a gold reserve, instead of obtaining gold specie by the natural processes of commerce, seeing that the uses of the Indemnity are already determined. The adoption of the gold standard on such a precarious foundation must be considered entirely premature. It were better to contrive measures for floating a gold loan on the western market than to remodel the whole currency system as a mere expedient for tiding over temporary difficulties.

The *Nichi Nichi* also is of opinion that unless the scheme is well conceived and well-timed, it will produce grave economical troubles. Our contemporary does not seem inclined to believe that circumstances are at present in favour of the adoption of a gold standard. The *modus operandi* accredited to Count Matsukata may serve the purpose of a temporary expedient to help the Treasury, but will not fail to inflict heavy losses on the people, and in the long run must drain their purses. In short, the *Nichi Nichi* seems to believe that the change would be sudden, and that more mature reflection must be bestowed upon the problem before its final solution is attempted.

The *Kokumin* hails the rumour with unbounded satisfaction. It regards it as an indication that the Matsukata Cabinet has resolved to rouse itself from its torpid, do-nothing policy, and to undertake some worthy enterprise of importance, calculated to make a deep impression upon the nation, and to inspire the public with confidence. In another article,

published next day, our contemporary avows strong dissatisfaction with the present currency system of Japan, which it criticizes as condemning the country to economic ostracism. It dwells on the great disturbance that the national finances must suffer should the gold price of silver fall much lower, and on the increased difficulty that would then be experienced in putting the long-hoped-for currency reforms into operation. It considers the present a particularly favourable opportunity for carrying the scheme into practice, an opportunity not likely to recur; which view is evidently based on the fact that the country is now in possession of 100 million *yen* in gold specie, paid out by China. The only question is the method of operation, for unless that be astutely elaborated, the disturbance of the national economy may be serious and far-reaching.

In commenting on this project, the *Shogyo* wishes to remind its readers that though, by a majority of 6 to 1, the Monetary System Investigation Committee decided that no necessity existed at that time to effect a change in the standard of Japan's currency, they were unanimous as to the necessity of such a change whenever a suitable opportunity presented itself. Granted, then, that, from a theoretical point of view, public opinion is in favour of substituting gold monometallism for the present silver standard, the question of the moment is what process should the Matsukata Cabinet adopt in carrying out the scheme. Two programmes offer; namely, either to use the present one *yen* gold coin as the unit of currency, or to take as the unit a gold coin equivalent in value to one silver *yen*. Evidently the adoption of the former would lower the current market prices of commodities to one half of what they are now, and would bring disorder into the sphere of economy. Therefore the latter plan must of necessity be pursued. A gold coin corresponding in value to one *yen* of silver must be struck, and the present one *yen* gold coin must be considered the equivalent of two of the new gold units. Viewed from various standpoints, the adoption of the gold standard at present must be considered opportune.

The *Fiji* does not wonder at the corruption of Members of the House of Representatives, and thinks that, so long as parties are organized not on fixed principles but on personal relations the custom of "buying over" members will not be easily eradicated. The political dispute of the present day being merely a fight of individuals, and no serious differences of principle being involved, the only programme for a Government desirous of commanding a majority in the House is to take steps to conciliate the good-will of members. In every undertaking the main purpose is to achieve a maximum of success at a minimum of trouble and cost. Hence it is not strange that the Cabinet should adopt the easiest method of securing the support of members, namely, bribery, which is said to be the most efficacious and simplest weapon available. Considered from the point of view of *similia similibus*, it does not appear wrong to obtain the allegiance of members by bribery, seeing that the members themselves, in most cases, have obtained their seats in the House of Representatives by direct or indirect bribery of constituents. Any person that condemns the Government for "buying over" members must be dubbed an extremely rustic fellow!

Parties being devoid of fixed principles and partisans of constancy, it is not wonderful that bribery should be potent for bringing about secessions, especially when it is remembered that the members being mostly men of scanty resources, are peculiarly open to the persuasion of money. (We need hardly say that the *Fiji* writes sarcastically.)

One object lesson learned by a member of the staff of the *Nippon*, who proceeded to Kyoto on the occasion of the Empress Dowager's funeral, is the importance of rebuilding that

ancient capital, so that it may become better adapted for conducting such august ceremonies as coronations of Sovereigns and funerals of members of the Imperial Family. Ancient records show that the Palace in Kyoto was eleven times larger than it is now, when the administrative power was still in the hands of the Court, and that the streets of the city were also several times broader. The same records attest that the number of persons allowed to take part in a funeral of the kind lately solemnized was about one-fifth of the number present on the recent occasion. It is easy to conceive what serious inconvenience would be felt both in the Kyoto Palace and in the city if such an august ceremony as a coronation had to be held there, seeing how great was the embarrassment even at the funeral on the 8th instant. The Palace and the city must be rebuilt.

The *Fiji* doubts whether keeping aloof from the people really conduces to the dignity of the Court. When a Tokugawa *Shogun* died, the veto against musical and theatrical performances lasted for 50 days, whereas the period in the case of an Emperor was only 5 days. Certainly the longer period of prohibition did not conduce to the dignity of the Shogunate, neither does the briefer period seem to have detracted from that of the Court. On the contrary, the more the period is shortened out of consideration for the distress of poor people, the more will those people and the nation at large feel grateful for the generosity of the Court. In this context the action of certain local officials who enjoined upon professionals the duty of observing the same period as that prescribed in the case of ordinary non-professional folks, is criticized as entirely extravagant. Instead of augmenting the dignity of the Court, such a step rather impaired it.

The liberation of convicts, against which the *Mainichi* protested, has naturally evoked another article from the same paper now that about 15,000 prisoners have been set free throughout the empire. When the Cabinet took the step protested against by the *Mainichi*, they must have had in mind some sufficient measures for providing against any disturbance of the peace. But the apparent fact that cases of incendiarism and burglary seem to have suddenly increased since the liberation of the convicts, makes the *Mainichi* doubtful whether any thought was taken beforehand to avert such contingencies. Our contemporary, as usual, wants to know how the Cabinet proposes to explain such a failure of duty.

The *Nichi Nichi* and the *Sekai no Nippon* urge Count Okuma to give clear answers to questions propounded by Mr. Suzuki Jyubi and Mr. Inouye Kakugoro in the House of Representatives, with reference to the existence of a convention between Japan and Russia about Korean affairs, and also with reference to the carriage-whip incident. These two Opposition papers are constrained to write on the above subjects because they learn that Count Okuma will personally address the House of Representatives, but with closed doors. Such secrecy is considered mischievous by these papers, inasmuch as it will rouse the suspicion of other Powers. Moreover, the question about the existence of a convention between the two States is not so grave as to preclude public discussion. Even a Treaty of alliance is published unhesitatingly by European diplomatists, and how can it be necessary that a secret session should be held to offer an explanation about a mere convention. The idea is entirely unworthy of Count Okuma.

The *Fiji* declares that the members of Parliament who advocate the reduction of the Foreign Office's Secret Service Fund from 80,000 *yen* to 60,000, are politicians that do not scruple to sacrifice national interests on the altar of personal enmity. The retrenchment is moreover entirely inconsistent and indefensible, when it is remembered that the same Budget Committee has approved the establishment of additional

Legations and Consulates. One object alone was contemplated in cutting down the appropriation, namely, the persecution of Count Okuma. That kind of thing is entirely inadvisable in affairs of State, especially at a time when the foreign policy of Japan must be expanded in conformity with the increase of her national influence.

The *Nichi Nichi* tries to discredit Count Matsukata's financial ability in connection with his original proposal to cut down the appropriations in the form of continuing expenditures for expanding the telephone service and improving Government railways, two of the most profitable enterprises that the State can undertake.

The *Mainichi* is opposed to the amendment of Article II., of the Civil Code, as projected by Messrs. Motoda Hajime, Otake Kwanichi, and others who have introduced a Bill in that sense in the House of Representatives. The amendment is that the wording of the article should be altered from, "The subjects or citizens of Foreign States shall enjoy personal rights in Japan except in cases specially forbidden by law or Treaty," to "The subjects or citizens of Foreign States shall enjoy personal rights in Japan only in cases specially provided by law or Treaty." The *Mainichi* protests against this amendment, because first, in such matter as the enjoyment of personal rights, no discrimination should be made between foreigners and Japanese; secondly, because foreigners are already precluded from enjoying certain personal rights; and thirdly, because the scope of such rights may be restricted by law. In short, the proposal is criticized as savouring of the old spirit of seclusion and the expulsion of foreigners.

EDITORIAL NOTES.

THE KOBE TEAM.

"W.G." writing in the *Kobe Herald*, says.—The following have been finally selected to represent this port in the forthcoming Interport Football Match to be played in Yokohama on the 20th inst.—F. L. Marshall, goal; W. Braess and C. H. Lightfoot, backs; Abell, Kerr, and Meek, half backs; Bethell and Taverner right wing; Hutton, centre; Wilkinson and Summers, left wing. This team should give the Northern Port a good game, but it is weak in many points; for instance there is at present a lack of combination in the forward division. The right wing, Bethell and Taverner, both work hard, but are apt to get too close to one another. Hutton is a good centre and always keeps his place; he is, however, a little prone when in front of goal to dwell too long on the ball before putting his shot in. Wilkinson at left wing is as dangerous as ever, and is well supported by Summers. The strongest part of the team is undoubtedly to be found in the back division, all of whom, with one exception, are old interport players.

FOOTBALL.

The football match on Saturday afternoon proved a great disappointment. In the first place the sides were entirely different from those announced in Thursday's paper, and the game was to that extent robbed of some of its anticipated features. The combination shown on either side was very poor, and at no time was any decent passing indulged in. Individual play may seem to some youngsters as redounding to their own particular glory, but in this they are greatly mistaken. Combination is the most essential characteristic of football, and unless the local eleven that will represent Yokohama on Saturday next can acquire some cohesion and display it on the field the hopes of holding our own against the Southern port are very small.

BRITISH SOUTH AFRICAN COMPANY.

A LONDON letter writer in the *Daily World* of Vancouver, thus refers to a recent matter debated in the House of Commons:—Although Parliament has adopted the Colonial Secretary's (Mr. Chamberlain) motion for the reappoint-

ment of a commission to enquire into the affairs of the British South Africa Company, the debate preceding the vote showed clearly that a strong feeling prevails in influential quarters regarding any investigation of South African matters. It is also proved that Mr. Cecil Rhodes and the British South Africa Company are not without strong friends in Parliament. Mr. McLean, who offered an amendment to the motion which would have taken the heart out of it, is proprietor of the *Western Mail*, one of the most influential papers in Wales, and the attempt to head off an investigation of the affairs of the Chartered Company had the support of other newspapers throughout the Kingdom. There is no denying the fact that if the commission attempts to probe too deep into the company's affairs, persons in high society and political life will be hurt, and that is the reason, in the opinion of many persons, why the proposed investigation will prove a farce.

A KOBE FORGER ARRESTED.

AFTER nearly five years' service with Messrs. W. M. Strachan & Co., at Kobe the head office-boy, the *Hogo News* announces, has unfortunately taken to evil courses, and he capped his achievements by attempting to cash a forged cheque for \$70. The cashier at the H. & S. Bank noticed something unusual in the purported signature of Mr. A. L. Robinson, and the young reprobate presenting the cheque then sought to make himself scarce but was followed up, captured, and handed over to the police. His father is a member of the Municipal police force, and was actually present when the prisoner was brought in. The unhappy boy had a second forged cheque in his possession and later on he confessed to having abstracted two other forms from the same book, which he had burnt. He was handed over to the Japanese authorities and will have to stand his trial. He has hitherto borne a good character with his employers, although somewhat irregular in his conduct out of business hours.

NEW SUBMARINE CABLES.

THE Glen line steamship *Glenfarg*, Captain Selby, says the Nagasaki journal, has completed the landing of the submarine cables recently brought over to the order of Messrs. Sale & Co. of Yokohama, and the Mitsui Bussan Kaisha, for the Japanese Government. Messrs. Sale & Co.'s consignment was settled in the tank at Nishidomari on Sunday morning but will have to be submerged in water for 24 hours and then tested before it will be accepted; the same process has also to be gone through by the smaller lot consigned to the Japanese firm. We understand that about 130 nautical miles of cable for Messrs. Sale & Co., and 25 for the Mitsui Bussan Kaisha were the quantities unloaded, or about 175 statute miles of small, intermediate, and large sized cables. The immense tanks in which they were coiled in the *Glenfarg's* hold will have to be taken to pieces and put ashore before the vessel proceeds on her trip north.

THE PHILIPPINE REBELLION.

MANILA papers received by the *China Mail* speak hopefully of the speedy pacification of the Philippines. The rebels have suffered defeat at various points, are now thoroughly demoralised in some provinces, and are taking advantage of the amnesty extended by General Polavieja. On the 23rd January, fifteen women presented themselves to the Civil Governor of Manila for pardon, declaring that they had belonged to the masonry league (secret society). These women, mostly young, belong to the well-to-do class amongst the natives. They gave up the aprons and other paraphernalia pertaining to the society, which is said to be the only society of the kind for women in the country. Another execution took place at Manila on the 25th January. Two tide-waiters named Marcelo Eugurea and Eugenio de los Reyes Herrera, and a customs policeman named Valentin Lagasca Cruz, were executed.

THE "CINDERELLA" PERFORMANCE.

THE Treasurer of the "Cinderella" performance, given at the Public Hall on the 11th inst., for

the benefit of the Convent and the Public Hall, has pleasure in reporting the result. The gross proceeds (for tickets and donations) was \$730. From this must be deducted rent of Hall, \$50; Messrs. Kelly and Walsh, \$7.75; sundry bills as per vouchers, \$28.15—\$85.90. This leaves a net balance of \$644.10; of which \$483.07 has been handed to the Convent, and a quarter (or \$161.03) to the Hon. Secretary of the Public Hall. The Superioress of the Convent of the Holy Infant Jesus returns her thanks to all who took part, or who attended, the performance.

COMPETITION.

THE *American Silk Journal* says:—It is suggested to the *Journal* that it should be our endeavour to interest people and invite an exchange of views throughout our columns on the subject of Oriental competition—how to keep out the encroaching Japanese; or, at least, to equalize competition with Japan. There is very little chance for the home manufacturer in the department of light-weight fabrics, especially of goods woven in the gum. We have been shown specimens of louisines, which for two years past have been manufactured of a good honest quality, seventy-two to eighty picks, at from 65½ to 65 cents. Recently there appeared on the market some Japanese imitations, of very light weight, but with 140 picks and in close hair-lines, which were offered at 35 cents. It is very difficult to make successful headway against competition like this.

"THE CHRONICLE AND DIRECTORY."

WITH admirable promptness the "Chronicle and Directory" (of China, Japan, Straits Settlements, Indo-China, Philippines, etc.), published by the *Hongkong Daily Press*, is already to hand. Year by year this admirable publication increases in size and completeness, and the present volume we notice takes in the Dutch East Indies. Considering the enormous district covered, the local directories are pardonably free from error, while the general information, the full text of treaties concluded by China, Japan, Siam, etc., with other countries, are invaluable to the busy man who has not time to turn to the miscellaneous publications wherein these things are usually found.

THE SUDDEN DEATH IN KOBE.

THE *Kobe Herald* says that Mr. Bernhardt's death was intentional and due to poison. The deceased was formerly constable of H.I.G.M.'s Consulate at Kobe. The same journal understands that the unfortunate man left a note saying that he was tired of life and had made up his mind to terminate it. It will be remembered that Mr. Bernhardt attempted to take his life some months ago by shooting himself.

ACCIDENT ON THE "NARCISSUS."

THE Nagasaki *Shipping List* says that when the *Narcissus* was shipping her anchor as she was about to leave Chemulpo on the 7th inst. a block broke and the rope flew back with terrific force, seriously injuring an able seaman named Vardigan, breaking two of his ribs, by which his lung was lacerated; and at the same time finishing a scalp wound on Lieutenant Gaunt.

"CHRONICLE" SHEET DIRECTORY.

WE have to acknowledge with thanks receipt from the *Kobe Chronicle*, Kobe, of the Sheet Directory published at that office. It gives a complete list of all the firms and residents in Kobe and Osaka, beside a map of the former Settlement. It will be found very handy in a business office.

THE MISS JACOB FUND.

THIS fund closed with 77 subscribers on Wednesday evening, the amount contributed being \$2,500. This will be handed by Mr. F. S. James, the Treasurer, to Miss Jacob at once.

CHESS.

WE notice an error in Problem 288 published in our Chess-column of Saturday the 13th inst. The Knight next the Black King should be a Black Knight and not White as printed.

GOLD MONOMETALLISM.

The information supplied by vernacular papers with reference to the rumoured adoption of gold monometallism in Japan is lacking in precision and uniformity. The *Nippon* says that the introduction of the gold standard has long been a favourite idea with the majority of the Treasury officials, and that the same opinion was entertained by the majority of the Monetary System Investigation Committee—whose work came to a conclusion last year, and was noted in these columns at the time. The Treasury has never abandoned its consideration of the problem: it has merely been waiting for a suitable opportunity to carry the scheme into practice. The result of the Japan-China war, the reception of a large sum in gold, by way of indemnity from China, and several grave inconveniences attending the present currency system in connection with *post-bellum* measures, are held to constitute a unique occasion for the practical inception of the scheme. Representations in that sense were made when the last Cabinet was in power, but Marquis Ito and his colleagues showed little zeal about the matter, and, moreover, the project then seemed more or less premature. It is now held that matters have changed largely in favour of the scheme. Count Matsukata is one of the most earnest gold monometallists in Japan, and the idea that the adoption of the gold unit would considerably facilitate the sale of Japanese bonds in Europe and America, has begun to acquire more and more strength, especially in view of the necessity of obtaining funds to carry out the *post-bellum* measures and the difficulty of procuring them in the home market. Of course no definite programme has yet been elaborated for carrying the scheme into practice. According to one authority, the free coinage of silver is to be stopped; the gold coins hitherto in circulation are to be re-minted, so that the ratio of 1 of gold to 32 of silver may be attained; convertible notes will become redeemable with either gold or silver; the silver coins now in circulation, aggregating about 60 million *yen*, will not be withdrawn, but will be allowed to circulate side by side with gold coins, as is the case in America and France; and the 80 million *yen* worth of gold specie now in the vaults of the *Nippon Ginko*, will serve as the nucleus of the reserve required for the operation.

The *Kokumin* also states that the ratio between gold and silver will be fixed at 1 to 32, and that one *yen* in the new gold currency will be the equivalent of 2 *yen* in silver. That will, of course, involve re-coinage of the gold now in circulation. There will be no one-*yen* gold piece: the smallest denomination will be the equivalent of 2 silver *yen* and will be marked "two *yen*," a method which will obviously make one silver *yen* the unit. There is also talk of not having any gold coin smaller than a five-*yen* piece, but whether five gold *yen* or a five silver *yen*, we do not discover. It is obvious that if recoinage be inevitable, the comparatively small quantity of gold coins in circulation can be manipulated more easily than the silver. In the *Shogyo Shimpō* we read that, as a one-*yen*, or a two-*yen*, gold piece would be inconveniently small, the lowest denomination will be five *yen*, or about an English half-sovereign. The same paper predicts

that a Bill on the subject will be submitted to the Diet during the present month.

Mr. Sakatani, an accountant of the Department of Finance, is one of the most ardent gold monometallists. His opinion as to the manner of carrying out the scheme is worth quoting, for in Japan he has the reputation of being well versed in the subject. The Monetary System Investigation Committee's Report contains a synopsis of his views, which he submitted in his capacity of a member of the Committee. Here is his project:—

1. A weight of 2.2222 *fun* of gold of 900 fineness shall be determined as the unit of Japanese currency and shall be called a *yen*.
2. In the new gold coinage, the only coin shall be a twenty-*yen* piece, weighing 4.4442 *momme*, and its design shall be commemorative of the war with China.
3. The minting of all gold coins other than the above shall be stopped, and those already in circulation shall be called in and re-coined.
4. The gold coins now in circulation shall be exchangeable at the rate of one gold *yen* for two silver *yen*.
5. The coinage of one-*yen* silver pieces to private order shall be stopped.
6. When such a course seems necessary, the Government shall be competent to coin one-*yen* silver pieces within certain limits.
7. The silver *yen* already in circulation shall be legal tender to an unlimited extent at the fixed ratio to gold.
8. Convertible notes, or bank notes, shall be redeemable with either gold or silver.
9. The *Nippon Ginko* shall direct its efforts to withdrawing the gold coins now in circulation.
10. The *Nippon Ginko* shall take steps to change the silver bullion now kept in its vaults for gold.
11. Prior to the enforcement of the new Currency System, a gold reserve of at least 100 million *yen* in new coins should be accumulated.
12. The Currency Regulations, Convertible Note Regulations, and so forth now in force shall be amended in the above sense.

Mr. Sakatani comments thus on the above. "The present unit of the gold coinage is too high in comparison with the scale of living in Japan. It must be lowered. Probably a reduction by fifty per cent. would be suitable, for not only would that facilitate the operation of changing the silver *yen* against gold, but it would also be convenient in converting Japanese currency into American dollars, English pounds, or French 5-francs. On the other hand, no gold coins of smaller denomination than twenty *yen* should be struck, experience having shown that to be the only denomination required for business transactions. Silver subsidiary coins should be legal tender up to twenty *yen*. The necessity of entrusting to the Government power to coin silver *yen* is evident in view of commercial transactions with China, Korea, the Straits Settlements, and the South Sea. The continued circulation of silver *yen* would not interfere with the gold monometallic system, as is proved by the case of France and America, whereas the withdrawal of the coin would involve the necessity of accumulating a large stock of gold as a basis. The convertible notes or bank notes should be made redeemable with either gold or silver, but the latter should be used as much as possible for domestic purposes, or even for payments abroad, so that the exodus of gold may be prevented. That is the practice now carried out in Italy, Holland, and France, the last country even levying a certain per centage for exchanging notes against gold.

It will be evident at once that these plans are not matured, and that many details have still to be supplied. Briefly stated, the idea—so far as we can see—is not to disturb the present silver currency at all, or to restrict its uses,

but merely to fix its ratio to gold, and to make a gold *yen* the unit instead of a silver *yen*. The weight of metal in the new gold coins would then be regulated so that the hundred-*yen*-silver consolidated Bonds, for example, would become fifty-*yen*-gold Bonds, and every paper *yen* or silver *yen* now in circulation would be equivalent to fifty *sen* in gold. The silver price of a commodity in Japan would, under such a system, be at once quotable in gold for the purposes of European and American markets, simply by dividing the figure by 2. Further, silver would remain legal tender to an unlimited extent, but whether that means optional tender or forced tender, we do not learn. If the latter, then the scheme becomes practically impossible, for to say that fifty-*yen*-gold securities have a gold basis when their holder is liable to be obliged to accept silver for them, would be an obvious contradiction. Of course, all securities guaranteed by the Japanese Government can be converted at any moment into gold securities by a stroke of the pen. All that need be done is for the Japanese Treasury to declare that such securities shall be redeemable in gold at a fixed ratio. No recourse to gold monometallism is needed to attain that object. But the ratio—therein lies the whole difficulty. Japanese financiers propose, if we understand the above programme, to fix the ratio at 32 to 1. But do they imagine that any advantage will accrue to them by that measure? Do they not see that to offer to foreign capitalists a security the sterling value of which is to be always calculated at a fixed ratio, would be to take all the risks of exchange on their own shoulders? Thirty-two to one is about the ratio now connecting the precious metals, and European capitalists would doubtless be quite ready to buy Japanese bonds on a guarantee from the Japanese Government that they should be redeemable at that ratio for all time, since even though the gold price of silver fell still more, the holders of the bonds would be safe. But the Japanese Treasury can accomplish that object at once without putting the country's currency on a gold basis. They have only to declare that the sterling value of their bonds is so and so much—a figure calculated at the rate now ruling;—that the five-per-cent. interest will be paid in gold, and that the bonds, when they mature, will be redeemed in gold at the value now fixed. That would be precisely the same as floating a gold loan in Europe, a process that will unlock western strong rooms to Japan at any moment. These comments touch the fringe of the subject only, but to discuss it seriously seems unnecessary until we can be sure that the project is really entertained, and until we have some accurate information as to the details of the programme contemplated. It is enough to say here that, if Japan expects to keep silver and gold circulating simultaneously at a fixed ratio within her borders, while the price of the metals in terms of each other is constantly fluctuating elsewhere, she is setting her hand to a task that has hitherto baffled the strength of financiers in all lands and at all eras.

A conference of the Central Tea Business Association took place at the Sankaido, Akasaka, on Tuesday morning, Mr. Otani Kahoi being in the chair. In the afternoon the committee assembled at the residence of Mr. Mayeda Masana and discussed the question of a Government subsidy to the Association.

THE GOVERNMENT AND THE DIET.

The success that the present Cabinet is obtaining in the Diet must be pronounced as remarkable as it was unexpected until quite recently. When Count Matsukata undertook the duty of forming a Ministry, and when Count Okuma's consent to accept the portfolio of Foreign Affairs was definitely announced, the universal belief was that the Government would find itself confronted by a large hostile majority in the Lower House, and that, not the Budget only, but every official measure would meet with a very warm reception. There was then good reason for such a belief. The Liberals and the National Unionists were understood to be pledged to a policy of mutual support, and as the two parties counted 136, exclusive of a considerable measure of support that would certainly accrue from the Independents, they plainly had a considerable plurality in the House. No forecast seemed too gloomy under such circumstances. But when the tie that bound together the Liberals and the Unionists was subjected to the strain of practice, it snapped. A large section of the Unionists seceded, rather than consent to be tied to the Liberal car. These recalcitrants certainly had some reason on their side, for a hard and fast alliance with the Liberals could not be reconciled with the independent manifesto issued by the Unionists only a few weeks previously. Quite unaccountable, on the other hand—that is to say, unaccountable from the point of view of outsiders—was the sudden tendency to disintegration displayed by the Liberals themselves. One by one they fell away until, from having been far the most powerful political association in the country, the *Fuyu-to* found itself in possession of not more than 85 votes in the House. The ostensible reason of this crumbling process was internal dispute—the difficulty of reconciling some of the members to the prominence enjoyed by the Tosa section under Count Itagaki. Considering that Count Itagaki is the father of the Party, that he formed it, and controlled it with excellent judgment and adroitness during a space of some eighteen years, the notion that any of the members should now think of breaking away from him, is revolting to all conceptions of honest loyalty and wise discipline. The facts, however, are not to be gainsaid. They were most forcibly illustrated in the debate on the Budget, when the House, by a vote of 151 against 90, rejected the petty reduction suggested by the Budget Committee, and restored the Government's figures in their entirety. No Budget ever before met with such a reception at the hands of a Japanese House of Representatives. It is still possible, of course, that difficulties may be raised with reference to the Extraordinary Revenue, and the Public Enterprises Loan. But as that most important question provoked no serious opposition even from the Budget Committee, it runs only an infinitesimally small risk of a hostile vote in the House. We seem likely to be treated to the unprecedented spectacle of a Budget's passage through the Diet without so much as a *sen* of reduction or rescission.

A GROWL AT MEDICAL MEN.

The *Mainichi Shimbun* has published a bitter note satirizing the medical practitioners of Tokyo. The article grew out of a recent discussion on the subject of the vaccination fees charged in the capital, which, owing to the rapid spread of a most virulent form of small-pox, and the publication of the compulsory vaccination ordinance, have of late proved an exceptionally remunerative source of income to all medical men in Tokyo. It is estimated that cases of small-pox in the capital at one time aggregated 200 per diem. But 'tis an ill wind that blows nobody any good, and the citizens' calamity was a god-send to many a struggling physician. At a meeting of medical men held on the 29th ult., it was resolved that the minimum vaccination fee for each person should be 20 *sen*; while vaccination undertaken at the request of a corporation, business house, or ward office should be 10 *sen per caput*. The fee for vaccination undertaken by the hour was fixed at 5 *yen* per 3 hours, and 1½ *yen* for every additional hour. Now, says the *Mainichi*, if we reckon temporary sojourners in the capital with its resident population, there must at least be 1½ million souls in Tokyo, and if one million apply to be vaccinated, fees, estimated on an average at 10 *sen*, will total 100,000 *yen*, which would go into the pockets of a little over 5,000 licensed doctors in Tokyo within the short space of a month or so. How much does vaccine cost the medical practitioner? Only five *sen* per tube, which suffices for five persons, though some are skillful enough to make it do for eight and even ten persons; anyhow the cost of vaccine per person is not more than one *sen*. To this must be added the cost of a vaccination certificate given to each applicant; this may be as much as 1½ *sen*. Hence, the actual outlay in vaccinating one person is 1.12 *sen*. How marvellously applicable to vaccination is the current proverb, *Kusuri kusobai* (medicine costs nine-fold). Yet we are told that the medical faculty are ever swayed by benevolence! What would Jenner, the great benefactor of mankind, think of these Tokyo doctors? When the Water-pipe scandal was discovered, several Tokyo barristers of a public-spirited disposition offered their services gratis, though it was evident that the City Office was not in any way embarrassed for want of funds. But now that a compulsory vaccination notification has been issued by the Police Board and the Local Office, obliging even the poorest persons to undergo vaccination, the Tokyo Physicians' Association decides to exact a fee ten to twenty times above cost! The physicians are apparently resolved to stand by their decision. Displeased at their exorbitant fees, the Headman of Kanda Ward intended to dispense with the services of practitioners living in that section of the city, and tried to obtain the help of those living in other sections of the city. But in every quarter his appeal was positively rejected.

The *Yomiuri* has some strong remarks on this topic. It says that, whereas the vaccination fee was only 5 *sen* when vaccine was sold at 25 *sen* per tube, yet now the fee has been suddenly raised to 10 or 20 *sen* while the same quantity of vaccine is obtainable for 5 *sen*. Is not this a case where the Central Sanitary Association and the Sanitary Bureau of the

Home Department should interfere and forbid the arbitrary action of the Tokyo practitioners? So long as such a fee is allowed to be exacted, no compulsory vaccination notification will have practical effect, says the *Yomiuri*. It is as if one should command a cripple to stand upright.

FOREIGN COURTS AND JAPANESE MOURNING.

The question as to whether the Powers of Europe and America having treaties with Japan, should observe mourning for the late Empress Dowager, has caused a good deal of editorial writing in the Tokyo papers. The *Asahi* remarks that the close ties of consanguinity now existing between the various crowned heads of Europe, make it a mere matter of course that each should observe mourning upon a death occurring in any of the Royal or Imperial families. In Japan, however, this system of international etiquette has yet to be evolved, for it was only during the last Cabinet's tenure of office that the Japanese Court, out of deference to certain Powers who were in mourning, publicly sent messages of condolence and set apart certain days for Court mourning. This was not the result of any formal arrangement with these Powers, but simply as a mark of sympathy. It is felt that the time has now arrived when something definite should be agreed upon in the matter. With that view, therefore, a Tokyo contemporary avers that the Government opened negotiations with various Powers, and as a result one replied that the matter could be arranged after a conference with all the Powers; while another said that its Court would observe mourning upon receipt of a despatch under the Emperor's hand and seal, informing them of the death of the Empress Dowager, a telegraphic message not being sufficiently definite. These replies have encouraged the Government to persevere in the negotiations so that a satisfactory precedent can be inaugurated. The *Asahi* ridicules the suggestion of some writers that the matter should form the subject of a question in the Diet, and warns them against making it a political topic. From telegrams appearing in the vernacular papers, we learn that Spain observed Court mourning for the death of the Empress Dowager.

THE MITSUI BANK.

The Mitsui Bank (Mitsui Ginko), having announced its intention of taking foreign business, our readers will be interested by some details of its history and organization. It is the oldest banking establishment in Japan, having grown out of the exchanges established by the firm in Kyoto, Osaka, and Yedo (now Tokyo) over two hundred years ago. It is a partnership undertaking, owned by the heads of the five branches of the Mitsui Family, who assume unlimited liability for all its affairs. The Bank's career has been one of uninterrupted prosperity. At the period of the *Meiji* Restoration, when the national finances were in an embarrassed and confused condition, the Bank was able to render such signal services to the State that the chief representative of the family, Mr. Mitsui Hachiroemon, has been honoured with a patent of nobility by the Emperor—an appropriate distinction, not

alone as a national recognition of merit, but also because the Mitsui were originally of the banneret class. There is certainly no bank in Japan more widely known or thoroughly trusted, and we are not surprised to learn from the latest financial statement that the sums deposited with the Bank aggregate 24½ million yen, against a paid-up capital of 2 millions, and a reserve fund of one million eight hundred thousand. The Bank seems to transact all kinds of legitimate business, including the purchase and sale of bonds and stocks, a class of transaction likely to assume considerable importance for foreigners by-and-by. Many foreigners already bank with the Mitsui, though the fact does not appear to be widely known. It offers special facilities. Customs dues, for example, may be paid with its cheques, instead of cash, and its numerous branches throughout the country enable payments to be conveniently made and received by foreigners doing business with Japanese. Some years ago, we published a brief account of the origin of the Mitsui Family, and of the very extended field of its business operations. We observe that it has now issued a pretty hand-book, in the latest style of such volumes, illustrated with platinotypes, and containing full particulars of the Mitsui enterprises, the Bank, the Land Department, the Busan Kaisha, the Mining Department, the Dry Goods Department—known under the famous name of "Yechigoya"—and the Industrial and Engineering Department, which includes large engineering works at Shibaura, and six silk factories. The rates of interest allowed by the Bank are very tempting, namely:—

On current account, 12 1/2% per 100 yrs of	4 3/8 % per annum.
daily balance,.....	6 % per annum.
On fixed deposits for 24 months.....	5 3/4 % per annum.
On fixed deposits for 6 months.....	5 1/2 % per annum.
On fixed deposits for 3 months.....	5 % per annum.

THE CAREW CASE.

We have received a letter with reference to Dr. Divers' evidence at the Carew trial and his subsequent utterances in the press, but we can not see that any good purpose will be served by re-opening this subject. There does not appear to be much more to say, unless some technical expert should happen to come forward with fresh testimony. We do not think that the evidence was at all sufficient to warrant a verdict of guilty, or that such a verdict would have been rendered on such evidence in England. Some of our critics profess to be shocked at our attitude, imagining that they detect in it an attempt to discredit the administration of British justice in Japan. That line of argument—or rather of invective—is really too silly. Had Englishmen always been restrained by such reverent tenderness for the working of established institutions, they would not have the good reason that they now have to be proud of their Courts of Law and their Judiciary. Nothing is more contemptible, in our opinion, than the spurious patriotism that renders some folks bitterly intolerant of all criticism directed against anything British. It will generally be observed that these same folks are themselves conspicuously prone to criticise everything that is not British, but if the tables are turned for an instant, then indeed the rash commentator is cried down as a renegade and buried under an avalanche of obloquy. Nothing more un-English can be conceived. It is essentially a British habit to speak one's mind openly,

and it is essentially a British privilege to receive a fair hearing. Still more, if an Englishman thinks that a woman has been condemned unjustly, he would be a miserable craven, unworthy of his nationality, did he refrain from uttering a protest. We do not think that it has been our custom to shrink from speaking our mind freely in these columns, and it certainly is not our intention to cultivate any such custom hereafter, possessing, as we do, absolute confidence that every Anglo-Saxon whose esteem is worth seeking, desires to hear all questions discussed on their merits, not sheltered from scrutiny under the foolish pretext that whatever is British must be immaculate, or must, at any rate, be upheld as immaculate.

CRIME AND EDUCATION.

Mr. Ishii Ian has contributed an essay to the *Yomiuri* about the relation between crime and education in Japan. He holds that education tends to lessen crime, and the figures he gives are intended to prove that doctrine. The result of his researches into cases of capital offences between 1882 and 1895 is as follows:—

	1882.	1883.	1884.	1885.	
	Lite. rate.	Illite. rate.	L. II.	L. II.	L. II.
Males.....	55	54	82	74	115
Females...	2	8	3	18	8
Totals.....	57	62	85	92	123
	1886.	1887.	1888.	1889.	Total of 7 years.
	L. II.	L. II.	L. II.	L. II.	L. II.
Males.....	198	243	176	149	175
Females...	8	74	6	40	6
Totals...	206	317	182	189	181
	1890.	1891.	1892.	1893.	1894.
	L. II.	L. II.	L. II.	L. II.	L. II.
Males.....	138	82	180	151	154
Females...	4	55	10	75	19
Totals...	142	137	190	226	173
	1895.	1896.	1897.	1898.	Total of 7 years.
	L. II.	L. II.	L. II.	L. II.	L. II.
Males.....	189	164	184	145	206
Females..	10	68	15	95	16
Totals...	199	232	199	240	222

Relative increase or decrease during the second period of 7 years as compared with the first:—

	1882-1888.	1889-1895.
Males ..	268	32
Females ..	37	213
Totals ..	305	255

The schedule given by the essayist is subdivided into 23 headings, distinguished according to crimes; as murder, burglary with force, incendiarism, and so forth. Male criminals, he explains, increase in number, cases of incendiarism excepted, and the increase is marked in the case of those that have received education. On the other hand, the number of female offenders shows an increase on the side of the illiterate, from which it may be inferred that the effect of education on crime varies according to sex. Differentiated according to the nature of the crime in each sex, it is found that murderous assaults on parents, burglaries culminating in murder, and incendiarism are generally more common among the illiterate than among the educated. But irrespective of the progress or otherwise of education, offences such as forgery of coin and documents, swindling, and so forth naturally increase with the general advance of the time. Crimes against seniors in the family, as parents, parents-in-law, and so forth, during the first seven years, totalled 49 and 4

in the educated male and female sex respectively, the corresponding figures in the illiterate section being 37 and 3. During the second period of 7 years, the educated criminals of this class were 55 males and 2 females, and the uneducated, 38 males and 9 females. However, if the following figures relating to offences against seniors in the family, to burglaries and to incendiarisms, during the two periods, be compared, it will be seen that the progress of education is not followed by any increase of crime:—

	1882-1888.	1889-1895.
Crimes against family superiors.		
Male. Female.	Male. Female.	
First Period	49..... 4.....	37..... 3
Burglary with Murder.		
First Period	186..... 7.....	173..... 3
Incendiarism.		
First Period	268..... 13.....	365..... 114
Crimes against family superiors.		
Male. Female.	Male. Female.	
Second Period	55..... 2.....	38..... 9
Burglary with Murder.		
Second Period	192..... 4.....	136..... 7
Incendiarism.		
Second Period	387..... 20.....	504..... 228

Even granting, as some criminologists maintain, that the foregoing figures may be construed as indicating that the advance of education is accompanied by an increase of crime, considerable allowance must be made for the fact that the distinction of literate and illiterate is very broad, and that persons barely able to write their own names are included in the former class. The essayist is of opinion that the rate of educational progress must be investigated, and its ratio to the increase of educated criminals carefully compared. He falls back on educational statistics giving the number of attendants from 1873 to 1893, and discovers that during these 21 years, the number of school-going boys and girls increased as much as 2,130,500, approximately. The attendance of one child at school has the effect of more or less educating other members of the same family. Illiterate parents or brothers of the child acquire, in many cases, at least sufficient knowledge to write their own names. Moreover, the result of conscription on the general progress of education must be immense, for privates originally illiterate return to their villages as comparatively educated men on the expiration of their service with the Colours. The standard for discriminating illiteracy, as adopted at present, is too indefinite. It is not possible to arrive at any fair judgment as to the relation between education and crime. The mode of classifying criminals according to literacy and illiteracy must be amended, and those coming under the former category should be subdivided into three or four headings, as, for instance, those that have gone through the primary course or higher course of common school education, and so on.

Possibly, statistics as to the efficacy or non-efficacy of correction and as to the reformation of liberated convicts, statistics compiled at the Penitentiaries under the direct control of the Home Office, may be more trustworthy for the given purpose. The results covering four years, between 1890 to 1893 inclusive, are as follow:—

	1890.	1891.	1892.	1893.
Those who can read and write	45.28	54.72	47.63	52.37
Those who are illiterate	38.39	61.61	39.63	60.37
Those who can read and write	48.02	51.98	50.92	49.08
Those who are illiterate	42.44	57.56	46.76	53.24

Another table is given by the writer showing the number of criminals subdivided into literate and illiterate, and the per-

centage that each class constitutes of the total number:—

STATISTICS OF CRIMINALS GUILTY OF SERIOUS OFFENCES ACCORDING TO LITERARY OR ILLITERACY.

	Literate.		Illiterate.	
	Total.	Percentage of the Whole.	Total.	Percentage of the Whole.
1895.....	1,705	58.20	1,226	41.80
1894.....	1,803	58.22	1,294	41.78
1893.....	1,825	56.17	1,424	43.83
1892.....	1,854	57.14	1,391	42.86
1891.....	2,137	58.57	1,512	41.43
1890.....	1,942	57.73	1,422	42.27
1889.....	1,582	61.10	1,007	38.90
1888.....	1,973	59.95	1,318	40.05
1887.....	2,752	62.54	1,648	37.46

It may be seen from the above that the rate of educated criminals shows some tendency to decrease, while that of the uneducated gives a contrary indication.

Statistics of the rough character given by Mr. Ishii are apt to be very misleading. Education is a relative term. A Japanese peasant that can write his own name would be classed among the literate, yet it would not at all follow that he had competence to read books and newspapers. In short, in acquiring a certain measure of caligraphy, he would merely have learned how to use a pen and how to write three or four ideographs, but would remain as completely ostracised as ever from the elevating moral influences that education is supposed to bring in its train. At all events, it can scarcely be worth while to discuss this question very seriously. Education must tend to develop the higher qualities of the human race, though, at the same time, opportunities for committing crime and temptations to commit it, are greater among an educated than among an uneducated community. The net result may be perplexing, but surely it is better that a man should essay to climb the heights of knowledge, even if the effort involves falls that are not risked by one grovelling at the foot.

LENGTH OF PEDAL.

Considering that two million persons now ride cycles in the United Kingdom, it is not wonderful that varieties of opinion should exist on many points connected with this splendid exercise and most exhilarating pastime. Yet surely there ought to be something like a consensus of views about a question so rudimentary as the proper length of the pedal. It appears, however, that there is nothing like a consensus. We have heard one experienced cyclist assert that at no point of the stroke ought the leg to be quite straight; another, that when the pedal is at its lowest, the rider should be barely able to touch it with his toe; and a fourth, that no contact whatever should be possible between the foot and the pedal when the latter is at its lowest point. We do not, for our own part, claim any competence to pass judgment in a matter where experts differ so radically. Here, however, is an opinion formulated with every semblance of assurance in a prominent medical journal; an opinion that commends itself to common sense:—"The height of the pedal should be such that the pedal at its lowest point can be easily reached with the ball of the foot, the foot being horizontal—that means full play to the ankle." The same authority lays down these principles:—"That the rider's position should be upright, not stooping; that the bicycle ought to be constructed so that the position of the handles shall be straight and placed so

that pulling with the arms shall assist the work of the legs, without disarranging the steering or shifting the rider on the seat; and that the seat must be far enough back to secure a steady hold of the driving hind wheel on the road, and to place little weight on the front wheel."

THE OPIUM LAW.

The following Opium Law was issued on the 21st ult. over the signature of Baron Nogi Giten, Governor-General of Formosa:—

Art. I.—The term "Opium," employed in this Law, means manufactured opium, opium for smoking, and opium powder.

Art. II.—Opium paste and opium powder shall be sold by the Government. It is forbidden to import or manufacture opium, or drugs containing the essence of opium and producing the same effect as opium for smoking; or to sell, purchase, transfer, receive, or possess the above articles without special permission.

Art. III.—Only by persons judged to be incurably addicted to the opium habit will the purchase and smoking of opium be permitted, licenses being granted to them for the purpose.

Art. IV.—The following businesses shall be licensed:—

1. Sale of opium for smoking.
2. Manufacture and sale of opium-smoking apparatus.
3. Retailing of opium-smoking apparatus.
4. Establishing opium-smoking shops.
5. Wholesale trade in opium powder, which shall be permitted to dispensers or druggists only.

Art. V.—Medical practitioners, dispensing chemists or druggists, and apothecaries shall alone be competent to possess opium powder, to sell or buy, transfer or receive it, without a special license.

Art. VI.—A fee must be paid for the licenses specified in Arts. III. and IV., the amount of the fee to be determined by Notification from the Governor-General's Office.

Art. VII.—Persons licensed to purchase and use opium for smoking or to keep opium-smoking shops, may purchase or own opium-smoking apparatus.

Art. VIII.—Should any person licensed to retail opium for smoking, sell or otherwise convey opium to persons not possessing licenses to purchase and use opium for smoking, the offence shall be punishable with penal servitude for a limited term, or to the imposition of a fine not exceeding 5,000 yen.

Art. IX.—Should the licensed keeper of an opium-smoking shop give the use of the shop or apparatus to persons not possessing licenses to purchase and use opium for smoking, he shall be liable to minor confinement with hard labour, or to a fine not exceeding 2,000 yen.

Art. X.—Should a person licensed to manufacture and sell smoking apparatus or to retail them, sell or otherwise transfer the apparatus to persons not holding a licence to keep smoking shops or to purchase and use opium, he shall be liable to minor confinement with hard labour or to a fine not exceeding 2,000 yen.

Art. XI.—Any person importing or manufacturing raw opium, opium powder, or drugs possessing the same efficacy as opium for smoking, shall be liable to major confinement with hard labour, or to a fine not exceeding 3,000 yen. Any person that sells or buys, conveys, receives, or possesses raw opium or drugs possessing the same efficacy as opium for smoking, shall be liable to major confinement for not more than 4 years, with or without a fine not exceeding 1,300 yen.

The same punishment shall be meted out to any one who, without obtaining permission, deals wholesale in opium powder, or who, not being a medical practitioner, or a dispensing druggist or chemist, sells, purchases, transfers, receives, or possesses opium powder.

In the foregoing three cases, the goods shall be seized, or should they have been already sold, the price obtained for them shall be confiscated.

Art. XII.—The sale of opium for smoking and of opium powder, and the granting of licences, as specified in the present Law, may, according to convenience, be carried out in each locality in turn, the localities for the purposes being divided.

Art. XIII.—Even during the interval after the enforcement of the present Law, and the issue of licences under it, the following provisions shall be put into force:—

1. Only those that have been previously accustomed to use opium for smoking shall be permitted to purchase, use, or possess opium-smoking paste and smoking apparatus.
2. Those that have thus far made a business of the manufacture or sale of opium-smoking paste or smoking apparatus, or of the retailing thereof, may be permitted to carry on the trade as before.
3. Those that have hitherto kept smoking shops may be permitted to carry on the business as before and to own or purchase smoking apparatus.
4. Raw opium, or opium-smoking paste, or smoking apparatus, hitherto possessed by persons not engaged in business connected with opium, may be either retained or sold to men engaged in the business.

Art. XIV.—In a locality where licences have been issued and the sale of opium-smoking paste has been conducted, all persons, except those that have obtained licences, must deliver up to the Government any opium or smoking apparatus owned by them, and the Government shall pay a proper price. Should the foregoing provision be violated and delivery to the Government be neglected, the offender shall be punished with major confinement for a period not exceeding one year, or with a fine not exceeding 350 yen. The opium or smoking apparatus shall be confiscated or, if already sold, a sum corresponding to their price shall be collected.

MURDEROUS ASSAULT IN SHANGHAI.

We take the following from the *North China Daily News*:—

A murderous assault was made on a local shipmaster by some sampun men at Pootung early on Friday morning. Captain Corner, of the *Yungping*, was returning on board from the A.D.C. performance, and to go to his ship, which was lying well down the harbour, hired a sampun at the Ewo Road jetty. It was raining at the time, and, on getting over to the Pootung side, the sampun man objected to going any further and wished to land Captain Corner at the New Dock. He, however, insisted on the sampun man proceeding, but on reaching the Eastern Wharf the coolie ran up alongside the pontoon, jumped ashore, and called to some other sampun men who were lying alongside. Captain Corner also got ashore and was immediately assailed by three men with bamboos. He defended himself as well as he was able with his umbrella, and finally made his escape to the house of Mr. Bentley, the wharfinger. He was then bleeding profusely from a very severe scalp wound and was suffering from other severe injuries to the arms and face, besides being almost exhausted through loss of blood. His injuries were attended to as well as possible at the time, but he was unable to get across the river to obtain medical assistance until the following morning. We are glad to say that Captain Corner has not sustained any injury of a permanent nature, and he is to be congratulated on having escaped as well as he did. An assault of this kind is fortunately of very rare occurrence here, but it serves to show the need of the adoption of some system of supervision as in Hongkong, viz.—A policeman should be stationed at two or three of the most frequented landing places after a certain hour at night, for the purpose of taking the numbers of sampuns hired, and the destinations of passengers. If this were done the detection and apprehension of the perpetrators of an outrage like this would be a simple matter. As it is, in this case they are likely to get off scot free, as no clue to their identity can be obtained.

Redemption and War Loan Bonds to the value of about yen 20,000 were sold on Tuesday, at yen 100.20 and 100.30. Messrs. Samuel Samuel & Co. are stated to have been the purchasers.

THE KING OF KOREA.

THE King of the KOREA, whom some critics describe as a kindly personage with large latent abilities, and others declare to be a man of little feeling and less competence, is at present passing through some unfortunate phases of his career. Perhaps the most charitable view to take of his character is that it has no opportunity to show its own colours, and that it simply reflects the tints of the royal entourage. Everybody remembers the brutal assassination of the two Ministers KIM HONG-CHIP and CHUNG PYENG-HA, just a year ago. It has been generally supposed that the barbarous fate of these officials was regretted in Korea, and that the Government eschewed all endorsement of the act. But such a theory will not hold any longer. The Minister of Justice, CHO PYENG-SIK, has memorialized the Throne to the effect that KIM and CHUNG, together with YU KIL-CHUN and CHO HI-YUN, all of whom His Excellency denounces as "traitors," "made friends with foreigners; compelled HIS MAJESTY to give up the royal prerogatives; forced the THRONE to issue a decree to reduce HER MAJESTY, the late QUEEN, to a common personage; and made HIS MAJESTY cut off the top-knot." KIM, the Minister declares, was the leader in these movements, and CHUNG, "by deceptive advice, prevented HER MAJESTY from escaping the danger." "The two traitors were killed during the confusion of last February without being punished in a proper legal manner." Therefore the Minister of Justice urges the THRONE "to punish them by a proper procedure," and announces that "the Department of Justice is willing to undertake the administration of the extreme penalty." The KING agrees. He has received many memorials on the subject, he plaintively says, but has never been able to obtain positive proof against the accused. Therefore he delayed. But now HIS MAJESTY has clear evidence: the declaration of the Minister of Justice—a Minister "so well versed in the proper administration of the law that We need not say much more about the matter." So Mr. CHO is to perform the extreme penalty on the assassinated men. The bodies of the unhappy victims of savage ferocity were so mutilated at the time that it is difficult to see what further horrors can be perpetrated upon them. But they will doubtless be exhumed, carved up and "distributed" after orthodox Korean fashion. It will be a pleasant sight for the murderers. We do not learn that any attempt has ever been made to detect or punish them. No Minister memorializes the Throne that he is "willing to undertake the administration of the extreme penalty" in their case. On the contrary, after a year's immunity from prosecution, they are now to see their crime publicly justified by the wreaking of barbarous revenge upon the decayed corpses of

their victims. Murder, in its proverbial "stalking abroad" career, seems unlikely to encounter many obstacles at the hands of the present Korean Ministers of State and Royal personages. After a delay of, say, twelve months, assassins may look forward to vindication from the THRONE. The murderer of KIM in Shanghai, and the would-be murderer of MIN in Tokyo, are now high in office. Where are the murderers of the Cabinet leaders of last February? Perhaps they, too, are in high office. The Minister of Justice probably knows, and as he is "well versed in the proper administration of the law," the world may feel, like the weary KING, that it "need not say much more about the matter." We must not forget, indeed, that all these things happened in the sequel of that abominable crime, the assassination of the QUEEN. If the Koreans are moved to feelings of fury and vengeance when they recall that horror, there is much excuse to be found for them. But that a Minister of Justice should publicly announce his "willingness to undertake the administration of the extreme penalty" upon the corpses of two murdered members of the Cabinet for a crime that was never legally judged, betrays a shockingly primeval conception of judicial administration.

The KING, if he keeps an account with his own conscience, may find some items to enter on the credit side. Prominent among them is the fact that he has actually spent a night in the Kyengwon Palace. HIS MAJESTY'S exultation at this feat has overflowed in the form of a Royal Edict:—

Since the removal of the Royal Ancestral portraits and the remains of Her Majesty to the Kyengwon Palace, We spent a whole night in the same house for the first time; which makes Us feel that We are doing Our duties to some extent.

The publication of this piece of intelligence, with its corollary of triumph, suggests the impression that the Kyengwon Palace is a haunted place, and that the KING, having played the part of the valorous guest in the family-ghost chamber, invites the applause of his loyal subjects. But it suggests, also, that the notion of leaving the shelter of the Russian Legation assumes alarming proportions in the Royal imagination. To have passed one night beyond that hospitable compound of refuge is an achievement over which the KING expects his people to clap hands of bravo. Exalted by the memory of his brave deed, the KING goes on to say:—"The Winter set in before the work of the buildings was finished. But the Spring will be here before long and We hereby order the constructors of the buildings to complete the work as soon as possible." The timely winter's arrival was as welcome as the tardy spring's appearance will be distasteful. Is it not a pitiful pageant? This poor monarch hiding under a foreign flag within his own dominions, and becoming emo-

tional over the audacity of venturing to creep out for a single night to a palace where the cenotaph of his QUEEN is enshrined!

THE "HIMEJI MARU" MARINE COURT OF INQUIRY.

THE methods pursued by the Marine Court of Inquiry, assembled to examine into the circumstances of the loss of the steamship *Himeji Maru*, which struck on the Bombay Reef of the Paracels, have elicited unfavourable comment in the editorial and the correspondence columns of local English journals. We confess that the published report of the proceedings caused us also much astonishment. As to the merits of the case, we do not presume to offer any opinion. The Court suspended the certificate of the Master, Captain TIPPLE, for four months, and the only remark that need be made about the sentence is that, if Captain TIPPLE lost his ship through want of sufficient care—a point concerning which we have nothing to say—he has not been heavily dealt with. What concerns us is that the Court did not display qualities such as may reasonably be expected of such a tribunal. Persons competent to act as judges, assessors, or in any other capacity connected with a marine court of inquiry, must be assumed to possess full knowledge of the many perils and dangers to which those that follow the sea as a profession are exposed. Unless there is some flagrant act of carelessness or want of sobriety on the part of the officer whose case is under investigation, the inquiry ought to be conducted on courteous and equitable lines, nor would some evidence of sympathy with his misfortune be out of place. But the method pursued by the *Himeji Maru* Court not only betrayed a lamentable lack of fairness, but was also disfigured by overbearing harshness. Witnesses appearing before such a tribunal are not placed on oath. They are merely cautioned. It is conceivable, therefore, that the officer undergoing trial may allow himself some latitude in presenting his case, but, on the whole, his testimony is safeguarded against flagrant misrepresentation. So far as we can judge, everything possible was done by Captain TIPPLE to lay before the Court the facts of the *Himeji's* loss in a lucid, straightforward manner. Log-book and charts had been preserved and forwarded for inspection. There was no question whatever of false entries or even erasures. Yet a member of the Court allowed himself to throw discredit on the log-book by saying "anything may be in the log-book for aught I know." We have always understood that the accurate writing up of his log-book is one of the inviolable traditions of a British ship-master, and it strikes us as particularly injudicious that a Japanese Marine Court should openly evince its contempt for such an important

record. So soon as official discredit is openly thrown upon log-books, the fine conservative conscientiousness that sailors have habitually brought to their compilation will cease to be effective. We note, further, that the Court ridiculed the route chosen by the master of the *Himeji*. But it now appears that the route was in conformity with instructions contained in the China Sea Directory, so that the Court is placed in the peculiar position of having rejected an authority respected by all ship-masters. Had the Master of the *Himeji* failed to navigate his steamer in accordance with the rules laid down in the Directory, the Court would certainly have been justified in censuring him severely. But the Court prescribed a course of its own, and declared, with reference to a track eastward of the Bombay Shoal, that "it is by taking such courses that these shoals have been lighted on." The Court may be right and the Directory wrong. We have no competence to judge between them. But the Directory being the book supplied to ship-masters by all maritime companies, Japanese not excepted, the fact that its rules do not receive recognition at the hands of Japanese Courts can not be too soon or too widely published.

The chief point with reference to the *Himeji* disaster was a question of currents. The Master alleged an abnormal current for which he could not have been expected to make allowance and ought not to be held responsible. Currents are frequently uncertain factors, and if any evidence be produced that seas lying in the track of numerous steamers are subject to currents not yet fully understood, a marine tribunal should be keenly interested in eliciting and sifting such evidence. But the *Himeji* Court showed a very different spirit. It treated with curt incredulity the evidence adduced by the master of the *Himeji*; denied point blank that any current existed such as the master of a Peninsular and Oriental steamer reported, and altogether conveyed the impression that it was not prepared to listen to anything inconsistent with its own preconceived ideas. If that be the general attitude of such tribunals, they evidently place themselves beyond the reach of all new information, for assuredly it is not to be expected that masters of steamers will furnish reports or make statements the certain fate of which is to be dismissed with contempt. It is only fair to note that the proceedings of the Court were practically directed by the foreign member, and that the attitude and comments upon which we have here animadverted were directly his. But the responsibility rests finally with the Court, and we are constrained to say that such methods are not calculated to improve the reputation of Japanese tribunals.

THE JACOB CASE.

MR. LOWDER, as will be seen from correspondence published elsewhere, has found himself in a position to offer to Miss JACOB a very frank apology for "the pain and mental suffering to which she was put in consequence of the charge preferred by him against her." The amend is tardy, but that it has been made at the earliest moment consistent with clear conviction, we entertain no doubt. Every one reading the stenographic report of the proceedings in Court when the prosecution of Miss JACOB was abandoned, could not fail to see that, although not furnished with evidence sufficient to warrant him in pressing the charge, Mr. LOWDER did not feel so entirely persuaded of the baselessness of his original suspicions as to offer a frank and unreserved apology. His language savoured of coldness, and suggested exigency rather than conviction. Yet he must have been perfectly well aware at the time that public sympathy and indignation had been strongly roused on Miss JACOB's behalf, and that an influential movement was on foot to institute legal proceedings against him for defamation of character. That contingency he faced, rather than make any public declaration not endorsed by his conscience. So, at any rate, we interpret the situation, nor can we perceive that any one is justified in interpreting it otherwise. Up to the moment of Miss JACOB's arrest it may be taken for granted that no member of the foreign community desired to see Mrs. CAREW convicted. On the contrary, every one would have rejoiced heartily had her Counsel discovered some means of rebutting the terrible charge against her. Public sympathy was with her, to that extent at all events. But Miss JACOB's arrest, and especially the circumstances connected with it, caused a revulsion of feeling. Some detected indecent haste in the fact that the arrest was made on Sunday, the accused being thus condemned to a night in prison before her case could be magisterially heard. Of course such a consideration would not have weighed a feather had the accusation turned out to be well founded. Others were outraged by the licence that the Court permitted in the matter of the accused's papers. Certainly that feature of the affair invited severe criticism, and the public still remains ignorant as to the nature of the misunderstanding by which the prosecutor's temporary chambers, instead of the precincts of the Court, became the place for examining the papers. Mr. LOWDER, of course, must have been prepared to perform the examination in Court, in the presence of an official, but it would appear that his request for leave to do so elicited permission to remove the papers to a more convenient place. He adopted the precaution of securing the presence of an independent witness during

the scrutiny, but unquestionably the whole thing was highly irregular, and must have had its origin in a misconception on the part of the official through whom the Magistrate's instructions were conveyed. The censure evoked by this particular incident savoured somewhat of extravagance, though sound enough at bottom. As for Mrs. CAREW, public sentiment appears to have become prejudiced against her at once, owing to a suspicion that she had instigated an attempt to transfer the burden of her own guilt to the shoulders of an innocent woman. We believe that no grounds whatever existed for such a suspicion, but, whether justifiable or unjustifiable, it wrought great mischief to Mrs. CAREW's cause, and roused on Miss JACOB's behalf a degree of fervour more creditable to the hearts than to the heads of her supporters. We feel the utmost sympathy with Miss JACOB, but, after all, her position now is the very reverse of painful, nor can any one pretend to think that the whole affair will not inure to her benefit rather than to her disadvantage. What seems to have been unfortunately forgotten is that the public has no means of judging precisely how much warrant her prosecutor had, or believed that he had, for laying a charge against her; how many witnesses, in the eagerness and excitement engendered by the strange circumstances of the time, made statements that they subsequently found themselves unwilling, or we should rather say, unable, to repeat upon oath, or how impossible it must have been for Mr. LOWDER himself, amid the heavy pressure of business entailed by the CAREW trial which he had to conduct single-handed—how impossible it must have been for him to reject all testimony until it had received independent sifting at his own hands. These various allowances must be made if we are to judge the case fairly, and though in urging them we place ourselves in momentary opposition to a number of the leading members of the community, it is none the less inevitable that we should raise our voice in the cause of justice. Miss JACOB is now fully vindicated, and it will be strange if her most enduring sentiment in connection with this vivid incident of her life is not one of confidence in the strong support that an innocent person, man or woman, may always count upon receiving from a British community.

NEW RUSSIAN REPRESENTATIVE.

We understand that Baron R. Rosen has been appointed to represent Russia at the Japanese Court. Baron Rosen was Secretary of Legation and *Chargé d'Affaires* in Tokyo in the early eighties. He left Japan in 1883, if we remember rightly, on promotion to be Secretary in Washington. His return to Tokyo in the capacity of Minister will be welcomed by a great number of friends.

KOREAN NEWS.

Korean finance, according to the Japanese vernacular press, is being straightened under the vigilant control of Mr. Brown, the English adviser to the Treasury. Mr. Brown's report shows that the Korean Treasury has effected economies aggregating no less than 1,600,000 Korean *yen* in the present year, which is quite a large saving compared with the revenue of the country, 4 million *yen* or so. It ought to be remembered that, when the revolution broke out in Korean politics in February last, everything was thrown out of order, especially finance. Mr. Brown, who had previously been a Commissioner in the Customs, was then appointed adviser to the Treasury. Fortunately, the Government had at that time a surplus of over a million *yen*, and this sum the new adviser determined to guard with the most rigorous care. Every possible economy was put into force and new undertakings were abandoned. Almost every unusual request made by a Minister of State to the Treasury was refused, and the payment of several months' salary of superfluous Government officials was abandoned. It is not strange, therefore, that Mr. Brown became the target of complaint, and an agitation was set afoot to compass his dismissal. He thereupon concluded a secret agreement with the King, and armed with this (which guaranteed his employment for three years), he looked upon the petty machinations of his assailants with disdain. Steadily he tightened the purse-strings, and succeeded in effecting economies. Mr. Brown is of opinion that if the Government is desirous of prolonging its life, it must stick to this negative financial policy, for the utmost economy must be enforced in every item of disbursement. If this policy is maintained, the surplus at the end of the present year will reach over four million *yen*, and no necessity will arise for recourse to a foreign loan. It is said that the idea of borrowing three million *yen* from the Russo-Chinese Bank originated with a certain political coterie having a special object in view, and that the Government has no desire to resort to this extraordinary means of raising funds. Questions now attracting public attention in Korea are the sudden appointment of Min Yong-hwa, the all powerful Minister of War, to be Envoy Extraordinary to Russia, Austria, France, Germany, England, and Italy; and the movements of Min Yong-tsu, the most powerful latent force in Korea. Opinions differ as to this sudden removal of Yong-hwa from the stage of home politics, some attributing it to the growing influence of Yong-tsu; or to the result of an understanding between Yong-hwa and Mr. Waerber, which was arrived at with the view of strengthening Russian influence in Korea. A third conjecture is that Yong-hwa's power is on the wane, and he therefore intends to remove himself from the reach of public odium. Supposing the first explanation to be nearest the truth, and supposing that the removal signifies Yong-hwa's banishment from the field of active politics, the question arises whether Yong-hwa's sense of inability or his growing dread of Russia's ambition, has influenced his decision. At all events, the change must have some grave import. His supposed dread of Russia may not be unfounded, judging from the almost universal desire of Koreans to see their king return to his palace. Rumour

says that Mr. Waerber has declared himself opposed to the King's return to the Palace. The Korean statesmen, even of pro-Russian views, have lately awakened from their pleasant delusion; and reaction is now afoot against Russia.

Yong-tsu's movements are an enigma as perplexing as Yong-hwa's sudden removal. Kin Phyoong-si has been relieved from the Premiership, after having tendered his resignation for the fourteenth time. The selection of a competent successor is very difficult. The Portfolio of Home Affairs is at present most popular, and Yong-tsu is believed to have an eye upon it.

Such are the views expressed by Tokyo journals. They will be read with caution by foreigners, much discredit having been thrown upon the veracity, or rather the nature of the sources of information at the command, of Japanese correspondents in Seoul. We are bound to say, however, that events have not always justified the sweeping verdict of the late correspondent of the *New York Herald*, who told the public that nothing coming from the pen of his Japanese *confrères* in the Korean capital merited serious consideration. In a great many cases the letters from Korea published by Tokyo journals have afforded valuable indications of the trend of events in the Peninsula. However, these comments are scarcely merited by the quality of the news immediately in question. Mr. Brown's success in the field of Korean finance is already appreciated, and it may be assumed that if, by legitimate economies, he can stave off the necessity of recourse to foreign—especially Russian—pecuniary aid, he will spare no effort to secure that end. As for the statement that Mr. Waerber opposes the return of the King to his palace, we find it difficult to credit. The situation in Korea must be growing intolerable to the Koreans themselves, and that it long ago became irksome to Russia can scarcely be doubted. Being a situation plainly calculated to engender discontent and encourage intrigue, some safe and practical exit from it is probably desired by the Russian Representative as much as by any one else. Concerning Min Yong-tsu's possible accession to the Cabinet in the position of Home Minister, our readers doubtless recollect that, according to intelligence contained in the latest files of the *Independent*, Pak Chung-yang, Minister of Home Affairs, has resigned, and been succeeded by Nam Chung-chul, formerly President of the Foreign Office and Governor of Pyongan. It seems unlikely that another change should occur immediately in the headship of the same department.

Indications of renewed disturbances are reported from Korea. The "Righteous Army" is again raising its head in the province of Kangwon, the regular scene of its operations. Last spring and summer, the Army committed terrible excesses, and the Government troops proved unable to restore good order completely. Numbers of Japanese were murdered, and political agitators undertook to prove that the insurrection was directed chiefly, if not entirely, against the Japanese, and against the innovations for which they were supposed to be responsible. Finally, after the fall of the Kim Cabinet, and the temporary suppression of progressive influences, the King addressed an euphemistic edict to the insurgents, inferentially patting them on the back for their loyal objection to vexatious innovations and their indignation against

the perpetrators of the Queen's foul assassination; telling them that the venerable top-knot was no longer tabooed, and bidding them disperse to their homes, carrying with them comfortable memories of the part they had played on the political stage and the clemency of which they had been the object. What explanation will be given, we wonder, of this new outbreak? Probably it will be attributed to Japanese instigation. Slander never troubles itself to be consistent. For the information of our readers, however, we may be permitted to quote here what we wrote last July about the doings of this "Righteous Army;" statements that we believe to be not less applicable to the present situation than it was to the past:—"There is no longer any ground for alleging that the hair-cutting edict or the murder of the Queen was the real reason of the recent disturbances in Korea: such things were mere pretexts. To discover the true causes, we must look in a different direction. When Count Inouye went to Seoul, he found there many crying abuses, but none called for speedier remedy than the system of hereditary office-holders. The oppression and corruption resulting from that system in the provinces were incalculable. The privilege of holding this or that official position descended from father to son in absolute entail. Incompetence, extortion, dishonesty—nothing interrupted the succession. Governors of provinces, indeed, were appointed by the Central Government and the small suites that accompanied them found employment within their districts. But, for the rest, the whole provincial administration was in the hands of hereditary office-holders, with results probably never surpassed in any part of the world. This flagrantly evil state of affairs was among the first that Count Inouye endeavoured to correct, and it may well be imagined that every family deprived of such a valuable heirloom became bitterly hostile to reform and its representatives. Another sweeping but most necessary change was the disbandment of the *Kogun*, a force organized originally by the Tai Wön-kun after Admiral Roze's repulse in 1866. It numbered over a hundred thousand men, who, though scattered throughout the provinces, preserved their military organization and constituted a perpetual menace to the peace of the Kingdom, as well as a powerful weapon in the hands of intriguing politicians. The breaking up of this force was, of course, widely resented, not merely by the men composing it, but also by those that counted on it as an instrument for furthering their schemes.

"There can be no doubt that the consummation of these two reforms engendered great discontent in the provinces, but since neither of them could be employed as a popular pretext for insurrection, public tranquillity remained undisturbed. A pretext alone was needed, however, and it was furnished by the hair-cutting edict and by the assassination of the Queen. Outsiders were puzzled to understand why the insurrection continued after liberty as to coiffure had been restored, and despite the fact that the overthrow of the Queen's enemies might be expected to restore to power the family proverbially associated with oppression and corruption. But these things were quite secondary considerations in the eyes of the agitators that fomented the disturbance. If comparative quiet has now been restored, it is not because the Govern-

ment's authority has been re-asserted or the discontent of the hereditary office-holders and the provincial troops allayed, but became the resources of the insurgents have been temporarily exhausted, and to obtain supplies of food, even, has become a difficulty to them. A period of tolerable tranquillity is now anticipated by those best acquainted with the circumstances." That period has probably come to an end now.

The position of the *Independent* in Korean politics is very interesting. The people of the little Kingdom are evidently beginning to use its columns as a means of ventilating their grievances against officials. We find a paragraph detailing the names of several persons who have been subjected to squeezes by a Special Inspector, with the amounts of the extortions. The *Independent* does not vouch for the truth of the statement but deems it worth attention. With such exposures hanging over their heads, Korean officials are likely to mend their ways. On the other hand, our Söul contemporary publishes a eulogy of the first Korean Minister in modern history who "has refused to accept a substantial gift from his friend." This singular specimen of self-denial is Mr. Min Yung-whan, the Minister of War. To pay his debts at the New Year, the Minister had to sell off a number of his belongings. An old friend, who had received many kindnesses at his hands, saw his difficulty and sent him six hundred dollars. Min returned the money, saying that the giving and taking of valuable presents by officials and private persons was the root of Korea's troubles.

The Supreme Court in Söul has been much eulogized of late. The editor of the *Independent* believes it to be "as fair as any Court in the world in deciding the cases of political offenders, considering all the disadvantages that surround Korean legal institutions." In the same *Independent* we find a suggestive example of the Court's doings. It sent word to the Governor of South Chungchong that he had not been performing his duties properly, and that he must forward his chief secretary under police escort to the capital, for the purpose of undergoing punishment in the Governor's stead. The Governor objected, on the double ground that his offence had not been specified and that to punish him by proxy would be illegal. The Court replied, by the medium of a constable, that if the Governor had not a chief secretary, any of his underlings would do, but that unless he sent some one within 8 days, the Court would make things hot for him. A great deal of allowance for "the disadvantages that surround Korean legal institutions" has to be made by readers of this story.

The trial of the persons charged with a plot to carry away the King from the Russian Legation to the Kyengpok Palace was brought to a conclusion by the Supreme Court of Justice in Söul at the beginning of the present month, Mr. C. R. Greathouse, Adviser to the Department of Justice, taking part in the proceedings. The investigation had lasted more than two months, the arrests having been made on November 21st, 1896. Several of the accused were released, and those found guilty were sentenced to receive 100 blows, and to be banished for 15 years. It was supposed, when the first intelligence of the so-called plot became public, that the whole affair had been invented for the purpose of terrifying the King into the

belief that his only chance of safety lay in the protection of the Legation. Apparently that supposition was not well founded for we read that three persons who had been convicted of making a false report of conspiracy, and had been sentenced to three years' banishment, were released by royal edict simultaneously with the above judgment. At the same time, it is to be noted that the five persons now found guilty were convicted on the evidence of three informers, who have been released for turning King's evidence. The "not guilty" number four.

Apropos this question of the King's return to a palace of his own, we read that some private individuals, having asked Mr. Kin Pyeng-si, a former President of the Council of State, to accompany them to Söul for the purpose of asking the King to leave the Russian Legation, were prudently advised by Kin to undertake the business on their own account. At the date of latest advices they were sitting in front of the Kyengwon Palace with a memorial to keep them company. It was in the Kyengwon Palace that the King spent "the whole night" of February 1st, and came away with the conviction that he was "doing his duties to some extent."

CHINESE NEWS.

The owners of foreign hotels in Pekin and Tientsin are increasing the accommodation of the buildings in view of the approaching completion of the railway to the capital, and the influx of tourists that is expected to ensue.

The winter is reported to have been very severe up to the present at Tientsin. The temperature during the third week in January fell to 7° below freezing point. The lowest temperature during the corresponding week in 1896 was +8°. Here are the minima for the two years:—

January.	1897.	1896.
15th	+3°	+20°
16th	+3°	+24°
17th	+3°	+21°
18th	+1°	+10°
19th	-2°	+10°
20th	-2°	+10°
21st	-4°	+8°

Another British expedition to Tibet has returned *re infecta*. It consisted of Captain Welby of the 18th Hussars, and Mr. Malcolm, of the Sutherland Highlanders. They left Leh on the 4th of last May, their caravan consisting of 39 animals and 11 attendants. On the 15th of October, they recrossed the Chinese frontier, en route for Pekin, by which time their following had been reduced to 3 animals and 4 men. They crossed the Na-Pu Pass, but were turned back by Tibetans from the Andok post.

The new Imperial Postal service was inaugurated in China on February 2nd.

A successful effort has been made to prepare China tea with the machinery and according to the methods employed in India. The tea of the experiment was ordinary third-crop Peking leaf, and the well-known firm of tea-dealers, Messrs. Andrew Melrose & Co., of Edinburgh, pronounce most favourably on the result, declaring that if they can get such tea from China they will be able to compete strongly with the Indian and Ceylon products. Certainly something is needed to restore vitality to China's tea trade, for whereas the annual export of China congou from Shanghai to London was 65 million lbs. ten years ago, it is only 13 million lbs. now. It is thought that if such encouraging results can be obtained by improved manipulation of third-crop Peking, great things may be done with first-crop leaf from the Yangtze districts.

Pheasant shooting evidently remains a grand sport in the valleys up the Yangtze. The Chinkiang correspondent of the *North-China Daily News* says that flocks of six to a dozen birds may

be seen within a mile of the city, and that snipe, teal, duck, hares, and deer are also to be had.

The native post offices in Chinkiang made an effort to boycott the new Imperial Post. They formed a guild, and refused to take any letters for the foreign-style institution. But the combination crumbled away in three days.

The following cruel story comes from the Tchou-fu correspondent of the *N.-C. Daily News*:—

A couple of jugglers put in their appearance at the semi-annual fair held on the parade-ground in the eighth month with a unique attraction. They exhibited a little child curiously mis-shapen, which they proceeded to manipulate in an extraordinary but very cruel manner. For example they forced it into an ordinary water jar (*kuan tsu*) or buried it in the ground with a covering over the head so that the audience which we may be sure was always on hand, were delightfully mystified by answers coming to various questions from such unlikely quarters. Sometimes the sport was varied by gashing one child with a knife and forthwith producing an uninjured one from—no one knew where. The proprietors of this edifying show were reaping a financial harvest when disaster overtook them. The prefectural examinations were in progress, and one day a student from the district of Chuchou joined the crowd about the conjurers. In the stunted and deformed child the young man thought he recognised a little brother (or cousin) who had been kidnapped several years ago. He laid information and the men were arrested. On the person of the child was discovered a birth-mark of which the informant knew.

When brought before the official the child at first refused to say anything, but upon being convinced that he had nothing to fear from his master he told a pitiful tale of mal-treatment. Amongst other things he said that he had been compelled to sleep every night in a water-jar and that by a process of pricking the flesh with needles or, as some report it, by the actual removal of certain tendons of the limbs and fingers, his joints had been made unnaturally pliable.

But there is no use in dwelling upon the details of the little one's sufferings. After his rescue he was brought to our dispensary and our physician did what he could for the miserable little wreck.

The guilty men were terribly beaten several times and were daily exposed to the mocking populace. They are now lying in prison awaiting what will probably be a death sentence.

The Blackburn Commission of British merchants had reached Chungking at the date of latest advices. It appears that, as yet, only one English merchant has ventured to start business there, although there are two German firms and one French. That there is a large opening for British manufactures in Szechuan seems to be admitted, and doubtless the investigations of the Blackburn Commission will contribute to the exploiting of the populous province.

We described in a previous issue the difficulty encountered by M. Haas, French Consul in Chungking, who found that land bought by him for his consulate could not be transferred owing to obstacles raised by the Chinese Authorities. We now read that the difficulty has been solved by M. Haas' consenting to substitute the ideographs "perpetual lease" for the character signifying "purchase." The theory advanced by the local officials was that, as the whole of the land in China belongs to the Emperor, it can not be sold to a foreigner. It is stated that, not many years ago, a missionary got into trouble for employing the very term now dictated to M. Haas. Meanwhile, the American and British Consuls have succeeded in purchasing excellent sites within the city and in the vicinity of the French lot as well as of the quarters of the Customs staff. The position (Wang Kiato) originally designated by the Chinese for a foreign settlement, is completely ignored, as it deserves to be.

A regular meeting of the Tokyo Bank Corporation took place at the Tokyo Bank Assembly Hall on the 15th inst. Mr. Shibusawa, President, being a little late in arriving, Mr. Yamakawa Yuki, of the Nippon Ginko, took the chair. While a motion for appointing an investigating committee to consider the proposed adoption of a gold standard was being discussed, Mr. Shibusawa entered. It was finally decided to entrust the matter to a special committee.

THE NEW RUSSIAN FOREIGN MINISTER.

Count Muravieff, who has been appointed to succeed Prince Lobanof as Minister for Foreign Affairs in Russia, was Secretary of the Russian Embassy in Paris from 1881 to 1884, and subsequently acted as Councillor of Embassy for two or three years, after which he was sent as Russian Minister to Copenhagen, whence he is now promoted to be head of the Foreign Office. *The Times'* Vienna correspondence contains the following with reference to him:—

The news of Count Muravieff's appointment as Russian Minister for Foreign Affairs is perhaps calculated to produce a less favourable impression in Berlin than in Vienna. Somehow the idea has got abroad that he has little sympathy for Germany. Indeed, when first his name was mentioned in connexion with his present appointment it was thought impossible that he could really be selected for the post. As a matter of fact, however, he has had little opportunity at Copenhagen of taking a very active part in diplomatic affairs. His task has been in a great measure confined to acting as intermediary for family matters between the two closely related Courts. All that is known of him in any way to his disadvantage is that he lacks the calm and self-possession which are so necessary for the Foreign Minister of any Great Power. Fortunately, that quality is possessed in an eminent degree by the Emperor Nicholas himself, which affords ample guarantee to the other Powers that Russia's foreign policy will not be influenced to any material extent by the individual temperament of the new Minister. It would therefore, be difficult to see any reason why Count Muravieff's appointment should give dissatisfaction here. It might have been different had the post been intrusted to M. de Nelidoff, as at one time seemed not unlikely. It is no secret that the policy carried out by M. de Nelidoff in Constantinople was never viewed with favour in Vienna—a circumstance which, it is supposed, prevented him from being accredited as Ambassador to the Austro-Hungarian Court. It is not impossible that the same reasons had something to do with his not being called to the vacant post of Foreign Minister. If that be the case, it would tend to show that the susceptibilities of Austria-Hungary are treated with due consideration in St. Petersburg.

Count Muravieff will, of course, not have unlimited control over the direction of Russia's foreign policy, any more than his predecessors. That belongs to the Emperor alone. But some influence he certainly will have, and it seems to be expected that it will not be exercised with the view of promoting closer relations between Russia and Germany. Yet it may be well to bear in mind that the late Prince Lobanof, on taking office in St. Petersburg, singularly modified the opinions generally attributed to him while he represented his country abroad. The case is not a very unusual one, and an equally striking instance of recent date might be mentioned had not the diplomatist in question now sought the seclusion of private life. Count Muravieff is said by those who know him here to be an affable and accomplished gentleman, not likely in personal intercourse to give umbrage to any one. The probabilities are that, knowing himself that he is given credit for entertaining no great sympathy for the Germans, he will studiously avoid everything calculated to cause friction with Berlin—at all events, so long as that is consistent with the course of Russia's foreign policy.

THE REBELLION IN THE PHILIPPINES.

Recent accounts from the Philippines have indicated that the cause of the rebels was gradually beginning to weaken, and possibly that it was never so strong as it has been depicted by newspaper correspondents. At all events, thoughtful observers concluded that the resolution and indomitable pluck shown by the Spanish Government in dealing with its multifarious difficulties must be rewarded by success in the end, and we are not surprised to learn that very encouraging intelligence has been received in Tokyo. On

the 15th, the Governor-General was to attack the rebel stronghold at Cavite. From twenty to thirty thousand men were said to be entrenched there, and foreigners who had enjoyed an opportunity of examining the position from a distance, predicted confidently that its reduction could not be effected without a force of sixty thousand men at least, and that the Spanish troops under the command of the Governor-General, being, for the most part, raw recruits, would be incapable of contending against the climatic and topographical difficulties that had to be encountered. Events have not confirmed these sinister forecasts. On the 16th instant the following telegram was received at the Spanish Legation in Tokyo, and has been kindly handed to us for publication:—

From General Cabo, Commanding-in-Chief at Manila: February 16th.

The Commander-in-Chief sends the following telegram:—"General Taramillo's force has captured Fort Trouquero, near Bayayongan, at the point of the bayonet. The Binion and Colombo columns, under General Lachambre, have advanced against Silong. Our squadron made a feat of landing a body of marine volunteers, furnished by the Spanish Club, and cannonaded Bacoar, while the battery under Balahicon made a demonstration at Noveleta. Colonel Barriquez attacked Pamplona on the Zapote River. The place was strongly entrenched, and defended by 2,000 rebels with artillery. After an obstinate resistance, lasting four hours, it was taken by our troops. The rebel loss was heavy. They finally fled precipitately, pursued by the attacking column. Our loss was 19 killed and 45 wounded. General Toramillo also took the rebel position at Biger, capturing a number of falconets and small arms. The rebels left 35 dead upon the field. Our loss here was 2 officers and 7 rank and file killed, and 28 rank and file wounded."

It seems plain from the above that the insurgents are unable to resist the Governor-General's forces, and that the work of restoring peace and order can be a question of time only.

INDIAN FAMINE RELIEF FUND.

A fund for the relief of distress caused by famine in India was opened in London, under the auspices of the Lord Mayor, on the 11th of January. The Queen headed the list with five hundred pounds, and the Prince and Princess of Wales gave two hundred and fifty guineas. In two days the subscriptions aggregated over twenty-eight thousand pounds, and by Jan. 28th it reached \$600,000. It is recalled that, during the famine in 1877, seven hundred thousand pounds was contributed in the United Kingdom. The fund in Yokohama, according to the latest published lists, amounts to \$5,761.45. The Kobe total, as published, is \$1,665.50. The *Straits Times*, which opened a subscription list, had received \$12,078 up to the 23rd ult. A fund has been started at Hongkong under Government auspices with the Chief Justice as Chairman.

The Plague is increasing at Bombay and there is great alarm amongst both foreigners and natives, and trade is in a paralyzed state.

News has been received at Hongkong that Plague, Famine, and Rinderpest are rampant in the Bombay Presidency.

Mr. Kataoka Chokuon, President of the Nippon Kai-Riku Hoken Kaisha (Japanese Sea and Land Insurance Company), will leave the capital for Shanghai and Hongkong in March to inspect the branches at the two ports. He will then proceed to London where he intends to select an official to place in charge of the London Branch of the Company.

IMPERIAL DICT.

MONDAY, FEBRUARY 15TH.

HOUSE OF PEERS.

The House was occupied with Committee work only.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m., the Order of the Day being:—

- 1—Continuation of First Reading of a Government Bill relating to Special Accounts for Formosa.
- 2—The Budget, First Reading.
- 3—First Reading of a Government Bill relating to Amendment of the Railway Construction Law.
- 4—First Reading of a Private Bill relating to Amendment of the Railway Construction Law.
- 5—First Reading of a Private Bill relating to a Special System of Land Tax in Districts devastated by Floods.
- 6—First Reading of a Private Bill relating to Amendment of the Press Law.

Before the Bills standing on the Order were taken, Mr. Suzuki Jyubi wished to explain a Question introduced by him with reference to Chinese living in Formosa. As provided in the Shimonoseki Treaty, the Chinese in Formosa were to determine whether they would become Japanese subjects or whether they would remain Chinese subjects, within the space of two years from the ratification of the Treaty; that is to say, by May 8th of the present year. The best plan to pursue apparently would be to treat them as Japanese subjects; but mature consideration showed serious consequences were involved. For if the Formosan Chinese became Japanese subjects, they would be at liberty to settle in any part of Japan proper, and would be entitled to enjoy the same rights and privileges as ordinary Japanese enjoy. Suppose, again, that these Chinese emigrated to America? The American Authorities would continue to regard them as Chinese, and even the Japanese Consulates stationed there would be unable to secure for them permission to land on American soil. Several difficulties would also present themselves if they crossed over to Chinese territory in the character of Japanese subjects. What step did the Government contemplate taking about the Chinese in Formosa? Only a short time remained for settling the question, yet the Government had not given any indication of its intentions.

Mr. Suzuki also referred to the two Questions previously presented by him to the Government, namely, that relating to the Russo-Japanese Convention, and that relating to the affair of the German Representative and the Seijo Gakko students. The Law of the Houses provided that when a Question was submitted to the Government, the latter should give a reply at once, or fix a date when the answer would be given. Neither answers nor an announcement about the date, had yet been received in the case of the above two questions. As to a journalistic rumour that Count Okuma contemplated asking for a secret session in order that he might offer explanations about the Russo-Japanese Convention, Mr. Suzuki wished to say that such a course would be entirely unworthy of Count Okuma, who had declared neither secrecy nor artifice was needed in diplomacy. Even granting that secrecy were necessary sometimes, the convention with Russia would not be a case in point, seeing that the public, both domestic and foreign, were already aware of the existence of a convention of the kind between the two Powers, and, therefore, the matter had already passed beyond the possibility of secrecy.

Mr. Imanishi Kaniichiro (Liberal) next ascended the rostrum and explained, at tedious length, a question introduced by him with reference to the Financial Policy of the Government. His speech was so lacking in clearness and his delivery so awkward, that the House fell into a yawning fit, and frequent cries of *yoshi tamaye* (pray stop) greeted the speaker. It is unnecessary to epitomise the speech.

Mr. Motoda Hajime (Unionist) wished to introduce an urgency motion in the sense that the Order of the Day be altered and that the Press Law Amendment Bill, introduced by him and others, but standing last on the Order, should be taken at once. He had been informed

by the Chairman of the Press Law amendment Bills Committee that the Committee had suspended the work of investigation and were waiting until the Bill introduced by him (Mr. Motoda) was discussed in the House and handed over to the Committee. The motion was approved by the House and also by the Government Delegate, and without any discussion, the Bill was at once handed to the Committee. The Bill standing first on the Order was then taken.

Mr. Kusakari Shimmei (Liberal) criticised the various opinions expressed by Government Delegates and by Mr. Nakano Bunyei (*Shimpo-to*) in favour of the Bill, and, in a speech of great length, urged its rejection.

Mr. Asakura Chikatake (seceder from the Unionist Party) spoke in favour of the Bill much in the same sense as Mr. Nakano had spoken on a previous occasion. The closure was put and carried, and the Bill was rapidly passed through its Second and Third Readings.

The Budget was then taken.

Mr. Motoda Hajime, Chairman of the Budget Committee, ascended the rostrum to explain the Committee's proceedings. He stated, among other things, that a Special Committee elected from among the Committee to deliberate on the policy that the Budget Committee should adopt with regard to the Budget, had decided that, in the main, the Committee should adhere to the scheme of the previous Budget, and that, with regard to matters concerning which the previous Budget did not afford any guidance, due discretion should be exercised by the Committee. He further explained that, in the course of the Committee's proceedings, the Minister of Finance (Count Matsukata) had made the following statements, namely:—That, owing to the short time available for framing the Budget, the Minister had been obliged to adopt, in the main, the financial programme elaborated by the preceding Cabinet; that the loan of 59 million *yen* could be floated with confidence; that the actual revenue would not much differ from the Estimated Revenue appearing in the Budget; that a foreign loan would not be raised; and that, though the expenditures were enormously increased, no serious financial difficulties presented themselves.

Count Matsukata then ascended the rostrum, and stated that he was pleased to learn from the report presented by the Chairman of the Budget Committee, that the Committee had decided to give general approval to the Budget as framed by the Government. The Cabinet had carefully considered the items reduced or rejected by the Committee and had decided to acquiesce in the Committee's amendments so far as concerned the reduction of 1,200,000 *yen* in the Naval Expansion Fund, also the opening of negotiations with the Tanko Railway Company for the purpose of recasting the contract guaranteeing the Railway's profits. With regard, however, to the retrenchments proposed in the Foreign and Home Offices and the Department of Education, although the items were not large, the Government wished that they should be allowed to stand in their original form. Count Matsukata alluded also to the insufficiency of the time available for framing the Budget, and said he hoped that, next year, the Government would be able to compile a Budget entirely satisfactory to the House. With regard to financial arrangements, the Government had a reassuring programme, but he was precluded from explicitly submitting it to the House lest the announcement should agitate the market.

Mr. Kurihara Ryoichi (Liberal) opposed the Budget. Being one of the most influential members in the Liberal Party on account of his erudition, he discussed the matter with considerable insight, but his awkward delivery detracted much from the effect of his speech. His main point was that, though the Government professed to have followed the previous Cabinet's programme in framing the Budget, that was merely a plausible pretence, for he discovered several points of vital difference between the financial measures of the Government and of the previous one. The former Cabinet had intended to obtain by means of a loan, the necessary

funds for the expansion of the national armaments, but that was because the Indemnity had not yet been received from China, and because it was considered that to base a Budget on a revenue not quite certain would be unstatesmanlike. The present Cabinet's plan of raising a loan of 59 million *yen* though the Indemnity had become an actual asset, was fundamentally different from the previous Cabinet's programme, not to speak of the heavy interest that the raising of the loan would involve. The anticipated difficulty of raising the loan had inspired the Government's project of adopting the gold standard, so as to facilitate the sale of Japanese bonds in foreign markets. The present Government had declared that the expansion of the national armaments should be commensurate with the resources of the State, but the intention of resorting to such extraordinary measures showed that the Government did not adhere faithfully to that declaration. Further, the Government's pledge to expand the national armaments was not compatible with the step taken by it in the matter of Formosan finance, for it proposed to appropriate more than 10 million *yen* from the Indemnity to Formosa, thus diminishing the fund that ought to be used for purposes of military and naval expansion. Another grave difference to which the speaker desired to draw the House's attention was the mode of estimating the revenue. The present Cabinet had introduced a radically different method of estimating the expected amount of Revenue, and whereas the receipts ought to decrease if the previous Cabinet's method, and indeed, the method pursued by every Government in times past, were adopted, the present Cabinet had contrived to show an apparent increase. A sum of 5½ million *yen* was a decidedly exaggerated increment, according to the previous mode of computation. The Budget, as framed by the present Cabinet was therefore very insecure, for, the revenue being artificially inflated, the balance between revenue and expenditure might be disturbed.

While the speaker was addressing the House in the above manner, Mr. Ozaki Yukio (*Shimpo-to*) begged permission to interrupt him for the purpose of asking whether he intended to move the rejection of the Budget.

Mr. Kurihara replied that he merely wished to express his opposition to the Budget as a whole.

Mr. Motoda Hajime (National Unionist) regretted to observe that Count Okuma was not present in the House, for when a certain member of the Budget Committee had wished to hear the Count's opinion about the foreign policy of the Government, to guide the Committee in discussing the Budget, the Count had declared that he would personally attend the House and explain his policy when the discussion of the Budget commenced. Yet he was not present, though the House was about to discuss the Foreign Office section of the Budget.

Messrs. Yoshimoto Yeikichi and Komuro Jyuko (Liberals) moved that the House postpone the discussion of the Budget until Count Okuma attended, and personally explained his foreign policy. The motion was put to the House, and the President ruled that it had been rejected. An objection having been raised, however, an open ballot was taken, with the result that, out of a total attendance of 223, the "ayes" numbered 103 and the "noes" 120.

Mr. Komuro Jyuko (Liberal) then moved that the House suspend its discussion of the Foreign Office appropriations till the Foreign Minister in person explained the foreign policy of the Government.

This motion caused some excitement, several members simultaneously springing to their feet and clamorously demanding the President's permission to speak.

Mr. Wada Hikohiro (Unionist) stated that, though the motion to postpone the discussion of the Foreign Office section were negatived, Count Okuma was morally bound to attend and give a personal explanation, as he had emphatically promised the Budget Committee that he should do so when the discussion on the Budget commenced.

The notorious Mr. Tanaka Shozo (*Shimpo-to*) who had managed to remain silent since the beginning of the session, except on the occasion of the question about the German Minister and the Seijyo Gakko students, could no longer contain himself. He cried out in his usual lusty voice that the *Shimpo-to* were cowards to dissuade Count Okuma from attending in the House, and that he saw no reason why the Count should refuse to satisfy the expectations of a section of the House by personally explaining the foreign policy of Government.

The President questioned the propriety of passing a motion with the object of asking for the presence of a Minister of State to give explanations on one topic or another. What could the House do if the Minister declined to acquiesce in its demands? The House had no power to compel the presence of a Minister, and consequently, if the Minister refused to comply with the House's request, the result would be derogatory to the dignity of the House. Hence the President was resolved not to put any motion demanding the presence of a Minister of State.

This declaration by the President augmented the commotion in the House, but at last permission was given to Mr. Kusakari Shimmei (Liberal) to speak. He referred to precedents already established, and declared that the President's ruling was entirely unconstitutional. If the President's opinion were right, what could the House do in case Government Delegates failed to offer explanations satisfactory to the House on any point connected with a Government measure? Would the course now proposed be derogatory to the dignity of the House in that event also?

Mr. Suzuki Jyubi (Liberal) believed that the motion was not to demand the presence of Count Okuma, but rather to suspend the discussion on the Foreign Office Section till the Count personally redeemed the pledge he had given to the Budget Committee.

Mr. Motoda Hajime (Unionist) wished to know whether the President had decided, without seeking the endorsement of the House, to overrule a motion demanding the presence of a Minister of State? If that were so, he thought that the President exceeded his power.

The President explained that he had no intention of deciding the point on his own judgment alone.

Mr. Nakamura Yaroku (*Shimpo-to*) suggested to the introducer of the motion that he should simply move to defer the discussion of the Foreign Office Section, without adding any condition as to the presence of Count Okuma. The proposed condition was paltry. Count Okuma would appear of his own accord, when he read the proceedings of the day.

The motion was put to the House, but the President's ruling that it had been negatived was objected to, and an open ballot had to be again taken. The result was that out of 218 members present 92 voted in favour of the motion and 126 against it.

The President suggested that the debate on the Budget should be postponed until the next day, and that other Bills on the Order be taken and entrusted to special Committees. This suggestion was adopted and the remaining Bills were handed over to Committees to be elected for the purpose.

The House rose at 5 p.m.

TUESDAY, FEBRUARY 16TH.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m., the Order of the Day being:—

1.—First Reading of the Budget for the fiscal year 1897-1898.

The debate opened with a maiden speech by a member from Kumamoto, Mr. Saiki Riichiro (Independent). He wished to introduce an urgency motion in the sense that in the event of Government Delegates failing to give satisfactory explanations on any point, the house should demand the personal attendance of a Minister of State. The motion not obtaining a second, fell to the ground.

Mr. Motoda Hajime (National Unionist) wished to report, in his capacity of Chairman of

the Budget Committee, that the committee unanimously approved Supplementary Budget No. 4, relating to expenditures for Vaccination and for the Repair of Shrines.

Count Okuma then ascended the rostrum and delivered a speech, apparently impromptu, for no notes were used, on the general foreign policy of the Government. His Excellency began with a remark that it was the first time he had had the honour to speak before the House, and that the speech was made in fulfillment of a promise given by him to the Budget Committee in the course of its deliberations. He then went on to say that, as frequently explained to the Diet by one Minister or another, the fundamental principle of the foreign policy of the empire was embodied in the oft-quoted phrase of *Kaikoku Shinshu* (opening of the country and progression). That was the policy of the nation. The celebrated Imperial Rescript promulgated on the occasion of the Restoration, also afforded very important guidance with reference to foreign policy. The Rescript emphatically declared that intercourse with other countries must be on the footing of equality. This principle of attaining equality had acted as the chief impulse in abolishing the old feudal system, in remodelling the local administration, in introducing the system of conscription, and, finally, in framing and promulgating the great Constitution of the Empire. Diplomacy, to speak the truth, was a difficult and delicate business, and its features were susceptible of considerable variation according to the times. Formerly, the scope of diplomacy had been confined to intercourse with a few neighbouring countries, but gradually its sphere had been widened, so that it now embraced the world. Consider the Venezuelan affair, about a strip of frontier territory virtually uninhabited and valueless. The dispute had originally been between England, one of the mightiest Powers in the world, and the petty State of Venezuela. But when the United States of America stepped in and sought to apply the Monroe doctrine, the venue of the question had been shifted, and it became a subject of controversy, first, between England and the greatest Republic on the earth, and finally between the latter and the whole of Europe, for the application of the Monroe doctrine on the two continents of America involved the interests of Europe. Another cognate example had been furnished by the Transvaal affair, which seemed, at one time to threaten a quarrel between England and Germany. The intervention that Japan had encountered at the hands of three Powers in connection with the retrocession of the Liaoting Peninsula might also be quoted as an illustration how the field of diplomacy had become wide and extensive. Side by side with this growth of its scope, diplomacy had been placed on higher ground, for to be sound and successful, it must conform closely with the principles of the law of nations. Thus based, it was sure to obtain the support and sympathy of the world. The friendship that the Powers had shown to Japan in the matter of revising the Treaties was a good example of this, for, in contravention of old traditions, they had decided to abandon the system of extraterritoriality in their relations with a country not inhabited by a white race. The work of revision remained to be concluded with Austria alone: it had already been consummated with the other Powers. For this Japan stood much indebted to England, which had taken the initiative in the matter. When the revision of the Austro-Hungarian treaty was effected, which would be within a short while, Japan would enjoy autonomy, a reward that she had obtained for having adhered to the principles of justice. That was not the opinion of the speaker alone: it was the opinion of the Meiji Government. In other words, it was the principle underlying the foreign policy of the Government of Japan, by whatever Cabinet it might be controlled. For the foreign policy of a country must be continuous, and must not vary with every change in the holder of the portfolio of Foreign Affairs. He himself was resolved to keep that point always in view.

Japan had succeeded in making her *début* on the stage of the world, and her foreign relations must inevitably expand, in proportion to the added importance that she had acquired. It followed, as a matter of course, that an increased number of Consulates and Legations must be established, and he trusted that the items excised or reduced by the Budget Committee would be restored by the House. As to the Question raised by one of the members about a Russo-Japanese Convention, the Government was consulting with the party concerned; and he, Count Okuma, was of opinion that that party would not object to have the convention published. No secrecy was necessary, and the apprehension entertained by the introducer of that Question that a secret session might be asked for when the question came to be answered, was entirely baseless.

When Count Okuma resumed his seat, showers of questions were addressed to him by Liberals and National Unionists, and also by a few other members.

Mr. Motoda Hajime (Unionist) put several queries to the Count about jurisdiction in case of disputes about patents and trade marks, as specified in the Revised Treaty between Germany and Japan, during the interval prior to the operation of the Treaty.

The Count expressed regret with reference to that point and admitted that such matters would come under the jurisdiction of the German Consular Authorities. He said, however, that negotiations were in progress with Germany to correct the disadvantage, but no definite conclusion had yet been reached.

Mr. Suzuki Jyubi (Liberal) observed that, according to the Count's speech, the best foreign policy was one strictly conforming with the principles of international law. But some Powers seemed to have been infringing those principles in their relations with Korea. What explanation had the Count to offer about that?

The Count promised to touch that point when he was in a position to speak about the Russo-Japanese Convention.

Mr. Shigeoka Kungoro (Liberal) was disappointed with Count Okuma's speech. That the scope of foreign policy must be wide, and that it should conform with the principles of the law of nations, were truisms comparable with the platitudes that a man must have nutritious food and take proper exercise, in order to prolong his life. What Mr. Shigeoka wished to hear from Count Okuma was the particular policy that would be adopted by him towards particular countries and particular nations; as Korea, England, Russia, or the Far East?

The Count replied simply that Japan's foreign policy was a national policy, not the policy of an individual.

Mr. Inouye Kakugoro (Independent) expressed satisfaction at the personal attendance of the Count, and at the explanations graciously given by him on all questions put by members, instead of leaving the Chamber, as other Ministers were too prone to do immediately on the conclusion of their speeches. He hoped that the Count would show the same courtesy when he came to tell the House about the Russo-Japanese Convention, for he, Mr. Inouye, would like to put questions to the Count on a point connected with Korea.

The colloquy ended here. It may be added that the Count's delivery was admirable; that his language was excellently chosen, and his voice well modulated. He spoke with animation, using gestures at once natural and forcible. Moreover, his suavity and coolness in answering the questions of members produced a most favourable impression. It is doubtful whether the House can produce any orator of equal ability.

The discussion on the Budget was then commenced. The general situation, however, had already become apparent owing to the split between the Liberals and the National Unionists. Thus the retrenchments recommended by the Budget Committee, though they did not exceed 1,300,000 *yen* in all, were evidently distasteful to the majority. They seemed to

have made up their minds to restore the appropriations to their original form.

Mr. Komura Jutaro, Vice-Minister of Foreign Affairs, defended the Government's proposals for establishing Legations in Mexico and Brazil, observing that, in order to ensure the safety of Japanese emigrants, whose arrival was confidently expected in both countries, Legations were absolutely necessary, though the Budget Committee had decided to allow Consulates-General only. Moreover, as a matter of international courtesy, Japan ought to establish a Legation in Mexico, since that country had sent a Minister here four years ago.

Mr. Kajiyama Teisuke (Unionist) did not see any particular reason to establish Legations instead of Consulates-General in those two countries.

An open ballot was taken, the result being that the Budget Committee's amendments in the Foreign Office section were rejected by 151 votes to 90, and the appropriations were passed in their original form. The Home Office section also was passed as framed by the Government.

Coming to the Army Estimates, Mr. Kudo Kokan (*Shimpo-to*) moved that the vacancies produced in the Divisions by the despatch of three Brigades to Formosa should cease to be filled up from the Reserves, and that a sum of about 690,000 *yen* should be retrenched from the Army Estimates on that account.

Mr. Kurihara Ryoichi (Liberal) moved that a reduction of 10 per cent. be made in the appropriations for the despatch of troops to Formosa. The two motions were rejected.

The House rose at 5 p.m.

WEDNESDAY, FEBRUARY 17TH.

HOUSE OF PEERS.

The House met at 10.15 a.m., the Order of the Day being—

- 1—Leave of absence to Prince Shimazu, Marquises Shō, Shijō, Date, and so forth.
- 2—First Reading of Tokyo and Osaka Arsenal Fund Increment Laws (sent up from the Lower House).
- 3—First Reading of the Senjō Woolen Factory Fund Increment Law (sent up from the Lower House).

Viscount Soga asked a Government Delegate how many rifles could be turned out in a day from the Tokyo Arsenal when the fund should have been increased, as proposed by the Government; what would be the cost of each, and how far the material needed for the manufacture would be procured in Japan.

Col. Nakamura, Government Delegate, replied that 150 rifles could be turned out per day, and 200 when working at high pressure. The cost of each was about 154 *yen*, according to present estimates, of which 5 *yen* represented the price of the metal, and the greater part of the remainder, the cost of labour. The metal was the only article imported from a foreign country, the rest of the materials being supplied at home.

In reply to another question from the same member, the Delegate said that the kinds of ordnance which could be cast at the Osaka Arsenal were guns of 27 centimetres, 24 centimetres, 12 centimetres, 9 centimetres, and 7 centimetres, the first two being made of iron, and the last three of bronze. Guns of 28 centimetres calibre, to be used for firing shells, and rifled mortars of 24 centimetres, 15 cent., and 9 cent., were also cast at Osaka.

The same Delegate further stated that shot for piercing the iron-armour of a war-vessel could not be made in Japan. Ordinary foreign steel was unfit for the purpose. The projectiles had to be imported from abroad, though in small quantity. Other projectiles could be made from iron obtained at home, namely, from the Kamaishi mines.

The two Bills were entrusted to a special committee of 9.

The House rose at 11.05 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 p.m., the Order of the Day being:—

- 1.—Continuation of the First Reading of the Budgets.

Mr. Kudo Kokan (*Shimpo-to*) explained, from the rostrum, a Question introduced by

him and others about Government Forests. He dilated on official dilatoriness in the matter of applications forwarded by the people about the sale, and so forth, of Government Forests. From Aomori Prefecture, which the speaker represented, more than 6,000 applications of the kind had been forwarded, yet, though about five years had elapsed in the case of some of them, no answer had been received from the Authorities. In certain instances, even after the lapse of two years, petitions were sent back to the petitioners on the ground of defective compilation. Official business connected with Government Forests was not properly conducted, the chief evil being that the duties of inspection and of management were undertaken by the same person. Such procedure was to be condemned, because it encouraged laxity of official discipline, as shown by the fact that a number of dendrological officials had been arrested and imprisoned on the charge of surreptitiously felling trees in Government Forests. Inspection and management must be independent, and must not be entrusted to the same officials. He also failed to see why Government Forests should not be placed under the control of the respective Local Offices, instead of putting them under the direct control of the Dendrological Bureau. Were the control transferred to Local Offices, the expenses required for maintaining the forests could be largely reduced. He asked why official undertakings connected with Government Forests were not shown in a special account, instead of the ordinary account, as was now the case; and why the Dendrological authorities did not take proper steps to fix the price of by-products of forests when selling them.

The debate on the Budget was then continued.

Mr. Sakata Shosei (Unionist) moved that a sum of about 50,000 yen on account of extraordinary Naval Constructions should be transferred from Ordinary Expenditure to Extraordinary Expenditure. The motion was passed, in spite of the protest of Baron Ito, Vice-Minister of the Navy, who failed to see any special reason for the change, inasmuch as a similar method adopted in the Army had obtained the approval of the House.

The Budget Committee's recommendation that a sum of over 13,000 yen in the grant for the Department proper of the Navy should be retrenched, was rejected by a majority of 103 to 58. The Ordinary Expenditures of the Navy were then passed, as were those of the Department of Justice, without any amendment.

The only item touched by the Budget Committee in the Ordinary Expenditures of the Department of Education was a sum of 63,000 yen, on account of local school inspection, which the Committee proposed to delete.

Marquis Hachisuka, Minister of Education, protested against the Committee's suggestion. His Excellency was convinced, from the discussion in which he had taken part during the course of the Committee's proceedings, that the Committee had arrived at its conclusion, not because of the Government's project, but on the ground that the sum was too paltry for the purpose, and because inspection carried out by low-salaried officials, such as the Government contemplated employing, would be devoid of any usefulness. But the method of inspection suggested by the Committee would involve a large outlay, which the present condition of the national finance did not allow. The Government was firmly persuaded that its measure would be efficacious, and therefore he trusted that the item would be allowed to stand in its original shape.

The discussion that followed the Minister's remarks was curious, in that the three speakers who took part in it were all Liberals, and all differed greatly from one another.

Mr. Tanaka Tori (Liberal) was against the item, because common education was relatively in advance, as compared with other affairs of State, and consequently the money, if it were available, should be employed for other purposes.

Mr. Komuro Jyuko (Liberal) could not admit that common education was in such an advan-

ced condition as to require no special attention from the Government. On the contrary, he thought that he saw great need of improvement in this important matter. By way of illustration, he showed that the number of common school teachers was deficient by more than 20,000, throughout the Empire. The Budget Committee's idea of excising the item on the ground of inadequacy, was analogous to the act of a foolish person who should prefer to stand shivering in the cold because he could not obtain silk garments.

Mr. Shiba Sankuro (Liberal) attacked Mr. Komuro, and observed that the Government's proposal to appoint local school inspectors who should have salaries not exceeding, nay even falling short of, those of district school inspectors, had no hope of success. It would be as if one should apply a patch to a whole, though rough, garment.

Mr. Motoda Hajime (Unionist) probably reflected the sentiment of his Party, as well as of a large portion of the Liberals, when he observed that, the House having been attacked by a mania for passing the Government's Budget, and disregarding the amendments suggested by the Budget Committee, he saw no special reason why this item in the appropriations for the Department of Education alone should evoke opposition. It might be suffered to pass, as others had been.

The Government's Budget was then passed without amendment.

Coming to the discussion of the Ordinary Expenditures of the Department of Agriculture and Commerce, Mr. Inouye Kakugoro (Independent) delivered a long satirical speech against the Department. The tone was so bitter that outsiders were driven to conjecture that the speaker had some special grudge towards the Department. He had no intention, he said, of condemning the Budget of the Department. He approved it. But his views about the personnel of the Department were very different. The public seemed to be satisfied with the present Cabinet Minister; seemed to be of opinion that so far as the standard of Japanese statesmen went to-day, the Cabinet might be admitted to be composed of good specimens. But that conclusion could not be extended to the Department of Agriculture and Commerce. The Minister, the Vice-Minister, and the Bureau Chiefs were entirely unsatisfactory. Mr. Kudo Kokan had attacked the Department about the management of Government Forests, and the speaker entirely endorsed Mr. Kudo's views. But everything said about the Dendrological Bureau applied with equal force to the Mineralogical Bureau, to the Bureau of Commerce and Industry, and to the Bureau of Agriculture. Last year, the Diet had appropriated a sum for the purpose of developing Japan's commerce and industry, and prosecuting inquiries to that end. What had the Department done with the money? It had, indeed, despatched some experts to France, but they knew nothing of the French language, and when they arrived in Paris, they were entirely at a loss how to proceed. He entertained the House with a story, doubtless highly exaggerated, as to how a gentleman who accompanied the Japanese Ambassadors to Russia was asked by the dendrological experts to act as interpreter for them in France, and how, on being informed of the points that they wished to know, the gentleman had been obliged to dissuade them from prosecuting such inquiries, lest they should put themselves and Japan to shame, for the information they sought was utterly antiquated. He then proceeded to criticize the site chosen for the Imperial Steel Foundry, which he said, must have been selected without the slightest regard to business convenience. The President of the Foundry himself, were he asked to undertake the affair as his own private concern, would hardly have fixed upon such an unsuitable site. In short, the Noshomusho, under its present direction, constituted a serious impediment to the business of the people, who were all eager to develop commerce and industry, and to attend to *post bellum* measures of their own. Believing, however, that Counts Matsukata and

Okuma would thoroughly remodel the Department and would fulfil the pledges given by the Cabinet with regard to the reform of officialdom, the speaker would not refuse to pass the Budget of the Department.

Mr. Kaneko, Vice-Minister of the Department and Government Delegate, accepted the challenge of Mr. Inouye, and rebutted the charges directed against the Department. He explained how difficult it was to carry out satisfactory investigations with regard to petitions forwarded about the sale of Government Forests, as each petition was accompanied by a mass of documents. The Department recently received one petition that came with a cartful of documents for reference. To wade through such documents, to ask questions of local, district, or village offices, before giving a fair judgment and reply, involved much labour and long delay. As to the purposes for which the Commerce and Industry Expansion Fund had been entrusted to the Department, the public were already well informed. The creation of the High Council of Industry and Commerce was one of them, and Mr. Inouye himself was a member of that Council. Mr. Kaneko dwelt at length on work done by the Council, and concluded his remarks with a declaration that Mr. Inouye's speech affected not only the dignity of the *Noshomusho* but also that of the Government as a whole.

Mr. To Kinsaku (Liberal) moved that a sum of over 95,000 yen should be retrenched from the appropriations for the Dendrological Bureau. The spirit of this motion was analogous with that of the accusations preferred by Mr. Kudo Kokan, in explaining the Question put by him about Government Forests. The introducer said that the present system of allowing petty clerks of Dendrological Offices, drawing only from 6 to 10 yen monthly to act as inspectors and managers of forests, was utterly defective. He argued, consequently, that official business connected with Government Forests must be lessened in scope.

Dr. Takahashi Takuya, Chief of the Dendrological Bureau, and Baron Noda, Chief of the Accounts Bureau of the Army, spoke against the motion. They explained that it was proposed to increase the expenditures in connection with the business of Government forests, chiefly because of the necessity of supplying timber for State railways, and for the building of military barracks, and so forth.

Mr. Kudo Kokan (*Shimpo-tō*) spoke in favour of the motion, which, when put to the House, was passed.

The other items in the Expenditures of the Department were passed in the form proposed by the Government.

On coming to the Ordinary Expenditures of the Department of Communications, Mr. Koganei Gonzaburo (Liberal) moved that an item of over 1,700,000 yen, namely bounties for the encouragement of navigation, be reduced to 1,000,000 yen, because, judging from the experience thus far obtained, he failed to see how ships could be offered in any large number for examination by the Inspecting Commissioners. The sum of over 700,000 yen that he proposed to retrench from the item might be better employed for extending the telegraphic service, on account of which no appropriation appeared in the Budget.

The motion was rejected.

The Ordinary Expenditures of the Colonial Department were quickly voted, without comment or division.

An appropriation of 60,000 yen, by way of subsidy to the Kobe Water-works, in the Extraordinary Expenditures of the Home Office, was discussed at some length, the opponents of the appropriation arguing that the money was not needed, seeing that Kobe City had not yet floated a loan, as the petition for a subsidy had represented, nor had the work of construction been started. Moreover, owing to the recent rise in the market price of commodities, the original estimate of a little over 1,000,000 yen was now found entirely inadequate, and the cost must be re-computed.

Mr. Furuichi Koi, Chief of the Public Works

Bureau, protested against the amendment, and it was rejected.

The House rose at 4.50 p.m.

THURSDAY, FEBRUARY 18TH. HOUSE OF PEERS.

The House met at 10.35 a.m., the Order of the Day being—

- 1—Leave of absence for Prince Mori and others.
- 2—Supplementary Budget No. 4 for the fiscal year 1896-1897, relating to the Conservation of Shrines.
- 3—First Reading of a Government Bill relating to An Industrial Guild Law.
- 4—First Reading of a Government Bill relating to the Control of Amulets (mamari-fuda) and Almanacks.
- 5—First Reading of a Government Bill relating to the Special Accounts of Formosa (sent up from the House of Representatives).

Viscount Tani, Chairman of the Budget Committee, reported that the Committee did not think the conservation of shrines as pressing as the question of vaccination, concerning which urgency had not been alleged, but in consideration of a promise from the Government Delegate that the Government would undertake not to ask for such an appropriation in the form of an urgency supplementary Budget hereafter, the committee had decided to recommend the supplementary Budget No. 4 for approval.

The Budget was passed without debate.

The Bill standing next on the Order was of great length. It consisted of about 70 articles. Its aim was to encourage the organizing of such guilds as credit-guilds, purchase guilds, sale guilds, manufacturing guilds, and guilds for community of ownership in machines and animals. The contemplated guilds are to consist of farmers, petty manufacturers or mechanics, or dealers in marine products, and must comprise at least 7 persons. A guild is to be entitled to a loan from an agrico-industrial bank to a limited extent, without security in the form of mortgage. Subject to variation under special circumstances, the limits of a guild's operations must not extend beyond those of a city, town, or village.

The Bill was entrusted to a Special Committee of 15, to be nominated by the President.

The Bill for controlling Amulets and Almanacks provides that the issue, transfer, or distribution of an amulet must be made solely by a shrine or Temple dedicated to a Shinto or Buddhist deity, and that no individual, or party of individuals, except those specially sanctioned (the Shinto shrine of Ise alone enjoys this license) shall be permitted to publish an almanack, or anything in the nature of an almanack. Any violation of this Law is to be punished with major confinement ranging from 11 days to 6 months, or by the imposition of a fine of from 10 to 200 yen.

The Bill was entrusted to a Special Committee, as was also the one standing last on the Order.

The House rose at 11.20 a.m.

HOUSE OF REPRESENTATIVES.

The House met at 1.25 a.m., the Order of the Day being:—

- 1—The Budget.
- 2—Continuation of First Reading of a Government Bill relating to the Amendment of a Portion of Law No. 92, issued in 1896.
- 3—Continuation of the First Reading of a Government Bill relating to the period of collecting Taxes in Oshima and Kawabe Districts (group of islands) in Kagoshima Prefecture.
- 4—First Reading of a Government Bill seeking *post facto* consent to Disbursements from the Reserve Fund of the 28th fiscal year.
- 5—First Reading of a Government Bill seeking *post facto* consent to payments in excess of, or not included in, the Budgetary items out of the Surplus Revenue of the 28th fiscal year.
- 6—First Reading of a Government Bill seeking *post facto* consent to disbursements from the Reserve Fund in the Special Accounts of the 28th fiscal year.
- 7—First Reading of a Government Bill seeking *post facto* consent to payments in excess of, or not included in, the Budget, out of the Special Revenue for the 28th fiscal year.
- 8—First Reading of a Government Bill relating to a Silk Worm Eggs Inspection Law.
- 9—First Reading of a Government Bill relating to the restoration of Lands, Forests, and Fields owned by the State.

10—First Reading of a Government Bill for sanctioning the private construction of certain Railways originally in the State programme.

11—Another Bill of the same nature.

EXTRAORDINARY EXPENDITURES OF THE FINANCE DEPARTMENT.

Mr. Horiuchi Kenro (Liberal) wished to excise a sum of over 110,000 yen, appropriated for the purchase of ground for improving the Kobe Customs; not because he denied the necessity of enlarging the Kobe Customs, but mainly because the method contemplated by the Government for obtaining the ground was open to criticism. The Government plan was to buy land reclaimed at the mouth of the Minato River by the Minato-River Reconstruction Company, which was not yet in existence. In point of fact, there was as yet no land to be bought with the fund. The motion was rejected.

EXTRAORDINARY EXPENDITURE OF THE NAVY.

Mr. Sakata Shoshiki (Unionist) chairman of the sub-Committee charged with the duty of reporting on the Navy Budget, explained why the Budget Committee had been led to retrench a sum of 1,200,000 yen from the Naval Expansion Fund. The measure had been entirely the result of a dispute between the Committee and the Government. The Committee were under the impression that the Government had already concluded a contract to purchase two war-vessels from abroad, without previously asking the consent of the Diet for funds. But the Government denied that anything of the kind had been done. Hence the Committee had been obliged, rather reluctantly, to retrench the Expansion Fund to that extent, being of opinion that if the vessels were to be built anew, they could not be finished within the next fiscal year, and hence the sum might be deferred to next year's Budget.

The amendment was adopted.

EXTRAORDINARY EXPENDITURES OF THE DEPARTMENT OF COMMUNICATION.

Passed as amended by the Government.

EXTRAORDINARY EXPENDITURES OF THE DEPARTMENT OF COLONIZATION.

Mr. Hirashima Matsui (Liberal), on behalf of the sub-Committee elected to consider and report on the Budget of this Department, stated that the Budget Committee recommended that, if possible, the agreement guaranteeing the profits of the Hokkaido Tanko Railway Company should be recast in the sense of reducing the amount guaranteed. According to the original stipulation, the sum to be paid by the State would aggregate over 240,000 yen until the expiration of the period covered by the guarantee. The Budget Committee thought that the amount might be reduced to 160,000 yen approximately. The Committee believed that the comparatively low rate of freight charged for carrying coal from collieries owned by the Railway Company, was the reason why the earnings of the line required to be supplemented from the Treasury. Were proper charges made, no such deficit would appear. The amendment was passed on the condition that should the Company decline to entertain the Government's proposal, the item was to stand as originally set down.

ORDINARY AND EXTRAORDINARY REVENUE.

Mr. To Kinsaku (Liberal) moved that, as a natural consequence of the House's decision on the previous day—namely that a sum of 95,000 yen be retrenched from the Dendrological Bureau's appropriations, with the view of reducing the scope of business connected with Government forests—a sum of 202,000 yen should be reduced from the item headed "Receipts from Government Forests."

The motion was adopted.

Mr. Suzuki Jyubi (Liberal) put several questions to Baron Tajiri, Vice-Minister of Finance, about an item headed "Government Loan to be floated." Mr. Suzuki wished to know what process the Government contemplated in floating a loan of over 59 million yen, and whether it was not the Government's intention to apply the Indemnity to the purposes on account of which the loan was projected.

Baron Tajiri replied that, judging from the present state of the money market, the Authori-

ties could not expect to obtain much from the public in the event of floating a loan. In that case, they would have no alternative except to apply the Special Finance Law, and to temporarily take the required sum from the Indemnity.

Mr. Suzuki then moved that the Government withdraw the item headed "Government Loan," and replace it by an appropriation from the Indemnity. If the item were suffered to stand, as now entered, and if the public remained uncertain whether the Government would raise the loan or appropriate the sum from the Indemnity, they would be unable to carry on their business with confidence. The Government must be convinced of the impossibility of obtaining a loan at home and of the necessity of having recourse to the Indemnity. Therefore all uncertainty had better be removed.

Baron Tajiri failed to understand why Mr. Suzuki raised such an objection. There were several modes of floating a loan, and the Government must adopt whatever method seemed best at the time. No occasion existed to specify the exact mode.

Mr. Suzuki's motion failed to obtain any supporter.

The Revenue Section, together with the remaining portion of the Budget, that is to say, the Continuing Expenditures and Special Account, were passed without amendment.

The Bill standing second on the Order, which related to the auditing of Formosan Accounts, was passed, the second and third readings being omitted.

The next Bill was passed with a slight modification.

The Bills standing 4, 5, 6, and 7 on the Order were entrusted to a Special Committee to be nominated by the President.

The Bill standing eighth on the Order was explained by Viscount Enomoto, Minister of Agriculture and Commerce. His Excellency said that the inspection of silk worm's eggs, conducted in various localities in accordance with Department Notification No. 9, issued in the 19th year of Meiji, had been attended by beneficial results. Already in about 20 prefectures a system of inspection had been put in practice. It was with the view of making the procedure uniform, and obtaining still better results that the Government had introduced the measure now before the House.

In reply to questions from several members, Mr. Fujita Shiro, Chief of the Bureau of Agriculture, said that the scheme would involve an outlay of about 300,000 yen, and that the reason why the Bill had been framed in the sense that the expense was to be borne by the respective localities, was because the charge was already levied in that way, and because the Treasury could not conveniently assume the burden.

The Bill was entrusted to a special Committee. The next Bill, for restoring State Land, Forests, and Fields to the people, was briefly explained by the same Minister. The gist of the Bill was that persons possessing proofs of their title to the whole or part of any land, forest, or field now held by the State, might forward an application to that effect before the end of 1898; and that in case any official recognition of private right of ownership were discovered to be faulty within the lapse of 5 years, such recognition might be revoked.

The Bill was entrusted to a Special Committee.

The last two Bills were to permit the laying of private railways between Himeji and Tottori, and also between Utsunomiya and Kure.

The Bills were handed to a Special Committee.

The House rose at 4.15 p.m.

About half-past eleven o'clock on Tuesday night fire broke out at Nishikobayashi-cho, Surugadai, Kanda, and over thirteen houses were destroyed. The Kondo Hospital caught fire and the patients had to be conveyed to the Tachibanatei, Kanda. Although a strong northerly wind was blowing at the time the flames were subdued by about half-past twelve, when rain fell. The cause of the fire has not yet been ascertained.

MONTHLY SUMMARY OF JAPANESE CURRENT LITERATURE.

Mr. Onishi Shuku contributes to the *Taiyō* the first of a series of articles on "Proverbs." After dwelling on the importance of the study of proverbs from a literary and philological point of view, Mr. Onishi draws attention to the fact that nothing like a good collection of Japanese proverbs exists. The term 俚語 *rigen* has a less definite meaning than the English word "proverb." The sense attached to the latter is much more limited than that attached to the Japanese *Kotowasa*. The latter term is made to include a number of different classes of common sayings. *Kotowasa* is explained by some as 傳言 *tsutaye-kotoba*, by others as 俗言 *sokugen*, 俚言 *rigen*, or 世話 *sewa*, *yo no hanashi*. The essential features of this class of speech are (1) that the sayings shall be an embodiment of the common experience of mankind, and (2) that they shall be in general use. The extent of their application it is often most difficult to determine. It often becomes a question whether expressions that are used in a great variety of senses and have been embodied in the ordinary speech of mankind can any longer be called *Kotowasa*. The great majority of Japanese proverbs have been derived from Chinese books or from Buddhist sources.

No. 22 of Dr. Katō's 100 essays, published in the *Taiyō*, is on the subject of newspapers and magazines in Japan. The following is the gist of what Dr. Katō has to say on this subject. Though the progress made in this class of literature during the past twenty-five years is very great, when Japanese journals are compared with those of Europe, the difference between them is seen to be that of adults and children, and among the children our small newspapers being only girls whom one expects to be ignorant, it is not worth while spending time in discussing their condition, but it is important to call attention to the fact that the journals that aspire to be called *Oshimbun* (great newspapers) should for the most part confine themselves to recording political news, crime of the more serious kind, and gossip, and should fill up the remaining columns with fiction. With three or four exceptions, the leading newspapers make no efforts to collect and publish information on industrial, commercial, and economic subjects. I notice, too, that of late the practice of inserting pictures in the columns of the great dailies is becoming common, as though the one object of a newspaper were to captivate its readers. The space devoted to the notice of important books that have been published ranges from 4 lines (行) to about 9, and as for the important articles that appear in magazines on commerce, industry, learning, and religion, not only are they not discussed, but even the mention of their existence is a rare occurrence. In Europe no newspaper of any standing allows the discussions on important subjects carried on in magazines to remain unnoticed, and I am informed that in the West specialists are paid to write summaries of current literature. I know that I shall be told that the field for newspapers in Japan is so limited that it would be quite impossible to conduct them on the lines of a European journal. But to this I reply that though in the present stage of national progress it is too much to expect the Western standard of journalism to be reached, without involving much extra expenditure, it would be quite possible to furnish newspaper readers with a digest of the contents of learned organs and with an account of the many interesting subjects undergoing discussion. But this is not done. When I see with what profound indifference the leading dailies treat contemporary literature, I cannot but heave a heavy sigh of regret.

The magazine we have just quoted is of opinion that there is a distinct movement in the literary world in favour of abandoning the

practice of exclusively publishing cheap, taking books. Men of means are coming forward and encouraging the preparation of such works as the *Kokushi tai kei*, the *Bijutsu tai kan* and a variety of dictionaries. Hence, it is predicted that the age of trashy literature has well nigh reached its close and that during the next few years the publication of works of a permanent type will be the order of the day.

We have to record considerable activity among writers on educational subjects. The *Dainihon-Kyōikukai-Zasshi* has changed its title and is henceforth to be known as the 教育公報 *Kyōiku kōhō*. With its new name it is to assume a new character. It is to be modelled on the lines of the *Kyōiku Hōchi*, minus the violent language often used by the latter journal. It will aim at recording facts bearing on education in a "straight-forward and simple" manner. From the office of the *Kyōikujiron*, a new magazine is to be issued, called the 教育壇 *Kyōikudan*, while from the office of the *Kyōiku Hōchi* a new publication called the 中等教育 *Chūitō Kyōiku* (Middle Class Education), is about to proceed. It seems that after a good deal of difficulty the Mombushō has succeeded in calling into existence a new deliberative body, to be called the Kōō-Kyōiku-Kaigi, the "High Class Education Council." The rules of this corporation have been published. It will be controlled by the Minister of Education; who will consult it on important questions connected with the policy of the Department. The Council is to be composed of the following members:—(1) the President of the Imperial University and the heads of the various Departments of the University. (2) The heads of Bureaux in the Education Department. (3) The Directors of the Higher Normal School for men and the Higher Normal School for women. (4) The Directors of the Higher Commercial School, the Higher Industrial School, and the Tōkyō Bijutsu Gakkō (Fine Art School). (5) One representative to be chosen from the Directors of the Higher Schools. (6) Seven members to be chosen from among those who have experience in education or whose general knowledge qualifies them to be valuable adjuncts to the Council.

The *Rikugō Zasshi* discusses Dr. Hozumi's views on National Education as expressed in the columns of the *Nichi Nichi Shimbun* at the beginning of the year, which for the most part it endorses. In the articles referred to, Dr. Hozumi contends that too much reliance is placed on history in seeking to awaken in the minds of the young feelings of loyalty to the State. The application to modern times of much of the material culled from the ancient historical records is by no means a task which can be accomplished by youthful students. Dr. Hozumi is in favour of first drawing the attention of the young to the emblems of authority by which they are surrounded, and to the existence of laws which they, as subjects of the Emperor, must learn to obey. Their attention should be called to the existence of the police, courts of law, prisons, soldiers, and the like at first, and later to the existence of a Diet and a constitution, and the significance of these things should be explained. In a word, instead of founding principles and precepts on the lives and sayings of the sages of antiquity and on the authority possessed by forms of Government which no longer exist, the agencies and institutions actually established and in constant operation before the eyes of the pupils should be used as object lessons wherewith to teach the necessity of obedience and loyalty. Dr. Hozumi expresses the opinion that the tendency of the age is in the direction of a selfish individualism, and that hence the task of inculcating in the minds of the young a regard for the interests of the State is the more imperative. Business morality, Dr. Hozumi thinks, is at a very low ebb. The *Rikugō Zasshi* objects to Dr. Hozumi's tracing the lax morality of modern times to the growth of individualism. Nothing can be clearer, says this organ, than the fact

that individualism of the right type is more conducive to high class morality than any other influence, an observation which we have no doubt Dr. Hozumi would endorse. It is a question of the meaning attached to terms rather than difference of principle.

From the *Shigaku Zasshi* (Historical Magazine), we learn that the first part of the 古事類苑 *Kojiruien*, the important work of which we gave an account in our September Summary, was issued at the close of last year. The *Shigaku Zasshi* publishes some interesting remarks of Dr. Shigeno, the eminent historian, referring to the province of Echigo as a field for historical investigation, and other matters, of which we give the following epitome. As is well-known, in Hideyoshi's time this province was governed by the renowned Uyesugi Kenshin, who spent most of his life in waging war in other provinces rather than in defending his own territory from invasion. Hence Echigo furnishes little material towards compiling a history of the civil war of the sixteenth century, but in other respects it is full of interest. Niigata and Sanjō are especially worthy of attention, the former as a centre of mediæval commerce, the latter as the place where Shinran founded the sect known as the Monto-shū, and Nichiren established the Nichiren-shū. Speaking of the character it is desirable that a historian should bear, Dr. Shigeno gave it as his opinion that in respect of impartiality and calmness of judgment in dealing with historical records and alleged facts, the majority of Japanese historians were inferior to those of China and the West. It often happens that historians fail to realise what was the real state of affairs in any given period, and consequently they give a wrong explanation of the motives and the general character of the men who figured in that period. To cite an instance, during the civil wars of the Sixteenth Century it was essential to self-protection that a man should choose a brave warrior as his master and remain faithful to him through thick and thin. This not infrequently led to members of the same family being pitted against each other in battle. In writing of this state of affairs, not a few historians represent the enmity felt by members of the same family for each other as showing a lack of virtue in the persons concerned, whereas it is plain that filial piety, fraternal love and the like, still existed, but owing to the exigencies of the time, were made subservient to loyalty to a military chief. Few are the historians who make allowances for the feelings and prejudices of the compilers of those historical records on which we now rely for an account of the events of the past. Take the instance of the war between Uyesugi Kenshin and Takeda Shingen, an extremely interesting page of our national history. Our two great sources of information on this war are the 春日山日記 *Kasuga-yama-nikki*, written by one of Uyesugi's retainers, and the 甲陽軍鑑 *Kōyō gun-kan* compiled by a retainer of Takeda. It is plain that neither of these sources is entirely reliable, and the historian who sits down to compile a faithful record of the events described in these works will need no small amount of tact and discernment: will need to weigh the evidence on both sides before giving a verdict.

The Tōkyō Tōkei Kyōkai, the Statistics Association, according to the report for 1896 published in a recent number of the *Tōkei Shūshi*, are doing good work in the collection and classification of a great variety of statistics. The Society has a membership of 232, consisting of 175 honorary members, 11 special members, 35 life members, and 173 ordinary members. During the year the Society despatched 2,960 letters of inquiry, to which 1,496 answers were received. Tables of Statistics and various publications necessary for reference received during the year amounted to 927. The Society's magazine has reached a circulation of 4,320, and, in addition to this, the Society has issued the *Résumé Statistique de L'Empire du Japon*, in French and Japanese, a work of

great value to foreigners, prepared annually by the Imperial Cabinet Bureau of Statistics, the 十五統計年鑑, *Jūgo-tōkei-nenkan*, being tables of Comparative Statistics extending over 15 years.

The *Awoyama Hyōron* publishes an article which furnishes some interesting particulars respecting the life of Sakuma Shōzan, furnished by Mr. Matsumoto Sōgo, an intimate associate of Sakuma, which, so far as we are aware, have never been published before. Sakuma seems to have always been ahead of his time. Some years before Commodore Perry visited Japan, Sakuma urged upon his *Daimyō*, Sanada, the necessity of preparing for the emergencies to which increased intercourse with the Western world would most certainly lead, and he himself gave instruction in gunnery. His zeal for learning knew no bounds. He was well versed in the philosophy of Wang Yang-ming* and in exchange for instruction in this subject he induced Tsuboi Shindō to teach him Dutch, in which he made such rapid progress that he soon exhausted his teacher's stock of knowledge and commenced investigating for himself. He informed his *Daimyō* that Chinese learning was altogether out of date, and that it was necessary for Japan to tap new sources of knowledge. It was at this time that he bought Parley's Universal History—a book for which he paid 300 *ryō*, though it may now be procured for 10 *sen*. Some estimate of Sakuma's eagerness for knowledge may be formed by considering that at this time his monthly emolument amounted to only 5 *ryō* in money and rice sufficient to feed 15 persons. His progressive ideas created many enemies and by not a few he was deemed to be a fiend incarnate, being called *Akuma* (Devil) instead of Sakuma. He fought an uphill battle against the most obstinate prejudices. To quote only one instance, his attempt to introduce the foreign mode of horse shoeing was denounced on every hand, being made the text of many a Buddhist sermon in which the cruelty of paring the hoofs and nailing iron on the feet of dumb animals was dwelt upon, and the advocate of this practice was consigned to the flames of hell. The knowledge that Sakuma obtained from books he proceeded to carry into practice. Being convinced of the benefit of vaccination, he forthwith vaccinated his own son and pointed to him as an example of its power as an antidote. When the American fleet under Commodore Perry arrived, the whole country was in a fever of excitement and the difficulty of obtaining rapid intelligence respecting the course of events was felt keenly. Whereupon Sakuma informed his *daimyō* that in the West information travelled like lightning and that guided by his books on the subject, he would construct an electric telegraph apparatus. For a month he worked hard at the task, but failed, owing to his ignorance of certain important details.

The Japanese are evidently very anxious to keep themselves up to date in naval matters, as is evinced by the fact that two standard books on naval affairs have been recently translated and published by the Society known as the 水交社 *Suikōsha*, connected with the Naval Department. The first is Vice-Admiral T. H. Colomb's "Naval Warfare," a work which in Japanese covers 4,000 pages, with no less than 50 maps. Copies of the book have been given to Naval officers, and the remaining copies of the first edition are for sale at Maruya's at the ridiculously low figure of 2 *yen* per copy. The other work translated by the *Suikōsha* is Captain Mahan's two volumes, which in Japanese bear the title of *Kaio Kenryoku Shiron*, "A history of Sea-power." The title of Captain Mahan's book in English is "The Influence of Sea Power on History," which ought to be translated, *Rekishi ni okeru kaio no seiryoku*; or, to bring out the meaning of the original more fully, *Kakkoku rekishi wo handō suru ni kaio seiryoku no ōi naru koto*. The *Suikōsha* translator is quite misleading as to the object

* Vide October Literary Summary, *Japan Weekly Mail*, Oct. 17th, 1896.

of the work, which is to show that the events of history have been immensely influenced by the presence or absence of naval power. Captain Mahan is of opinion that the United States would not have been independent to-day were it not for the aid received by America from the French fleet. Captain Mahan's work, as is doubtless known to many of our readers, is considered the best modern book on the subject treated, and has been adopted at the suggestion of the Emperor of Germany as a class book in German Normal Schools.

A long felt need has at last been supplied by the publication of maps designed to illustrate and render intelligible Japanese history. It is said that neither labour nor expense has been spared in the preparation of the atlas now announced to appear under the title of the 日本歴史地圖 *Nippon Tokushi Chisū*. The cartographers who have been engaged on the work are Messrs. Kawada Hi, Yoshida Tōgo, and Takahashi Kenji. The period embraced extends from the early ages of Japanese history to the time of the China-Japan war. The atlas contains 51 maps. It is stated that the blocks required for printing the work have taken two years to prepare. The subscription price for the work is 1 *yen* 30 *sen*. The list closes on February 28th. The first edition of the atlas consists of 30,000 copies only, issued by the Fuzambō, Urajimbō chō, Kanda, Tokyo.

Professor Kurita Kan, of the Literary Department of the Imperial University, has recently published a work entitled 天朝正學 *Tenchō Seigaku*, a Shintō book whose chief object seems to be to show how great was the influence of Minamoto Mitsukuni, the founder of what is known as the Mito-ha, and Motoori. The priests who belong to the Mito-ha rely on Confucian doctrines as well as on the articles of ordinary Shintō. The *Tenchō Seigaku* is partly theological and partly ethical. As the name implies, "Imperial Sacred Learning," the author seeks to demonstrate that national virtue must be based on regard for the Imperial will and on the sacredness to be attached to the Imperial ancestry. The *Tenchō Seigaku*, true to the traditions of the Mito-ha, is intensely national and anti-foreign in tone. It is published by the 國光社 *Kōkō-sha*, Nichōme, Tsukiji and sells at 35 cents.

The Hakubun Kwan has just published a work that ought to prove of considerable value to persons engaged in trade. It is entitled the "Ei-wa-shōgyō-sakubun-ji-i." "An English-Japanese Commercial phrase Dictionary," compiled by Messrs. Soyama Shōzō and Ōta Jūgorō, and revised by Mr. E. J. Blockhuys, of the Higher Commercial School, Tōkyō. This work has aimed at collecting all the commercial terms in general use in Japan and at illustrating their usage by a number of carefully chosen phrases. The words employed in business transactions are so numerous and many of them so difficult of comprehension to the Japanese that this new lexicon should command a large sale. Its subscription price is 1 *yen* 10 *sen*.

The *Teikokubungaku*, in an interesting note, which we summarise, draws attention to the love of the Japanese for nature as evinced by their poetry. It is customary in collections of poems to find them arranged according to the four seasons, but the subjects of these poems are invariably natural objects and natural processes, or the feelings and sentiments suggested by them. The stormy days that preceded the Tokugawa era for a time diverted the attention of Japanese poets from nature, but soon after the ushering in of a reign of peace, our national love of nature reasserted itself and, though what are known as the *haikai* (17 syllable verses) almost superseded the *Famato-uta*, in respect of the subjects which fascinated our chief muses, there was no change. But it is important to point out that the ideas respecting nature entertained by our poets are nothing much to boast of. In their study of nature the minds of our bards

are passive rather than active. They hear what nature says, but do not make her talk after the fashion of Europeans, who subject all nature to their wish, whether it consists of the conversion of natural forces like electricity into transmitters of their thoughts, or the calling of spirits from nature's hidden recesses to give them a glimpse of the marvels and sublimity that pervades those regions. The standpoint from which we regard nature is by no means an advantageous one. Our ideas lack the decision and the penetration that characterise those of Western poets. What we must strive after is to render nature more active, that is, to make her say more than she has been wont to do. The *Idyō* is of opinion that what is needed is more comprehensiveness and more discernment in our method of regarding nature. At least this is what we take to be the meaning of the words *Shisen wo Taikwan* (大觀) *subeshi*. If this be so we are at one with the *Zaiyō*. What is lacking in us are the mental qualities required for a proper study of nature. The philosophic view of nature with which readers of Occidental poetry are so familiar is wanting here. With all our modern love of nature, in ability to interpret nature we fall far short of the bards of bygone days. In the Nara† age there were Hitomaro and Akahito; in the Heian age‡ there was Tsurayuki; in the Tokugawa era there was Bushō; but in the Meiji era there is no poet who can be regarded as an interpreter of nature.

The magazine we have been quoting contains a valuable article on Japanese lexicography of which we here give the gist. The views expressed are those of Mr. Takemura. Among the dictionaries that have been published of late years, Mr. Owada's *Nihondaijiten*, and Messrs. Fujii and Kusano's *Teikokudaijirin* are worthy of special mention and comparison. First it is necessary to say a word about other Dictionaries. (1) There is the *Nihondaijiten*, issued under the auspices of the Imperial Household Department; (2) the *Kotoba no Hayashi*; and (3) *Nihondaijisho*. But for various reasons these works are not much used. It is different with Mr. Otsuki's *Genkai* (Sea of Words). This lexicon has had a wide circulation, but it is defective, not containing anything like the number of words required to make it thorough. Hence the two lexicons first named undoubtedly helped to supply a vacancy. To begin with, Mr. Owada's *Nihondaijiten*, though in the main compiled on the lines of the *Genkai*, possesses some important advantages over the rival work. The *Genkai* has made a specialty of botanical terms and of the names of utensils, implements, and the like, but is sadly deficient in archaic Japanese and in polite speech known as 雅言 *Gagen*. Words that occur in text-books used in schools are frequently not to be found in the *Genkai*. The *Nihondaijiten* is strong where the *Genkai* is weak, and hence for general use is incomparably the better of the two. It has more words than the *Genkai* and has made a specialty of historical, military, theatrical, operatic, and Buddhist terms. Moreover, its explanations are lucid and its engravings well executed. But the *Nihondaijiten* is by no means without its imperfections. Its most glaring omissions are the Chinese words in everyday use. It may be argued that the general familiarity with the meaning of these terms is an excuse for their omission, but a dictionary that claims to be thorough should never omit words in general use. This dictionary is weak, too, in the matter of derivation, very few words being traced to their origin. Provincialisms are entirely omitted, a subject for regret.

Coming to the *Teikokudaijiten*, the first remark to be made is that it differs in no important respect from Mr. Yamada's *Nihondaijisho*, unless it be in supplying archaic and classical terms not found in Mr. Yamada's lexicon. Its explanations are very minute. It often gives over 20 distinct meanings of a word and sometimes fills a whole page with examples

† When Nara was the capital of Japan.

‡ The time when the Court was at Kyōto. The reference to the Tokugawa era below is confusing, as the court was still at Kyōto in the Tokugawa era.

of usage, but the same may be said of the *Nihondaijisho*. In fact the *Teikokudaijiten* is guilty of gross plagiarism, as a comparison of the two works will show. The *Teikokudaijiten* professes to have collected all the principal words in use. The comprehensiveness ascribed to it by its compilers is thus expressed:—*Nihon Shima no Kokon no gagen, sokugen wo mōra* (網羅) *Shi Kwashiku Kai-shaku wo hodokoshi*, &c. And yet the dictionary does not contain more than about 50,000 words, some 10,000 less than are found in Owada's work. Like the *Genkai* the lexicon we are now criticising has omitted numbers of words in daily use, and on the other hand has given scores of words that are seldom used. Its explanations are in many cases carelessly incorrect. Engravings are often given where the objects are quite familiar and not supplied in the case of objects seldom seen, and the work is disfigured by numerous misprints. Taken altogether, it is not a work that we can praise, but we trust that in its second and third editions it may be sufficiently improved to make it a valuable addition to our libraries.

The *Meiji Hyōron* has a note on small handwriting in which it is maintained that there is no nation in the world which has made so much progress in this art as the Japanese. It is said that in the Tokugawa era 1000 ideographs were written on a grain of rice, but, according to the magazine we are quoting, this feat has been surpassed by modern scribes. There is a man in Nagano Prefecture called Hayashi Josen who can write characters that can only be read by means of a microscope. Some little time ago Hayashi's powers were put to the test by Count Hijikata in the presence of the Chinese Minister, the Minister remarking that though this species of chirography had been brought to great perfection in China, he was of opinion that nothing approaching the minuteness of Hayashi's ideographs had been reached. Under orders from Count Hijikata, Hayashi, not long ago, copied a long extract from Sanyō's *Nipon Gwaishi* which was a perfect marvel of diminutiveness. This work of dexterity was presented to the Shijōnawate (Kusunoki Masatsura) shrine, where it may be seen by the curious.

The new literary magazine, the *Kōkubungaku*, whose appearance we noticed last month, discusses the influence of novels on the colloquial language in daily use. The view of the writer is that it is not desirable that the Tokyo dialect should become the standard of speech as it is in danger of becoming. The reason assigned is that the Tokyo language now in use, unlike what was known as Edo *Kotoba*, is made up of a variety of incongruous elements, the large influx of people from the provinces resulting in a linguistic hodge-podge that is anything but palatable. Notwithstanding this fact, under the impression that the Tokyo dialect should hold the highest place in public esteem, the chief novelists make their heroes and heroines discourse in this lingo. Hence it often happens that there is an unpleasant contrast between the polished language used by a novelist in the descriptive parts of his work and the words he puts into the mouths of his characters. Rather than follow this course, continues the *Kōkubungaku*, we would advocate the mixture of modern and mediæval colloquial, though Mr. Mozume and others who think with him, are of opinion that no such mixture is desirable and that the proper method to adopt is to revert to the colloquial in use among educated people prior to the removal of the court to Tokyo.

An article from the pen of Dr. Shigeno appears in the *Seikai-no-Nihon* entitled *Nihon wa korai kaitoku shugi nari*, "Japan from ancient times favoured the opening of the country," of which we give a brief epitome. There are those who assert that from ancient times Japan has been in favour of closing the country to foreigners. They are ignorant of history. In proof of this assertion the learned historian quotes from a num-

ber of ancient works, and then proceeds to add that one of the greatest proofs of the favour with which foreigners were regarded in ancient times was the adoption by the government, some time in the seventh century, of the most liberal views in respect of the naturalisation of foreigners in Japan. At a time when both in Japan and Korea class distinctions were very marked, when there were in this country and in Korea 良民 *ryōmin* (superior people) and 賤民 *senmin* (inferior people), and when the gulf that divided the two classes was deemed almost impassable, we find recorded in the 大寶令 *Taihōryō* (a collection of Laws called after the era in which they appeared, A.D. 702) a law sanctioning and encouraging the settlement of Koreans of *senmin* rank in Japan and providing that such settlers should, when naturalised, rise to the rank of *ryōmin* in this country. As a consequence of the privileges they enjoyed, not a few Koreans came over to this country, some of whom, like 敬德 *Keitoku* and 敬信 *Keishin*, became the governors of provinces, while others conferred not a few benefits on the nation by their enterprise and learning. The Sado and the Oshū gold mines were discovered by Koreans, and Sakanoye-no-Tamuramaro, than whom Japan has never had a more faithful servant, and who will always be remembered for the zeal he showed in the subjugation of the bandit hordes that infested the country in his time, was also a Korean. In ancient times the families of the upper classes were divided into three classes (1) the Imperial family; (2) the families of governors of provinces (守 *Kami*), and (3) the families of naturalised persons. Thus we see that foreigners who had settled in this country occupied a higher rank than the mass of the natives among whom they settled. As was but natural, the Koreans who resided permanently in this country and became Japanese were most numerous in Kyūshū. Naturalised Koreans at first retained their own names, but after a while, with a change of nationality, came a change of name, so that there is often nothing to distinguish Koreans from Japanese on the page of history. The entire obliteration of their foreign origin eventually led to their no longer acting as an influence in favour of extensive foreign intercourse. They became so identified with Japan as to regard with jealous eyes the arrival and the commercial success of foreigners. The invasion of Japan by the Mongol Tartars in A.D. 1281, naturally had the effect of prejudicing the government of that time against foreigners, and for centuries subsequent to this, anti-foreign feeling was very strong. In the Kanyei era (A.D. 1624—1643) the construction of large ships suitable for voyaging to adjacent countries was forbidden and in the Tempō era (1830—1843) the feeling which dictated the above named policy culminated in an order for the expulsion of foreigners (*uchi-harai no mei*). It is a mistake to think that Ieyasu was at heart in favour of closing the country to foreigners. The action he took in discouraging foreign commerce and intercourse was forced upon him by the ambitious foreign wars waged by Hideyoshi. He saw an element of danger to the home country in the costly campaigns undertaken by the generals of the Taikō on Korean soil; hence, not as a settled policy for the country to adopt in after ages, but rather as a temporary expedient rendered necessary by the circumstances in which he found himself, did Ieyasu favour the closing of the country. Thus it appears that the anti-foreign ultra-national party can find no support for their views from history, properly read. It is impossible for a discerning student of history to overlook the fact that with the exception of those few centuries when special circumstances interfered, the settled policy of the Japanese nation has been to study and to adopt all that it deems worthy in the government, the knowledge, the religion and the life of each country with which it has come into contact, and it is to the existence of this policy throughout past ages that we are to attribute these elements of our civilisation of which we are most proud. Had this not been so, the Japan of the beginning of the Meiji era would have been nothing more than a Formosa enlarged.

TIDAL WAVE RELIEF FUND.

SUPPLEMENTARY REPORT.

A report of monies expended and methods of distribution was published in full in the *Japan Mail* of Aug. 3rd, 1896. It was then stated that 150 sets of *futon* had been made, two in each set, each *futon* being marked with the character *Yoko* (横), and with a number, the number on each set being the same, and set-numbers running consecutively from 1 to 150. It was stated further that these *futon* had been forwarded to different localities for distribution among those who were both aged and destitute. Most of the freight was prepaid, and where it was impossible to prepay, the deficit was to be furnished out of funds left with the Kencho of Iwate Ken for boats and their furnishings. These boats, it was stated, were also to be numbered consecutively and each to be marked with the character *Hama* (濱). The boats were not purchased by the Committee, for reasons set forth in detail, but the supervision of their construction was kindly undertaken by the Kencho above alluded to, along lines specified by the Committee. For the purpose of their construction money was left by the Committee with the Kencho to the amount, finally, of \$4,268.73.

About a month ago, the undersigned received from the Kencho a report in regard to the distribution of the *futon*. It covers about 60 pages, and gives in detail the names, residences and usually the ages of recipients, stating the set-number of those respectively received, as well as a receipt by each of the 150 recipients duly stamped with seal or thumb-imprint. Some facts in this report are herewith submitted in a greatly condensed form. The distribution according to place and sex will be seen from the subjoined table:—

Place.	Male.	Female.	Total.
Kamaishi-machi	36.....	14.....	50
Ofunato-mura	6.....	5.....	11
Massaki-mura	8.....	7.....	15
Otomo-mura	1.....	2.....	3
Hirota-mura	3.....	9.....	12
Yonezaki-mura	1.....	2.....	3
Kessen-mura.....	3.....	3.....	6
Akazaki-mura	12.....	9.....	21
Kiyori-mura	3.....	3.....	6
Okkirai-mura	6.....	6.....	12
Yoshihama-mura	1.....	2.....	3
Toni-mura	4.....	4.....	8

1284.....66.....150
An examination of the ages given (those of Kamaishi are omitted) shows one person to have been a little under 60; forty-one to have been between 60 and 70; forty-three between 70 and 80; fourteen between 80 and 90; and one to have been a little over 90. The average age was a little over 70 years.

The report in regard to the boats was received just at the close of the year. It contains about 500 pages of written matter, besides imprints of the stamp* used to mark the boats and a few carefully drawn designs to explain matters referred to in the report. The financial part of the report shows that, after the payment of \$3.50 for freight on *futon* above alluded to, the \$4,265.23 remaining was expended as follows:

For boats alone	\$3,413.759
For their furnishings	767.545
For fishing implements	80.326
For stamp	1.60
For designs	2.00

Total\$4,265.230

The total number of boats made was 165. The following table gives their technical names, the number of each kind made, cost, etc.:—

Technical Name.	No. Made.	Lowest Price.	Highest Price.	Total cost.
'Awa-segi'	32	\$20.30	\$20.46	\$ 652.00
'Dambe-knko'	11	30.50	—	335.50
'Kakko'	19	28.616	45.60	719.663
'Temma'	18	28.10	66.666	645.997
'Sappa'	85	10.00	25.80	1060.599

* The stamp measures about four inches by five and a half. In the pictures sent it appears on the port side of

The smallest boats and their furnishings were in about seventy cases given to individuals, but the larger ones were given to groups, in one case 62 seals are appended to as many names in the receipt for a single boat and its furnishing. The following table shows the number of boats distributed, and different *mura* and *kori* and the number of men in the latter places receiving for the boats:—Each name has its own seal or thumb-imprint.

Name of Mura.	No. of Boats.	Name of Kori.	No. of Men receiving.
Okkirai...	11	Kessen	538
Toni.....	9	Kessen	
Hirata ...	16	Kessen	
Suzuki ...	16	Kessen	
Sakiyama, 10	Higashi Hei	38
Komoto... 36	Kita Hei	70
Tanobata. 34	Kita Hei	
Noda..... 11	Minami Koko no Hei	412
Taneichi.. 7	Minami Koko no Hei	
Ube 12	Minami Koko no Hei	
Taneichi.. 3	Kita Koko no Hei	
			61
11	165	5	1,129

The boat furnishings, 886 in number, comprised 245 sails, costing \$222.64; 24 mats, costing \$13.826; 18 anchors, costing \$44.466; 24 rudders, costing 34.60; 31 ropes, costing 23.70; and 544 oars (3 kinds), costing \$428.313. The fishing implements are hooks and their poles for catching *awabi*—the univalve mollusc known as *ear-shell*. These implements cost from about 49 to about 52 *sen* each. A beautiful drawing of one was sent with the Japanese report.

In closing, the undersigned desires to express his conviction that the Kencho has carefully and thoroughly performed the task which at the request of, and on behalf of, the Committee, it kindly undertook, and has given vouchers which ought to satisfy the most fastidious. He wishes also to say that if further information or evidence is desired, he will do what he can to furnish it. Otherwise, thanking the *Japan Mail* for the use of its columns, he respectfully reports that his work is finished in connection with the Tidal Wave Relief Fund.

Respectfully submitted,

ALBERT ARNOLD BENNETT.

Yokohama, Jan. 13th, 1897.

[Mr. Bennett has earned the gratitude not of the afflicted people of north-eastern Japan only, but also of the foreign residents of Tokyo and Yokohama, whose charitable contributions he has so carefully distributed.—Ed. J.M.]

THE LATE DR. HENRY HARTSHORNE.

The following short sketch of the career of the late Dr. Henry Hartshorne, has been placed at our disposal:—

Dr. Henry Hartshorne was born in Philadelphia in the year 1823. His ancestors for two hundred years belonged to the Society of Friends, to which he was always strongly attached. His father, Dr. Joseph Hartshorne, was a native of Virginia, but moved in his early youth to Philadelphia, where he became prominent in the Medical Profession. Young Henry Hartshorne graduated at Haverford College (then Haverford School), obtaining the degree of M.D., in the year 1845, at the University of Pennsylvania. He had rare opportunities for extended hospital work through his father's influence, and practised as a physician for some years in Philadelphia, being engaged at the same time as a medical teacher and lecturer. In 1849 he married Miss Mary E. Brown of Philadelphia, who was also a member of the Society of Friends. Inheriting from New England ancestors vivacity and energy too great for her physical strength, Mrs. Hartshorne was for many years an invalid; and it was largely through her husband's trained watchfulness that her life was prolonged till 1886. When about thirty years of age Dr. Hartshorne's health completely broke down through over-

the boats, and, together with the boat number on the stern. It may also be on the starboard side, but that side is not shown in the pictures.

work, and a trip to Europe and a winter in Egypt were suggested. This restored his physical powers, though on his return he gradually withdrew from medical practice and devoted himself to teaching and literary pursuits. Soon after his return from Europe, the Civil War broke out in America, and Dr. Hartshorne placed himself at the disposal of the Government, for work in the Philadelphia hospitals. He was actively engaged during the latter years of the War, and, after the battle of Gettysburg spent three days on the field tending the wounded and suffering and passing through many thrilling experiences. Dr. Hartshorne afterwards filled many important positions, lecture-ships, &c., in several schools, besides holding professorial chairs in Haverford College, the University of Pennsylvania, and the Women's Medical College of the same State. In 1884 the University of Pennsylvania conferred upon him the honorary degree of L.L.D. He did much laborious work preparing medical textbooks for students, two of which have been translated into Japanese and largely used by medical students in this country, while he was also connected with medical journals. His last medical work is a Household Manual of Medicine and Hygiene, intended for use in families. Dr. Hartshorne also published three separate volumes of poetry. For fifteen years he was Editor of *The Friends' Review*, a religious and literary weekly in Philadelphia, resigning that position before coming to Japan in 1893. Dr. Hartshorne's interest in missionary work had always been very keen and increased with his years. His sympathies developed especially with regard to Japan, through the translation of two of his works, viz.:—"The Essentials of the Practice of Medicine," and "The Conspectus," brought over by Mr. Sen Tsuda and given to his friend, Dr. Kuwada, of Tokyo.

A few years later, the establishment of the Friends Mission in Tokyo emphasized his interest, and led to Dr. Hartshorne's first visit here in 1893. Returning to America for about a year, he, with his youngest daughter, once more crossed the ocean and took up their residence in Tsukiji, where, and in the various missions in Tokyo, and also during long summer visits to his friend Prof. Inazo Nitobe, P.H.D., of Sapporo, Hokkaido, he found a large and varied sphere of usefulness, especially in connection with the work of the Young Men's Christian Association. The late physician also took an active interest in the movement to prohibit the use of opium in Formosa, and in the recent work of Miss Clara Parrish of the W.C.T.U. His illness was very short, a confinement to bed of only two days. He was conscious to the end and in perfect peace, and trusting in his ever present Saviour, he quietly passed away leaving a vacant place that will not easily be filled.

PRISON GATE RESCUE WORK.

For several years Mr. Hara Insho, pastor of the Methodist Church in Minami Jinbocho, Kanda, has been unostentatiously carrying on work among convicts released from prison, in a style similar to the Prison-Gate rescue work so well known in England and elsewhere. He was led to this form of philanthropy, we gather from the vernacular press, about 16 years ago, when, having been convicted of violating the Publication Law, he was incarcerated for a short time. For some eight years he undertook religious services among the inmates of the Kabato (Sorachi) Prison, and is said to have gained great influence among the convicts. Then he started work among persons who had just been released from jail, and here again, despite disappointments innumerable, he has the satisfaction of finding his endeavours to restart prisoners on a better and a purer line of life, not wholly thrown away. Hundreds of men, and women too, whom Mr. Hara has met at the prison gates and conducted to his home, to rest a while before making a restart in life away from all their evil associates and associations of the past, now testify by upright, conscientious lives that a word spoken in season accompanied

by a heartfelt interest in their future, have turned them effectually from the courses of evil. Many touching tales are told of the conversations thus wrought by a good man and his wife—Mrs. Hara is a perfect helpmeet to her husband, in every sense of the word—but we have not space to recount them here. The recent liberation of convicts under the Imperial amnesty, threw a very heavy responsibility upon Mr. Hara's shoulders. But he faced the situation bravely. On the 6th inst. when more than 250 Hokkaido convicts were transported to the Sugamo Prison and there liberated, Mr. Hara went down to the prison with more than 100 *furikisha*. He led those ticket-of-leave-men who were willing to accompany him first to his home at Shibuya, where they were fed and clothed, and then to his Church, where they passed the night. Next morning over one hundred of the men listened to an earnest sermon, full of kindly advice, by their benefactor. Each man was asked what he intended doing, and it was discovered that 56 of them preferred to remain in Tokyo to earn a livelihood under the instruction and protection of Mr. Hara; the rest were desirous of going home. The convicts liberated from Hokkaido prisons were all men whose terms of service were for over ten years, and hence each had sums of money amounting from 20 to 100 *yen*, the result of their good conduct and prison work. Those who wished to remain in Tokyo deposited these sums in their own names in the Post Office Savings Bank. Some have already found employment, and others are about to start in petty trading of various kinds. In each case Mr. Hara will act as security, as very naturally people regard the liberated convicts with a certain amount of distrust, and will not engage them or let them houses unless they receive a proper guarantee. Mr. Hara's benevolent work has begun to attract the attention of the public, and several gentlemen of position have sent him contributions. Count Hijikata, Minister of the Imperial Household, sent 100 *yen*; His Excellency Mr. Kiyoura, Minister of Justice; Mr. Fukuzawa Yukichi, and several foreigners have also contributed money to forward the work.

A NEW STEAM LAUNCH.

On Saturday morning, in response to an invitation from the Directors of the Yokohama Engine and Iron Works, Limited, a goodly company attended the trial trip of a fast new steam launch just built in Yokohama by that Company. Among those present were Mr. Jas. Walter, Mr. J. A. Fraser, Mr. A. F. Macnab, of Tokyo, Mr. J. Johnstone, Mr. McWilliams, Captain Crawford, Captain Efford, Mr. Tresize (Manager), Mr. Weaver (Chief Engineer), Mr. C. K. M. Martin, Mr. H. S. Thompson, Captain Jas. Martin, Mr. Friedlander (Acting Secretary), Mr. R. M. Varnum, and others. The launch, a graceful vessel of particularly pleasing lines, left the English Hatoba shortly after half-past ten o'clock, and steamed off to H.M.S. *Undaunted*. Here the little company was augmented by the Doctor and the second engineer of that stately vessel, and a course was then shaped towards Kan-nonzaki. The morning was delightfully fine, a brilliant flood of sunshine playing on a placid sea. The voyage down the Bay was peculiarly pleasant, the launch travelling at a speed of about ten knots. There was little vibration, either above or below, and great satisfaction was expressed at the speed attained. The launch, which has yet to receive a name, is a very roomy craft. A spacious cabin forward will accommodate a dozen people comfortably; it is nicely fitted up and possesses every convenience that naval architects can devise for such a craft. The engines, amidships, are splendidly built. Spacious deck room is provided both fore and aft—especially aft—and 75 persons can find plenty of room aboard. Before turning back for home on Saturday, several toasts were drunk to the success of the new craft in particular and the Engine and Iron Works in general. At the red light-ship all the

watches on board were brought into requisition to time the speed of the new craft to the harbour entrance, a distance of a mile and an eighth. Mr. Tresize and Mr. Weaver went below to superintend the engine-room, and the passengers on deck made up small bets on the number of minutes that the run would take. Those who placed their estimates inside ten minutes won handsomely, the speed working out at a little over 10½ knots an hour—not a bad performance considering her size. Her length between perpendiculars is 50ft.; beam (extreme), 10ft.; depth (moulded), 6ft.; compound surface-condensing engine, of 60 i.h.p., high pressure cylinder 7in., low pressure cylinder 14in., and stroke 9in.; boiler, diameter 5ft. and length 5ft. 6in.

CORRESPONDENCE.

(Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.)

THE CAREW CASE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your leading article of to-day (February 11th) on the Carew Case is in keeping with those that have preceded it. In reply to it, I can only express my regret that you do not agree with me in considering the *Japan Gazette's* articles a valuable review of the trial and, further, that you felt obliged to say so. As to any endeavour of mine to discredit your analysis of the evidence, the fact is that I was not conscious of it when I gave some facts opposed to your attempt to cast doubt upon the guilt of the condemned. I did not touch your analysis of the evidence. Nor was my purpose, as you state, to establish guilt, for that is already done. My remarks were upon matters, as you rightly recognise, outside the evidence given at the trial, and they form no part of an analysis or of a review of the evidence. Now that the trial is over, I make known my belief that the minute quantities of white arsenic in the stomach must, in some way, have come back from the Fowler's Solution of it, though I am ignorant of the way in which it did so, and am unable to admit that it was some that remained in the Fowler's Solution still undissolved, as Mr. Schedel is said to have suggested. The adoption of that belief removes a difficulty in a case already decided, but it could not have had any weight in the course of the trial so long as the question as to the exhibition of white arsenic had any significance.

Concerning my remarks about the fender stain, you suggest that the bottle might have fallen when wrapped in paper. But how much does that matter in face of the woman's statement that the bottle was smashed and the broken glass swept off the fender with a broom? And, by the way, is not this introduction of a paper-wrapper into the case by you an instance of that making of hypotheses against which you have appealed?

Yours faithfully,
Feb. 11, 1897. EDWARD DIVERS.

EDUCATION IN AMERICA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The report of the Commissioner of Education in the United States for the year 1893-94 is out and contains some facts that will be interesting not only to educationists in Japan but to readers generally. The report is in two large volumes of over 1,000 pages each, and contains an immense amount of valuable information about education not only in America, but also in Europe. The United States Bureau of Education was created in 1867, just thirty years ago. And although there is not a national system of education in the United States, each state having its own school system, yet the completeness and accuracy of the National Commissioner's report will compare favourably with similar compilations from the older countries of Europe. The Hon. William T. Harris, Ph.D., LL.D. is the present Commissioner.

The report says there were enrolled in schools and colleges of the United States, both public and private, during the school year 1893-4, 15,530,268 pupils and students, being an increase of 446,638 over the preceding year. In addition, there were 400,000 persons enrolled in various special schools and institutions, making a grand total of nearly 16,000,000 persons who attended a school of some kind during the year. The percentage of the total population enrolled in the schools was 20.53. There

was an increase of 425,258, or 3.15 per cent. in the common schools. This is noteworthy, says the Commissioner, in view of the wide-spread business depression during the year.

The following statistics from the report of common schools will be of interest:—

Pupils enrolled.....	13,935,977
Male teachers	124,768
Female teachers	263,239
Average monthly wages of male teachers	\$44.76
Average monthly wages of female teachers	\$37.48
No. of school houses	236,529
Value of school property.....	\$425,024,341
Total revenues	167,051,392
Total expenditures	170,384,173

In the Southern States where nearly one-half the population is composed of negroes, the Commissioner has collected some interesting facts. During the past 20 years the population of that section has increased 54 per cent. while its school attendance has increased 130 per cent. In the same period the school property has increased from \$16,000,000 to \$51,000,000. In 1876 the South had enrolled in its schools 571,506 coloured children and 1,827,139 white children. But in 1894, eighteen years later, the white pupils had increased to 3,835,593, while the coloured pupils had increased to 1,424,995. The increase of the white pupils for the eighteen years was 109 per cent., while that of the coloured was 150 per cent. Twenty-three out of every 100 white inhabitants are now enrolled in schools, and 19 out of every 100 of the coloured inhabitants.

The number of universities and colleges is 476, the number of professors and instructors 10,897, of whom 13.8 per cent. were women. Number of students, 143,632; of whom 24.5 per cent. were women and 4.9 per cent. were coloured. The value of the entire equipment of universities and colleges is given as \$212,181,552, of which amount \$98,527,052 are endowment funds. The total revenues for the year were \$15,305,612, and the benefactions amounted to \$9,025,240.

There were 7,658 students in theological schools, 7,311 in law schools, 21,802 in medical schools, 5,151 in dental schools, 80,767 in training schools for teachers, and 2,710 in training schools for nurses.

In regard to primary education and its methods a great many changes are being made and much thought is being given to it. The principles advocated by Pestalozzi and Froebel a century ago are receiving a great deal of attention. It is being recognized as never before that training the intellect without at the same time training the heart and hand is a dangerous experiment in a republican form of government. Every one realizes the great importance of teaching a high ideal of morality and patriotism, but there is a great diversity of opinions as to how this should be done. It is very difficult for a teacher to hold his position in an American common school if he is not exemplary in moral conduct, and the vast majority of them are professing Christians, especially the women: and 67.8 per cent of the teachers are women.

Yours truly,
Feb. 9, 1897. WILL PATILLO.

THE "GAELIC" COLLISION.

At the Osaka Marine Office, on the 28th ult., an inquiry was held into the circumstances attending the collision between the British steamer *Gaelic* and the *Kompira Maru*, owned by Mr. Hara Kokichi. Mr. Wilson Walker, pilot of the *Gaelic*, stated that the vessel left Nagasaki about 6 p.m. on the 12th of August, 1896, for Kobe, and on the following day, about 6 a.m., the vessel entered Shimonoseki Straits. Soon after, he sighted the *Kinsu Maru*, at a distance of about 200 feet. He managed to avoid a collision with her, the vessel sheering off, but the *Gaelic*, a moment after, struck a junk, the *Kompira Maru*. After the collision the pilot tried to pass the sunken rock known as Yojibi, but without success and the vessel struck the rock. About 9 a.m. the same day, the *Gaelic*, having floated off the rock, anchored near Hikojima and effected temporary repairs to her bottom. At noon, the following day the vessel left for Nagasaki, arriving there about 11.30 p.m. the same day.

After hearing the evidence of several witnesses, the Court found that Mr. Walker, the pilot, was not to blame in regard to the collision, but was blameworthy for having struck the rock. His certificate was suspended for two months.

UNION CHURCH, YOKOHAMA.

ANNUAL MEETING.

The regular Annual Meeting of the members of the Union Church and congregation was held at the Van Schaick Hall on Tuesday, 16th Feb., at 8.30 p.m. The Rev. Dr. Meacham took the Chair and opened the proceedings with prayer. There were present, Mr. G. Sale, Rev. H. Loomis, Messrs. A. J. Wilkin, F. Whitefield, Mr. and Mrs. C. V. Sale, Miss Moulton, the Misses Wilkin, Mrs. Ballagh, Mr. George Booth, Mrs. Bagnall, Miss Wynn, Messrs. C. Griffin, Unite and Lewis.

The Rev. Dr. MEACHAM reported that the Church membership remained at just the same number as it did twelve months ago. There had been some changes, but while new members were entered upon the Register of the Church, others had left, so that there was no alteration to report in the total of members. He regretted very much that the services and meetings of the Church were not more largely attended, and urged members to give a more hearty support to the different institutions working in connection with the Church. The revision of the constitutions of the Church was regarded as an item of special importance which had been accomplished during the past twelve months.

In presenting the accounts, the TREASURER drew attention to the fact that during the year the regular income of the Church, that is to say, funds derived from pew rents and offertories, showed an increase of some \$609, as compared with the figures of the previous year, and while the total Receipts of the past twelve months only showed an increase of \$209.52 against that shown on the previous balance sheet, it should not be overlooked that the account for the year ending Jan. 31st, 1896, included two special items, amounting to \$473.90 received as proceeds of a Concert, and also a special collection, while the figures now submitted to the meeting represented, with the exception of about \$128, *bona fide* income of the Church. It was to be regretted that the accounts for the year had to be closed showing the Church to be in debt some \$437.30. Against this item there would come the proceeds of the recent organ recital and concert, which it is anticipated will net \$280—but which it was impossible to bring into these accounts as the year closed on Jan. 31st—leaving some \$150 to be made up.

S. E. UNITE, HON. TREASURER IN ACCOUNT CURRENT WITH THE UNION CHURCH, YOKOHAMA.

E. & O. E.

Yokohama, February 12th, 1897.
STAR. E. UNITE, Hon. Sec. & Treas.,
Union Church.

Examined and found correct

(Signed) George BOOTH.
C. V. SALE.

It was proposed by Mr. BOOTH and seconded by Mr. WHITEFIELD, that the accounts be duly passed. The motion was carried.

Mr. SALE moved and the Rev. H. LOOMIS seconded, that a special collection should be taken up on Sunday next, for the purpose of removing the debt, and as the end of the month was drawing near, when further expenditure would have to be met, every effort should be made to secure an offertory which would not only place the Church

out of debt, but leave a substantial margin to start the new year. The motion was duly carried.

The following was next read:—

SUNDAY SCHOOL REPORT.

The attendance during the year has been well maintained, and thanks to the zealous co-operation of the teachers, there has been no break in keeping the various classes going.

In the 39 Sundays on which School was held there were present 1846 children, an average of 47, bad and good weather together.

But we would again say to parents how anxious we are to see the children come regularly and be in their places punctually.

The weekly collection is somewhat larger in total than last year, and the sum of \$40 has been forwarded to the Okayama Orphanage towards the support of our little protégé there.

Our Christmas entertainment was a successful one. It was much enjoyed, evidently by the scholars as well as by the goodly number of friends who favoured us with their presence. The singing of the carols was good: the recitations by children, some of them very youthful, were interesting, and a tree well hung with presents gave much satisfaction. The cost was met by liberal contributions from the Congregation and some special donations from old friends at Kobe, while Messrs. Lane, Crawford and Co. gave their usual kind help in the eatables.

The Library, we are glad to say, is well used. Mr. C. Griffin, the librarian, has taken great pains to arrange and improve it, and is assiduous in his endeavours to bring it into touch with the young folk; and it is evident by the increasing interest taken by them that he has met with a full measure of success. He reports that there are about 37 names on the register, drawing books. The children seem really to enjoy them, and some special favourites are in constant demand. To keep a good selection going needs, however, a constant renewal of fresh volumes, and help here will be heartily appreciated.

As we begin another year, we would feel the responsibility for the opportunities offered of bringing God's truth to the minds and hearts of these young children, now in life's golden days: but our prayer and our hope is, that even though there may be many discouragements, much seed is sown to spring up and bear fruit to life eternal.

A. J. WILKIN,
Superintendent.

February 16th, 1897.

February 16th, 1897.

E. & O. E.

A. J. WILKIN,
Superintendent.

The election of Church Officers resulted as follows:—

Elders—Mr. Sale, Rev. H. Loomis, Dr. Cleveland, Mr. A. J. Wilkin, Rev. E. S. Booth. Deaconesses—Mrs. Loomis, Mrs. MacArthur, Mrs. Van Petten. Deacons—Mr. F. Whitefield, Mr. S. E. Unite. Trustees—Messrs. C. V. Sale, T. Rose, L. Pollard, G. Booth, F. Whitefield, S. E. Unite. Superintendent of Sunday School—Mr. A. J. Wilkin. Organist—Mr. F. Whitefield.

The meeting instructed the Hon. Secretary to write to Mrs. Brower conveying special thanks for her very handsome donation of \$100.

It was moved by Mr. WILKIN and seconded by Mr. S. E. UNITE, that the best thanks of the meeting be tendered to those friends who assisted the Choir at the organ recital, coupling especially the name of Mr. Griffin, as conductor, with the vote of thanks.

Mr. C. V. SALE moved, and Mr. WILKIN seconded, that the "Church Praise" be used for the Sunday evening services.

Mr. SALE, seconded by Mr. S. E. UNITE, moved an amendment, that the "Church Praise" be used alternately with the "Tune Books" now in use, or the "Moody and Sankey Tune Book," according to the discretion of the conductor of the meeting.

The amendment was carried by 8 votes to 4 against.

Mr. CLARENCE GRIFFIN reported that the Library of the Sunday School had been thorough-

ly overhauled and all undesirable books had been set aside. He would like to add that in consequence of the severe wear and tear which books usually experienced, especially at the hands of young folks, it was necessary to obtain a continuous supply of fresh books, and he would be glad to receive any contribution in the way of books, or funds, to buy new ones.

The meeting recognising the services of Mr. Griffin, authorised him to burn such books as were not fit to put into the hands of the young, for whom the Library was especially reserved.

The Trustees were authorised to meet the Trustees of the Church Building with a view to arranging a more convenient platform, if possible. The meeting closed with the Doxology.

NEW JAPAN.

(A GREETING.)

We hear the trumpet thrilling across the leagues of sea.

"*Banzai*," responds our "Golden Gate," and banner of the Free!

Not for the sounding clamours that field and fortress woke,

Red sword that sunward flashes, and cloud of battle smoke,

The flag of stars salutes you, O symbol of the sun: But for the coming duty when warrior-deeds are done.

Aye, for the sacred purpose that placed her in the van,

And crowns her lifted banner, all hail to "New Japan!"

* * * * *

We hear a clearer bugle across the leagues of sea, Type of Yamato's valour for all the days to be—

Behold a peasant-hero amid the battle stand With bleeding bosom forward, and glory in his hand!

A soldier's will in triumph rebukes the failing breath,

Ontrings his last "*Susumé*," outflows the tide of death.

"Dead on the field of honour"—whatever fate befall,

He with unreckoned heroes shall never know "Recall."

But Fame's eternal trumpet hath caught his bugle-note;

Thro' all the skies of Orient that ringing "Charge" shall float,

And lands of Orient follow with onward-hasting feet

Her one, unconquered people that cannot sound "Retreat!"

O banner of the Sunrise, if with thy symbol bright, Thou shine to burdened millions, as Freedom's beacon-light,

Then Asia's great encampment of jarring tribe and clan

Shall show to distant nations a brotherhood of man,

And mid the war-tents folded and peaceful triumphs won,

A world shall cry in greeting, "Flag of the Risen Sun!"

Sanitarium, St. Helena, California, U.S.A.

THE JACOB CASE.

The following letters have been handed to us for publication:—

Yokohama, 13th February, 1897.

MADAM,—I am at this moment, and for the first time, in receipt of proof which is conclusive to my mind that you were not the writer of the A. L. letters; and I now hasten to ask you to accept that apology which I have heretofore been unable conscientiously to offer you for the pain and mental suffering to which you have been put in consequence of the charge I considered it my duty to prefer against you, and which I am now convinced was unfounded.

Very faithfully, J. F. LOWDER.

Miss Mary Esther Jacob,
No. 2, Bluff.

Yokohama, 13th February, 1897.

J. F. LOWDER, Esq., Present.

SIR,—On behalf of my client, Miss Mary Esther Jacob, I have to acknowledge, with thanks, your letter of this date, addressed to her.

I am, Sir, yours sincerely.

GEO. H. SCIDMORE.

15th February, 1897.

G. H. SCIDMORE, Esq.

SIR,—The publication of the letter I addressed to Miss Jacob on the 13th inst. has resulted in the communication to me of facts which indicate the existence of a depth of duplicity and deceit which is to my mind unimaginable, inconceivable; of which I, among others, have been the unconscious dupe, and Miss Jacob the victim; and which would go far to reconcile the most advanced modern thought with the answers of the Judges to the questions propounded to them by the House of Lords in 1843, arising out of the decision of M'Naghten's case. Words fail me to express the regret with which the hearing of the story has filled me; for I feel that an act of injustice has been committed for which, had it been intentional on my part, no reparation in my power could be adequate.

You will be able to explain to your client that a lawyer, even under the developed circumstances of this case, may not be at liberty to make public all he knows, and may be prevented from adducing evidence which Miss Jacob might justly demand without laying herself open to any accusation of inquisitiveness; but short of the revelation of professional confidences I shall be glad of any suggestion either from her or from yourself as to what farther action you would wish me to take for the more complete vindication of her character.

Very faithfully,

J. F. LOWDER.

Yokohama, 17th February, 1897.

J. F. LOWDER, Esq., Present.

SIR,—I have given much anxious thought to all that you have been so frank in stating in your letter of the 15th instant, and I can appreciate the force of the considerations involved in your position as a lawyer with reference to professional communications.

I, of course, cannot now suggest the exact line for you to follow in your desire to vindicate my client's character; but it is not amiss for me to say that, in spite of all that has thus far appeared in public, a strong and deep impression exists and is freely expressed to the effect that, while recantation has been made of the charge of murder, there still remains the shadow of that terrible charge against a young woman's chastity which has been published to all the ends of this earth.

For the present, I must confide in your expressed wish to do justice and look to you to remove this cloud in words of such explicitness that malicious tongues here and elsewhere may be silenced.

Sincerely,

GEO. H. SCIDMORE.

17th February, 1897.

G. H. SCIDMORE, Esq.

SIR,—I am in receipt of your letter of to-day's date, in reply to mine of the 15th, in which you intimate that in spite of all that has thus far appeared in public, a strong and deep impression exists, and is freely expressed, to the effect that while recantation has been made of the very grave charge preferred by me against Miss Jacob, there still remains, unremoved, the shadow of an accusation of almost equal gravity, with which it was purposed to support that charge.

Believe me, my single desire and sole concern is to satisfy your client by doing what lies in my power to restore her character to the extent that I have been instrumental in impeaching it; and to that end I now explicitly withdraw every word I have said imputing the existence of questionable relations between her and the late Mr. Carew, because what I have said was based on the statements of Japanese servants who, I have since learned, perjured themselves at the trial, and who are consequently disentitled to be believed, and on the allegation of a person, not a Japanese, who subsequently withdrew what he had told me.

You are, of course, at liberty to make this correspondence public; but I trust you will understand that I do not write with the remotest wish or desire to influence any action your client has been or may be advised to take with a view to her more complete vindication, or to the bettering of her position pecuniarily.

Very faithfully,

J. F. LOWDER.

Mr. George C. Cox (Hongkong), Mr. L. P. Ebdon (Straits Settlements), and Mr. John J. Francis, Q.C. (Hongkong), have been elected Fellows of the Royal Colonial Institute.

Sir Edwin Arnold has bought a yacht, and accompanied by his son and daughter-in-law, purposes to start for a cruise in the Mediterranean.

AN AUSTRO-HUNGARIAN MINISTER FOR PEKING.

The Vienna correspondent of *The Times*, writing under date of January 10th, says:—

The official *Gazette* publishes the appointment of Baron Moritz Szikani von Wahlborn as Austro-Hungarian Envoy Extraordinary and Minister Plenipotentiary to the Court of Peking. Baron von Wahlborn has up to the present, held consular office and was for some time Consul-General at Moscow. This afforded him the opportunity of studying Russian affairs and learning the language, with which he is familiar and which will doubtless be of use to him at his new post.

Hitherto, the Dual Monarchy has had but one representative for China, Japan, and Siam, the last titular being Count von Wydenbruck. The post of Peking was to have been given to the late Herr Boleslawski, formerly Austro-Hungarian Minister at Tangier, but he died a few months ago at Karlsbad. He was one of the ablest officials and the best English scholars in the diplomatic service of this country.

The detachment at the post of Peking from the triple diplomatic representation of Austria-Hungary in the Far East would seem to have suggested itself on various grounds. In the first place, the inconvenience of having but one agent for the three posts must have been experienced prior to and during the recent China-Japanese war. Then, the efforts made of late years by the Government of the Dual Monarchy in view of the expansion of export trade in the Far East would also help to account for the decision thus taken. But considerations of a purely political order have doubtless had something to do with it. It cannot be expected that on any point of the globe where the rival interests of other Great Powers are in active conflict Austria-Hungary should not be as efficiently represented as themselves. Recent experience has shown that diplomacy in the Far East is in immediate connexion with diplomacy in Europe. This connexion is rendered possible by the temporary co-operation between Russia, France, and Germany. The commercial interests of Austria-Hungary in China are as yet not very considerable, still it might become a profitable outlet for her native industry. But there is no reason why this country should not be entitled to a legitimate amount of influence in China-European political affairs, and that, of course, can scarcely be exercised in an efficacious manner without an independent diplomatic representative in Peking—that is to say, independent of other Austro-Hungarian Legations in the Far East.

From an English standpoint it can only be regarded as satisfactory that this country should have a permanent diplomatic mission in China.

UNION CHURCH CONCERT.

There was a large attendance at the Union Church, Yokohama, on Friday evening, when the sacred cantata "Ruth" was given with capital effect. Gaul's pretty piece of composition is too well known to need elaborate description, suffice it to say that the solos, trios, and recitatives were well sung, and its tuneful choruses received full justice at the hands of a capably trained choir. Owing to a severe cold, Mrs. James Walter was unable to appear, and at very short notice Miss Poole took *Orpah's* solo in the Cantata, and Mrs. W. W. Campbell filled a similarly created vacancy in the second portion of the programme. Miss Lloyd Thomas sang the numbers allotted to *Ruth* in her usual finished style, and, despite the still apparent effects of a recent indisposition, charmed all hearers. Mrs. W. T. Payne, who possesses a flexible contralto voice of great compass, sang *Naomi's* difficult music in a pleasing manner, sustaining the part well. Mr. den Arend took the solos and recitatives set down for *Boaz*, and performed his portion of the work most conscientiously. Mr. F. Whitefield accompanied on the organ; Mr. J. T. Griffin being the conductor. During the evening Mr. Griffin gave the following selections on the organ:—"Coronation March" (*Le Prophète*), Meyerbeer; "Romanza" in G Major, Beethoven; *Adagio and Finale* (Op. 4), Spohr; and "Grand Offertoire" in G, Lefebvre-Wely. Mrs. Campbell's sacred song, "Sion" (Paul Rodney), was the gem of the evening. The beautiful passages of this lovely theme were most artistically handled, the subject being evidently a favourite one with the sweet singer. Mr. Fleet's rendering of the solo—from Mendelssohn's *St. Paul*—"Be thou faithful unto death," was very fine and was highly appreciated.

THE MOSQUITO'S ENTERTAINMENT.

The entertainment given at the Public Hall on Monday evening under the auspices of the Mosquito Yacht Club, contained many amusing features and the large audience went away thoroughly satisfied. The Chairman was Mr. W. W. Campbell (Commodore); who had for Stewards, Messrs. E. Coutts, F. J. Hall, J. McArthur, G. C. Murray, S. Warming, and K. Wilson. Mr. E. Beart was Stage Manager; and Mr. F. Coghill Jackson, General Manager. By kind permission of Capt. Hallifax and officers, the Band of H.M.S. *Undaunted* played several capital selections during the evening, the opening overture, an interlude and the accompaniments to Dr. McNabb's songs. The first song, given in costume by Mr. Wileman, was the old nautical ditty "Jack's Yarn." It was an ambitious effort, but the singer was not in his best voice. A scena and duet by Mrs. Campbell and Mr. Coghill Jackson followed—"O, Maid of Witching Grace," from the "Artist's Model"—in which the soprano was heard to great advantage: the waltz that concluded the piece caused some amusement. Mr. Sharp's recitation, "Kissing Cup's Race,"—given in "Mr. Worthington's" colours—as usual thrilled the house. Then followed the "Yes, dear mamma" duet from the "Gaiety Girl"—sung by Mrs. McWilliams and Miss Lloyd Thomas. The duet between the Duchess and her daughter that runs:—

"For the proper kick for a girl, you know,
Is not too high nor yet too low;
If you wish to shine as a social queen
You must always maintain the golden mean."

—was most archly given. It took immensely and the ladies received several gifts of flowers. Mrs. Campbell's next song "Il Bacio" was sweetly pretty and was loudly applauded. In the succeeding number an old favourite returned to the local boards in the person of Mr. A. C. Read. Attired in the becoming habiliments of a buxom matron from the purlieus of Stepney, Mr. Read gave an inimitable rendering of "At my time of life," getting in several palpable hits at the "modern girls" who were not about at the time "when my old four-penny-bit picked out me." An encore and a bunch of flowers were his reward. After an interval by the naval band, Mr. Wileman gave his "undaunted" hornpipe, and gained additional *audos* for his masterly management of the intricate steps. Owing to Mrs. Jas. Walter still being indisposed through cold, the song down on the programme against her name was deleted, and a trio by Mrs. Campbell, Mr. Wallford and Mr. Whitefield—the latter taking Mr. Fleet's place at a moment's notice—followed. This number was "Over the Hills," one of the prettiest things in the "Shop Girl." Mrs. Campbell delighted every one again, but her companions evidently suffered from a common stage infirmity, an ever-conscious feeling that their hands were in the way, but the well trained voices redeemed this failing. A surprise in the shape of an impersonation of *Trilby* was the next item on the list, Miss Lloyd Thomas giving "Ben Bolt," attired in the costume beloved by Du Maurier. After this the programme frankly announced itself as "comic." Mdlle. Cogwheel, in short blue skirts and the slimmest of black-hosed legs, sang "The Man in the Moon" from the "Shop Girl," and in response to an encore, "Di, di, di." Professor Bunkum (H.J.S.), talked learnedly about the phonograph and completely satisfied all as to his ability to live up to his name. The bright particular star of the concert—a major planet, we might say—then burst upon the view in the person of Dr. McNabb. He sang two Irish character songs and the audience yelled for more: he gave them a verse on a local subject—skating on the Yokohama pond—and left amid a blaze of glory. Mdlle. Cogwheel, in a rose-pink skirt, brought the proceedings to a close with a pretty dance and hand spring.

LETTER FROM PEKIN.

(FROM OUR OWN CORRESPONDENT.)

Pekin, January 15th. The main feature of life in Pekin is its monotony. The social side is better than the political, but neither is too lively. The foreign community has its balls, its theatricals, its meetings, and its crush parties, but over all there hangs the gloom of the impending downfall of the Dynasty. Such is the growing impression of many, even among the Chinese themselves. Whether the impression is sound or not, we have no good reason to advance one way or the other. We are only inclined to conjecture that if Turkey has managed to exist in

spite of its barbarities, China is likely to hold together in spite of its corruption and ignorance.

Since the departure of the Railroad Director Sheng, railroad matters have ceased to claim much attention. Shanghai rather than Pekin has been the centre of the speculation and excitement. It was supposed when Sheng left here, that if any foreigners were to be taken into the affair, they would be Americans, as Sheng, in his Memorial to the Throne, distinctly stated a preference for American companies, if foreign money was to be borrowed. Sheng, however, was savagely attacked by the *Peking and Tientsin Times*, in the interests of Mr. Kinder and other English speculators, and was threatened with a revelation of his past crimes, so he decided to let the Americans slip and began negotiations with Mr. Kinder. This gentleman was given the building of the section between Pekin and Pao-ting-fu. Since then the above paper has made no further charges or attack. This gain on the part of the English was followed by a counter move on the part of the Americans. The syndicate represented by Mr. Bash, having made definite arrangements with Sheng, had several prominent men on the way out, and so when Sheng reached Shanghai he soon learned that the Americans were not going to yield so easily as he had expected. He was ordered by the Tsung-li Yamen to close with the Americans, but he continued to make excuses, still fearing another attack from leading English firms who have facts as to his past trickery. To appear all right, he has proceeded to negotiate with all nationalities and inspires every aspirant with hope.

Grand Secretary Li still holds to the Golden Mean, neither in high favour nor ruthlessly denounced. He is weary of his present duties, being insignificant in comparison with the power he possessed in Tientsin and the glory which he received in his tour of the great Powers. He is undecided whether to ask for permission to return home or to hold on a while longer. In outward appearances he is rather the leader in foreign affairs, but in reality he is opposed by the majority of the others, whether progressive or conservative. While Li has his faults of temper and may be blamed for corruption, he yet deserves better at the hands of his country than the present snubs which are being continually given. The Emperor not only knows nothing, but is so ruled by passion that he fails to recognize the worth of the man whom "the world delighteth to honour."

Among the foreigners, the chief event has been the fancy-dress ball at the British Legation through the hospitality of Lady Macdonald.

THE WATER-TUBE BOILER ON ITS TRIAL.

There has recently been brought to a close a series of trials of the water tube boiler which has attracted more attention than any event that has happened in the engineering world for many months past. We refer to the trials of the 25,000 horse power installation of Belleville boilers on the cruiser *Powerful*.

These trials were remarkable, not because this was by any means the first use of water tube boilers at sea, but because it was the first attempt to use them on such an enormous scale. The public has long been familiar with this type as used on torpedo boats, and of late it has been winning its way into fuller recognition on shore, where it is doing good work in the general industries. It was natural that it should meet with favour for marine, and especially naval work, where its light weight, compact form and capacity for sudden generation of power render it specially useful. In the earlier days of torpedo boat building it had the locomotive type of boiler for its competitors; but as the demand for combined lightness and power has grown, the locomotive boiler has practically disappeared from the contest and left the water tube type in possession of the field. The excellent results obtained by the French navy in fitting some of their smaller cruisers with this type have led the British Admiralty to equip their two largest cruisers, the *Powerful* and *Terrible*, entirely with the Belleville boiler. The decision was based upon the French experience, and also upon a series of exhaustive trials in one of their own gunboats. The decision evoked a storm of criticism from experts, naval and otherwise, and it was freely predicted that the attempt would be a costly failure. The results of the recent trials, however, are reported to have been exceptionally favourable, the contract horse power, 25,000, being largely exceeded, and steam being maintained with ease and regularity.

The Belleville boilers, forty-eight in all, are divided into eight groups—four groups of eight boilers each and four others of four boilers each,

each group in its own compartment. The four latter groups are arranged side by side and fired alternately. The other four groups are arranged for fore and aft firing. There are twelve stoking spaces, arranged with four boilers and six stokers to each space. It is found that if the men replenish the fires every four minutes by the clock, perfect uniformity of pressure can be maintained.

It has frequently been urged that the results of official trials of foreign battleships are worth very little because they are of too short duration to really test the qualities of the machinery and boilers. It must be admitted that no such charge can be made in this case, the trial tests, indeed, being of an extraordinarily severe nature, such as have never been attempted in any other navy. They included two runs at 5,000 and 18,000 horse power respectively, each of thirty hours' duration, and a final run of eight hours, the first four hours at 25,000 horse power and the remaining two at 22,000 horse power.

In the first trial the average indicated horse power was 5,008 and the coal consumption 2.07 pounds per horse power per hour. Sixteen out of the forty-eight boilers were used. In the second thirty hour trial the indicated horse power was 18,433 and the coal consumption 1.83 pounds. The four hours' full power trial was carried out on November 27. The boiler pressure was 257 pounds; the mean indicated horse power was 25,886, the maximum being 26,497; and the speed of the vessel against a head sea and wind was 21.8 knots, the distance being measured by landmarks. The coal consumption was not taken. It was estimated that in smooth water the speed would have been about 22.75 knots.

During both thirty hour runs the two furnaces of each boiler were fired alternately at intervals of four minutes. At the commencement of the full power run this was reduced to three minutes. The fires were kept at a thickness of six inches, coal being put on only in sufficient quantities to fill up the holes and hollows. The draught plates were kept three-quarters open, the air supply being controlled by varying the speed of the fans. The Belleville system is run upon the "open" as against the "closed" system of forced draught, and the fans are used primarily for ventilation. The work of the ordinary closed stokehold fan is done in a Belleville boiler plant by air compressing engines, one of which is placed in each stokehold. It will thus be seen that the introduction of the water tube boiler has removed at a stroke all the discomforts attendant upon the old forced draught. The maximum temperature in the stokehold never exceeded 90 degrees; in the engine rooms it was 75 degrees. It is claimed, and very justly, too, that this moderate temperature will be of inestimable value when the engine and boiler room staff is called upon to endure the long continued strain of a war cruise.

Some idea of the saving of weight which is made by the use of this type of boiler as against the ordinary Scotch boiler may be gathered from the fact that the *Powerful* can carry a coal supply of over 3,000 tons. On the other hand, it must be borne in mind that the consumption of coal per horse power is higher for the water tube than for the common type of boiler. It is a common occurrence for a Scotch boiler to show a consumption of less than 1.5 pounds per horse power per hour, and it was only the other day that, chancing to step aboard a tramp steamer and inquire as to her coal consumption, the engineer promptly responded by handing us the cards of the voyage just ended, which showed a consumption of 1.4 pounds. So that in considering the merits of the Belleville boiler as regards saving of weight, we must remember that if the weight of boiler per horse power is less, the weight of coal per horse power is greater.

Warships, however, are not run for economy. The value of this type of boiler lies in its power to generate high pressure steam rapidly and in great volume for a considerable length of time in response to an emergency call, such as will continually be made in active service. The trials just concluded prove that all these conditions can be fulfilled with an installation of the unprecedented capacity (for water tube boilers) of 25,000 horse power.—*Scientific American*.

LATEST TELEGRAMS.

(Reuter's Service of Telegrams supplied to the "Japan Herald," the "Japan Gazette," and other Subscribers in Tokyo and Yokohama.)

London, February 12. Affairs in Crete are most serious. Greece has presented a note to the Powers stating that she cannot merely remain a spectator. A torpedo flotilla under the command of Prince George of Greece has sailed for Crete.

The plague in Bombay is largely on the increase, and the famine in India is the worst known for a century past.

London, Feb. 13. A Greek note delivered to Lord Salisbury declares that Greece will prevent the landing of Turkish troops in Crete by every means in its power.

Exchange on London at Paris 25.19
" " " New York 4.87
(Tel. Trans.)

(FROM THE "N.C. DAILY NEWS.")

London, February 6. M. Hanotaux, speaking in the Chamber of Deputies, in reference to the statement made by Sir Michael Hicks-Beach, said that the policy of France was best defined by a French and Russian protest; that it was not desirable to enter into a parliamentary polemic, and that it was important at the present delicate juncture to do nothing to imperil the concert of the Powers which France was doing her utmost to maintain, but that nevertheless France would never suffer any violation of her rights founded on international treaties and pledges.

London, February 7. The Marquis of Lansdowne, Secretary of State for War, announced that it was intended to add two battalions to the Guards and one to the Cameron Highlanders, another to the Malta Artillery, and another to the West India Regiment, to increase the garrison artillery by 3,500 men, and to raise another field battery. Three battalions of the Guards are to be held available for service in the Mediterranean, and one battalion goes to Gibraltar this year. The above makes an increase in the army of 7,385 men, and will increase the estimates by £98,400.

London, February 8. The Right Hon. Sir Michael Hicks-Beach, Chancellor of the Exchequer, in moving the Egyptian vote of £798,802, which the House of Commons adopted, said that the necessity for making an advance would be likely to prolong the occupation. He said that the main cause of this prolongation is the refusal by France to allow Great Britain a free hand, and that Great Britain regards the advance in the Nile Valley as necessary, and will not be worried out of its policy by hindrances such as the refusal of money.

The Egyptian Government has replied to France and Russia that it is legally entitled to accept a British loan.

London, February 10. The state of affairs in Crete is serious and the revolt is spreading.

Popular meetings are taking place in Greece to demand the annexation of Crete.

The insurgents have proclaimed a union with Greece.

The entire Greek fleet has been ordered to sea.

London, Feb. 11. A Greek torpedo squadron is being hastily prepared for service.

There is a growing and wide-spread opposition to the Marquis of Lansdowne's proposals concerning the Guards.

The Niger Expedition has arrived near Bida, defeating the Foulas' outposts with heavy loss.

(FROM THE JAPANESE PAPERS.)

Nagoya, Feb. 13. The Lord Abbot of the Senyujin, Kyoto, arrived here to-day from Kyoto carrying with him the tablet of the late Empress Dowager. Tomorrow a special religious services will be performed at the branch temple of the Higashi Honganji.

Osaka, Feb. 13. In the event of a proposal to adopt the gold standard being laid before the Diet, the cotton spinners of this district are preparing a strongly worded protest against such a measure. The Osaka stock market is fairly active.

Hakodate, Feb. 13. The steamer *Furu Maru*, owned by Mr. Sawaguchi, collided with the *Satsuki Maru*, belonging to Mr. Noto, last night. The former sank but the passengers were saved.

Kyoto, Feb. 13. The Kyoto Railway Company's new line will be opened for traffic to-morrow.

Yokkaichi, Feb. 13. The Miye Cotton Spinning Company has decided to buy out the Ise Chuwo Cotton Spinning Company.

Nagano, Feb. 13. Midzusama, of Miwa-mura, Kamimidzuuchigun, Nagano Prefecture, and ten others have been arrested on a charge of forging one yen notes.

Nagasaki, Feb. 13. The Russian man-of-war *Dimitri Donskoi* has arrived from Yokohama. Four other Russian men-of-war, have arrived from Fusan, Saga, Feb. 13.

Snow has accumulated here to a depth of two feet.

Osaka, February 15. The Osaka stock market is active, prices rising considerably.

The Hankoku Railway Company has purchased the Settsu Railway Company line for yen 313,673. From to-morrow the line will come under the control of the Hankoku Railway Company.

A telegram from Shanghai reports that cotton thread has risen in price there. Quotations for Sanhin-torishiki-jo thread have also risen.

Nagasaki, Feb. 15. A Netherlands man-of-war put into this port this morning.

The Russian men-of-war *Bobre*, *Kreiser* and *Admiral Nakhimof* will leave here to-morrow for Hongkong.

Kobe, Feb. 16. Nine Japanese men-of-war are manœuvring every day near the Kitan Straits. This morning, after taking supplies on board at Wada-misaki, the fleet proceeded towards Senshu-oki.

Shizuoka, Feb. 16. The new barracks for the 34th Regiment of Infantry have been completed.

Kagoshima, Feb. 16. Mr. Kobayama, ex-member of the Lower House, died this morning.

Mayebashi, Feb. 16. The Gumma Branch of the Japan Red Cross Society has obtained the services of a trained nurse, and instructions in first aid to the sick commenced to-day.

Yamaguchi, Feb. 16. The Hirase Ginko has been established here. This Prefecture now has six banks.

Nagasaki, Feb. 16. The Japanese man-of-war *Saiyen* left here for Sasebo to-day.

Nagasaki, Feb. 16. The Russian men-of-war *Admiral Nakhimof* and *Bobre* have left for Yokohama.

Osaka, February 17. The Osaka Chamber of Commerce held a conference last evening on the subject of the proposed gold standard. They will present a strong protest against the measure.

The fourth general meeting of the Tokiwa Cotton Spinning Company took place last night, when it was decided to dissolve.

The inquiry into the cause of the sinking of the *Sanko Maru* was continued in the Marine Court yesterday. Captain Takeda and the chief mate, Miyazaki, of the *Sanko Maru* were called and gave evidence before the Court.

Kobe, February 17. 182,114 bales of Japanese rice, and 76,713 bales of grain are now stored in Kobe.

Saga, Feb. 17. The Karatsu Railway Company proposes to buy up the Kariya Railway Company's line.

Akita, Feb. 17. The ceremony of formally opening the Products Exhibition took place to-day. Over 4,000 exhibits have been arranged.

Nagano, Feb. 17. Five other forgers of one yen notes have been arrested.

Kagoshima, Feb. 17. Uchida Nobnyuki, controller of the Kagoshima Ken Ordinary Normal School, has been arrested on a charge of having stolen money and articles belonging to the students.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets on Monday and Thursday in each week, at Clausen's Hotel, No. 66, Main Street, from 5 p.m. to 11 p.m. Visitors to Yokohama, and Officers of ships (whether Navy or Merchant service) who are Chess-players, are welcome to use the Club during their stay in this port.

The Tokyo Chess Club meets at the Tokyo Hotel, every Friday, from 1 p.m. to 7 p.m.

GAME No. 662.

Game played on the 15th Dec. in the match, Ludgate Circus v. Post Office Chess Club.

WHITE. BLACK.
H. C. Wright (Post Office). C. Schulz (Ludgate Circus).
1—P to K 4 1—P to K 4
2—Kt to K B 3 2—Kt to Q B 3
3—B to B 4 3—B to K 2
4—P to Q 3 (a) 4—Kt to B 3
5—P to R R 3 (b) 5—P to Q 3
6—Kt to B 3 6—B to R 3
7—B takes B 7—P takes B
8—B to K 3 (c) 8—Q to Q 2
9—Q to K 2 9—P to Q 4
10—B to Kt 5 10—Castles Q R (d)
11—B takes Kt (e) 11—B takes B
12—Castles K R 12—K R to Kt sq. (f)
13—Q to Q 2 (g) 13—P to K Kt 4
14—Q to K 2 14—P to Kt 5
15—R P takes P 15—R takes P
16—Kt to R 2 16—R to Kt 3

- 17—Kt to Q sq.
18—Q to Q 2
19—Kt to K 3
20—P to K B 3
21—K to B 2
22—K takes B (i)
23—R to B 2 (j)
- (a) Black's line of play is called the Hungarian defence, but White will have no difficulty in giving it a Philidorian character; this he can do at once by playing 4—P to Q 4.
(b) Better to go on with Kt to B 3 and to treat the game Giuoco Piano fashion. Bring the Kt over to the king's side, and castle Q R if possible, in anticipation of continuing with a king's side attack.
(c) This is precarious, as it obviously is Black's intention to advance his Q P.
(d) Good play. The second player succeeded in doing what the first player ought to have done.
(e) Not advisable. 12—P takes P, P takes P; 13—Castles Q R was better.
(f) Naturally he at once seizes with good judgment the opportunity for a king's side attack.
(g) White must have been rather at a loss what to do. Kt to R 4 at once was preferable.
(h) This move crowns the successful fabric on the Kt file. There is practically no reply if 5—P to K K 4, then P to K R 4.
(i) If Q takes B, R takes P; 5—K to K sq, Kt takes P ch., and wins.
(j) Black here announced mate, which he can carry on as follows—Q to R 3 ch.; 5—P to B 4, R (Kt sq) to Kt 6 ch.; 5—Kt to B 3, Q takes P, mate.

Tamari, S. Shimada, S. Miyake, S. Waku, K. Iwakami, T. Kinpira and child, Ching Shing Lo, and P. Smiles in cabin; 32 passengers in steerage.

CARGO.

Per British steamer *Verona*, for Hongkong via ports:—Silk, 938 bales; Waste Silk, 207 bales.

REPORTS.

The British steamer *Empress of Japan*, Capt. Henry Pybus, reports:—Left Vancouver, February 1st at 1.55 p.m. and Victoria the same day at 8.30 p.m. With the exception of a moderate N. W. gale for 12 hours on Thursday the 11th, fine weather was experienced throughout the passage, arriving at Yokohama at 8.15 a.m. on February 15th. The time occupied on the run was 12 days 18 hours, 14 min.

The German steamer *Hohenzollern*, Captain H. Blecker, reports:—Left Hongkong the 14th February at 6.15 p.m.; passed North Point of Formosa the 15th at 6.30 p.m., weather through Formosa Channel good; passed at noon the 17th Akushi Island; and Siwo Point the 18th at 8.30 p.m.; since the 16th had gale from N.N.W. to N. with high sea; from Siwo Point strong northerly winds; passed Rock Island the 19th at 8 a.m. and arrived at Yokohama the same day at 2.30 p.m.

LATEST COMMERCIAL.

IMPORTS.

No great animation, buyers being full of excuses for their lack of activity. The talk of Gold standard or anything else which may loom in the politico-commercial world is sufficient to delay purchases apparently. Country buyers will no doubt enter the market again more freely when they have finished all their New Year arrangements.

ATKINSON'S WHITE ROSE.

"The Sweetest of Sweet Odours."

Delightfully and delicately fragrant.

BEWARE OF IMITATIONS.

ATKINSON'S ONLY GENUINE. Perfume, Toilet Powder, Soap, Tooth Powder, Sachets, & all other specialties with this "charming" odour, of all Dealers throughout the World & of the Manufacturers—J. & E. ATKINSON, 24, Old Bond St., London.

May 4th, 1895.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors the throughout World.

May 22, 1896

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

YOKOHAMA: SATURDAY, FEB. 27TH, 1897.

BIRTH.

On the 24th inst., at Kitsune-yama, Tokyo, the wife of ALEX. G. MOSLE, Belgian Vice-Consul, of a son.

SUMMARY OF NEWS.

THE Y.C. & A.C. close the year with a debt of \$600.

THE Osaka merchants are in favour of the gold standard.

THEIR Majesties will visit Kyoto in the middle of next month.

HONGKONG has enforced quarantine against Japanese ports.

BARON SHIRANE is steadily progressing towards convalescence.

THE Spring Regatta of the Y.A.R.C. will take place in the first week in May.

YOKOHAMA, much to the surprise of everybody,

won the Interport match last Saturday, beating Kobe by four goals to nothing.

THE King of Korea has left the Russian Legation at Seoul and returned to his own Palace.

THE Korean Ambassador has been received in audience by their Majesties during the week.

A SHOOTING accident occurred in Yokohama on Thursday, a sealer being shot through the body.

PROF. MERCK, the violinist, gave his farewell performance at the Public Hall on Monday evening.

PLAGUE has broken out at Kandahar. The Russians have established a military cordon in Amoordaria.

THE Powers are discussing a proposal made by Russia for a mixed European occupation of the towns in Crete.

A PHENOMENAL fall of snow occurred last Friday and Saturday, over a very wide area of East-Central Japan.

MR. ARAKAWA, the new Japanese Consul-General in London, left Yokohama for England on Sunday.

THE British steamer *City of Seva* has been wrecked on the coast of Spain, and a large number of lives lost.

THE question of the hour in commercial and political circles is the proposed adoption of the gold standard by Japan.

It is reported that Baron Hayashi, Minister to China, now on leave, will be appointed Minister to Russia at an early date.

H.R.H. Prince Wi-hwa, of Korea, who had been studying English at Kanagawa, left by the *Peru* on Thursday for the United States.

VICOUNT TAKASHIMA, Minister of War and of the Colonization Department, is confined to his residence through indisposition.

At the request of the Chinese Government, a French mission is leaving for Foochow to take over the supervision of the arsenal.

THE new Honorary Secretary of the Yokohama Amateur Rowing Club is Mr. H. E. Hayward, vice Mr. H. R. Mair resigned.

SHORTLY before twelve o'clock on the 18th inst. a conflagration occurred at Omachi, Sakai, Izumi Province, and about fifty houses were destroyed.

A PRONOUNCED shock of earthquake, of some duration, was felt over an extensive portion of Japan on Saturday morning. Very little damage was done.

SMALL-POX is decreasing rapidly in Yokohama. It is still very bad in Tokyo, and increasing rapidly in various parts of the provinces in the south-west.

THE two little children of Mrs. Carew left for England by the German mail-boat on Sunday, in charge of a Japanese maid. Mr. Porch also travels with them.

THE dead body of a Chinaman who fell overboard from the steamer *Macduff* on the 19th ult., was recovered by the Water Police in Yokohama this week.

THE outlook in Europe is very troubled, Greece being determined to stand out in the Cretan affairs. She has fired the first shot, taking captive 400 Mussulmans and a fortified town in Crete. Turkey is despatching troops and warships,

while strengthened squadrons from the navies of Foreign Powers have been sent to Canea in hot haste.

MR. KATO MASUO was appointed *Chargé d'Affaires* in Korea on the 23rd instant. Mr. Hara Kei, the Korean Minister, now on leave, being released at his own request.

THE agreement for the opening of the West River has been signed. Wuchou and another port, and four ports of call, are to be opened to trade on the first of June next.

THE British Naval Brigade which is advancing on Benin is being stubbornly opposed, and Commander Pritchard (of H.M.S. *Alecto*) has been killed, and Lieutenant Edward Hunt and Capt. Coe have been wounded.

MR. OKOSHI, President of the Yokohama Custom House, and fifty offices, gave a social reception to Mr. Watanabe Toyo, President of the Anpei Customs, at the Customs Club, Toke, on Thursday evening last.

At the dinner given to the Kobe Football team on Saturday, three gentlemen were present who took part in the first interport football match ten years ago. The rest have either left Japan or gone over to the great majority.

BARON VON GUTSCHMIDT, the German Minister, will leave Japan for home on the 6th of March next. Count Okuma, Foreign Minister, will give a farewell dinner to the German Minister at his official residence on the 3rd of March.

THE Nippon Yusen Kaisha, taking advantage of the profits accruing from the late China War, opened lines to America, Australia, and Europe, but the expenditures during the past year have amounted to yen 3,400,000. There being no prospect of the business paying, the Company recently petitioned the Government for further subsidies. The Authorities have decided to grant yen 3,400,000 as supplementary grant, and the project will be laid before the Diet as a Supplementary Budget at an early date.

THERE is a good improvement to be noted in the Import trade, mainly in the Textile branch, and buyers having come to the conclusion that bottom prices have been reached, have made heavy purchases of "gassed" Yarn and have taken "plain" freely. There has also been a good business in "spot" Shirtings, and about 150,000 pieces have been sold to arrive. Of Fancy Cottons, Turkey Reds and Velvets have been in fair request. While Woollens, with the exception of Italian Cloth, of which 5,000 have been taken, are still rather dull. In the Metal market, holders have further advanced quotations and find it a hard matter to effect sales of any magnitude at increased figures. Kerosene occupies rather a peculiar position, for while "spot" Oil is scarce buyers are not anxious to deal, though stocks up country are known to be low. There has been some business in Sugar at late rates, but the tendency at the close for China and Manila sorts is somewhat in buyers' favour. A price has at length been fixed for new Takao, and offers "to arrive" have been settled at \$4, but these find no takers at present. White sorts continue steady, with a quiet market. The Silk market has been quiet since the recent heavy transactions, which reduced the stock here to 11 000 piculs, but there appears to be a movement in consuming quarters, and holders are quite firm. The Waste trade is nil. Nothing to report in Tea, but the change in the weather will bring news of the "flushing" of the bud shortly. Only fractional alterations have occurred in rates of exchange, which may be called steady.

THE SPIRIT OF THE VERNACULAR PRESS DURING THE WEEK.

The question of questions of the day is, of course, the adoption of gold monometallism. The vernacular press, however, is engaged, for the most part, interviewing noted financiers and economists and publishing their opinions. We find this week only the *Fiji*, the *Shogyo*, and the *Kokumin*, and we may add, the *Hochi*, expressing their own views on the subject.

The *Fiji's* article is long and highly circum-spect. It does not endorse either side definitely, but is devoted, rather, to enumerating the various results incidental to the adoption of the gold standard. In the first place, the change of the monetary system in the sense contemplated by the Government will amount to abandoning the advantage that Japan has hitherto derived from the divergent values of gold and silver, an advantage that served the purpose of a protective tariff. Secondly, the export of such staples as yarns, matches, marine products, and so forth, which are manufactured or obtained in Japan for the purpose of sale in the Chinese and other Eastern markets, will certainly be diminished. But that disadvantage will be fully compensated by the benefit resulting from the adoption of the gold standard in transactions with gold-using countries, for the trade with China does not exceed more than 30 per cent. of the whole volume of the country's foreign commerce, the remaining 70 per cent. being with gold countries. Again, in the event of the new system's going into operation, the gold-price of silver may temporarily fall, and silver *yen* and convertible notes current in Korea and other neighbouring places may be re-imported for exchange against the new gold *yen*. The latter, therefore, may flow out of the country in large quantities. Further, should bimetalism be adopted in the west, and should the ratio between the two metals be fixed at 1 to 24 or 25, the Japanese market, assuming that the ratio of 1 to 32 is adopted in this country, must be thrown into difficulties culminating in something like the temporary collapse of trade and industry. These and many other circumstances indicate the necessity of employing the utmost circumspection and resorting to the fullest investigation before any final conclusion is reached on this most important national problem. Whatever ability Japanese economists possess must be brought to bear on the subject, and no labour or time should be spared in working out the solution.

The *Shogyo* devotes three articles to the problem. In the first, it contends that the contemplated adoption of the gold standard would not produce any particular effect on the market prices of commodities, at all events, no effect comparable with that due to inflation of the volume of the currency. So long as the financial programme of the country stands as at present, observes the same paper in its second article, and so long the great sum of about 353 million *yen* has to be spent for extraordinary purposes during the next decade, 220 millions of which will go abroad, the adoption of the gold standard would not improve the economic prospect to any sensible extent: a deficit will appear in the Government's budgets just the same. The only safe plan is to avoid any sudden growth of expenditure. The silver coins thus far struck at the Osaka Mint, says the third article, aggregate more than 162 million *yen*, of which more than 37 millions must be circulating abroad, 32 millions at home, and 19 millions must be lying in the vaults of the Nippon Ginko. Therefore, if, as some economists advocate, the system of gold monometallism now prevailing in England be adopted in Japan, and silver be relegated to the place of subsidiary money, a sum of over 88 million *yen* must be withdrawn from the market, and the vacuum thus created must be filled with gold. Such a change is to be condemned as too sudden.

If, argues the *Kokumin*, Japan's commerce with China should collapse merely because of

the adoption of the gold standard, and if Japanese merchants can not avail themselves successfully of the advantages of cheap labour and proximity of markets, in competition with their English and Indian rivals, then their trade capacity must be very low indeed.

Count Okuma's speech in the House of Representatives has caused some journalistic discussion. "That Japan's foreign policy must be based on the principle of the opening and development of the country; that its scope must be wide; that it must be stable and continuous; and that it should closely conform with the principles of the Law of Nations,—can such be the foreign policy of any Minister?" asks the *Sekai-no Nippon* (Opposition). "Count Okuma said that it was not his own foreign policy but the foreign policy of the Empire. Why did he not advance a step farther and say that it was neither the foreign policy of himself, nor the foreign policy of Japan, but the foreign policy of the world? In short, such a foreign policy is merely an academical abstraction, without any element of practicality."

One thing that strikes the *Tokyo Shimbun* (Opposition), on perusing Count Okuma's speech, is his mendacity; mendacity consisting of an endeavour to conceal the policy he pursued when he was at the head of foreign affairs some years ago. His foreign policy at the time was to revise the Treaties on a footing of inequality. Yet he now tries to delude the public into the belief that the principle of equality was his own from the first!

The House, contrary to expectation, writes the *Kokumin* (Independent), was reduced to silence by the eloquent words of Count Okuma. This was chiefly because he did not seek to take shelter under the ægis of the strict letter of the law, as Count Mutsu did a few years ago, and did not assume the attitude of a palterer. His candour and frank manner entirely deprived his political opponents of any opportunity to attack him.

The House of Representatives, writes the *Nichi Nichi*, has blindly adopted the Government's Budget, and has passed it without any amendment worth mentioning. Our contemporary expects that the Upper House will exercise its function as the safeguard of the Imperial Legislature, and will impartially and independently discuss the Budget.

One lesson that the recent repeated shipping disasters in the Inland Sea has taught the *Fiji*, is the urgent necessity of framing a special navigation law applicable to that tract of water, where such an abundance of rocks and such peculiar currents render navigation extremely difficult.

In the disintegration of the Liberal Party, the *Kokumin* discovers a source of apprehension. For the event may, not improbably, be the work of certain wire-pullers, desirous of destroying the obstacles that now separate the Satsuma and Choshu cliques, so as to restore the cordial relations originally existing between them, and making clannism again predominant. Regarded in that light, the break-up of the Liberal Party is anything but reassuring. In the interests of constitutional politics, the continued existence of the Party may be desirable. The Liberals should no longer suffer the Tosa influence to predominate, but should contrive to have it superseded by Choshu influence. The best plan would be to definitely cement the relations between the Party and Marquises Ito and Yamagata.

The *Nippon* doubts whether the morale of members of the Lower House qualifies them to become Ministers of State, an ambition that they must always keep in view. An object lesson, petty though it be, that the writer of the article saw in the course of his journey to Kyoto on the occasion of the Empress Dowager's obsequies, did not reassure him on this point. The members were all furnished with first-class fares, yet, to the disgust of the writer,

most of them rode in second-class cars, evidently with the object of pocketing the balance. Such sordid and undignified conduct shows how greatly the ideas of the members fall below those of Ministers of State. The *Samurai* that boldly assumed an attitude of opposition to the Councillors of the Shogunate, prior to the Restoration, conducted themselves in a more gentlemanly manner than their representatives of to-day. Though unable to approach the officials of the Shogunate in the standard of their living and social intercourse, they were not so mean as to invite the contempt of those officials and of the people by servile greed for money. They entertained high aspirations and did not neglect to cultivate their minds in preparation for future days. Members of Parliament, however, seem to be engrossed by money-earning alone.

It will be impossible, writes the *Fiji*, for the Government to adhere faithfully to its declaration of policy and to invite men of ability to enter the ranks of officialdom from the public at large, so long as the Cabinet conducts itself in such an undignified manner as it is doing to-day. Apparently a reaction from their pre-vious arrogance has overtaken the Ministers of State, for they seem to think of nothing but currying public favour.

The *Mainichi* sees more and more clearly that the present Cabinet is destined to prove a mere transition ministry on the nation's route to party government. Instead of trying to adhere to the spirit of the time, as a real party Cabinet should do, the Matsukata Ministry places confidence in the opinion of a few wire-pullers. The next Cabinet will take care to be in closer touch with the spirit of the time, and will concern itself less about wire-pullers. This point must always be kept in view by politicians when shaping their course. Amid the anarchy now overwhelming political parties, their leaders seem to be at a loss what step to take.

The Lower House, says the *Nippon*, is losing sight more and more of its prime function, namely, that of checking the Government's inclination to increase the administrative machinery. This criticism has special reference to the House's recent attitude towards the Budget. At heart a majority of the House were opposed to passing the National Defence Expansion programme without any modification, but petty jealousies among rival political parties deprived the members of all effective capacity for combination. The lesson that the *Nippon* draws from this peculiar phenomenon is that a party commanding a majority in the House must be created with as little delay as possible.

The *Sekai-no Nippon* is inclined to estimate the character of the Satsuma men at a low value. One of their idiosyncracies, says that paper, is indifference to fixed principles; another is selfishness. The revolt of Shimazu Yoshihisa against Hideyoshi (the *Taiko*), and his prompt surrender when he saw the impossibility of resisting Hideyoshi's force, as also the quick adhesion of Satsuma to the Imperialist cause at the time of the Restoration, are cited as illustrations of the great clan's lack of fixed principles. The Hojo and the retainers of that illustrious house were more faithful: they resisted Hideyoshi to the death, and the clan became extinct. The same deficiency in the unprincipled talent of changing front to suit the circumstances of the time, reduced the Aizu clan to a pitiable condition at the time of the Restoration.

The *Fiji Shimo* instances an example of official tardiness in connexion with the development of means of communication. According to the accounts compiled at the end of October last, the Government did not spend more than 1,370,000 *yen* on railway improvement out of an estimated total of over 5½ million *yen*; or more than 210,000 *yen* on the telephone service out of an estimate of 1,677,000 *yen*. Altogether, out of more than 89 million *yen* of estimated

extraordinary expenditures, only a little over 30 million yen was actually spent up to that date. The Authorities themselves are of the opinion that a sum of 30 to 40 million yen out of the total must be carried over to the next fiscal year. The Government can not escape the charge of dilatoriness in the conduct of its business. If it be alleged, by way of defence, that much time is necessarily spent on the inception stages of works, and that no avoidable delay occurred, then the Government must be arraigned on another count, namely, that of having framed the Budget in a perfunctory manner, and asked for appropriations that were not needed during the year.

The *Kokumin* pleads with the Japanese people to contribute to the Indian Famine Relief Fund. Men that earnestly sympathized with the unfortunate fate of the crew of the Turkish vessel *Ertogroul*, and contributed for the relief of the survivors, must do the same for the sufferers in India. Such humane procedure will conduce, indirectly, to remove the stigma that Japan incurred in connection with the alleged massacre of Chinese at Port Arthur and the assassination of the Queen of Korea.

The *Nippon* can not pass without notice a phrase in the judgment lately pronounced against the Koreans arrested on the charge of having plotted to force the King's return to his own Palace. The passage runs thus:—"It is indisputable that one of the foreigners concerned in the project of constructing the Soul-Fusan Railway took part in the affair and abetted it." Evidently the word "foreigner" is used in the sense of "Japanese." Of course, if a Japanese was implicated in the affair, proper steps must be taken about him. But such a thing is entirely absurd. The Korean Government must have inserted that passage by way of preliminary to withholding the concession for the Soul-Fusan railway. The thing is of a piece with Korean policy in general.

EDITORIAL NOTES.

DOG-STEALERS IN YOKOHAMA.

COMPLAINTS have been general during the past few months of thefts of valuable dogs belonging to foreign residents in Yokohama. On the Bluff several sporting dogs, owned by various gentlemen, have mysteriously disappeared, especially after the shooting season was well under way; while pet dogs used either in or about the house have also been surreptitiously taken, or enticed away. The suggestion is that the dog stealer of the Settlement finds a market for foreign sporting dogs, broken or unbroken, in the interior. We were loth to believe the story, yet confirmation in one particular case is forthcoming. But sporting-dogs, as we stated above, are not the only representatives of the canine race that are abstracted. Only the other day a well-known resident lost a brown Chinese "chow." Search through the native town was unavailing, and all enquiries were futile; till the other day, when the skin of the unfortunate animal—that was easily identifiable owing to certain peculiarities—was found on sale in a Japanese furrier's. We understand the police have the matter in hand, and we hope the culprit will be discovered, and punished.

ACCIDENT TO THE U.S.S. "BROOKLYN."

THE U.S. cruiser *Brooklyn*, Captain Cook, has met with a nasty accident on the Delaware river. She had been lying in the stream when a "cold-snap" set in and it was determined to remove her to Cramp's yard. Iceboats broke the ice about the big ship and then, under her own steam, she began her passage down the stream. Two experienced river-pilots were on board and were in charge. She had arrived by this time opposite to Schooner Ledge, above Marcus Hook, when the pilots sent her slightly to starboard, where they considered it better water. Almost instantly the vessel struck the rocks with a jar that shook her from stem to stern. The quick settling of her

proW showed that damage had resulted. A hasty examination, followed by a closer one, revealed that her inner compartments were but slightly, if at all, damaged, and that the bulk of the injury had been done to the outer compartments directly under the engine-room and stoke-holds. A Court of Inquiry has been summoned to investigate the cause of the accident. The *Brooklyn* is the latest and most modern patterns of an armoured cruiser in the U.S. Navy, and was launched at Cramps' shipyard on October 2nd. She is said to be the only vessel in the Navy having a complete electrical apparatus for moving her turrets. Her cost, exclusive of armament, was \$2,986,000. Her battery consists of eight eight-inch breech-loading rifles of 35 calibre, twelve five-inch breech-loading rifles of the rapid-fire type, twelve six-pounder rapid-fire guns, four one-pounder rapid-fire guns, and four machine guns.

SNOWBALLING.

THE last few days have provided splendid opportunities for indulgence in the old-fashioned winter pastime of snowballing. On the cricket-field, both before and after the football match, a continuous fusillade was maintained, nearly every one taking a hand. A good deal of fun has also taken place along the approaches to and upon the Bluff. From the hearty, vigorous manner in which many elderly and middle-aged gentlemen repelled the assaults of younger members of the community—boys and girls alike participating in the game—we imagine that they enjoyed the exhilarating sport as much as anybody, suggesting to many a passer-by that the sports of youth are not forgotten though years and dignity have come to chill the blood.

KOBE ENGLISHMEN.

IN accordance with advertisement appearing in the local press, a meeting of Englishmen was held in Kobe on Friday, to consider the advisability of holding a St. George's Ball there this year. After some discussion it was decided to hold another meeting, it being thought that "to hold a ball while thousands of their fellow-subjects and fellow-men were perishing from starvation would be a cold-hearted proceeding." It was suggested that the money raised should be given instead to the Indian Famine Relief Fund. Mr. J. C. Hall's idea was that all the Queen's subjects in Kobe should join in celebrating the diamond jubilee of Her Majesty. Finally a small committee were appointed to consult with the Scots and Irish in the community who were to report at the next meeting the result of their conferences.

SEAMEN'S MISSION.

DURING the fortnight commencing Feb. 7th and ending the 20th, special Mission Services for seamen have been held every evening at the Seamen's Free Reading Room, No. 82, Settlement, with a total attendance of 800, or, an average congregation nightly of fifty-seven seamen, the majority of whom have been from the merchant vessels in the harbour. At the close of each service, refreshments have been served, and the men have been conveyed to and from their ships in the mission launch.

SHOOTING ACCIDENT.

ABOUT half past-eight o'clock on Thursday evening a shooting accident happened at No. 97, Yokohama. John Richey, a sealer, late of the *Golden Fleece*, became intoxicated during the afternoon. He had about his person a small revolver carrying a bullet of about 22 calibre, and towards evening began to flourish it about. Edward Purser, who was in charge of the bar-room, attempted to take the weapon away, and in the struggle the revolver went off. The bullet entered Richey's body above the left groin and went right through to the spine. He was conveyed to the Hospital and treated by Dr. Munro. The wound is not expected to prove serious.

DEER-SLAYING IN KOBE.

MANY of our readers, remarks the *Kobe Chronicle*, in their walks on the Hill have been familiar with the sight of about a dozen deer on the

ground attached to the house formerly occupied by Mr. Winckler—the highest house on the Hill—now occupied by Messrs. Webb, Bethell, and Harris. Only two of the deer are now left, the others having been killed or stolen by thieves. A *momban* had been employed to watch the premises, but the thieves apparently managed to do their work between his fits of vigilance. One animal was killed last Friday or Saturday, and the remaining two were lamed. Since then more watchmen have been engaged and the police have the matter in hand.

NAVAL NEWS.

THE Netherlands armoured turret-ship *Konig Wilhelmina der Nederlanden* is reported to have arrived at Nagasaki on the 15th inst. from Amoy. The vessel is 4,600 tons and 328 feet long. It is remarked that it is many years since a Netherlands war-vessel has been seen at Nagasaki.—The rumour is revived in Naval circles that H.M.S. *Powerful* is coming out to the China Station in the month of May.—The Shipowners' Association holds the Admiralty responsible for the payment of £86,529, as compensation for the sinking of the Australian wool ship *Siren*, which was run down by the English Channel some months ago by the British gunboat *Landrail*. The Admiralty authorities offered £4,843 in settlement of the claim, but this offer was refused. The Greenock Chamber of Commerce has drawn up a petition to the House of Commons in favour of the claim made by the owners of the *Siren*.

A MILITARY AUTO-CAR.
